As to the leaders who give the orders—the Canbys, the Ames, the Reynolds, and others higher in authority, who, under the sanction of your opinion and dressed in a little brief authority, are cutting such antics as are making American liberty and republican institutions a by-word among intelligent Europeans—it is hard to tell what to say of them. It is always desirable, where possible, to take the most favorable view of men's motives; and it is possible that some of them act simply through party prejudice and ignorance of law.

But it is difficult to find even this excuse for some of their acts. For instance, the following order appeared in the papers of the day as recently issued by the Gen. Ames who commands the troops in Mississippi to officers commanding military posts in that State:

The commanding general directs that you do not obey in future any writ of habeas corpus issued by the United States court and circuit court or any order made by such courts for the release of prisoners in your custody. Should such writ or order be served upon you, report the fact by telegraph.

What bearing, if any, this order has upon the pending application to the United States Supreme Court for a writ of habeas corpus in the case of Yerger, above referred to, has not appeared. But an order like this, directing subordinates to set at defance the orders of the United States courts, hardly admits the defense of ignorance or fanaticism. Taken in connection with the recent

case in the city of New York, where a prisoner was taken out of the hands of the civil authorities by the military and taken to one of the forts in the harbor, it looks very much like part of a scheme to test the submission of the people to arbitrary power and their acquiescence in the subjection of the civil to the military arm of the Government. To these higher and bolder offenders against the law it ought to be sufficient to suggest that the most cursory reading of history is sufficient to teach that popular favor, or the appearance of it, is very changeable and that the tide of political affairs is as uncertain as the turn of fortune's wheel. The power they now hold and abuse may soon fall from their hands, and it would be the part of wisdom to introduce no innovations which may "return to plague the inventor." The people of this country have grown up under free institutions and with a respect for law, and they will not tolerate their subversion. You doubtless claim your and their present trampling upon liberty and law to be the very pink of modern "loyalty." The time is near at hand when it will be differently regarded.

But loyalty truce, we're on dangerous ground; Who knows how the fashions may alter? The doctrine to-day that is loyalty sound To-morrow may bring us a halter.

-John H. James.

Federal Usurpation of State Rights in Water-Pewer Legislation.

SPEECH

OF

HON. CLIFTON N. MCARTHUR,

OF OREGON,

In the House of Representatives, Friday, January 7, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 408) to provide for the development of water power and the use of public lands in relation thereto, and for other purposes.

Mr. McARTHUR. Mr. Chairman, it is well established by judicial decision that the title to waters of nonnavigable streams is vested in the States and not in the Federal Government, yet this bil proposes to wrest from the States the control of such waters for the purposes of hydroelectric-power development, and lease them without regard to the wishes of the States, claiming the right to do so by reason of the Federal Government's proprietary ownership of the public lands lying adjacent to the streams. As the Federal Government is a government of enumerated and granted powers only, it is fair to assume that the framers of our Constitution did not contemplate Federal usurpation of a right which was not especially delegated or alienated by the States.

Legislation concerning the control and use of waters lying within a State is municipal in character and can not be rightfully exercised by Congress or anybody other than the legislature of that State. The Supreme Court of the United States has, in numerous decisions, recognized this principle and held that the United States has no constitutional capacity to exercise municipal jurisdiction after the admission of a State to the Union, except in cases where the same is expressly granted.

STATES HAVE RIGHT TO LEGISLATE,

I do not believe that there is a man within the sound of my voice who will dispute the proposition that neither man nor government can rightfully sell or lease another's property, and, as the States own the water in the nonnavigable streams, how can the Federal Government lawfully exact compensation for the rental of waters which it does not own? Yet the bill under consideration proposes to do this very thing because of a proprietary ownership of the land, through which the streams happen to flow. The ownership by the States of water within their limits means that the States have the right to legislate as to the use of such waters, unhampered by Federal control. It means that the State could even grant authority to one of its citizens to divert the flow of a nonnavigable stream for power, irrigation, or other purposes and thereby render valueless a power site located on land owned by the Federal Government, I do not articipate that any State will take such action, but mention the possibility only to show the complete control which a State may exercise over its waters.

BILL DENIES LOCAL SELF-GOVERNMENT,

The bill before us strikes at the very root of one of our treasured rights—the right of local self-government. It pro-

poses to establish a long-range bureaucratic control over our country's greatest potential resource. It proposes to deny to the sovereign States of the great West the right to regulate and control their own internal affairs. It has been suggested that these States can not be entrusted with this great responsibility and that our various State legislatures will fritter away the interest of the people in great water-power sites and sell them to corporations at a ridiculously low price. Let me suggest in this connection that the rights of the people in most of the Western States, commonly known as "Public Land States," are amply safeguarded by the initiative and referendum and that these rights are more likely to remain inviolate under State rather than Federal control of water power.

The rights of the people of nearly all these Western States are further safeguarded by the existence of public-service commissions, which protect the consuming public against monopoly and unreasonable rates. The West may have made mistakes in frittering away its school land and water-power rights, but it is not doing these things to-day, and this very fact is sufficient proof that we are capable of administering our own affairs. The West prefers to correct and rectify these mistakes, in so far as possible, without bureaucratic interference from Washington. The West does not like absentee landlordism or bureaucratic rule by Federal agents who are not responsible to the people of the West, and we are opposed to having the public domain put into a Federal leasing system. Such a policy tends to re-store the Crown-land systems of the Middle Ages—a policy uta policy utterly foreign to our American ideals. We of the West are a free, virile race of people, and instead of Federal tenants or vassals, we want independent landowners who will pay their share of taxes, take an interest in public affairs, and become a part and parcel of our splendid citizenship.

FEDERAL GOVERNMENT HAS MADE MISTAKES,

I have heard the suggestion that the Federal Government is a safer guardian of the public domain and resources of the country than are the States, but let me remind you of the manner in which the public domain owned by the Federal Government and located in certain Western States has been looted by land, timber, and swamp-land thieves, and how the Federal Government deeded away immense wagon-road and railroad land grants for a song. No State in the West has ever imposed such a burden upon its people as the Federal Government imposed upon the people of Oregon in the matter of the Oregon & California Railroad Co.'s land grant. Had Congress prescribed a few simple restrictions to this grant, all the resulting delay and litigation would have been avoided and the immense tract of land embraced within the grant would now be the scene of civilization and development instead of a howling wilderness, In view of all this, it seems to me that the advocates of Federal control of our natural resources should not overlook the fact that the Federal Government's administration of the public domain has not been such a wonderful success

We people of the West are a loyal people. We love our Government, both State and National, and our flag, and I resent the insinuations that we are not to be trusted in the government of our internal affairs and of protecting ourselves and our posterity from monopoly and exorbitant rates. It has been stated by ultraconservationists that we of the West want the control of these resources in order to turn them over to corporations. There is, of course, no warrant for such charges, and they represent the counterfeit zeal of the demagogue rather than the sober apprehensions of genuine patriotism. The record of the West in the matter of corporate regulation and control speaks for itself, and speaks louder than these spurious charges.

FEDERAL GOVERNMENT IS MERELY PROPRIETARY OWNER,

Those who are advocating the passage of the pending measure fail to distinguish between the sovereign and the proprietary capacity of the United States. The sovereign jurisdiction does not, and, from the very nature of things, can not, extend to the public domain, for is not this domain all located within sovereign States, and is not each State sovereign within its own boundaries? Did not the original thirteen States reserve to themselves all power not specifically granted to the Federal Government, and have not all States admitted subsequently been admitted on an equality? Is not the State required to maintain roads and schools, exercise the police power, and hold elections throughout its entire area, including public domain owned by the Federal Government? Can it be successfully argued that a State can exercise all these functions and the sovereignty of the public domain repose in the Federal Government? If the Federal Government is sovereign, then these vast areas throughout the public-land States of the West are not portions of the States, but are Federal provinces—a proposition too

ridiculous to admit of serious consideration. The truth of the whole matter is that the Federal Government is not the sovereign but the proprietary owner of the public domain, and as such has the legal right to hold, sell, or lease this public domain—the same as any other proprietary owner of land has the right to hold, sell, or lease. But has the Federal Government the moral right to adopt any policy that will withhold this public domain from settlement and development? It is true that the organic acts by which these Western States were admitted to the Union prescribed a relinquishment of all unappropriated public land to the Federal Government, to be held in trust for the benefit of the people, but does this mean that this public land is to be withheld forever from settlement, private ownership, and the jurisdiction of the power of the States to tax?

PUBLIC DOMAIN MUST EVENTUALLY BE ON TAX ROLLS.

Any policy which tends to create and continue large areas of untaxed public domain works a great hardship upon the people of the State in which such domain is located and destroys the time-honored principle of equality among the States. It must eventually be conceded that the Federal Government holds the public domain for the use of the people, and that the larger portion of domain must, in the course of time, pass into private ownership and be taxed for the support of schools, roads, and the institutions of the State and county governments. The Federal Government recognizes this tendency in the enactment of homestead and reclamation laws, and it can not be successfully contended that the Government intends to withhold from settlement forever the lands and resources of the great West, except such as may be needed for parks, monuments, public works, or forest-reserve areas that are unfit for cultivation or presentday use, but upon which timber may be grown for future generations.

BILL VIOLATES CONSTITUTIONAL RIGHTS OF STATES.

I have a very high regard for the patriotism and statesmanship of the author of this bill [Mr. Ferris] and for the Secretary of the Interior [Mr. Lane]. I recognize many commendable features in the bill, but I also recognize a number of weak points and have discussed what I believe to be the most important—the usurpation of the States' undisputed right of ownership and control of the waters of nonnavigable streams. I believe this to be a violation of the moral, legal, equitable, and constitutional rights of the Western States, and therefore can not give my assent to it. I would not oppose the bill upon partisan grounds and am glad to see that partisanship has not entered into this debate. My objection to this bill is fundamental and based on principle, and I would be recreant to the sentiment of the West and unworthy of the trust reposed in me if I failed to voice my protest against it.

The Government's ownership of the public domain being proprietary and not sovereign, I contend that the State, which is sovereign within its own limits, should unquestionably be privileged to exercise the right of eminent domain over all land within its borders, and that by virtue of such a right the State, or those acting under its authority, can condemn Government-owned land lying adjacent to nonnavigable streams and can proceed to the development of hydroelectric power plants thereon. This is the main point involved in this entire discussion, and is the great question at issue in the case now pending in the Supreme Court of the United States—the case of the Beaver River Power Co. against the United States.

WESTERN DEVELOPMENT RETARDED.

The public land of the East and Middle West has long since passed to private ownership and contributed its share of taxation to the various State and local governments, and yet we find gentlemen from these States who stand upon this floor and tell us of the West that our magnificent section of the country, endowed as it is by a bountiful Providence with a delightful climate, fertile soil, abundant resources, and a sturdy race of people, is to remain dormant and undeveloped because the Federal Government is the proprietary owner of a large portion of its area.

Does anyone believe that any of our Western States can become truly great if they are denied that right to tax large portions of their areas or to utilize their greatest and most useful natural resources? Does anyone believe that the framers of our Constitution contemplated that large areas of free States should be forever controlled from Washington and the people of these States denied the right to legislate as to matters that are of local and State-wide concern? Again I say that the Federal Government was created and established as one limited and delegated power, and that this proposed usurpation of the rights of the States of the great West was not contemplated by our constitutional forefathers. [Applause.]

The American Woman.

EXTENSION OF REMARKS

HON. CHARLES H. DILLON, OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1916.

Mr. DILLON. Mr. Speaker, under leave to print I insert a speech made by Mrs. Harley Thomas, of White Lake, S. Dak., before the South Dakota Universal Franchise Association, at Huron, S. Dak., on November 18, 1915.
The speech is as follows:

THE AMERICAN WOMAN.

ADDRESS BY MRS. HARLEY THOMAS, OF WHITE LAKE, S. DAK., BEFORE THE SOUTH DAKOTA UNIVERSAL FRANCHISE ASSOCIATION AT HURON, S. DAK., NOVEMBER 18, 1915.

This age is witnessing a readjustment in the affairs of women. The great movements of the day are attracting our attention on every hand. Politics are interfering with our realm at every turn, so that we have been forced into the position we take, and it is only right that we should go forth to help solve the problems of the home and the interests

great movements of the day are attracting our attention on every hand. Politics are interfering with our realm at every turn, so that we have been forced into the position we take, and it is only right that we should go forth to help solve the problems of the home and the interests we represent.

When our sphere of action is compared with that of our grandmothers it is to be wondered what the next 50 years will demand of the American woman. The high and holy position of our grandmothers has been and is still the subject of sublime culogy; and well it should be, for they contributed their link in the chain of human progress. But however that may be, to judge correctly of an age or generation one must know the surroundings or forces at work. In those days the home and all its exclusive rights were hers; to-day we are obliged to follow our domestic activities into business and industrial enterprises. Whatever the fate of other days, it is our duty to contribute our share to human progress as it appeals to us in the conditions of to-day; for it has been wisely said that. Man looks after the affails of life, but when the subject of t

The bravest of battles that ever was fought,
Shall I tell you where and when?
On the maps of the world you will find it not—
Twas fought by the mothers of men.
No marshaling troop, no bivouac song,
No banners that gleam and wave;
But, oh, its struggles they last so long—
From babyhood down to the grave.

The American woman of to-day must be a financier. She must be keenly awake to existing conditions. A few years ago, when a young girl either failed in or disliked her chosen work, her parents found relief in the thought that she could get married and settle down. But times have changed. This decisive step to-day does not mean settling down, but rather a rising up to meet life's responsibilities. She must think, for her life in reality then begins. She must first realize the keen competition of the business or professional life of her husband, and realize the value of money as she has perhaps never realized it before. She must know just where they stand in money matters; then she must invest accordingly.

She must have a knowledge of the constituents of food. She must study the prices of food products and practice economy in the use of foods. She should become interested in the factories, the health of their employees—so that the food she serves her family has not been subjected to diseased conditions. She must study the cheapest and best methods of buying, whether in large or small quantities. One might think this all an easy matter; but it becomes quite complicated, especially where obliged to do it on limited income. So that those who think a married woman does not need to use her mind to advantage are laboring under a serious mistake. If she does not live within a margin of the family income, she fails in the science of financing; and home building will lose some of that cherished effort, for there is a consolation in knowing that a little is being saved for the rainy day.

Let us guard against excessive demands. It isn't necessary that

inancing; and home building will lose some of that cherished effort, for there is a consolation in knowing that a little is being saved for the rainy day.

Let us guard against excessive demands. It isn't necessary that we try to compete in luxury with our more wealthy friends; often-times our humbler homes are the happier, and it is the spirit of the home that tells. And it is often quite true that our wealthy friends do not spend so freely or dress so lavishly as those of more limited means, so that we gain no point on that ground. I might add that in these days, when styles change so rapidly, judgment in buying, and a little tact in the art of sewing, might mean considerable to the hank account. The American man is justly proud of his family, and rather than refuse those whom he loves best, he is often tempted in a weak moment to forme the cheek. I do not meam to emphasize money as the all-important factor of the home, for it is not, but in these days of keen competition it forms a very important factor.

We havn't gathered here to pour forth a torrent of corruption upon the men of our country. Our motio should be "justice and equality." The social and industrial forces which are largely shaping the history of this century must need the strongest cooperation between men and women. Public thought has sort of released the father from his moral duties to the home, deeming it sufficient if he but sustain it financially, which is no trivial matter to say the least: but our children must be fed morally as well as physically. The home is a moral organization—the mother superintends, directs, and upholds its standard, but the father must be a presiding factor.

I must add that we are largely responsible for the attitude of the men of to-day. They give us what we demand, and present conditions, as a rule, demand that we bring men back into the home, where they, too, must have a sacred influence to lend to the home and family. The duties of father must not be transferred to those of mother. It requires the peculiar ex

to nation.

The old idea that men are interested only in a pretty face has fallen through. A face full of thought and expression is more attractive than the one of passive beauty. It is personality, not beauty, that influences our men unconsciously, and it is the active mind that develops personality and personality develops beauty, for it is the soul within us that speaks. If we influence man we must become artists of human nature. We must feed his heart and his mind as well as his appetite. If we look about us we will observe that it is the women of ideas who find in their husbands true companionship. The woman whose mind is never refreshed by the current topics of the day too often drifts into the household drudge.

Society cossip want satisfy the man. A little may act as a flever

often drifts into the household drudge.

Society gossip won t satisfy the man. A little may act as a flavor, but his practical mind responds to something richer and deeper, and we must prove to him that we live and think in higher things. Let us, the women of this country, become more interested in the living questions of the day and the American man will begin to prefer family and home to good-fellowship and clubroom, for there is no home complete without both man and woman. If we preserve our country we must preserve our homes, for the home is the lever to uplift the world.

Free young women should receive training in some spacel line of

Every young woman should receive training in some special line of work whether she marries or chooses to remain single. It is necessary to the single woman and might prove so to the married woman. If the husband fails as the bread earner, it is the wife's duty to come to his relief, and there are thousands of women all over our country enlisting as bread winners in order that the homes may be sustained. If man and woman are going to establish a home, when one falls in performing his duty, the other must do it for him.

Lack of employment creates discontent on the part of women of leisure. There was a growing tendency among the women of the last generation to try to establish prestige by elevating themselves above the menial employments of the home; but the great throng of American women are casting aside the false sentiments of the past.

women are casting aside the false sentiments of the past.

God gave us hands to use and there is no better place to use them than about the home, and the woman who is an artist in the home stands on the same footing with the sculptor or musician, and it is within the reach of every woman to become skilled as a home builder. Let us remember that to work is to worship, and that the cleanest citizenship and the great moving power of the country come from those who labor with mind and body. Our inventors, financiers, statesmen, and philanthropists do not come from the leisure classs. The greatest men and truest women laid the foundation of this Republic with the toil of their hands, and to-day women are found in factories, offices, and schools wherever there is work to be done. The business and financial world must recognize her as a rising factor, and as a tax payer she meets the demands of the Government.

They tell us that the days of chivalry are gone, that the sacred mis-

They tell us that the days of chivalry are gone, that the sacred mission of woman is fading from view; but we are on the eve of a new day, and when the morning dawns the Stars and Stripes will wave

ever a freer people. Then will the American woman stand enfranchised under the Goddess of Liberty.

The last century still echoes the old story—woman's influence. If an influence chained is so powerful, what would it be set free? The judgment of the American woman is a balanced quantity. Our opponents do not understand us. They do not understand womankind. They think with the ballot in our hands we will suddenly become transformed into military forces, going about the country dictating unto all mankind. That the enfranchised woman will never more love the sacred portals of bome, but what a mistake. There will never be any place on earth so welcome to woman's heart as home, sweet home.

The great dramatist Shakespeare has said human nature never changes, and we find this true with the women of the enfranchised States. It has given them a keener insight and a larger understanding of life in general. This public sentiment against woman's progress is merely repeating itself in history. Whenever women were offered any special advantages, the masses rose up in horror of the results. When the gates of coeducation were thrown ajar, and woman grasped the opportunity, wild denunciations rose up from both men and women. Again it repeated itself; women begin to invade the business and industrial world.

The cry went up that men would be driven out of employment. But God has decreed labor for all and there are still fields of industry and wealth undeveloped and unexplored; and through it all she stands cleaner with her superior intellect, ready to gracefully accept the right of citizenship and thence march on hand in hand with man, neither his master nor his slave.

I speak of suffrage because it is the main public issue of the American woman of to-day, and it would indeed be interesting if all the objections raised to it were placed on record, and future years would, no doubt, smile, as we do when we read objections raised to great movements of the past. The one objection holding preference in the minds of our opponents is

With political equality within our reach, we are now facing a momentous question, that of establishing moral equality—not by lowering woman, but by elevating man. There must be a single standard of morality for both men and women. We shall no longer tolerate commercialized vice and see our sons poisoned mentally and physically before they reach mature judgment. I can give no better thought than that expressed by Dean Summer when he said, "One kind of man walks our street without a spark of honor, without a spark of sportsmanship. He is the hunter of the uninformed, lonely girl, the girl who is lonely as you and I have been. She is hunted down by him. She is lost to her family, lost to her friends, lost to herself, lost to her God; but he is accepted everywhere. He continues to walk the streets a romantic figure."

It will never be any different till you women demand the single standard, till you say to your boys, "Somewhere, some girl is keeping standard, till you say to your boys, "Somewhere, some girl is keeping

figure."

It will never be any different till you women demand the single standard, till you say to your boys, "Somewhere, some girl is keeping herself clean and sweet for you. Can't you do as much for her?" I challenge you, the flower of womanhood, to say to men. "No longer shall you exploit my sex in degradation of marriage to which you bring disease." Public opinion has become very indifferent to this growing vice. On one hand it caters to wealth and position and carries those steeped in the vice on the tide of society, while on the other hand the working girl who falls through her struggle for existence is sent down to dishonor. But public sentiment is now being aroused, and it is to be hoped that the social evil has reached its climax, and I claim this credit for the American woman, whose heart and mind were first touched by human conditions.

She has labored conscientiously against that mental and moral de-

that the social evil has reached its climax, and I claim this credit for the American woman, whose heart and mind were first touched by human conditions.

She has labored conscientiously against that mental and moral destroyer—intemperance. She has been confronted with every argument and with every obstacle, at times not even a gleam of victory. But with a purpose true, her efforts knew not fail, and, like Hamlet's ghost, she would not down. And to-day the whole world is taking up her thought and justice is being enthroned in the conscience of men. In 1916 we shall prove to the inhabitants of this great State that we can improve cities, that we can build schools and churches, and greater than all clee, we can build men, without the revenue from the saloons.

As we look upon warfare as it is being waged between enlightened nations to-day it seems that history is turning backward. While the constructive genius of those great nations were leading the world in art and science, there was silently going on inventions to destroy the purpose of higher man. One must pause with the question, for what purpose does a nation build if the government which fosters it at the same time encourages forces for its destruction? All this seems like mock civilization. They are not fighting for the emancipation of man from some great evil; even were this true, the better judgment of this age should resorf to saner means. It is said that war is the result of political gamblers who care little about the country that is laid waste, the millions of lives that are sacrificed, the manhood degenerated, or the hearts that are broken. They must have power at whatever cost.

As one looks upon this country, beautified by the higher purpose of man and made more wonderful by his inventive genius, he sees a country that stands for right and not for conquest and power. As American eagle, as he hovers in the atmosphere above us, gives warning of threatening danger, and it seems at times that this country will become entrapped in war's dreadful machin

resort to The Hague tribunal for settlement. But let no one lose faith in a better day; a day when armaments on land and sea will cease; when it will not be a question of air crafts and submarines, but of right and wrong, and till then—

Be strong.
We are not here to play, to dream, to drift;
We have hard work to do and loads to lift,
Shun not the struggle, face it, 'tis God's gift. Be strong, Say not the days are evil, who's to blame, And fold the hands and acquiesce, O shame! Stand up, speak out, and bravely in God's name. How hard the battle goes, the days how long, Faint not, fight on, to-morrow brings the song.

Americanism and Patriotism.

EXTENSION OF REMARKS

HON. JAMES H. DAVIS. OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1916.

Mr. DAVIS of Texas. Mr. Speaker, it has been nearly two generations since our fratricidal war of the sixties, and it would seem that our Americanism and patriotism would inspire a better feeling than that of intolerance and sectional hate. But there are men yet on both sides who keep the cankering sores of the war period rubbed raw because it provides a partisan purpose in which they serve some sordid special interest by

preying upon the passions of a past age.

Some days ago on this floor in commenting on the malicious designs of syndicated wealth as represented in the notorious "Gary dinner," where the money-mongers and sordid trust masters were holding conclave with a damnable design, as I thought, to debauch this country and destroy the Republic, I spoke of it as far more reprehensible and destructive of human spoke of it as far more reprehensible and destructive of liberty than that cabal of the slave power, spoken of in what is known as the "Ostend circular," when the slave power was designing to annex Cuba and Mexico, south of Mason and Dixon's line, which finally resulted in secession and a bloody war. In this connection I mentioned in the light of history Bob Toombs, W. L. Yancey, and Jeff Davis, seeking to convey the idea that these money devils that were holding these Belshazzar's feasts these war traffickers and trust masters—were designing to put us in war, make millions out of the war, and then elect Roose-

velt, whom they were feasting, to prolong their sway.

In my speech I referred to Gen. Miles's testimony against a huge Army and Navy, with its conscription and despotism, and called him a "grand old patriot." This made Morgan's and called him a "grand old patriot." This made Morgan's minions and the defenders of the damnable liquor traffic who run newspapers furious, and in Texas they raised the bloody shirt, and men who belonged to "the rabbit-hunt brigade" during the war began to fight the war over and to cave and cavort all around me because I called Gen. Miles a patriot, saying "he was the man that cruelly imprisoned Jeff Davis." Perhaps he was cruel; those were cruel times. A raging, murderous, cruel war of four years had just ended with the assassination of Lincoln as President and maddened resistors of in nation of Lincoln as President, and maddened passions of in-tense frenzy held the country under its sway.

Then following, on Sunday eve, by invitation, I made a prohibition speech at Poli's Theater that awakened great interest

throughout the country. I am now marked for slaughter. One so-called Upshur Vincent, in the Houston Post, vituperating Miles and me, says I slandered Jeff Davis. I deny it in toto. Jeff Davis, like my father and thousands of southern leaders and citizens, believed slavery was a divine institution, taught and supported in the Bible. For the men as such I have a high respect, but for such doctrine I have an utter abhorrence. But since I read this man Vincent's venomous fusillade against Gen. Miles and me, I want to compliment Jeff Davis by saying that this willful, malicious, pragmatic poltroon, compared to Jeff Davis would be like comparing Judas to Jesus. But I beg pardon of Judas for even mentioning him in comparison with this man Vincent.

This bloody-shirt issue including Gen. Miles and me in its imprecating poison is a national question. Hence I am glad to use the national forum to set Gen. Miles, myself, and the issue squarely before the country in its true light, and at the same time uncover the perfidious pelf dealers who raise the bloody shirt to conceal their nefarious designs. I never saw Gen. Miles or Jeff Davis. I only know them in history, as I know many others of that war period.

Mr. Speaker, I, like my Savior, let the dead past bury its dead, and with a glorious hope for the destiny of this Republic,

look forward to grand achievements in its name.

Twenty-five years ago, one Sunday morning in May, on the battle field of Corinth, in whose trenches lay the unmarked bones of my oldest brother, who went down in that carnage wearing the gray, with uncovered head, in deepest melancholy, I called upon God to witness the rectitude of my conduct while I stood-in my mind's eye-on the south side of a dead brother's bones, strewed flowers over the clay that covered them, and reaching out my right hand, shook hands in American fellowship with the soldier who wore the blue, and thanked God that Abraham Lincoln had lived and that chattel slavery had been

abolished in this Republic forever.

And there in my solitude I meditated over what the war had cost me and mine. I called to mind that my father and oldest brother, five uncles on my father's side and three uncles on my mother's side all wore the gray; and that three of those on the field answered the last roll call amid carnage, bullets, bayonets, and blood, making a pillow of their knapsack, went to sleep in eternity. I thought of the fact that all on earth my father had in earthly possessions was in black chattel slaves, and went down in the emancipation proclamation. And left homeless and destitute at the close of the war, my mother, a consumptive invalid, died soon after, leaving seven living children, of whom I was next to the oldest boy. Without a home, without an education, we set about to battle our way through the world, my brother and I being the principal breadwinners for the family. I thought of the fact that I had been deprived of a collegiate and even a commonschool education, and although just previously admitted to practice law in the supreme court of my State, the most of whatever education I had was acquired by burning a midnight lamp and by pine-knot fires in an humble home.

And yet, in the Americanism of my heart, I said to myself that the preservation of this Union and the hope it held out for human freedom was worth all the sacrifices that had been made. And then and there, without abating one jot or tittle of love and admiration for the boys in gray and their chieftains of my southland, I dedicated myself with whatever powers of mind and body I possessed to the perpetuation of this Republic as an "indissoluble Union of indestructible States," confederated under a Constitution binding them in mutual cooperation to stand for the glory of God and the grandeur of men, as made manifest in the Declaration of American Independence that gave And then and there I pledged my life to help free this land from the corporation combines and the greedy monopolies that were then forming and feasting upon the toil of the farmers and helpless labor with as heartless cruelty and as merciless avidity as ever the slaveholder did with the slaves, and rapidly concentrating the wealth of our country into a few great corporations. I also pledged my life to the utter extermination of that legalized infamy known as the liquor traffic, which had become a great Government monopoly and was feasting upon human depravity, growing rich upon the wreck of happy homes, and building palaces out of the tears and tribula-

tion of innocent women and children.

As to whether I have fulfilled that promise, I leave the historian to tell. But I beg pardon for pointing to the fact that since that time I have helped in four States in this Union, in which we drove the liquor traffic from its legal intrenchments; helped in 120 counties in Texas, in which the liquor traffic has been legally exiled; that in the defense of progressive democracy, with all its best known and sacred principles, I have repeatedly canvassed most of the States of this Union. Sacrificing many opportunities to make money and acquire wealth, I have given the best years of my life to the cause of the plain people, of democracy and prohibition, asking and expecting but little; and the only recompense of value to which I can point is the heart blossoms of gratitude in many thousand homes that have been made sober, peaceful, and happy by my labors.

And now this man Vincent, supposed to be the agent, emis-

sary, and secret-service sleuth of combined conscienceless busiturns loose on me with a tirade so malevolent, so vicious, so full of unscrupulous venom that I can not maintain my selfrespect and remain silent under his vindictive anathemas.

The Houston Post and Chronicle have slandered me with unabating malice for years, and this last exudation of putrid filth is nothing new. Out of its total disregard for Democracy and clean government, five years ago the Post threatened vehemently and vigorously to secede from Texas in defense of the villainous liquor traffic and make a whisky State out of south Texas. A paper that is so depraved as that may be expected to do anything to support dishonor, uphold vice, slander virtue, traduce

honesty, and extol falsehood and villainy. For years it has taken every opportunity to slander, traduce, and vilify me, and this fresh onslaught is only another overflow of its gall and

Every honest man that stands for decency, honor, virtue, clean politics, and sober homes will find the Houston Post, Houston Chronicle, and papers of their ilk ready to turn over whole pages to men who want to castigate, calumniate, abuse, and

Not content with slinging the bloody shirt and slime all over Gen. Miles and me, these miserable cankerworms on the body politic challenge and calumniate my Democracy. The Houston Post has been the devil's defender and the speaking tube for the

liquor traffic for years.

I am now 62 years of age; my life has been subject to the common frailties of humanity, and I shall not offer myself a bright example for Democracy or religion, but I resent, refute, deny, and defy every charge that these character assassins deny, and dery every charge that these character assassins make in their venomous attack. Friends of the liquor traffic and big business have slandered me for years and this scurrilous attack is part of their program; but I have, inspired by the love of God and home, gone on helping to exterminate the traffic, and all the combined powers of Morgan and the traffic can not stop me while I live. With me on these questions there is no truce and no treaty.

The coward may cringe and the timid may be terrified by vindictive assault. It is different with me. I can stand up with St. Paul and join in that glorious spirit he had when he

Though beaten with many stripes and twice put in prison he counted it all honor to suffer for a cause so righteous.

They may hush my voice in the chambers of death, And take from my veins the crimson blood, But as long as these lungs can inhale breath I'll stand in the battle where I've always stood—
A battle for the weak against the strong, A battle for the right against the wrong, A battle for the poor and plundered masses, Against the plundering arrogant classes, And the slanderous tongues of scornful men Shall have no terrors for me.
I'll stand in the fray where I've always been No matter what results may be.

A United States Senator from a historic southern State, a man famous for his real democracy, who has been governor as well as United States Senator, told me since I have been in Washington that the sublimest set of Democratic principles ever written in a national platform was the Populist platform of the Omaha National Convention. Ex-Congressman, Ignatius Donomana National Convention. Ex-Congressman, agnatus Poin-nelly, of Minnesota; ex-Senator Tom Patterson, of Colorado; and Cyclone Davis, of Texas, wrote practically every word of that platform. Donnelly and I spent nearly one whole night in its preparation before the convention convened. These principles first appearing in the platform of the National Farmers' Alliance adopted at Ocala, Fla., were indorsed later at a national conference of the grange, the alliance, and the Knights of Labor at Cincinnati. They were then enlarged and amplified as the basic principles of the Populist movement at Omaha and as the basic principles of the Populist movement at Ghana and received 2,000,000 votes in that election. They made up the cardinal principles of the Bryan platform of 1896, in which they rent in twain the Democratic Party, putting Bryan at the head of the great reform movement.

In 1912 they had found such lodgment in the hearts of Americans that Roosevelt took up a large portion of them and literally tore asunder the Republican Party. And the whole world now knows that upon these issues Woodrow Wilson was elected. And if loyalty to these grand principles makes a man a Democrat, my Democracy has been unswerving for 25 years, for beginning with the Ocala platform, under that noble patriot of North Carolina, Leonidas Polk, as president of the National Alliance, I took part in all the struggles that finally led up to the election of Wilson. And in the Wilson campaign I volunteered my service and campaigned nine States in his interest.

When I saw those pages of slime and slander against Gen. Miles and me, I bathed my soul in prayer, and knew that when I had to take such slanderous abuse I was only paying the price that every man must pay who fights Morgan and his invisible government and that organized legalized demon known as the liquor traffic.

"A tree is known by its fruit," and I point to a thousand battles and a thousand victories won in defense of patriotism, prohibition, and progressive Democracy, as apples of joy growing on my tree. These principles have become the shibboleth and battle cry of millions of freemen, enshrined in the hearts of our country's noblest men, and this nondescript, this Hessian has columns in the Houston Post in defamation of my name and of Gen. Miles, simply because we refuse to run raving mad in this war craze, and turn the country over to Morgan and his war traffickers.

When I read those infamous assaults my heart grew sick over the wanton depravity of the men that wrote them and the papers that published them, but remembering that God has said that the man who conquers himself is far greater than a man who conquers a city, I am trying to smile at the iniquity of their recurstion and pray for those who despitefully use me.

accusation and pray for those who despitefully use me.

All these years I have stood for the income tax, election of United States Senators by direct vote of the people, the initiative, referendum, and recall, a liberal farm-loan rural credit system, and all of those grand principles which mark our greatest patriots. I had more than 500 debates in their defense. For them my voice has rung out in almost every county seat from Chicago to the Pacific Ocean and from the Ohio River to the Gulf. I have been trusted and honored by their friends for 20 years, and never yet lost my lance, lowered my shield, or faltered in the face of an enemy. I have been called often by telegram to all parts of the Union by the best men that ever lived, trusted by them to lead the conflict in more than 500 joint debates, one of the chosen men sent throughout the United States to bear the toil, endure the pain, face the frowns of sordid, selfish greed in their defense; spent my own money to attend more than a hundred conventions and conferences throughout the Union to promote their adoption.

And now this ribald ruffian finds bloody-shirt sheets in Texas, where he ventilates his venom in defense of those gluttonous,

greedy concerns that want me destroyed.

All this clamor and calumniating abuse of me found in the pages of Morgan's minions and mouth organs, like the Houston Post and the Houston Chronicle, is nothing new or strange. They spread slime and slander over every man that stands for

honest, clean government and the plain people.

When I came to Congress, if I had lined up with Morgan and his war traffickers to load the common people with billions of taxes fed into the greedy maw of the Steel Trust, if I had been willing to prostitute myself to the base service of Morgan and his melon cutters and got behind the curtains and played soft and sweet with them and helped them in their mysterious and invisible government rob the people and fix up a great military machine to stifle the cry of the oppressed and perpetuate the sway of Morgan and his plundering minions, I might have abused Jeff Davis in the vilest terms, and yet the Houston Post and Houston Chronicle would have now been extolling me as a great and worthy patriot and statesman. But I thank the God who gives me the light to see the right that He also gives me the courage to perform. The only way I could expect to win their praise would be to abase myself to the infamous service of organized greed and organized infamy. This I refuse to do. If they can find some spineless specimen of humanity who will come under their wing and be their puppet, you will see them singing his praise and working for him to take the place I hold.

Mr. Speaker, there are a lot of venal character assassins who operate daily papers to serve the sordid selfish interests by a continuous attack upon Members of Congress and public men who refuse to betray the people and assist in their spoliation. The Houston Post stands at the head of this generation of vipers in Texas. But I thank God there is one paper in the United States that tells the truth about Congressmen and in which they give the people the truth untarnished and in which they can expose the people's enemies.

I now give the Houston Post notice that I will serve God and humanity by exposing the venom of its villainous attacks in the Congressional Record, a paper that does not belong to the "subsidized press," but belongs to the people and speaks the

truth as their sworn Representatives see it.

It is a sad commentary on the hope, heart, and prospects of this Republic to think that 50 years after the Civil War a southern boy, born a slave holder, and who lost all on earth he had in the emancipation proclamation, began life at the close of that war a motherless orphan, can not refer to Gen. Miles as a patriotic man without being castigated, maligned, and abused by these vile papers. There may be another reason for their malignant shafts thrown at me. Their pretended love and devotion to Jeff Davis and the southern cause may be only a hypocritical cant with which they seek to shield their infamy while they protect organized greed, organized lechery and lust and the brutal trusts and combines that are preying upon the innocent people.

Congress has been considering the question of what should be done with some sixty-five millions of cotton taxes that were unlawfully collected from southern people during the war and reconstruction period. And, sir, speaking for myself, I want to rise above the prejudices and passions of the past and pray God that I may live to see the day, and that I may help to

write the law that will carry this money back to the country from whence it was unlawfully taken. The Supreme Court of the United States has decided that this money was unlawfully taken, and hence this Republic has no right, either in law or justice, to refuse to honestly and fairly return it to the people. And to assume that this Republic is under no obligations to return this fund, because some of the persons from whom it was unlawfully taken were disloyal to the Union, is to set up the astounding doctrine that this great Republic is under no obligation to do justice; for, if the money was unlawfully taken, it is immaterial in any court on earth whether it was taken from saints or sinners, the taker himself has no right to the property unlawfully and wrongfully taken. To assume otherwise is to undermine the very foundations of all law and of civilization itself; and cold must be the heart and callous the conscience of the man on either side of that great struggle who, 50 years after its close, would ignore and scorn down the righteous demands of

There may be another motive behind all this bloody shirt, spite, spleen, and vindictive acrimony against Gen. Miles and myself. The depraved designs of the war traffickers may be to stand guard around the Treasury and allow no claim, however just, to take \$65,000,000 out of the Treasury. The Steel Trust, the Powder Trust, the Armor-Plate Trust, the "war traffickers," and the munition makers are longing to get their clutches on that \$65,000,000.

It may be, sir, that some secret power and pipe lines connect these institutions with such papers as the Houston Post and the Houston Chronicle to bring down their venom and condemnation on men like myself who refuse to surrender to these

munition plunderers and war traffickers.

Soon after the opening of this session, Congressman Tillman, of Arkansas, a man like myself, who has grown up since the war, feeling that the highest elements of national honor is to do justice, introduced a bill to pay this sixty-odd millions of dollars back to the South by pensioning the old Confederate soldier. And if the Texas papers that have been maligning and abusing Gen. Miles and me had been half as anxious to serve the old gray-coat soldiers as they were to raise the bloody shirt and serve Morgan and war traffickers, they could have joined in a general patriotic appeal in the name of a reunited country to help Mr. Tillman, myself, and others who have labored day by day to advance this measure.

But, sir, in the maddened rage of the war frenzy, now clamoring for all the money there is in the Treasury to be handed out to the Steel Trust and war traffickers, many papers brand almost every honest appropriation of public funds for the general purposes of government as "pork-barrel" legislation, while they yell in remorseless greed for a whole pork hogshead of funds to be handed out to Morgan and his meion cutters.

And in this pell-mell of perfidy that is now running rampant I fear the old, maimed, battle-scarred, tax-ridden, corporationrobbed veterans of the gray will be shoved aside. But, sir, if I
could have my way I would pass some just measure to dispose of
this fund toward a reunited, rehabilitated Union. I would like
to set out at least \$250,000 of that fund to pay the expenses of a
grand national union of the blue and the gray here in the
Nation's Capital, with fitting ceremonies, mementoes, and mottoes. Then pass a law providing the larger part of this fund be
appropriated for pensions to the old southern soldier. And in so
doing we could show to the world a great example of patriotism,
chivalry, and poetic justice.

The old soldier of the North, the veteran of the blue, would be on the pension roll from the general funds of the Republic as a compliment to him from the great heart and conscience of a Union he helped to preserve. The old soldier, the haggard, the worn old soldier of the South, could go home from that reunion with his heart aglow over the grandeur, the glory, the magnanimity of our Republic. This sum, which the Government unlawfully took, amid the passions of the past, it had in the calm, cool consideration that 50 years of reflection had brought about, with a generous love of justice handed back

to these sons of the South.

Mr. Speaker, scenes and realizations of this kind would be to men like myself entrancing indeed. For, whatever may have been felt and seen and heard in those cruel days of the sixties, when the fiery, impetuous chivalry of the South and the cool patriotism of the North met to make the bloodiest battle fields of history, the very valor and splendid courage of that day behooves us now to make sure a transcendent future by abating the last vestige of hate and malice and turn our face to the coming day of our Nation's grandeur. For, if we are to succeed in the future in holding our sphere and position among the peoples of the earth as the world's glorious example of self-government and democracy, we must

not nourish the hatred of the past, but cherish the friendship

and solidarity of a glorious future.

It will not be long until all the old veterans, both North and South, will hear the bugle's blast, blown by a trumpeter who stands by the golden gates of eternity. It will not be long until bent down by years they will take their last drink from the canteen of life. It will not be long until heaven's angel band will be the music of their drum corps,

And, sir, in my mind's eye I pull away the mystic curtains that hang between us and glory land and see the grand reunion of the sons of the South and boys of the blue following Grant and Lee under the archways of infinitude and entering that

joyous day in glory that knows no end.

The American Army.

EXTENSION OF REMARKS

HON. CHARLES A. LINDBERGH,

OF MINNESOTA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1916.

Mr. LINDBERGH. Mr. Speaker, as throwing a line of light on this section for promotions, section 11, I wish to use a letter which I received and to have it read into the RECORD. It is from a man who was seven years in the Regular Army, a very well read man, and a good observer as well as a student of economics. He is the author of a book upon important social problems that shows him to be a man of exceptional ability and unques-tioned integrity. I mention those facts merely to give the weight to what he states in his letter that it should have.

The letter is as follows:

BATTLE LAKE, MINN., February 15, 1916.

Hon, CHARLES A. LINDBERGH, Washington, D. C.

DEAR SIR: Every young man who enlists in the Army and applies himself to his duties in the proper spirit can feel reasonably sure of promotion. This is a statement which some no doubt will dispute, but, nevertheless, I believe I am right in the assertion. There is nothing the matter with the opportunities, but the system of promotion is absolutely

himself to his duties in the proper spirit can feel reasonably sure of promotion. This is a statement which some no doubt will dispute, but, nevertheless, I believe I am right in the assertion. There is nothing the matter with the opportunities, but the system of promotion is absolutely wrong and unjust.

A large number of the commissioned officers have worked their way up to a commission from the ranks, and it seems though as those officers have a very successful "knack" of handling men; in other words, they know the "ropes" from the bottom up.

The American Army is, I believe, the only army worth the name which permits the men from the ranks to gain the coveted shoulder straps. The examination for a commission is open to all enlisted men who have not less than two years' service to their credit and are under 30 years of age. During my entire service I have never yet heard of a single case where an enlisted man desiring to go up for a commission was not given every opportunity to do so. Officers, as a rule, do all they can in encouraging the men in gaining knowledge, and thus promotion. It is safe to say that the private libraries of officers are at the disposal of enlisted men who are in earnest. The reason why more men do not try to get a commission than there is, is undoubtedly due to lack of enterprise or simply lack of nerve. There is no doubt, but that a commission is worth going after, when it is considered that a second lieutenant's pay is \$1,700 per year. In addition, he is allowed quarters, light, and fuel, making the position worth at least \$2,000 per year to start with. After 5 years' service officers get 10 per cent increase. A second lieutenant's pay will then be \$1,870. After 10 years' service 20 per cent, and after 15 years' service 30 per cent increase. A second lieutenant's pay will then be \$1,870. After 10 years' service 20 per cent, and after 15 years' service 30 per cent increase. An officer should then have reached the rank of capitain, and his pay would be \$3,120 per year, besides the al

In the "line" promotion is not obtained by competitive examination, as for a commission or a noncommissioned staff position, but by appointment. The captain usually "picks" out one of the sergeants for a first sergeant, the same way with the company quartermaster sergeant and mess sergeant. From the ranks of privates men are "picked" out and usually recommended by the first sergeant for corporals and sergeants.

and usually recommended by the first sergeant for corporals and sergeants.

All the noncommissioned officers of "line" hold their warrants "at the pleasure of the commanding officer." There is a constant "picking" and "recommending" "that" man or "this" man for promotion, absolutely no merit system in force whatever. Consequently favoritism plays a great rôle in the matter of promotion, and some men fairly fail over themselves in trying to get "a stand in with the captain" or with some one who they "think" has a stand in with him. The present system of promotion naturally results in the formation of "cliques" among the men, reminding one very much of machine politics on a small scale. No one feels sure of his position, because the warrant continues "at the pleasure of the commanding officer." A great deal of injustice is also the result of this peculiar behind-the-times system, some men can break the rules and it is overlooked, while if somebody else does the same thing, he is punished severely. A noncommissioned officer may be perfectly fair and impartial, but in the execution of his duty he may be obliged to reprimand some one, this "some one" may be the "friend" of somebody higher up, and in nine cases out of ten there is "trouble" ahead.

I have in mind the case of Sergeant F, of Company —, Coast Artillery Corps. Sergeant F had been a sergeant for 15 years and was considered an excellent noncommissioned officer. In some way or other he found himself in disfavor with some of the other noncommissioned officers of his company. A program of systematical "knocking" was instituted against him. In due time the captain was "influenced" and Sergeant F was reduced to a private for "inefficiency" without even the formality of a court-martial, simply at "the pleasure of his commanding officer."

Corporal G was a very efficient noncommissioned officer in the company of which he was a member; he permitted no "back talk" and was a stern disciplinarian coupled with justice. "Knocking" had no

instituted against him. In due time the captain was "influenced" and Sergeant F was reduced to a private for "inefficiency" without even the formality of a court-martial, simply at "the pleasure of his commanding officer."

Corporal G was a very efficient noncommissioned officer in the company of which he was a member; be permitted no "back talk" and was a stern disciplinarian coupled with justice. "Knocking" had no influence whatever with his company commander, who intended to promote him at the first opportunity. He had enemies of higher rank who did not "like" him, and a "frame up" regarding Corporal G's moral character was launched Corporal G had 19 years service to his credit, was a veteran of the Spanish and Philippine campaigns, during which time his alleged immorality had not been discovered. The result of the "frame up" was that Corporal G bought out of the service. Under the present system of promotion a man may be a noncommissioned officer for years in the same organization, but if he should want to serve in some other company he can not do so and retain his rank, he must start in as a private and take his chances for promotion. The result of this very unjust system is that in every organization in the line there can be found oil soldiers, veterans of wars, who perhaps have been noncommissioned officers for years, under the authority of noncommissioned officers barding, maybe, only a year's service to their credit, and the result of this sort of injustice is dissatisfaction and numerous cases of insubordination.

In the year's service to the credit, and the result of this sort of injustice is dissatisfaction and numerous cases of insubordination.

In the year's service to their credit, and the result of this sort of injustice is dissatisfaction and numerous cases of insubordination.

This principle is recognized in the case of commissioned officers. Officers are given very little authority over men until they reach the rank of captain, which usually takes about 10 years. Sometimes a second and first

themselves, but will usually "influence" some innocent fool to do the "testing."

I have in mind a case to which I was a party to myself. I had for some time before I was "picked" for promotion to corporal earned the enmity and jealousy of some of my associates because of the fact that I happened to be, as far as I know, the only enlisted man who ever wrote and published a book white serving in the Army. To make matters worse, I was "made."

Private C, a young, good-natured boy, with whom I heretofore always had had the best of dealings, one day undertook to curse me out. I told him to stop, but he grew more abusive. It was a plain case of insubordination. I had nothing against the man personally; I rather liked him.

insubordination. I had nothing against the man personally; I rather liked him.

Private C was a possessor of a certificate of merit, and I hesitated a long time before I finally placed him under arrest. At the same time I knew that he was influenced by the "agitators," but it seemed to be the only course open, and, as a consequence, Private C was given a fine of \$15 and 30 days' confinement. Needless to say Private C was considered as a "martyr" among the element that did not "like" me. For example: Two young men who had grown up together decided to enlist in the Army and are assigned to the same company, which very often happens. One is picked for promotion, the other one is

not; naturally the one who is promoted is not going to be as strict with his friend as he is with the rest. It would not be human nature for him to be impartial.

Mr. Charles Johnson Post, in Harper's Weekly, in his articles, "The Honor of the Army," writes up cases of severe punishment meted out to enlisted men by courts-martial for offenses which, on the surface, appear insignificant. I admit that the punishments in most cases are too severe; for that matter the method of punishment should be changed altogether, a subject which I will endeavor to deal with later. But Mr. Post does not know the "inside" story, and it is safe to bet that in each case which he cites there was one. Perhaps the offender had for months been engaged in stirring up dissatisfaction among his fellow soldiers or felt slighted because somebody else had been promoted over him, etc. It is safe to assume that the latter reason is the "inside" story in cases where Mr. Post cites the acts of "hysterical corporals and sergeants."

It is my personal belief, backed by actual observation, that a great many cases of insubordination and disobedience of orders, with its trail of courts-martial, fines, and guardhouse sentences, is really due to the prevalent peculiar system of promotion "at the pleasure of the commanding officer."

I have observed that old noncommissioned officers, who have years of service and experience, have very little, if any, trouble with the men, and when an "old soldier" joins the company his promotion is taken as a matter of course.

RECOMMENDATIONS FOR PROMOTION.

RECOMMENDATIONS FOR PROMOTION.

I recommend that the present system of promotion by appointment in the "line" of the Army be abolished, and a system of competitive examination be introduced in its stead, as follows: Any private who has served in the Army not less than two years shall be eligible to be promoted to the grade of corporal upon his qualifying for the position. He must be of good moral character, his general fitness for promotion to be determined by a board of officers and noncommissioned officers. Upon the successful passing of the preliminary examination he shall then be required to attend a noncommissioned officers' school for six months; upon graduation he shall then be sent to fill a vacancy wherever it may occur, except in the company where he came from. To do away with reducing to the ranks at some one's pleasure, a noncommissioned officer should be tried for offenses before a regular constituted court, who shall inflict such punishment as may be necessary, including dismissal from the service.

Noncommissioned officers' schools could be established in most any Army post, with officers detailed as instructors. To fill vacancies for sergeants, corporals should be required to pass an examination in the same manner as a lieutenant now has to pass an examination for captain.

It is evident that if promotion in the "line" was made according to a merit system it would not be long before the Army would be in possession of an efficient, well-educated corps of noncommissioned officers, and I believe that the number of them could be reduced 25 per cent and their pay added to the remaining 75 per cent, which would make the position more lucrative and worth keeping. Corporals should be paid \$30, sergeants \$45, and first sergeants \$60 per month. With the establishment of a merit system of promotion, instead of the present "hit-or-miss" nuisance, vacancies for commissioned officers, reserving West Point graduates, with their higher technical education, for the higher commands.

Respectfully,

Carl E. Swanss

I have three other letters from Mr. Swansson, one particularly relating to the rations of the soldiers in the Army. He having been an officer dealing with the commissary department, his ideas are worth consideration. He states in one of his letters that if 10 cents a day additional would be allowed the soldiers for their rations that the service would have all the recruits they could take.

Postal Service.

EXTENSION OF REMARKS

HON. JOHN JACOB ROGERS, OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1916.

Mr. ROGERS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a statement by my colleague [Mr. Tinkham] with reference to House bill 12407, to place certain positions in the Postal Service in the competitive classified service:

The statement is as follows:

STATEMENT BY MR. TINKHAM.

The bill to place the first, second, and third class postmasters in the classified Federal civil service is merely the natural and logical extension and application of the sound business standards of the civil service to the higher offices in the Post Office Department. The postponement to this late day of this natural evolution of the principles of civil service to those positions has been too long deferred with loss both to the service and to the finances of this great department of the people's business, and is without justifiable reason.

The first, second, and third class postmasters have executive charge of the larger post offices of the United States. postmasters have nothing to do with the determination of Government policies. They are subordinates of the Postmaster General, and are no more than administrative officials in charge of the business management of their respective offices. discretion even in details is not large. Their business is not partisan in any part or particular; no more partisan than the business of the postal clerk or letter carrier. It is completely nonpartisan in its entire character, and in its every aspect.

It is an anomaly and an anachronism in the Federal civilservice law that first, second, and third class postmasters of the United States should be removed as a matter of course every time there is a change in the national administration, and that these places should be disposed of as partisan spoils. There is no sound or defensible reason why these positions should be filled by political hirelings to pay political debts. These appointments should not be political patronage, and that the spoils principle maintains in these positions is a denial that the merit system should apply in the more important adminis-trative offices of the Federal Government, and vitiates at the head in the Post Office Department the very principles, standards, and practices of honest civil-service reform.

On January 1, 1916, the number of first-class postmasters was 503, with aggregate salaries of \$1,897,100; the number of second-class postmasters was 2,139, with aggregate salaries of \$5,057,700; and the number of third-class postmasters was 6,479, with aggregate salaries of \$9,030,200; a total of 9,121 a total of 9,121 postmasters with aggregate salaries of \$15,985,000. These posttions and these salaries should no longer be apportioned by the political boss, and disposed of for the political exigencies of any partisan Federal administration-Republican or Demo-

cratic.

The Post Office Department is the largest business unit and department of the peoples' government in the United States, and the principles of the civil service, namely, competitive merit and personal efficiency, and not political influence and personal favor, should apply to every office in this great American public business institution. This department comes in contact with more people than any other department of our national civil administration, and any deficiencies in its administration are more broadly diffused than those of any other Government service. Government service.

On September 30, 1915, there were employed in the Post Office Department 296,879 persons, nearly all of whom were under the beneficent provisions of the Federal civil-service law.

The Post Office Department receipts for the fiscal year 1915 were \$287,248,165.27, and there was expended for the main-tenance of the service \$298,546,026.42. Under the Parcel Post tenance of the service \$238,346,026.42. Under the Parcel Post Service of the Post Office Department 1,000,000,000 packages are now handled annually, and on June 30, 1915, the number of depositors in the Postal Savings Banks system was 525,414, and the amount on deposit was \$65,684,708. This is a gigantic business, and in the near future the business of this department promises an enormous increase.

To-day this greatest of the departments of our civil government is demoralized because of the irregular system of appointment of the first, second, and third class postmasters; these most important positions in the department being filled by political favorites, who are placed in charge of each set of the competitive civil servants employed in the 9,121 principal post offices of the United States. With these positions in the hands of political appointees, promotions under them can only be arranged with difficulty, dismissals are not made with an even hand, and, where it is possible, the merit basis of the civil-service law is evaded both in spirit and in letter. The result is inefficiency in the service, dissatisfaction among the civil-service employees, and extravagance in expenditures, and thus the public is robbed in part of a vital service which should be the most proficient and scientific, the best and most complete.

To secure a body of able and competent civil servants a system should allow an employee to look forward to a life of increasing activity and a career as broad as the service to which he is to devote his life. There should be no arbitrary limit barring him from looking forward to the higher places of his particular branch of the service. The present system of appointment to the first, second, and third class postmasterships places this arbitrary limit upon faithful and competent employees of the

As plain American business reform demands experts more and more rather than amateurs, so the people's business demands better trained and more skillful men. The larger and more intricate the scope of public business becomes the more and more reliance must be placed by the Central Government in Washington upon reports and investigations; so, consequently, the more and more should the delegated head of a local department be skillful and of the best ability.

By applying the merit system to the first, second, and third class postmasters it would be possible to fill many of the postmasterships from the clerical and carrier forces in the post offices and the rest by the promotion of a postmaster from a smaller to a larger office on a basis of efficiency and under a

system of competitive examination.

Postmasters of the first, second, and third classes should be able to conduct large business affairs and by experience be familiar with the character of postal work. The Post Office Department could not do the business it is now doing, nor could it do it with any degree of its present efficiency, if most of the employees were not selected under the merit system or unless demonstrated ability was the principal test of employment and

promotion.

The original reason for the application of the civil-service law—the merit system—to public employment was to take away patronage from the party boss, to bring back to the people the control of their representatives, and to check the demoralization that always follows an irregular system of appointment in the public service. To-day the purpose of the civil-service law is to improve government and, by the application of the principles of efficient business management, produce the best Government results and maintain a permanent and well-ordered control of the great problem of public employment.

To-day the merit system as applied to Government employ-

ment is as positive a policy and as constructive as the policy of the conservation of natural resources. It should be as definite and as complete in its aim and application and as important

in the national program.

On April 4, 1912, President Taft, in connection with the work of his economy and efficiency commission, said:

of his economy and efficiency commission, said:

In my message submitted to the Congress on January 17, I referred to the loss occasioned to the Government because of the fact that in many cases two persons are paid for doing work that could easily be done by one. In the meantime I have caused an inquiry to be made as to the amount in money of this loss. The results of this inquiry are that the loss amounts to at least \$10,000,000 annually. For example it appears that a very substantial economy would result from putting experienced and trained officers in charge of first and second class post offices instead of selecting the postmasters in accordance with the present practice. As the annual operating expenses of the first and second class offices aggregate the enormous sum of more than \$80,000,000, undoubtedly if the postmasters of these offices were embraced in the classified service, and required to devote all of their time to the public service, the annual savings would eventually represent many millions of dollars. The savings in salaries alone, not taking into account any saving due to increased efficiency of operation, would amount to about \$4,500,000. At the present time the salaries of postmasters of the first and second class amount to \$6,076,900 while the salaries of assistant postmasters of the same classes amount to \$2,520,000. If the position of postmasters were placed in the classified service, and those officers were given salaries equal to 20 per cent more than the salaries now given to the assistant postmasters at the latter position being no longer required, there would be a saving in salaries of the third class a large annual saving could be made.

The bill to place the first, second, and third class postmasters

The bill to place the first, second, and third class postmasters in the classified Federal civil service, if made law, will substi-tute in the great Post Office Department nonpartisanship for partisanship, demonstrated efficiency for demonstrated inefficiency, and competitive reward of merit and skill for political influence and party advantage.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND. OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1916.

Mr. BORLAND. Mr. Speaker, when I proposed an amendment to the effect that clerks in the Government offices in Washington be required to work a full day of eight hours, like civil-service employees elsewhere throughout the United States, it seemed to me a very simple and businesslike proposal-one which any honest business man would adopt in the management of his own business.

It aroused, however, a perfect frenzy of criticism in Washington. I was flooded with abuse, ranging all the way from sanctimonious sermons of preachers to the anonymous filth of blackguards. As I never permit personal feelings to enter into the performance of public duties, I have refused to reply to personal attacks. Whether I am a good man or a bad man has The question is nothing to do with the merits of the case.

whether an abuse exists in the city of Washington that is costing the American people a tax burden of \$5,000,000. It is remarkable that no attempt is made to dispute the facts I have

Outside of Washington there is practically but one opinion on this abuse, and that is that it is indefensible and should be corrected.

One organization in Washington, however, went so far as to transmit its resolution of criticism to the House of Representatives, and thereby brought itself to the bar of public opinion of the Nation.

In order that there may be no mistake as to what I really said in my letters to my fellow Congressmen, I set forth herewith, first, the resolution of criticism, and second the letters complained of:

Offinance of:

1916, circulated among his colleagues three communications the tenor
of which seriously reflects upon the citizenship of the District of
Columbia; and
Whereas the Piney Branch Citizens' Association is firmly of the opinion
that the sentiments expressed in said communications do not reflect
the views of Members of Congress generally, in whose sense of fairness we have faith: Therefore be it

ness we have faith: Therefore be it

Resolved, That this association earnestly and emphatically protests against the undignified language employed in said communications, and against the aspersions and reflections thereby cast upon the citizenship of the District of Columbia; and be it further

Resolved, That this association regrets that a Representative honored by the citizenship of this great Nation should consider it necessary to forget to such an extent the dignity and fairness which should characterize the actions of a Member of Congress; and be it further

Resolved, That a copy of these resolutions be furnished to the Speaker of the House of Representatives and Mr. Borland.

[From the Washington Star, Mar. 11, 1916.]

LETTERS ASK VOTE FOR BORLAND RIDER—AUTHOR OF UNCOMPENSATED HOUR OF WORK FOR CLERKS WRITES TO COLLEAGUES—ALSO FREELY CIRCULATES CARDS BEARING SARCASM—CARRY WOEDS "EIGHT HOURS A DAY FOR MAN WHO WORKS; SEVEN HOURS FOR GOVERNMENT CLERKS."

HERE IS THE PRIZE LETTER.

HERE IS THE PRIZE LETTER.

DEAR COLLEAGUE: The statement that salaries in the Government service in Washington have not been changed for 56 years is false. Every appropriation bill carries a number of increases and promotions, and the work is constantly readjusted.

The statement that salaries are adjusted on a seven-hour day is false. Clerks are paid for a full day.

The clerks have 30 days' vacation, 30 days' sick leave, and all the holidays; they work 238½ days out of the year, or an average of less than 20 days a month. This is equivalent to only 208½ full days of 8 hours, or 17½ days a month.

Civil-service employees outside of Washington work eight hours and only have 15 days' vacation, and many of them work Sundays and holidays.

There are 476,366 civil-service employees in the United States. Thirty-four thousand four hundred and thirty are in Washington and are treated as a privileged class. Thus 7 per cent of the Government employees do all the bellyaching; the other 93 per cent work and ask no favors.

The merchants and landlords of Washington are for more Government clerks, extravagance, and inefficiency.

The American taxpayer is for an "honest day's work for an honest

Are you for the financial interests of Washington or for the taxpayers of the Union?

Very truly, yours,

William P. Borland.

The second letter:

CALLS CLERKS LEISURE CLASS.

CALLS CLERKS LEISURE CLASS.

Dear Colleague: If we spend without adequate return four or five million dollars of the people's funds primarily for the departmental clerks, but ultimately and really for the benefit of the mercantile interests of Washington, where are we to get the money? It must be laid upon the American people as a tax burden in some form. We are not spending money we have already raised—that would be wrong enough—but we must honestly and wisely face the problem of raising money for vital national expenses. Only a demagogue will vote for appropriations and refuse to vote for taxes. Can we justify laying a tax upon the farmers, business men, and wage earners of the country to pay for the privilege of having a leisure class in Washington?

Whose rights are paramount—those of the man who supports the Government or the man who is supported by it?

Does the farmer work seven hours a day?

Does the wage earner work seven hours a day?

Does the merchant work seven hours a day?

Let's give the American taxpayer a square deal; heaven knows he needs it.

Very truly, yours,

The third letter:

WHY DO MERCHANTS OPPOSE IT?

WHY DO MERCHANTS OPPOSE IT?

DEAR COLLEAGUE: If the eight-hour law for Government clerks will not save money for the Government why are the merchants and landlords of Washington opposing it? They know that it will cut at least \$4,000,000 a year off Uncle Sam's pay ro'l.

All the money the clerks get finds its way into the pockets of the merchants and landlords. They pick the bones of the clerks clean. Are they friends of labor? Are they against an eight-hour day on high moral grounds? Why don't they give a seven-hour day to their own employees? Why did they oppose so bitterly an eight-hour day for woman wage workers in Washington? Ask these department-store keepers who now want your vote.

The land speculator, too, wants your vote. If the Government hires more clerks than it needs in order to work them less than a full busi-

ness day, our real estate friend can sell them houses on the installment plan. The merchants and farmers back home pay the salaries that buy these houses.

Also it takes more office space for a large number of clerks working seven hours than for a smaller number working eight hours. Much of this space must be rented from private owners. The Government pays \$36,000 a year for the quarters now occupied by the Attorney General. In all it pays out about \$700,000 a year in rent in Washington. All of the saving in space will reduce this item.

The financial and mercantile interests of Washington have bullied and villified Congress. They call us salary grabbers, mileage grafters, pork-barrel thieves. If we are bullied into voting for this hogshead of pork for them are we not all that they say we are?

Very truly, yours,

WILLIAM P. BORLAND.

Preparedness.

EXTENSION OF REMARKS

HON. DUDLEY DOOLITTLE,

OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1916.

Mr. DOOLITTLE. Mr. Speaker, under the general leave to print, I desire to insert in the Record a grand and patriotic letter received by me from one of my farmer constituents. gardless of what differences of opinion there may be in this House and in the country on the question of "preparedness," I submit the following as indicating the spirit of a true patriot:

RURAL FREE DELIVERY No. 2, Americus, Kans.

Hon. Dudley Doolittle, Washington, D. C.

Hon. Dudley Doolitle, Washington, D. C.

Dear Sir: In writing you for agricultural bulletins, list inclosed, I want to say also that I am for Wilson's brand of preparedness for five special reasons, and they are five sturdy boys who call me daddy. Young jayhawkers, every one of them, but men by and by, and with enough patriotic blood in their veins, I am sure, to spring to their country's call when needed. Give them a fighting chance with guns, ammunition, equipment, that if they must lay down their lives the enemy will have paid the cost in advance.

Friend Doolltrike, keep standing by Wilson; get a brace with your feet against the rock of his policies and let your back aid him in bearing his crushing load. And us hayseed farmers want your rural-credit bill. Keep boosting along that line.

Respectfully submitted.

STEVE BURCH.

WILLIAM P. BORLAND.

I have not inserted this letter in the RECORD, Mr. Speaker, without having asked and received Mr. Burch's permission to make it public, and, excepting a personal remark concerning myself, which I have eliminated from the letter printed, the foregoing is an exact copy of the original in all particulars.

Patriotism and National Preparedness.

EXTENSION OF REMARKS

HON. M. E. BURKE,

OF WISCONSIN, IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1916.

Mr. BURKE. Mr. Speaker, under unanimous consent granted me to extend my remarks in the RECORD, I insert an address by Hon. Willet M. Spooner, an attorney of Milwaukee, Wis., before the Congress of the National Security League, at Washington, D. C., January 20, 1916.

The address is as follows:

REMARKS OF WILLET M. SPOONER, DELIVERED BEFORE THE CONGRESS OF THE NATIONAL SECURITY LEAGUE AT WASHINGTON, D. C., JANUARY 20,

There is a powerful sentiment in the Middle West in favor of wise and adequate preparedness for the national defense,

An adequate standing army of professional soldiers is immediately essential to proper protection, an army sufficient in size and equipment to withstand attack for such length of time as would enable the Government to recruit and prepare the real army of defense, drawn from the citizenry of the country.

Lying at the threshhold of military preparedness, so far as it relates to so-called citizen armies, is the matter of officers capable of instructing and generally preparing untrained men for active service in the field. The greater the number of patriotic men who would spring to arms at call the more difficult would be the problem of the Government, unless it had capable officers in sufficient number to drill and otherwise prepare them for modern warfare,

Whether universal obligatory military training, a continental army, or other plan be enacted into law, the fact remains that the efficiency of the force would depend absolutely upon the number and capability of the officers whose duty it would be to instruct and discipline it.

Acting merely as presiding officer to-night, it is not my function, however, to discuss the question of preparedness, and particularly because skillful and eminent men are here to deal specifically with its varied problems.

Whether it be opportune or inopportune, I want, however, to deliver this message. If ever it should become necessary to marshal armies under our flag, the men of German parentage, in the Middle West in any event, would send their full quota of men, whether that war should be with England, Russia, Japan, Germany, or any other nation under the skies.

Contrary indications, doubtless carrying a certain degree of conviction, owing to loudness of assertion, come only from a comparatively few among them. They do not reflect the senti-

ment of the masses.

The only danger-and I think the great danger-confronting the American people does not lie in the probability of war. War may come, and if it should soon come we should probably at the present time be defeated; but great peoples always have and doubtless always will survive the shock of defeat. We would survive it. With all its horrors and heartbreakings it would not be an unmixed evil if out of the ashes there should arise a united and solidified people, transfigured by a loyalty and devotion to country the like of which it is doubtful if we know to-day.

We need to prepare ourselves more thoroughly for the discharge of patriotic duty in times of peace. Without an unfaltering national spirit, preparedness in the way of material and training would be only partially effective. We can preand training would be only partially effective. We can pre-pare for war with money—we can not buy patriotism. Without the unhesitating willingness of the people to subordinate all personal and political interests to the welfare of the Nation we have no Nation-no country, in the higher sense-but merely

The "Nation," as such, has to all peoples who have accomplished the great things of life, been a personal thing—a part of the lives of the people—something to live for and to die for

in war or in peace.

They have been the guardians of its honor and integrity as they saw it, because it was their country. They have jealously safeguarded its interests and have sought to extend its power and influence. They have always been careful to protect its prestige and to save it from humiliation and distress

It is not material that sometimes the methods have been bad nor that the ends sought unconscionable and wrong. point is that these people have done these things because they regarded the honor and power and prestige of the Nation as their honor and power and prestige-collectively and individually.

It is the sense of common interest—the spirit of nationality which makes men, now and in the past, refer to their country as the "Father Land" or the "Mother Land" or in other terms of similar import. Do we not need more of that spirit in our country?

Are we willing, as individuals and as members of political parties or other organizations, to subordinate, in times of peace, the personal or party interest-to maintain the dignity and to promote the interests of the country-just because it is our country?

Events of current history to some extent answer the question. Day by day we have seen, and without apparent resentment on the part of the people, men seeking to hinder and embarrass the President of the United States in the discharge. of great and vitally important national duties. It seems to be immaterial to these men and to these parties, of whom the Nation has the right to expect other things, that their efforts to nullify, for political purposes, the efforts of the President to successfully work out in the interest of the country delicate and perplexing international problems, work manifest injury to the Nation.

If the constituted authorities of Government achieve a socalled diplomatic success for the country, greatly increasing its prestige and power, a large section of the people and press hasten to minimize its importance and to destroy the value of the result obtained so far as in them lies, merely to the end that the political influence of the administration shall not, by such success, be enhanced.

We see politicians in office and anxious to stay in, and politicians out of office and anxious to get in, offering no word of advice, making no effort and apparently Laving no desire to assist in the proper solution of great questions for the country's sake, but swift to herald to the world the story of failure, of unfortunate mistake, simply for the sake of the political ad-

vantage that may follow.

Only a few days ago there was transmitted to the United States Senate a military report from a high officer of the Government with the suggestion that part of the document contained information which should be treated as confidential, because in the hands of foreign Governments the information would be damaging to the United States.

The Senate with complete unanimity ordered the report made a confidential document, intending thereby to prevent publication at this time. Some newspaper men worked day in and day out to ascertain the nature of the confidential facts submitted, and having obtained those facts immediately proceeded to publish them to the world without the slightest regard for the interest of the Nation or the request of the department and the Senate that such information should not be published.

There is an almost countless number of instances of utter disregard for the welfare of the Nation when that welfare runs counter to personal or political profit. Assume, if any one will, that these things are in and of themselves unimportant. They lend persuasive force, however, to the suggestion that there is not among our people that spirit of loyalty and patriotism

which puts the Nation before all things.

If every one of us felt, as each one should feel, that the Nation is a part of himself and that anything that injures it injures him, acts, whether by person, party, or press inimical to the public interest, now an almost daily occurrence—although perhaps generally done without conscious intent to injure the -would end, and there would come a new order of things in the United States and we would move forward to more glorious national achievement. The very fact that things are said and done hurtful to the country without intent so to do, indicates that we need an awakening of the national conscience.

That there should be full and free criticism of public officers is undeniable, but its expression as to time and manner should be regulated, not by restrictive laws but by a solid public senti-

ment which springs only from patriotism.

It should not be forgotten that the President of the United States represents before the world the sovereignty of the United States. He occupies a far different status from that of the ministers of France, England, Germany, and other countries. We ought always to remember that in a government by the people such as ours evidence of lack of unanimity in support of the President in dealing with international affairs weakens his position and thereby inevitably the position of the country.

What is true of the present administration has been true of

practically every other.

The principle of free speech and press lies very close to the hearts of the American people. But the people, let us fondly believe, will some day curtail, when the interest of the Nation is involved, free speech and free press, not by the enactment of restrictive laws nor by the closing of newspaper offices nor by the dispersing of assemblies, but by some such swift and crushing popular condemnation that no man nor party nor paper will dare attempt in the face of such public opinion, for personal or political profit to impede and hinder the President of the United States in the discharge of his constitutional duties nor to attempt to humiliate him in the eyes of his own people and the peoples of the world-much less to speak or print facts hurtful to the country and helpful only to its enemies.

When our people feel that degree of national spirit and loyalty

then, indeed, will we have become a real Nation.

If Providence guides the destiny of our Republic, the time will surely come when, at least in times of national peril and when the President is dealing with great international problems, all men, without regard to personal prejudices or party politics, driven by a sublime spirit of patriotism, will say: "You have decided on your policy; I do not agree with it, but you are the President of my country, and I shall not, by word or deed, nor so far as in me lies will I permit any man to hinder or embarrass you in the discharge of your duty as you see it, but I shall in all ways encourage, uphold, and sustain you. You are the President of the United States; you represent the honor, the power, and the prestige of my country. My country is representative of all that is dear to me in life."

Should we not encourage the more rapid growth of such a

Should we not begin to do so now?

We can and we will prepare for our defense by adequate military equipment, but the only thing that will make this Nation enduring, that will perpetuate it through the ages, that will make it the greatest Nation of the world, is a spirit of unfaltering and uncompromising patriotism. We will have that degree of patriotism when the individual citizen can and will say from his heart, "This is my country," when he feels that spirit of nationality and gives expression to it.

The real foundation for preparedness in time of war and progress in time of peace primarily lies in the unification of our people, in the steadfast adherence to the ideals of the Republic, and in the growth of feeling among us that we have a nationality of our own; that we have builded a Nation rather than a mere shell in which an unmerged collection of races dwell.

The Military Establishment.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL. OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 23, 1916.

Mr. SIEGEL. Mr. Speaker, seeking an expression of the sentiments of the voters of my congressional district on the question of a reasonably increased Army and Navy, I wrote to 14,000 of my constituents asking for their views, and in response thereto received over 600 replies in the affirmative and but 5 in This more than justifies the attitude that I have taken that the citizens of our country desire it placed in a position where it can command the respect of the entire world.

It must be borne in mind, as stated in Collier's Weekly of

December 4, 1915, that-

Our readiness to prepare and our beginning to prepare in 1916 may prove the paramount factor in turning the world from folly to wisdom. Our attitude would then be that we with our wealth and resources could still make ourselves ready to defend our land; but should they—the European combatants—in the reaction from the horrors of war, turn their thoughts toward disarmament, we in the process of preparation would be better able to lead the world in disarmament than could any of the more or less broken nations in Europe after the war.

Some men still ask why we need an increased Army and Navy, and the answer is that it is beyond dispute that with the twentieth-century artillery, aided by large aerial squadrons, the armor-clad fleets of this age can proceed directly to any port that may be selected by the aggressor, and then bombard at will any city that is on or near the sea.

The question has been succinctly answered by Mr. George E.

Adams, who says:

Adams, who says:

Invasion does not necessarily mean the subjugation of the United States. It may mean taking hostile possession of a part of our territory on the Pacific or Atlantic coasts or on the Panama Canal and holding it to ransom by imposing a war indemnity. That this could be done by any one of several powers of the Old World, considering their present armaments and shipping and our lack of means of defense, is the opinion of the War College. How large an indemnity the invader would impose we can only guess. How much, for example, for the ransom of our Pacific coast, including the western ends of our transcontinental railways? How much for our Northern Atlantic coast, including Boston, New York, Washington, and the eastern ends of our principal railways? How much for the Panama Canal? * * * That it would be reckoned in hundreds of millions of dollars is probable. That it might be reckoned in thousands of millions is possible. To drive out the invader after he has dug himself in would cost more. To buy him off by paying the indemnity would be a loss not to be reckoned in dollars.

Is there a man who has given any study to our country's

Is there a man who has given any study to our country's history who has forgotten how, through lack of preparedness, the Capitol of the United States was burned and possession of the city of Washington taken by the British in the War of 1812? Nearly everyone agrees that if we had had an adequate Regular Army in 1861 the Civil War would have been quickly decided instead of taking four years, besides necessitating the the tremendous sacrifice in both life and property.

We have learned from what we have witnessed during the past two years that wars do usually come without the slightest premonition or notice. The Spanish-American War came upon us from a clear sky, and if the country had been properly pre-pared, not only would the conflict have been shorter but the

losses sustained would have been smaller.

Gen. Wotherspoon, in his report as Chief of Staff from April 22 to November 15, 1914, has said:

OUR RIDICULOUS OVER-SEAS GARRISONS,

OUR RIDICULOUS OVER-SEAS GARRISONS.

In looking over the strength of our garrisons in foreign possessions it becomes at once manifest that the garrisons we are maintaining there or propose to maintain there under the scheme of distribution of our Army as it exists at present are entirely inadequate to the needs of those possessions. That an effective defense against an enterprising enemy in the Philippines could be made with a dediciency of 38 per cent of the maning details of the coast defenses o. Manila and Subic Bay and with a mobile force of a little over 7,000 American troops, supplemented by less than 6,000 Philippine Scouts, is manifestly impossible; that the great waterway of the Panama Canal can not be protected against the operations of a first-class military power by the present or proposed

garrison we contemplate placing there without the power and ability to reenforce it rapidly by troops from the United States is equally manifest; that we can retain our valuable Territory of Alaska in its isolated position against an enemy with any military power by placing there a garrison of less than 500 men verges on the ridiculous unless we have ample forces at home to occupy that Territory in the very earliest stages of an impending conflict. As regards the Hawaiian Islands, all military persons will recognize that the proposed garrison in this possession is far below what it should be to meet a serious attack unless, in this case again, we have an adequate force on the Pacific coast ready to dispatch to the island when trouble is impending. It must therefore be frankly admitted that the present garrisons of these outlying possessions are entirely inadequate for the purpose for which they have been sent there, and that without a material change in conditions at home we have no available resources from which to reenforce them, even should time be given to us to do so. As the Philippines are too distant from the United States to be reenforced when war is impending, it would seem necessary that the garrison of those islands should be at least a full manning detail for the Coast Artillery defenses and one complete division at full war strength plus the ne essary administrative staff. As to our other outlying possessions, with the exception of Alaska, may be considered adequate only under the contingency that we have available in the United States sufficient thoroughly trained troops in excess of our home needs to warrant us in heavily reenforcing the peace garrisons.

WE MAY BE INVADED.

As to the necessities within the continental limits of the United States, whilst our isolation by water from the other great powers is an undoubted protection, that protection is limited by two main factors: First. The power of our fleet to protect the country from invasion over those

over those seas.

Second. Our ability to assemble rapidly at the points of debarkation selected by an enemy an adequate force to delay, if not prevent, his effecting a lodgment on our share.

Whether or not our Navy is adequate for the purpose indicated, i. e., to protect our country from overseas, is a question beyond the scope of this report. That we can not, with our present strength, rapidly assemble a sufficient force, fi-ily equipped for field operations, to meet such an expedition as might be dispatched against our shores is evident. The very fact that an enemy traversing the seas would have a wide choice of landing points, or points of attack, at once evidences the difficulties attending the assembly of organizations of sufficient strength to meet him at the point be may select. It therefore appears to be necessary that the general distribution of forces to meet such a situation would be on a very wide front, if prompt opposition to a landing is to be effected.

There have been six plans advanced for increasing the Na-

There have been six plans advanced for increasing the Nation's land forces, respectively, as follows:

1-THE HAY PLAN. In time of peace
Reserve of Regular Army
National Guard

In time of peace Reserve of Regular Army National Quard Men trained and in the country	140, 000 60, 000 129, 000 995, 790
TotalCost per annum, \$137,494,954,	1, 324, 790
2—GENERAL STAFF PLAN (THE WAR COLLEGE PLAN). Regular Army, Continental army, under training three months a year for each three years On furlough, subject to three months additional training before taking the field	500, 000 500, 000 500, 000
Grand total	1, 500, 000

Cost per annum, \$353,000,000. -SENATOR CHAMBERLAIN'S PLAN.

A Regular Army of 64 Infantry, 20 Field Artillery, and 19 Cavalry regiments; also 30,000 men for the Coast Artillery, 7 regiments and 7 battations of Engineers, and a Signal Corps of 1,840 men-165,524

4-COL, ROOSEVELT'S PLAN. Regular Army 250, 000 Some sort of compulsory service, based on the Swiss or Australian

5-GEN. WOOD'S PLAN. Regular Army ___

Federalization of the National Guard; compulsory service, based on Swiss or Australian system.

6-GEN. NELSON MILES'S PLAN (THE NATIONAL GUARD PLAN).

Federalization of the National Guard, with shorter enlistment term as basis of increase. National Guard as backbone of defense.

It is generally conceded beyond question that our main reliance on land must be on the Regular Army, but the dispute arises how and in what manner to obtain the additional men who must make up the reserve forces of the Army in case of

Ex-Secretary Garrison, in a statement made on January 6, 1916, said:

Many people who think that this situation has been successfully met in other places urge the adoption of the system in use in Switzerland or that in use in Australia. There is, unfortunately, very little accurate knowledge among many who discuss this matter concerning the details and what is involved in the adoption thereof.

Very briefly, the two systems are as follows:

Every male Swiss is liable to military service from the age of 20 until the age of 50 and officers until the age of 55. Between the ages of 10 and 16 the Swiss boy receives courses of gymnastics or calisthenics in the public schools, and after the last-named age the law requires him to go on with his gymnastics and to make a beginning at musketry. Rifle shooting is a national sport, and practically every boy belongs to rifle clubs that are under national auspices. The first line, called the "elite," consists of those from 20 to 32, inclusive; the second, or "landwehr," of those from 33 to 44, inclusive; the third con-

sists of all others from 17 to 50 years of age. When a recruit reports be is fitted with his uniform and equipment and given a rifle, all of which must be taken care of by him and remain in his custody until the end of his military service. Recruits receive instruction from 60 to 90 days, depending upon their arm of the service. For the "elite" a repetition course of from 7 to 14 days is held every year. Sergeants and higher noncommissioned officers serve 10 repetition courses. In the "landwehr" a repetition course of 11 days takes place every 4 years for all the different arms. All work is in the field and on the target range. Universal military service and the beginning of the work in the public schools are the most prominent elements of the Swiss system.

in the public schools are the most prominent elements of the Swiss system.

The Australian system likewise requires all male inhabitants to render military service. They are divided into junior cadets, of those between the ages of 12 and 14, inclusive, who serve for 2 years for 90 hours each year; senior cadets, 14 to 18 years, serve 4 years, 4 whole days, 12 half days, and 24 night drills. Variations are permissible, provided the total remains the same. ('litzen forces from 18 to 26, for 8 years, in first 7 years equivalent to 16 whole days, of which at least 8 must be in camp. There are particular requirements for particular branches of the service which need not be here gone into. Musketry is carried out on Saturday afternoons throughout the year, and nearly every training locality has rifle ranges within a few miles. As in the Swiss system, the attention given in the schools to gymnastics and preliminary education along military lines, together with universal military service, are the striking features of this system.

In this country it is not believed practicable at this time to found a military policy upon either of tae two essential bases of the systems just described. The National Government has no jurisdiction over the public-school systems of the various States. A constitutional amendment would be required to give it any such jurisdiction. If it attempted to acquire any participation in the school work by the consent of the States, it would require contemporaneous, identical legislation in the 48 States of the Union, and this, as we all know, would consume long years of time to accomplish. In addition to this, it would require an enormous number of Federal officials to supervise the innumerable public schools scattered throughout our enormous area, Furthermore, it is not believed that the people of this country have reached the conclusion that compulsory military service is a necessity.

Our people do not see the necessity for a compulsory military service, and therefore the reserve forces must be directly under control of the Federal Government.

As far as the militia is concerned, the Washington Post of March 22, 1916, in an editorial, expresses the views of the people of this country when it says:

ple of this country when it says:

The relations of the militia of the States to the Federal Government have been frequently considered in the light of the Constitution, and up to this time it has never been doubted that the militia was under the control of the States and could be called into the service of the Government only to execute the laws, suppress insurrections, and repel invasions. In time of peace the General Government can not enforce its will upon the militia of the States, and in time of war the uses of the militia are limited by the Constitution.

Forty-eight variations of National Guards in time of peace, to be suddenly transformed into a compact, efficient national army in time of war! Who believes such a thing is possible? Experience shows that it is an impracticable arrangement, and prudence suggests that the Government should not depend upon it for national security. It is a reversion to the old failure under the Articles of Confederation, when each State did as it pleased, and many of them failed or refused to do their share in furnishing men to defend the Nation.

The United States as a Nation should provide its own Army, absolutely independent of any or all State governments.

The Philadelphia Ledger of March 13, 1916, confained similar

The Philadelphia Ledger of March 13, 1916, contained similar editorial comment, which is as follows:

editorial comment, which is as follows:

As to universal service, if the Nation has to choose between universal military training in time of peace and compulsory service of reluctant and untrained citizens in time of war, we should most emphatically prefer universal service in time of war, we should most emphatically prefer universal service in time of peace. The call for volunteers in war time has never been filled. Lincoln had to resort to the draft, and in the Spanish War the number who volunteered fell far short of the number called for. If the war had lasted longer and if more men had been needed, we should once more have seen that the volunteer system is fatally defective.

What the Nation needs is a new birth of patriotism in order that citizens may understand and appreciate the obligations of their citizensip. There are men who say that the right to vote and the obligation of military service should be inseparable; that if a man is not willing to train himself to take up arms to defend the nation he should have no share in its government. As a general proposition this is sound, but it can never be applied in the United States. Some way must be found however, to impress upon the men of military age and upon their employers the duty of assisting in the formation of a large reserve force of trained men. The Regular Army is the proper first line of defense, A second line composed of trained reserves ready for instant service on the call of the President will find us ready for quick action when any action is needed. Then the State troops would very well form a third line of defense, which could have ample time for preparation after the first alarm. And the tourth reserve body would be the great mass of untrained citizens who would be called upon to volunteer after the other reserves had taken the field. In the event of failure to volunteer they would be drafted. These are mere suggestions. The duty of framing a plan rests on Congress.

I hope to see each State have a State constabulary to attend to police work. I believe it is the concensus of opinion that the militia should only be used for national defense, repress insurrection, and for sudden emergencies, and not to be required to do the work of police in strike troubles.

Our Army should be reasonably increased, but against a foreign foe our main reliance must be on an adequate Navy, which shall not only have the respect of our own people but which shall be respected by all the nations of the earth. It is our Navy and our shipping fleet that must carry our flag over the four corners of the earth. It is only with the maintenance

of a Navy, fully and properly manned, together with proper equipment, that will cause our passports to be respected abroad and create sufficient respect for us as a world power, so that when we make representations abroad they shall receive prompt

consideration and approval.

As I have previously stated before the Committee on Foreign Affairs, we are at peace with the world. With all the powers engaged in the European struggle we have numerous ties, both by treaties and by acts of friendship demonstrated on many an occasion. Every day that the war continues means a further retardation of the progress of the entire world. The chain is no stronger than its weakest link. The world at peace means progress for humanity; the world at war means retrogression in every effort to relieve humanity. To the nations at war peace means more than they would desire to disclose to the world at the present time.

We are the largest and most influential neutral nation to-day. It is our manifest duty to set in motion the machinery for the termination of hostilities and to make strenuous efforts to bring about peace. We owe it to ourselves; we owe it to humanity. We must show the world that we desire the peace and prosperity of the world rather than the temporary gain being derived by us from the sale of war's munitions. In times of peace we have made our greatest progress. As in the past, so in the future, mankind can only make progress when peace reigns supreme

everywhere.

I recognize the fact, however, that when the world is afire it is our duty to take reasonable precautions by insurance, which in this case means a reasonably increased Army and Navy.

In conclusion, Mr. Speaker, I read a poem that has stirred men to duty in days gone by, and I hope to see it do the same thing now in every walk of life, so that we may realize the dream of the founders of the Republic-a nation at peace, and never the aggressor; a home for the oppressed, and where men may be judged by their worth, ready to do their duty to the Nation in its hour of peril and need.

GIVE US MEN.

Give us men! Give us men!

Men from every rank,
Fresh and free and frank;
Men of thought and reading,
Men of light and leading,
Men of loyal breeding,
The Nation's welfare speeding;
Men of faith and not of fiction,
Men of lofty aim in action;
Give us men—I say again,
Give us men.

Give us men.

Give us men!
Strong and stalwart ones;
Men whom highest hope inspires,
Men whom purest honor fires,
Men who trample self beneath them,
Men who make their country wreath them
As her noble sons,
Worthy of their sires;
Men who never shame their mothers,
Men who never fail their brothers,
True, however falls are others;
Give us men—I say again,
Give us men.
Give us men. Give us men!

Give us men.

Give us men!

Men who, when the tempest gathers,
Grasp the standard of their fathers
In the thickest fight:

Men who strike for home and altar—
Let the crowd cringe and falter—
God defend the right.

True as truth, the lorn and lonely;
Tender as the brave are only;
Men who tread where saints have trod,
Men for country, home, and God:
Give us men—I say again,
Give us men.

Our Coast Defenses.

EXTENSION OF REMARKS

J. HAMPTON MOORE. HON.

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 23, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, the Military Affairs Committee, in reporting this bill, declared that some people would deem it adequate and that others would not, The debate thus far has shown that the committee was right as to the criticism that was to be expected, but the chairman of the committee has frankly told the house that this bill in all

essentials is "the President's own bill," and that counts for much in these war-talk days. It is evident the bill does not meet the expectations of the ultrapreparedness people, and it is equally clear that from their point of view the bill is inade-

quate and unduly economical.

My own view of the bill, judging it in the light of the public expectation, is that it is an extremely economical measure. It will not meet the expectations of those who have been agitating for preparedness, although it is possibly the best bill that the majority of the House, cooperating with the President, will stand for at the present time. So long as the attempt is being made to satisfy the public demand for preparedness, I regret that the bill does not go further in three particulars.

NEED MORE COAST ARTILLERY

First, in the increase of the Coast Artillery. Coast Artillery at present comprises 170 companies, I am advised that this number is 93 companies short of the number required to man one-half of our guns. It is true that the Hay bill provides for an increase of 52 companies, but that still leaves the Coast Artillery far short of its ability to man one-

half of the guns.

While it has been charged in debate that an enemy, seeking to land upon our shores, would not be likely to sail up direct to our fortifications, it is generally conceded by military men that coast fortifications, together with the Navy, constitute our first line of defense. Unless these fortifications are efficient, an enemy could destroy our seacoast cities without setting foot on our soil. If the Navy is strong enough to beat off an enemy there can be no invasion, but our coast lines are so extensive that our coast fortifications become an essential factor in the problem of defense. These important fortifications are manned to-day especially along the Atlantic seaboard by about 25 per cent of what would be esteemed a reasonable quota to properly man and defend them. At Boston, New York, Philadelphia, Baltimore, Norfolk, Savannah, and Jacksonville we have yielded up probably 75 per cent of our coast defenders for economy's sake or because the men were needed in our Territorial possessions. I am glad we are going to get 53 more companies of Coast Artillery, but that will not be sufficient to adequately man our guns with regular trained forces if it should be necessary to stand off an enemy seeking to destroy or capture any one of our great seacoast cities.

SHOULD INCREASE ENGINEER CORPS.

Second, I regret that this bill does not make more ample provision for the strengthening of that useful branch of the military service, the Corps of Engineers. The committee has rejected what is believed to be a reasonable increase of officers and men for this service, partly upon the ground that there have been two increases in recent years, due to rivers and harbors work. It is generally conceded that the United States Army Engineer is an efficient officer. He is so efficient that he is with-drawn from the regular service of the corps for high-grade special duty, as, for instance, at the Panama Canal; and thus depletes the service for constructive work in the United States. I understand the department favored an increase in the Corps of Engineers of 6 colonels, 8 lieutenant colonels, 14 majors, 58 captains, 52 first lieutenants, and 15 second lieutenants, to-gether with 4 regiments of 2 battalions of 3 companies each and 1 mounted battalion of 3 companies. This increase has been rejected by the committee despite the fact that the Corps of Engineers is heavily drawn upon for constructive and special work in times of peace. The necessity for maintaining a well-equipped Engineer Corps for war purposes, as well as for constructive purposes when there is no war is patent. These are the road builders, the bridge builders, the channel builders, and the generally practical soldiers of the service. To them has been committed the development and supervision of the waterways of the country. They are not only equipped for fighting but they are thorough up-to-date business men, prepared for immediate service in peace or war.

NO PROVISION FOR WAR CHANNELS.

Third. The bill in its scheme for increasing the efficiency of the Military Establishment of the United States makes no provision for the utilization of certain channels along the coasts, upon the use of which in time of war the fate of armies might It is the misfortune of those who advocate these coastal channel improvements to be buffeted about from committee to committee and from one session of Congress to another, but now, when an increase of the Army and of the Navy is uppermost in the minds of most people, it is almost unthinkable that these avenues of accommodation and approach should be left out of any scheme for the national defense. The waterways were the chief means of communication and for the movement of troops in the earlier wars of the country, and they were of such

strategic value in the last great war between the States as to be worthy of the best attention of Congress now. The capture of Washington in 1814 was due to the channel approach and the poor defenses of the Chesapeake. That incident was a disgrace to the Nation, and we make small mention of it in our histories. If a foreign fleet were to chase an American fleet into the Chesapeake Bay to-day, that fleet would be bottled up as successfully as Cervera was at Santiago, because the Government has refused thus far to take over a small canal 13 miles in length at the head of Chesapeake Bay that would permit an American fleet to pass through to the Delaware Bay and River for repairs or to pass out to sea as it saw fit. If an American fleet were driven into the Delaware Bay, it could not pass through to the Chesapeake or to any of the southern outlets to the ocean for the same reason. If driven into New York Bay, it could not pass through to the Delaware River or the southern ports, because the Government has not yet deemed it prudent to take over an existing canal or to build a new one connecting New York Bay with the Delaware River and the Chesapeake Bay.

WHERE ATTACK MIGHT BE EXPECTED

And yet here is that section of the country which would be most likely to be the scene of activities in event of war. The existing canals are incapable of accommodating the commerce that seeks to do business upon them. They are not of sufficient draft to permit of the passage of the smallest gunboats or submarines of the Government. Rather than be of service to the Government in time of war they might prove a hindrance, unless taken over and improved suitably to the needs of the Government, and this would take time just as the mobilization of an army would take time. Gentlemen may say that this is a commercial or a naval proposition having no place in an army They are mistaken. The Army is responsible for the burden-bearing waterways of our country in times of peace; it would be the greatest user of them in times of war. It is not generally known, but nearly all the Government departments are now provided with a fleet. The Army has one of the largest of the fleets, the total number of vessels under its control at the present time being no less than 2,500. I concede that the committee might establish a point of order against an amendment to this bill which would provide for the taking over of such a waterway as the Chesapeake & Delaware Canal, but I insist with all earnestness that if war should come the failure to fortify ourselves in this substantial and common-sense method would reflect no credit upon Congress. The military value of this project has been pointed out to Congress in numerous reports, one of the latest of them coming from a commission headed by Gen. Felix Agnus, of Baltimore. Only recently the War Department itself has again pointed out the urgency of connecting the Delaware and Chesapeake Bay for strategic reasons. A report to the Senate, signed by Grig. Gen, Macomb, Chief of the War College Division, approved by the Acting Chief of Staff and by the Secretary of War, is so in point that I ask leave to extend it as a part of my remarks:

A WAR DEPARTMENT OPINION.

WAR DEPARTMENT, OFFICE OF THE CHIEF OF STAFF, Washington, February 27, 1915.

Memorandum for the Chief of Staff. Subject: Military advantages of the Chesapeake & Delaware Canal.

Subject: Military advantages of the Chesapeake & Delaware Canal.

1. There is returned herewith a memorandum with attached papers on the above subject, dated February 24, 1915, from the Secretary of War to the Chief of Staff, wherein three questions are submitted:

(a) The military advantage, if any, of the existence of this canal.

(b) Whether a canal along this line would be of any military advantage, and if so, what?

(c) What character and size the canal would have to be in order to be of any advantage?

These questions superpently refer both to the present and contaments.

(c) What character and size the canal would have to be in order to be of any advantage?

These questions apparently refer both to the present and contemplated canal along this line.

2. In answer to 1 (a), it is believed that the existing canal has some value as it exists to-day as an obstacle to the advance of a bostile expedition landing on the west bank of Delaware Bay and advancing against Wilmington and Philadelphia. The fine, undefended harbor at Lewes, Del., makes such a landing a probability. The canal especially at the locks, is so narrow, only 24 feet at the locks, as to form an obstacle not very formidable. The canal is too small for the passage of submarines or other naval craft that would be used for preventing the landing of troops from hostile transports, and too small and obstructed by locks for rapid transport of troops and matériel from one bay to the other.

3. As to 1 (b), a sea-level canal along this same line would be of very great military importance from the following points of view:

(a) For the novement of submarines and other craft that must constitute an important part of our coast-defense system.

(b) As forming an almost impassable obstacle to the passage of the novement of submarines and other craft that must constitute an important part of our coast-defense system.

(c) For the transport of men and matériel of the Coast Artillery supports from one bay to the other.

4. The first of the points enumerated in paragraph 3 is a military nue because submarines and other small craft are believed to be at present an integral part of the seacoast defense, for use not only against naval attack on the harbors, but in a still more important part of the seacoast defense, for use not only against naval attack on the harbors, but in a still more important part of the seacoast defense, for use not only against naval attack on the harbors, but in a still more important part of the seacoast defense, for use not only against naval attack on the harbors, but in a still more important part of the sea

sense against transports attempting to land a hostile force on our shores in case of the defeat of our Navy. Seacoast defenses reach ho farther than the range of their guns, and it is impossible to distribute mobile army troops at all possible landing places to prevent the landing of troops without so frittering away the Army in small detachments as to render it almost impossible to collect them for united action. A canal such as proposed would allow the whole force of submarines, etc., to be held in one of the two bays and used with equal efficiency in either. Without the canal the force of submarines, etc., must be divided between the two bays and to reinforce one another they must attempt a passage by the outside, a distance of over 200 miles, as against about 15 miles by the canal.

A canal along this line and one from Delaware Bay to New York Harbor would make a landing of hostile troops almost impossible between Nargagansett Bay and Chesapeake Bay, and the construction of this canal is an important step toward the accomplishment of this result.

5. As an obstacle and a part of the land defense of Wilmington and Philadelphia a canal suited for other commercial and naval purposes would be of great importance. Defended by a few troops and small gunboats, such an obstacle, of the size recommended below, would hardly be crossed, and it is not believed that it would be attempted.

6. As a means of transport it has a measure of value for the easy transportation of men and matériel between the fortifications of Delaware Bay and of Ba timore.

7. As to 1 (c), the objects set forth in paragraph 3 above can be obtained by a sea-level canal having a depth of 18 feet at mean low water and a bottom width of about 150 feet. While tides of 6 feet to 10 feet prevall in the waters at the ends of the canal, investigation has shown that guard locks will not be necessary and that an open canal will be entirely feasible.

M. M. Macoms,

M. M. MACOMB, Brigadier General, Chief of War College Division.

I concur.

TASKER H. BLISS,
Brigadier General, U. S. Army,
Acting Chief of Staff.

I concur.

LINDLEY M. GARRISON, Secretary of War.

Workingmen and National Defense.

EXTENSION OF REMARKS

HON. EDWARD KEATING.

OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 23, 1916.

Mr. KEATING. Mr. Speaker, under leave to print, I desire to place before the House an article which appeared in the editorial section of the New York World on Sunday, March 12. It is entitled "Conditions under which the American workingman would shoulder a gun," and is an interview with James Lord, president of the mining department of the American Federation of Labor.

Mr. Lord is one of the really great leaders of organized labor in this country, and I am sure that no man is better qualified

to voice the sentiment of the toilers of the Nation.

I venture the assertion, Mr. Speaker, that no statesman in this land has in recent years given utterance to a finer expres-sion of patriotism than is to be found in the following paragraph from Mr. Lord's interview:

If the country were actually invaded, no one would sacrifice more, and more quickly, than the organized American workers. But they do not want mintarism. They want democracy and constitutional government. They are watching the situation in Europe and hoping that it is the beginning of the end—the end of king and kaiser, Prussianism, and every form of professional militarism.

The interview with Mr. Lord in full is as follows:

[By Charles W. Wood, in the New York World of Sunday, Mar. 12, 1916.]

"The average American workingman is hesitating between patriotism and dismay. He is a patriot; you can bank on that. He is not a coward, and he is not a nonresistant pacifist. He is willing to give his life in defense of his home. But, in spite of this, all the programs of preparedness now before the country leave him cold and sulien."

I was looking for a "new angie" on the question of preparedness, and I found it. I was talking with James Lord, president of the mining department of the American Federation of Labor. A mine worker at 11, a pioneer in the Miners' Union, now at the head of tive allied organizations, representing haif a million men, there is no one in America more closely in touch with the most rugged and militant class of American workers.

ruling class of any country does not want its workers to make. Mr. Runciman, of the board of trade, was hustled over to settle the 'scandalous' situation summarily. The miners argued that they were asking only a molest raise 'n wages, while the mine owners were suddenly acquiring exorbitant profits.

"Then, after a conference, the union leaders approached Mr. Runciman. 'All right,' they said, 'we have decided that we will all go back to work for our board and lodging—for just what is necessary to keep us allve and working, on one condition.'

"The condition was that the coal should be furnished to the Government at cost

"That settled the strike. The miners got their raise. In one sentence, which is bound to become historical in the labor movement, they called the bluff of British capital."

Mr. Lord is not one of the excitable radicals. He is known as a practical fighting man in the labor movement, not as a dreamer or a prophet. He would not tell me that American workers will not stand for this and that.

"TAKE THE ALL OF ALL."

"If you want to know whether American workingmen are patriotic," he said, "propose some scheme where everybody will be called on to throw everything into the meiting pot for the national defense. Make John Smith give up everything and make John Rockefeller give up everything. Make no distinction between J. P. Higgins and J. P. Morgan. Don't propose to borrow what they have or take a part of what they have, but propose to take all that all of them have, just as they take all that John and Jimmle have when they put them into the Army to-day. Watch the way the capitalists and workers react to such a proposition and you might get a line on which class is really the more patriotic.

"Governments do not propose anything of the sort. They expect workingmen to give up everything for their country, and then turn over the country to everything but workingmen. The flower of England's manhood went to South Africa to fight for the country. The remnant that returned had no country, not even a job. Malmed, diseased, broken, rotting body and soul, these ex-soldiers could be seen all through England begging bread. At the same time the diamond mines which their sacrifice had guaranteed to English capital were being filled with Chinese coolies."

But can it be that American workmen suspect any such a deal? Clearly, America has no schemes of conquest. "Will the American workers," I asked, "do anything which might hinder a policy of adequate defense?"

"No," said this representative of the working class. "If the coun-

But can it be that American workmen suspect any such a deal? Clearly, America has no schemes of conquest. "Will the American workers," I asked, "do anything which might hinder a policy of adequate defense," I asked, "do anything which might hinder a policy of adequate defense," I show a standard of the working class. "If the country wants defense, it can have all the defense it wants. Miners and railroad men and shopworkers would raily by the million to any military system which meant pure defense, or in the event an invasion was actually threatened. Any time this Nation wants to arm its workers and show them how to fight it will have no difficulty in getting men. If that were all that military service means, there would be no such attitude as there is to-day toward preparedness.

"But what does it mean?" I asked And I learned, incidentally, why this very quiet and hard-headed miner, born in England, has come to have the confidence of half a million American workers.

"It means an autocratic military machine," he said. "It means that a man joining the Army must give up everything he holds dear and trust in God and his superiors not to turn his gun against his own class interests. It means service obedience to certain individuals, an honest workingman having to cringe before some whiffet of an office, because he is dirr while the officer is a 'gentleman.' It means the denial of all the principles he is supposed to be defending; the denial of democracy, the denial of decent manhood, the denial of the home. How can a man defend democracy by building up a machine in which he has not the slightest say; not even the right to speak in protest? How can he defend the home by deserting his own wife and children to fall for the dissipation and disintegration that goes with a tropical expedition or a brutal occupation?

The big miner's face became tense. "I was sinking a shaft in Indiana," he ead, "when my partner, one of the finest chaps I ever worked with, told me his Philippine story. He had a wife and two children here

"Just how?" I asked. A democratic army was a hazy jumble of words to me.

"By volunteering en masse," he said, "on one condition—on the condition that the army could not be used to tyrannize over themselves, either as individuals or as a working class. Oh, I admit that it is impossible for the American militarist to see it, but it may be impossible for the workers to see anything else. Then, of the two impossibilities—well, we could that out shortly whether the army was really wanted for defense or whether the word 'defense' was being used as a pretext in order to get the army established."

ELECT AND RECALL OFFICERS.

"But just how would a democratic army function? How could the working-class soldiers be guaranteed against the usual run of militarism?"

militarism?"
"It is very simple," said Mr. Lord, "or very impossible—just whichever way you happen to see it. But tell me first: Is a soldier a man? Is he entitled to a decent living? Is he a citizen? Should he be allowed to think and speak and vote? Is there anything in the

ordinary schedule of a workingman's life which is too good for him in case he agrees to defend his country?

"Well, then, if a soldier is a man, there is no reason why he should have to cringe before an officer. And if he is a citizen, there is no reason why he should be tried by an officer. And there is no reason why he should take orders from an officer. And there is no reason why he should take orders from an officer. And there is no reason why he should take orders from an officer. And there is no reason why he should take order from an officer. And there is no reason why he should take orders from an officer. And there is no reason why he should take order from an officer. And there is no reason why he should be given the chance that a workingman is supposed to get if he breaks the law. Nothing short of a trial by his peers, not by his superiors, would be demanded in a democratic army.

"A democratic army would possibly elect and recall its officers. That would be impossible in an army intended only for defense. We have much to defend in America, much that is very dear to the workingman's heart. If that is threatened, there is no sacrifice he will not make. But just now he is wondering how he can defend it by selling himself body and soul to a machine over which he has not the slightest control. Can we defend ourselves against militarism by establishing militarism? Can we defend ourselves against tyranny by becoming slaves?

"Incidentally a democratic army would demand decent pay, so long as the country in general was not impoverished. In a crisis it would starve for an ideal just as so many millions of American workingmen have starved through long-drawn-out strikes. But it would not do the country's dirty work for 10 cents a day while the country was rolling in wealth as a result of its services. And it would not black the shoes of the officers except at union rates for bootblacks.

"But, above everything else, it would not shoot down other members of its class for demanding better conditions. That is why

THE WORKER DISARMED.

"And have the country at the mercy of a great military organization?" I interjected.

"Not a professional military organization at all," he explained, "but an armed working class. Can you imagine a country being overrun by its people? Don't you know that a fundamental principle of the American Constitution was that the right to bear arms should not be abridged? It has been abridged, however. The workers have been disarmed, and the arms have been placed in the hands of a military organization out of touch with the workers, or in the hands of private detectives and thugs hired by the capitalists, as in Colorado.

"I would not commit the organized workers of the country to any particular policy. No man can do that. Personally, I am opposed to militarism, the only militarism I have seen and can judge. Also I can not see any danger of European powers arranging to invade America; but with our immense coast line an adequate coast defense seems thoroughly reasonable.

with our immense coast line an adequate coast defense seems thoroughly reasonable.

"If the country were actually invaded, no one would sacrifice more, and more quickly, than the organized American workers. But they do not want militarism. They want democracy and constitutional government. They are watching the situation in Europe and hoping that it is the beginning of the end—the end of King and Kaiser, Prussianism, and every other form of professional militarism. They are reading and thinking and waiting. I think they will refuse to be swung off their balance by the hysterical appeals of munition makers, partisans, and professional militarists, even at the risk of being misunderstood."

Comments on the Remarks of Mr. Davis of Texas.

EXTENSION OF REMARKS

HON. JAMES P. BUCHANAN, OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 24, 1916.

Mr. BUCHANAN of Texas. Mr. Speaker, on page 2472 of the Congressional Record, February 5, 1916, under the heading "Extension of remarks," my colleague from Texas, Mr. J. H. (Cyclone) Davis, had, among other things, the following printed in the RECORD:

in the Record:

It was the leading envoys of this class that met at the Gary dinner a few days ago. Touching knees under a table in a gorgeous feast representing unfold millions of loot legally extorted from a helpless people, they met to devise ways to put Woodrow Wilson in ignominious defeat by the corrupting and debauching influence of their ill-gotten millions and to destroy Democracy and put Roosevelt at the head of "their" bidding. What Brutus was to Cesar, what Judas was to Jesus, they are to this Republic. When W. L. Yancey, Robert Toombs, Jeff Davis, and others met to extend slavery by the annexation of Mexico and Cuba as slave country south of Mason and Dixon's line, and later to seede from the Union to save their special privilege to appropriate the labor of slaves as legal, they never had a more damnable design on American liberty than that bunch which met at that millionaire carouse of the war traffickers and trust masters which made up that Belshazzar feast. And the slave traffic with all its infamy never represented more than one-tenth the wealth said to have been represented in that gold-bound, diamond-tipped cabal of conspirators. When the slave masters met they, with complacent aristocratic minds, covered their sordid, knavish designs under the sweet and sacred terms of State rights. When these trust masters met they covered their knavish depravity under the euphonious term of "protection" to American labor.

And then again, on March 22, 1916, on the alleged subject of Americanism and patriotism, my colleague from Texas [Mr. Davis] had printed, among other things, the following

Davis] had printed, among other things, the following:

Some days ago on this floor, in commenting on the malicious designs of syndicated wealth as represented in the notorious Gary dinner, where the money-mongers and sordid trust masters were holding conclave with the damnable design, as I thought, to debauch this country and destroy the Republic, I spoke of it as far more reprehensible and destructive of human liberty than that cabal of slave power, spoken of in what is known as the Ostend Circular, when the slave power was designing to annex Cuba and Mexico, south of Mason and Dixon's line, which finally resulted in secession and the bloody war. In this connection I mentioned, in the light of history, Bob Toombs, W. L. Yancey, and Jeff Davis, seeking to convey the idea that these money deviis that were holding these Belshazzar feasts, these war traffickers and trust masters were designing to put us in war, make millions out of the war, and then elect Roosevelt, whom they were feasting, and prolong their sway, as the slave powers did in the sixties.

* * And now this ribald ruffian [Upshaw Vincent] finds bloody-shirt sheets in Texas where he ventilates his venom in defense of those gluttonous, greedy concerns that want me destroyed.

In these characteristic harmaness.

In these characteristic harangues my colleague, Mr. Davis of Texas, staged utterances so sensational, unjust, and unwarranted that every true citizen of the United States who reads them resents the reflection with the rising pulse of scorn. Under the guise of discussing the "Mexican situation and national de-fense" and "Americanism and patriotism" and under the momentum of his well-known fondness for sensational postures, he recklessly flaunts a gratuitous insult at the holiest memories and most revered names of the historic South.

And so malicious is his apparent intent to traduce the land of his own nativity, like the unclean bird that befouled its own nest, that he proclaims his abuse without one recorded word to substantiate his libelous assertions. There is not a word of truth in his assertions that-

W. L. Yancey, Robert Toombs, and Jeff Davis and others met to extend slavery by the annexation of Mexico and Cuba as slave countries south of Mason and Dixon's line.

The Ostend circular he so flippantly cites to bolster his gratuitous libel was at the instance of President Franklin Pierce, himself not a southerner nor affected by any special southern sympathy; and the only reference to slavery in that historic document was in condemnation of that "infamous traffic," and the names of W. L. Yancey, Robert Toombs, nor Jefferson Davis are not mentioned in it or even remotely referred to.

President Franklin Pierce in 1854 directed our ministers to Spain, England, and France—Soule, Buchanan, and Mason—to compare opinions and to adopt measures for perfect concert of action in aid of the negotiations at Madrid. The three envoys assembled at Ostend October 8, 1854, which resulted in the promulgation of the Ostend circular. The hoped for annexation of Cuba was for many other pertinent reasons.

No chivalrous son of the South now defends the institution of slavery, which every candid student of history knows was a national sin; and there is no escape from its culpability for any of the thirteen original States. The South, as the proverbial facts are known, became the dumping ground for the unremunerative human chattels of the colder North.

When this cyclonic, slanderous diatribe reached the people whose lost cause it defamed through the privileged publicity of the Congressional Record, the indignant voice of the offended manhood of Texas and elsewhere was aroused. The great dailies of Houston and of other cities of the State denounced in unmeasured terms the unsupported attack upon our enshrined ideals of immemorial honor, and, as always, these great standard journals hold themselves steadfast and undismayed when the tumult of the delirious fanaticism imperils our republican institutions or as, when now, the venom of vituperation assaults a commemorated name.

Why should our great official mouthpiece, the Congressional Record, be permitted to be prostituted to the low level of disreputable yellow journalism, as it is when made the vehicle disreputable yellow journalism, as it is when made the vehicle of circulation for a defamatory slur upon the lofty character of the heroic dead and the unjust abuse of our standard representative journals, the champions, through thick and thin, of our rights and liberties? All the southerners who cherish the lost cause and hallow the memory of our departed chieftain, fall under the lash of the frenzied denunciation, for they are in identity of the Jefferson Davis blood and faith. He represented and led us in every dectrine of the old South and the sented and led us in every doctrine of the old South, and the stroke aimed at him falls on his followers who are devoted to the splendor of his character, cherish his memory, and honor the cause for which he suffered and sacrificed.

As a further reply to the unjust reflection upon our illustrious dead, I adopt the language, thoughts, and sentiments of Senators Lamar and Garland in Congressional Record of March

Mr. LAMAR. The only difference between myself and Jefferson Davis is that his exalted character, his preeminent talents, his well-established reputation as a statesman, as a patriot, and as a soldier enabled him to take the lead in the cause to which I consecrated myself, and to

which every fiber of my heart responded. There was no distinction between insult to him and the southern people, except that he was their chosen leader and they his enthusiastic followers, and there has been no difference since.

Jefferson Davis, since the war, has never counseled insurrection against the authority of this Government. Not one word has he uttered inconsistent with the greatness and glory of this American Republic. The Senator from Massachusetts can point to no utterance of Jefferson Davis which bids the people of the South to cherish animosities and hostilities to this Union, nor does he cherish them himself.

The Senator, it pains me to say it, not only introduced this amendment, but he coupled that honored name with treason, for, sir, he is honored among the southern people. He did only what they sought to do; he was simply chosen to lead them in a cause which we all cherished, and his name will continue to be honored for his participation in that great movement which inspired an entire people, the people who were animated by motives as sacred and noble as ever inspired the breast of a Hampden or a Washington. I say this as a Union man to-day. The people of the South drank their inspiration from the fountain of devotion to liberty and to constitutional government. We believed that we were fighting for it, and the Senator can not put his finger upon one distinction between the people of the South and the man whom the Senator has to-day selected for dishonor as the representative of the South.

Now, sir, I do not wish to make any remarks here that will engender any excitement or discussion; but I say that the Senator from Massachusetts connected that name with treason. We all know that the results of this war have attached to the people of the South and the sense in which the gentleman used that term as applied to Mr. Davis, He intended to affix—I will not say he intended, but the inevitable effect was to affix upon this aged man, this man, broken in fortune, suffering from bereavement—an epithe

Sir, it required no courage to do that; it required no magnanimity to do it; it required no courtesy; it only required hate, bitter, malignant sectional feeling and a sense of personal impunity. The gentleman I believe takes rank among Christian statesmen. He might have learned a better lesson even from the pages of mythology. When Prometheus was bound to the rock it was not an eagle—it was a vulture—that buried his beak in the tortured vitals of the victim.

Mr. Garland, Mr. Pavis and myself were not, in a general way, of the same politics in reference to this Government; but I have never had occasion, in the long service that I had with him and under him, in a civil capacity entirely, to doubt his capacity, to doubt his integrity, or to doubt his nower of purpose under any and all circumstances; and I will say to the Senator from Massachusetts, and all others who agree with him and indulge in the spirit that prompted this amendment, that whenever they seek to see a game man die, whether he dies in adversity or in prosperity, they may go to the dying bed of Jefferson Davis and they will witness that.

Military Establishment.

EXTENSION OF REMARKS

HON. ALLEN T. TREADWAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 23, 1916.

Mr. TREADWAY. Mr. Speaker, I am opposed to section 82 of the Military Establishment bill. The section reads as fol-

That to provide for the fixation of atmospheric nitrogen by the development of water power, or any other means, necessary to establish an adequate supply of nitrogen, the appropriation of such sum or sums of money to construct the necessary plant for such purpose is hereby authorized.

This is so distinctly an effort on the part of shrewd business men to secure capital, through a loan at a low rate of interest, from the Government to carry on their private business that the item should be stricken from the bill. We all recognize the importance of securing atmospheric nitrogen, but if the Government is to carry on any line of business looking toward better preparedness, there is no reason why the Government should become a partner in a firm wherein it assumes the risk of capitalization and the other member the opportunity of profiting thereby.

We have in the hearings before the Committee on Military Affairs a statement from former Assistant Secretary Breckin-ridge, on page 134, in which he says that the Secretary of War ringe, on page 134, in which he says that the Secretary of War has not as yet determined in his own mind what ought to be done in regard to this matter. There is also, on page 491, some testimony from Gen. Crozier, in which he says that at Rock Island Arsenal there is sufficient unused power for the purpose of meeting the need of the Army in times of peace for the development of atmospheric nitrogen. The only other testimony we find is the statement of Mr. Frank S. Washburn, who, I understand, represents the large company now manufacturing nitrate at Niagara Falls, and who also represents the interests nitrate at Niagara Falls, and who also represents the interests in control of the power at Muscle Shoals.

Section 82 is so evident the result of his effort to secure capital from the Government that it ought not to be given favorable consideration by Congress. There are at least three distinct efforts being made by those interests to have the Government furnish them capital for their private business enterprise. In company with my colleagues on the Committee on Rivers and Harbors, I visited Muscle Shoals last May. I thoroughly be-lieve in the development of that power. There is a great opportunity there for business development and a tremendous

amount of possible energy now going to waste.

The proposition put up to the Rivers and Harbors Committee is practically the same as the one advocated before the Military Affairs Committee, and the one which has been before the Committee on Agriculture, all three calling on the Government to provide capital for a private business enterprise. Undoubtedly these shrewd business men will offer other suggestions wherein Government capital would be valuable in their business. Any other business man in the country could do the same thing and would be willing to pay the same rate of interest to the Government as these people are willing to pay, namely, 3 per cent, whereas no money in that section could probably be secured for less than twice that amount.

We want to be fair with the Muscle Shoal Interest, and after the passage of the Adamson Dam Act, I hope they will undertake the development of their properties as any other business

enterprise would.

I wish to say that in no section of the country is there more interest in the construction of a dam for hydroelectric purposes, and thereby secure river navigation, than in the district which I represent. We are going to secure that result in time, but I can assure this House that neither I nor any other interested Representative from that section will ever come before you with any subterfuge or effort to secure Federal capitalization. That is exactly what is back of section 82, and for the good name of this House it should be excluded from this bill at once.

I wish now to make very brief reference to the bill itself.

heartily concur in the purpose of the committee in their effort to take the first step toward better national defense. With the conditions confronting the country to-day, debate should be made as brief as possible, and action prompt. Our duty is plain and consists simply in voting. Let us do that immediately both with this bill and others that will follow, bills looking to increased equipment in the Army and Navy as well.

Some weeks ago I issued a letter to my constituents asking for an expression of views. I have received over 800 replies. Of these 650 favor increased national defense, and 175 were opposed. The intelligent expression of opinions showed the study and thought the people are giving to this great problem. I am confident that this ratio of nearly 4 to 1 is about the proportion of opinion throughout my district, and I would be greatly mistaken if that same proportion did not fairly represent

the views of the entire people of the country.

Undoubtedly this bill is imperfect in many particulars, but it represents the careful study of a thoroughly interested committee, every member of which I am confident is inspired by the one object of properly serving the people in an effort to solve this great national problem. Their decisions are the result not alone of their own study, but of testimony which has been submitted to them by the leading experts both in civil and military life. I for one am willing to accept their judgment, and so far as I am concerned will delay a vote no longer in discussing any separate features of this important measure.

Villa's Raid on Columbus.

EXTENSION OF REMARKS

HON. ISAAC R. SHERWOOD, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES, Thursday, March 23, 1916.

Mr. SHERWOOD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from Marcus M. Marshall, giving an account of Villa's raid on Columbus, which is vouched for by the New York Times.

The letter is as follows:

SAYS VILLA FOUND BORDER UNGUARDED-NO PATROL OUT THE NIGHT OF THE COLUMBUS RAID.

A letter reporting the raid made by Francisco Villa and his band on Columbus, N. Mex., on Thursday, March 9, and the murder of several American ranchmen by the Villistas the day before was given to the New York Times yesterday by E. J. Marshall, president of the Paiomas

Land & Cattle Co., whose 2.000,000-acre property lies on the Mexican side of the line a short distance south of Columbus.

In his report the younger Marshall severely citicizes the troops stationed at Columbus at the time of the raid. No troops were patroling the border, he asserts, although the military authorities had received ample warning that Villa was approaching. He tells how Villa hanged two of the Palomas ranchers and ordered his outlaws to ride their horses over another who was fighting desperately for life. He declares that Villa had only 500 men with him. The letter follows:

SAW 500 MEN WITH VILLA.

PALOMAS LAND & CATTLE CO.,
HACIENDA DE NOGALES, CHIHDARUA, MEXICO,
OFFICE OF CASHIER,
Columbus, N. Mex., March 12, 1916.

Columbus, N. Mex., March 12, 1916.

My Dear Father: At about 8 o'clock on the morning of Tuesday we were coming down the Boca Grande River when McKinney and myself sighted about 500 men beginning to make camp. They were unsaddling and starting to cook coffee. McKinney wanted to go up to their camp and talk to them, but I said to him, "Arthur, please don't go, for they may be Villistas." I told him this several times, but finally he turned to me and said. "Well, I'm going to talk to them; are you such a coward that you don't want to go with me?" I told him that if they were Villistas they would certainly kill us, so what was the use of taking such a crazy risk; that it would be better to stay where we were and wait to see what they intended doing.

GAVE THEM THE SLIP IN CANYON.

These men had sighted us and we started north for the line. They gave us a close chase, but we gave them the slip in a canvon and came straight into Columbus, arriving here the same night. Upon reaching here I notified the colonel of the United States troops of the happenings during the day, and he sent me back next day to locate the band and report to him. I reported that night, Wednesday, that Villa, with about 500 or 700 men, was on the Boca Grande River and was headed this way. The following morning the Villa outfit attacked Columbus.

PUTS BLAMB ON THE ARMY.

PUTS BLAME ON THE ARMY.

The blame for the Columbus affair should rest on the United States Army. It had been forewarned not only by Foreman Fondille and Antonio, our men, as to Villa's whereabouts and the directions being followed by Villa on his march, but had information from several other sources. As I understand, there were no troops patrolling the border during that night—only sentries about the camp of troops in Columbus. Villa left his horses about 300 yards south of the town and came in mainly from the south and west. Villa's outfit was in the town about one hour and a half before withdrawing. The United States Army was extremely lucky in having so few soldlers killed—I believe seven in number—and luck is all that it can be called. A large part of their guns and ammunition was locked up. Overconfidence and the thought that Ville would not dare attack a detachment of United States troops no doubt juli-d our soldiers into a feeling of security.

Four or five of the largest stores and the Commercial Hotel were burned. Our houses were not damaged except by a few stray bullets. The Villistas took all of our horses which were at the time in our corrais at Columbus and all harness and saddles. They broke no windows and took nothing from the commissary. The horses lost both here and through Villa's capture of our branding outfit number about 2 head. Seven of these horses are lying dead between here and the Mexican border and along the route taken in the retreat of Villa's outfit.

Villa is now only about 50 miles to the south as far as we can learn.

Mexican border and along the folder outfit.

Villa is now only about 50 miles to the south, as far as we can learn from our men here. It is not believed he will make another attack on this side.

Unless the United States Army now goes into Mexico there can be no more work done on our Palomas ranch, except to in a way keep up the watering places by sending courageous men in from time to time. This is the first time, as far as I can learn, that our men seem inclined to say "quit." but they all say it now, unless something is done toward furnishing protection.

This is the lifst time, as its to say "quit," but they all say it now, unless something is done toward furnishing protection.

The last two nights have just about cleaned this town out of Mexicans; Thursday night five were shot. Friday four, and last night three. We have kept our men inside the house or grounds at headquarters, and to-morrow, after obtaining passes for them, they will be sent with the horses to Alamo, Waco, in charge of Foreman Fondille. Cashier Forzan left Columbus with his wife on Friday, thinking it best for him not to remain while feeling was running intensely against Mexicans.

MARCUS M. MARSHALL.

Preparedness.

EXTENSION OF REMARKS

HON. LUTHER W. MOTT, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 10, 1916.

Mr. MOTT. Mr. Speaker, the problem of establishing an army for this Nation on a broad and comprehensive scale, to make it adequate to meet all possible contingencies and at the same time to avoid the establishment of an autocratic military machine, always so detrimental and eventually destructive to the principles of equal rights for all on which our Government is founded, is not one to be considered lightly. It calls for deep thought, elimination of everything save that which is best for future generations, a broad spirit of patriotism, and an exercise of statesmanship in the true meaning of the word. Those of us who are politicians must seek to be statesmen, and those of us who are statesmen must consent to play politics fo: a little while so we may get rapid and united action on this vital measure. It is the most important question which has agitated this country for more than a half century; it is more material even than that of the Civil War, for at that time only one-half of the Nation was at stake. Now the entire Nation, with its foreign dependencies and commercial future, is jeopardized, to say nothing of the future of every other country in the Western Hemisphere that looks to us as the guiding spirit of freedom and democracy.

So when we take this Army bill up for consideration we are doing more than talking about regiments and batteries and fortifications, munitions, and officers and men; we are talking about our national future. The United States, we trust, will never enter upon a war of aggression. We are not built that way, and when we do then must our Monroe doctrine, that inspired policy which has been the preservation of many a minor Republic in time of stress, go by the board, and we shall lose our position that has cost us so much labor and endeavor. The world is watching us now, and we must make good for its effect on the future of this Nation, if nothing more.

Since 1898 the United States has been a world power. Sometimes, diplomatically, we forget it, but the fact remains that we are considered such by foreign powers, which have been looking askance for years at our unrestricted growth in wealth, population, power, and influence. Should any one of these great foreign nations take the notion to experiment to ascertain whether we are a world power, they would be disillusioned and would we be?

We have always needed a constructive policy for our Army and Military Establishment. While we are the best-educated Nation in the world, having the lowest percentage of illiterates and enjoying freedom of speech and of the press to enlighten us, we have been unwisely taught some facts in our own history which are not borne out by truth in history as viewed by disinterested observers. Some of these untruths taught under guise of history are on our Army and national prowess, and as a Nation we have not taken the time to analyze what history should have taught us as far as our military policy is concerned.

We have been taught to regard military resources as military strength. We are taught that all of our wars have been fought by volunteer troops raised on the spur of a moment, and that with these troops we have never known defeat. Nothing was more certain than ultimate defeat by Great Britain in the Revolution had it not been for the aid given by our ally, France.

In 1812 we were defeated in every land engagement of note, and during that war our militia forces, to say the least, were not capable of creditable performance in battle against the trained soldiers of the enemy. Nor have our volunteers ever been able to do their full duty, although I hesitate to say this, disliking to injure the feelings of any volunteers who have served their country with patriotic fervor in the past. It is a fact that they would have been so much better able to have rendered military service of the approved kind had they been trained for that duty. All of us at times talk about a million armed men springing into action in 24 hours. Last week it took us nearly a week to get 10,000 Regulars in shape to chase an unorganized and illy disciplined force of bandits. That is a fact, the more apparent than older facts because of its youth, but no more striking than past performances of our military forces.

Our Volunteers in the Mexican and Civil Wars were not Volunteers when they performed their best services. They were Regulars, made so by years of training that was costly to them and costly to the Nation. They gave up in the early stages of those wars, their lives oftentimes sacrificed because they did not know how to fight. It has cost this country millions and millions of dollars, acres and acres of wasted substance, and hundreds of thousands of lives for entering on so-called necessary wars without being prepared. Every war we have ever entered upon has been prolonged unnecessarily and the cost in dollars has mounted millions upon millions because we have not had a sufficient Military Establishment and lacked a constructive policy in the Army.

It is time now to think of these serious matters. If the world war in Europe, awful as it has been in its toll of dead and maimed, in its destruction of priceless works of art and science, and its tearing down of civilized convention, has awakened in us a sense of what we as Americans owe our country, the United States, and owe to future generations, then it has not been without its good effect.

We have been "lucky" in our wars up to this time, but it

We have been "lucky" in our wars up to this time, but it is now come to the point where we must play safe, by not depending on a continuance of that good fortune, and the one way to be safe on this proposition is to outline now a policy for the development of our Army. We must treat this question as one which shall not please this or that faction but as a national question involving not alone the present but the future. Let us issue national insurance to protect the safety of our children and their children, and to teach them the lesson of preparedness and let each of them learn that he must do his part in the work.

NOT SO PEACEFUL AS A NATION.

We have been a Nation for about 140 years. During that time, such a short time as years are counted in history, we have been at war for a total of about 25 years. The Revolution lasted 7 years, the War of 1812, 2 years, the Florida wars 7 years, the Mexican War 2 years, the Rebellion 4 years, and the Spanish War and the Philippine wars about 2 years. This estimate does not take into consideration the years of actual warfare spent on the plains of the West, against Indians, genuine warfare though it was. So with more than one-sixth of our existence spent in warfare we have not been such a peaceful Nation after all.

WHY MILITARY DUTY IS UNPOPULAR.

As a Republic, we have borne through our years with us a spirit of hatred for militarism and for that reason have been opposed to a large standing army. That is but natural, for did not most of the early settlers come here to get away from war, while our comparatively recent immigration influx has been inspired by men from nations which exact compulsory military training from every male citizen. Naturally these men hate and fear compulsory military training because it has always stood for something that has taken them from their homes for a period of years, placed them on a military treadmill where they lived by rote and had officers of a so-called higher social class to do their thinking for them. They got little or no money for their years of toil and service for their country, and, if they were of a race not thought worthy even of serving in the army of their country, they hated military establishment for the cruelties brought about in its name and by its agency.

So when we prepare a constructive military policy our first aim must be to make military duty for the citizen as compatible as possible with the ideas of right and freedom which have come to be established standards in this country. There can, of course, be no comparison between a machine-made soldier of a European army and the citizen soldier of the United States service. We have just pride in the fact that our trained Regulars are the equal or superior of any European regular in everything save numbers. We feel that our Army system even under its present limited status is far superior to any other. Our men place less dependence upon their officers than those of any other army. Many an old scarred and gray-haired sergeant has just as good a knowledge of practical military science as has many of his officers. We give our rank and file every advantage possible, but it is no sign that we can not improve the Army.

GOOD MACHINERY IS EXPENSIVE,

Our present Army, inadequate though it is for almost any purpose, is a costly machine, and it is to be more costly. The reason is that we spend more money on it—spend it in accordance with American ideas that the laborer is worthy of his hire. We pay our officers fair salaries, feeling that, as professional men, they earn them, presumably. We pay our enlisted men fair wages, considering that they are clothed, fed, and cared for according to a liberal standard. They are clucated, too, in more things than military science. They are taught obedience, but, more than that, they are shown the way to lead clean lives and be real men.

Therefore, when we come to a consideration of this new policy, we must avoid the abolition of any ideals we have built up, and not alone maintain the standards of the past, but extend them on a wider plan. Our problem, as I see it, is to increase our standing army considerably, provide for establishing a suitable reserve and for an adequate system for raising, training, and officering Volunteer forces.

We have still another task. We must make the Army popular in civilian circles, not on the coasts, where the dangers are greater than inland and where the soldier is respected for the good he may sometime do, but throughout the country. We must instill in the mind of every male citizen the fact that the main duty he owes his country and that to which he must look forward as a part of his education is a service he owes the Military Establishment of the country. I mean compulsory military training—the only training which will bring real preparedness, not alone to the country, but to the man who answers a call to arms in time of need. Perhaps the time is not just at hand for this measure, but it will come, and we should be preparing that system, and it will be no child's play, either. In some States we make children attend school for the good that will accrue to

them. No child in after years regrets being forced to learn. Neither will citizens, if they are taught their duty to their country in the right way. To force a man into the Army for three years of irksome service is a sure way of making the Army unpopular. The answer is a difficult one, when the question is, "How?" Therefore we must go back to the beginning and start our military training in schools of the country, that place where to-day the first lessons in patriotism are taught. In some schools I have visited the children give what is called the flag salute. A stand of the United States colors is on the platform, and in unison the children, tots, just able to lisp, repeat after their instructor, "I give my hand, my head, my heart to my country." Well enough as far as it goes. I do not want to place rifles in the hands of infants, but I believe it will be well for this body to give heed to some things that will help the children and help the Nation when they reach the age of citizenship. I am against militarism, but I hope I am patriotic, and to be the latter necessitutes, in these troublous times, facing the situation and acting in accordance. It is not the old men who fight the battles of their country and win its victories. It is the boy just out of his teens or still in them, as has been shown just this last year. Older men sometimes have to be drafted.

The boys always go first and are the first to suffer. They suffer more because their outlook on life has been restricted, and most of the time they go to premature graves for the lack of a little military knowledge. Obviously the way to teach them the elements of this science of military life is when they are in school, when it will be accepted as a part of their training. Those boys will be more sure of themselves in war and in peace for having been prepared. They will come to know that war is not medals, gay uniforms, flying machines, and stirring trumpet notes and vacation camp life. From experience they will know that it is far more serious, even mimic war. It means hard work. The rank and the file of an army in modern warfare works. They work far more with a pickax and spade than with a gun. One augments the other.

WHY THERE IS OPPOSITION TO A STANDING ARMY.

One reason I want a larger standing army, outside of the fact that it is a security measure, is for educational purposes. People inland, far removed from military stations and regular establishments, hardly ever see a Regular. They know he exists somewhere, just as they know China exists, through reading. I venture to state there are millions of people in this country who have never seen a regular soldier marching with his fellows. Apparently there are some Members of the House who have never seen one.

Perhaps my ideas of patriotism are peculiar. The word means "love of country," not love of congressional district. We all see the flag and know for which it stands. Beautiful and symbolic though it may be, there is another sight which brings to me more acute thrills of patriotism than even the flag. It is a sight of soldiers—Regulars—marching. They may march in peace down a village or city street, but when I see them, shoulders back and in perfect step, I feel that I am looking at what is back of the flag, what protects that for which the flag stands. The sound of military music is inspiring, but soldiers marching without it are just as inspiring to me; they mean something more, something impressive, that in a glance calls back what soldiers have done for us.

I do not want to be recorded as a lover of pomp, and glory, and jingling spurs, and military medals, yet I would like to see the uniforms of our service stand for more than they do. I dislike very much the practice of officers of both Army and Navy discarding their uniforms, the badge of what they are, when they go on detached duty at headquarters in this city or elsewhere. When I go to see an official of the United States service on official business I want the admiral or the general I see to look more like a soldier or more like a sailor than will be lent by civilian attire. During the Spanish-American War officers on duty at the Army and Navy Building wore their uniforms, and the sight called up the service they were performing; let the uniform serve that for which it is intended—to show the service a man performs.

INADEQUATE PREPAREDNESS.

We all have varied ideas on the numbers that should compose our standing Army. It is significant that the Committee on Military Affairs of this House reported out a measure calling for an increase in the Regular Army without a dissenting vote. Otviously the measure has its defects; to me they are chiefly in the fact that it is inadequate preparedness. If we are going to have an Army and make changes in the numbers of that Army let it be an increase substantial enough to be felt. I am aware that it is just ignorance of necessity, lack of knowledge of what the Army is and means, that brings forth the opposition from

inland States. I am aware, too, that some of us—perhaps I am as the pot calling the kettle black when I say it—are of the opinion that we know better than the men we have educated to military life what our Army needs. When I am sick I call a physician and let him prescribe. When I need work done to my teeth I consult a dentist, not a blacksmith. So when I want to know about an army it is but natural to consult an Army officer, one who has spent years in a study of what I want to know. Some things we hear from Army officers we must discount, but in the main their ideas must be correct from a military standpoint. I favor taking their advice, founded on practical experience, more than the vagaries of a theorist who thinks he knows.

Our Army can not be accused of a lack of initiative. We have always taught the world more about warfare than we have learned ourselves. Outside of our costly mistakes at the start of every war as regards volunteers we have reason to be proud of our military performances. We must for the most part give the credit to Regulars.

WHAT WE MAY EXPECT.

When this present war is over and peace has been signed at least six of the greatest nations of the world will have mammoth armies of veterans, made so from years of fighting under modern conditions of which even our Regulars know through actual experience. Those nations will each h millions of fighting men, fully equipped, ready for battle. Those nations will each have will have by the present laws 120,000 regulars and about the same number of militia, and the latter needs a great deal of training to fit itself for strenuous service. We propose in this so-called "preparedness" military measure to increase our standing force to some 140,000 men, and to create a reserve, which will approximate some additional hundreds of thousands men, trained and ready to fight. The increase to the Regular Army is pathetic as far as numbers go. It is disgraceful as a measure of preparedness, and insignificant from the standpoint of real increase. It is a halfway measure, between nothing at all and nothing much of anything, a sop thrown to those who want little and those who feel the need for much. diplomacy, perhaps, and evasion of a real issue; but as an example of statesmenship is a waste of time. We have seen a division of this House on the question of increasing the increase to 220,000 men. We know the result, and know better why our Army has been kept down in numbers for so many years. surely can not be a matter of expense that is doing it; for some of the gentlemen who voted against the Kahn amendment are some whom I have noted raising their voices in appeals for public buildings, plants, and other Government financed projects for their districts. It must therefore be set down to mental torpidity and lack of knowledge of the why and the wherefore. Some of us need patriotic education. I pray that it will not require a war to bring it about.

We have had over a year to think over this measure of preparedness. We may not have such a similar lengthy period again to think of its gravity. Hindsight is better than foresight; but it is always well to remember that a few dollars spent now, when we can well afford it, notwithstanding the state of the Treasury, may save us millions later on and many thousand lives.

We have been stirred now and again by ominous reports and semiofficial recommendations as to what the world thinks of us as a Nation and thinks of our foreign policy. We are more likely than not to be stirred further in the future. As a nation we have no friends, and we have not pursued a policy to make us friends. The European crisis has served to draw us closer to our South American neighbors than anything in years has done; but when this war is over abroad those who have been fighting for two years or more will naturally turn their bloodshot eyes across the seas to a Nation swollen with receipts from war munitions, with national credit unimpaired, and resources intact, It will be a look of bitterness and disappointment, for every nation in that world war will be vanquished. There will be no victors. They will have been defeated by death, by sorrow, by debt; and after the war will be crushed by taxes. The only profits from the war, outside of ethical ones, perhaps, will have been to the United States. They will be money profits, not profit by experience of others.

THE EXAMPLE OF ENGLAND.

We may well consider what happened in England when that country needed men to fight her battles. Her little standing army was as nothing to that of her opponents. She has been two years raising an adequate army, and it has not been able to do any effective fighting yet. A sister Republic of ours—France, our ancient ally—has been doing most of the fighting on the side of the allies. She was prepared, in a measure, and it was only that measure of preparedness that saved her capital from invasion.

I need not mention that Germany was prepared. Her preparedness, if it has not been able to win a decisive victory, has at least been sufficient to save her territory from invasion in turn and to make the whole world wonder at her wonderful resources

and her military strength and efficiency.

Englishmen have for years maintained about the same opinion of themselves that we enjoy about ourselves. Before the war whenever a German said his country was prepared we admitted it, and said that every German had to train for arms when needed. England said she was prepared. We admitted that too, for she had the same system that we have now liance on military resources instead of military strength. We know how England fared and is faring. There have been a few riots and a few drafting measures in the United Kingdom and a whisper that the noble spirit of old that prompted every mother's son of them to turn out as one for their country, is It has been because England believed in the theory rather than the practice, of volunteer troops. The practice has not worked out successfully as far as returns have shown. We need a spiritual Zeppelin or two to show us what patriot-Patriotism means serving country as well as loving We should attempt to devise a plan here for making every citizen love his country and show his affection by service that counts. We must act the part of statesmen not politicians. This is too sacred a cause for admixture and contamination by

We have time yet to take a measure of preparedness that will prepare for something. We have the money and can not afford to spend it in so worthy a cause. There are times when saving is in spending in time. Next year may be too late. We have the past to profit by, the present is here, but the future is unforeseen. One famous American said, "Millions for defense and not one cent for tribute." We still have the millions but are nevertheless paying tribute, and the tribute we are paying is a mortgage on the security of the future of the Nation. are paying tribute to pacifists, which will be a good thing when bring on a plan for universal peace that will work, but until they do we must be in a position to work out our own measures for peace—and that is in preparing for emergencies. The Hay measure does not prepare us for anything. serve it creates is a figment of the imagination and will be for years to come. We shall still go on counting our resources for strength and fooling ourselves that they are adequate. We need a universal training, one that will give us all a chance to do something when the time comes and the need arises. We should devise that plan and put it through unhesitantly. We should prepare to take our armies off paper and put them on terra firma. We have been fighting with paper armies too long. We have a sacred trust and a sacred duty. I for one do not want to be accused of failure in either.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. MOSES P. KINKAID, OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. KINKAID. Mr. Speaker, a strong and earnest attempt is being made to baffle if not stifle the real question now involved. Many are trying to make it appear that the question is whether the Congress will "stand by" or "uphold the hands" of the President; but, sir, the McLemore resolution does not involve any such a question. It involves the question of whether it would be a wise step to take to warn American citizens not to travel on armed merchantmen of belligerent nations. Mr. Speaker, my predilection is very strong for cooperating with the President in any international issue. I deem it very desirable that our American people stand together regardless of political affiliations when an issue may arise with a foreign nation. I will sacrifice much in a partisan way to be with the President in such a crisis, as I did in fact do in a conspicuous instance when my convictions were decidedly to the contrary. But my vote then only helped to ratify what had been already half accomplished before the vote was taken.

Mr. Speaker, I defy anyone to read the record in this case whereby the issue is formed, on which Members are to vote, and find involved in it the question of whether Members will be "standing by" or standing against the President by the way they vote. Speaking from the standpoint of the legal profes-

sion, no such issue is contained in the pleadings by which the issue is formed. It is only by the oral arguments made by the Members that any issue involving the President is intimated or brought in question and that is not legitimate. So far as the written record is concerned, consisting of the McLemore warning resolution and the rule of the committee bringing it into the House go, the matter of "standing by" or against the President is not put in issue, but it is a question of the wisdom of giving warning to our citizens to not travel on armed merchantmen of belligerent nations that is expressly put in issue. A vote upon this question, therefore, will show how the Members of the House stand upon the warning resolution. That is, if a vote were permitted upon the real question, such would be the But we are going to be cheated out of a vote directly upon the question by parliamentary juggling, the final part of which is the motion to table the McLemore resolution.

Mr. Speaker, the policy of neutrality is directly involved in the present issue. It is so plain that any man who runs may read that to needlessly persist in the exercise of our rights to travel on these armed merchantmen of the nations at war. thereby to hinder or obstruct one or the other in attacking its foe, is against a neutrality policy. For an American citizen to deliberately and unnecessarily place himself upon one of these armed merchantmen knowing it is traveling into a war zone, it seems to me, is like willingly going between two enemies and saying to one or the other "You dare not shoot because you may injure me. I am a citizen of a neutral nation and you dare not shoot me."

Mr. Speaker, I favor a policy of scrupulous neutrality with regard to this European war. Every American citizen has a right to his own views, and most of us will unavoidably express a sympathy for one side or the other, owing to where we trace our ancestry. But in every public way, collectively and as a Nation, in my judgment we citizens owe it to our country as a patriotic duty to studiously avoid taking sides with either of the belligerents. Mr. Speaker, no condition of which my mind can conceive could in my judgment be more demoralizing to our country than for America to become involved in this European war, especially if we were to take sides with either.

Mr. Speaker, inasmuch as the President has requested a vote upon the question of warning I think we owe it to him and at the same time to the American people to vote upon that question squarely and directly, and thereby advise the President how the Members believe their constituents stand upon the issue. Inasmuch as the President has asked for a referendum of the matter why not deal with it consistently in that way and then the Congress and the President abide by the result.

Mr. Speaker, as I view it, giving warning to our citizens not to unnecessarily travel upon the armed vessels of belligerent nations is a step supported by every rule of ordinary prudence, common sense, and humanity, and I am constrained to believe that an overwhelming majority of my constituents will view the question in the same way. It is in keeping with the homely maxim that an ounce of preventative is worth a pound of cure. Mr. Speaker, I do not favor the McLemore resolution in toto. In fact I would discard nine-tenths of the language it contains. First, I would strike out of the nine lengthy "whereas" paragraphs. I would only preserve the few simple words it contains to fhe effect that citizens of the United States be warned against traveling on armed merchantmen of belligerent nations, in the language of the substitute proposed by the gentleman from Kansas [Mr. Campbell] which reads:

Resolved, That in the opinion of the House of Representatives, citizens of the United States, under existing conditions and irrespective of their legal rights, ought to refrain from taking passage on armed vessels of belligerent nations, except in case of imperative necessity.

The Beginning of Militarism.

EXTENSION OF REMARKS OF

HON. CHARLES H. RANDALL. OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES, Friday, March 24, 1916.

Mr. RANDALL. Mr. Speaker, on yesterday I voted "present" when my name was called an internal present. Mr. RANDALL. Mr. Speaker, on yesterday I voted "present" when my name was called on the passage of H. R. 12766, a bill to "increase the efficiency of the military establishment of the United States." The passage of this bill was a great rebuke to the "big Army" men in Congress. It calls for only 20,000 men in addition to the Regular Army strength of 120,000 already authorized. On that score I had no complaint

But the provision for military training and military courses to be placed in the public schools makes it impossible for me to support it. I have no objection to military schools, where those who desire to do so may take military instruction. But this bill would supply the public schools with guns and all sorts of war equipment, and it details United States Army officers to give military training. The whole atmosphere of our schools, and all the children in them, would become charged with the war spirit. It is the beginning of European militarism in this country. I can never support the teaching of the horrible science of war to the youth in our public schools.

TO LIMIT ARMAMENTS.

The military spirit is running rampant throughout this country. We seemingly have forgotten that this Government's duty is to use the present opportunity to teach the warring nations of the world that peace pays better, and that all disputes can be settled without bloodshed, by cool-headed conference. We ought to be promoting this sentiment through the columns of the daily press, rather than our big Navy and big Army schemes. But frenzy has taken the place of reason. Therefore all that I can do is to give notice that I shall offer the following amendment to all the "preparedness" bills which may come before this House:

Be it enacted, etc., That upon the conclusion of agreements between the leading nations of the world, to which the United States is a party, wherein limitation of armaments or disarmament of such nations is proposed, the President shall have authority, in his discretion, to limit or suspend any provision of this act.

The Bogy of Alien Illiteracy.

EXTENSION OF REMARKS

HON. WILLIAM GORDON.

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 24, 1916.

Mr. GORDON. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I insert the following editorial from the North American Review of March, 1915:

THE BOGY OF ALIEN ILLITERACY.

Negroes, American born.... Whites, American born.... Whites, foreign born..... 1, 534, 272 1, 650, 361

entire population. in 1910:	Here are the percentages of illiteracy among a	dults
Negroes, American Whites, foreign bo		30.4
Whites, American	born of American parents	3, 7

Whites, American born of immigrant parents.

1.1

Thus the illiterate children of immigrants were less than one-third as many, proportionately, as the illiterate children of native Americans. What is the natural and inevitable deduction? Why, that illiterate immigration, while a present evil, assures a much greater future good. It increases for the present the sum total of illiteracy in the Nation, but promises in the next generation to decrease its proportion. It means a present generation of illiterates, but a coming generation of literates.

what is the natural and inevitable deduction: Why, that litterate immigration, while a present evil, assures a much greater future good. It increases for the present the sum total of illiteracy in the Nation, but promises in the next generation to decrease its proportion. It means a present generation of illiterates, but a coming generation of There is the less reason for applying the literacy restriction to immigration at this time, because for some years to come the volume of allens entering this country is practically certain to be greatly diminished as a result of the European war. While the war lasts there will be few immigrants. Some who would otherwise have come will not come because they can not get passage, in the great disturbance of ocean traffic; some because they are in the armies or were in the armies and have been killed; some because they expect soon to be need in the armies; some because they are urgently needed to carry on the industries the ranks of whose workers have been depleted by the military conscription.

So much while the war lasts. But with the return of peace we need look for no marked resumption of migration to America. The enormous losses of the war will have decreased the industrial efficiency of the chief European nations so greatly that all the survivors will be needed at home, and will, in fact, have at home greater opportunities of achievement and of gain than they would have here. Nor will the need be for an increase in the armier of the chief European nations so greatly that all the survivors will be needed at home, and will, in fact, have at home greater opportunities of achievement and of gain than they would have here. Nor will the need be for each merely to man the ordinary industries. The create interest of the chief European has not be spared by their neighbors to rebuild their razed cities, to till their ravaged fields, and to rehabilitate their own citizens and all who can be spared by their neighbors to rebuild their rated cities, to till their ravaged fields, and

Early Irish Settlers.

EXTENSION OF REMARKS

HON. CLYDE H. TAVENNER. OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 25, 1916.

Mr. TAVENNER. Mr. Speaker, while the subject of immigration is up I desire, under leave to print, to present some information relative to early Irish settlers. I submit as a part of my remarks a tribute to the Irish settlers of the Pan Handle of Montgomery County, Ill., by Mr. John F. McCarron, of Farmersville, Ill.:

THE IRISH SETTLERS OF THE PAN HANDLE OF MONTGOMERY COUNTY, ILL. (By John F. McCarron, of Farmersville, Ill.)

A careful census of the settlers of Irish extraction who settled upon the prairies of the Pan Handle of Montgomery County, Ill., 50 and 60 years ago will show that only a few survive of that brave band of stout hearts. And yet it seems but yesterday since most of them were active participants in the life of the community they loved so well.

The history of Montgomery County can never be accurately written without a correct appreciation of the work of the Irish settlers of the Pan Handle. They have contributed a large share in the development of that county, and a knowledge of their lives, characters, and the work performed by them must be carefully reviewed by the historian for a full comprehension of their worth to the State and Nation.

It must be first said of them that they loved and cherished the home of their adoption. As believers in and upholders of the Constitution and laws of the land they were surpassed by none and equaled by few. No heart beat with more patriotic pride than that of the Irish settler at the sight of Old Glory. And in his children he instilled the love of country and respect and devotion to her institutions. No one loves liberty-true liberty-more than the Irishman, and no one respects lawful constituted authority more than he. John Boyle O'Reilly has well described the Irish attitude in that respect:

I am Liberty—God's daughter!

My symbols—a law and a torch;
Not a sword to threaten slaughter,
Nor a flame to dazzle or scorch;
But a light that the world may see,
And a truth that shall make men free.
I am the sister of Duty,
And I am the sister of Faith;
To-day adored for my beauty;
To-m:rrow led forth to death.
I am she whom ages prayed for;
Heroes suffered undismayed for:
Whom the martyrs were betrayed for!

When the men and women of Irish birth settled upon the prairies of the Pan Handle they brought with them the best characteristics of their race, namely, character, honor, thrift, a deep religious fervor, and splendid physique. These things made them a valuable addition to the brain and brawn of the Nation. Their sunny dispositions, their keen wit, and wholesome humor, combined with a sense of fairness and justice, made them respected by all.

Blessed with broad minds, pure hearts, and sound bodies, they gave to the Republic the vitality so essential to its growth and progress. The great truths of Christianity were strongly imbued in their minds and hearts and the Golden Rule was their "cloud by day and their pillar of fire by night." They made the principles set forth in the Declaration of Independence living things, and the great truths of centuries stood personified. They breathed into their hearts and souls the air of freemen and the exhilarating blood of new-born life coursed through their veins.

In the old country their lot had been a hard one, through no fault of theirs. For centuries the beautiful land of their birth had been oppressed by the most damnable and tyrannical laws that had ever been enacted by one civilized country for another. And what a verdant spot. Father Tighe has eloquently portrayed its beauty in the following words:

trayed its beauty in the following words:

It is the fairest patch of earth ever flung by the Creator out of the windows of God's heavens. On the face of the Almighty's green footstool there is no land so green. Nowhere is the sky more soft, the air more bilthe, the sun more metlow, than the sky that smiles, the air that blows, and the sun that shines upon this verdant sea-locked isle.

For when the day god rejoicing in His strength streams up the valleys and rolls away the blue haze from the mountain tops all nature is aglow with congenia; gladness. When the early flowers of springtime show their heads above the humid soil, and the enameled meads are lighted up with the ineffable radiance of the noontide's golden showers, the bewirching beauty of the landscape precludes all ordinary expressions of delight. The heather blooms upon the hillside; the rose blushes in the valley; the birds tunefully carol in every grove and glen. Nature has blessed the ancient isle.

The lands of their fathers had been taken from them and parceled out to the soldiers of a triumphant and tyrannical op-pressor. Civil and religious liberty was cast aside while the plunderers drove the Irish into the bogs and mountain fastnesses. A price was placed upon the heads of those who dared oppose the plunderers who yearned for the spoils. To read the history of the terrible oppression in Ireland when the blood of her sons and daughters was shed for home and liberty makes one's blood boil with indignation. How terrible the crimes that were perpetrated upon her defenseless women and children. The eyes glisten with the tears of sorrow for Erin's sons and daughters during this dark page of her history. The Irish people forgive those terrible wrongs, but they never can forget them.

It is hard to forget when a deliberate attempt is made to Crive a nation of patriotic, God-fearing people from off the earth—for no cause, except that they loved liberty. Can they forget how laws were made to drive every vestige of education and religion out of the land so that their posterity should be

brought up in the darkest ignorance and thus made easy of subjection? No, indeed.

Would they stand idly by and allow their civilization to be thus taken from them? Would they permit their posterity to be deprived of centuries of learning dating back almost to the beginning of the Christian era? No; never! Not while a drop of Irish blood remained would they submit. How proud they were of the part played by them as a race. Back in the fifth and sixth centuries Ireland's missionaries had carried the work of Christian civilization to the Continent of Europe, especially among the Germanic tribes, when continental Europe and Britain, too, were enveloped in pagan ignorance. Universities flourished in Ireland and were the seats of learning for western Europe. In 837 the University of Ardmach alone had an en-rollment of 7,000 students. Ireland was rich in culture and education. It would be interesting to show the large part she played in the Christian civilization of Europe, but space forbids.

The oppressor would take from the sons and daughters of Erin the priceless heritage of centuries. He did not care for culture, education, honor, and character so long as there was an opportunity to lay his murderous hands upon the beaten and bruised body of Erin. Kill her children, ravish her noble and pure women, and murder her men, yet he could not conquer the spirit of the Irish race. Ireland's beloved poet, Tom Moore, has well described this spirit:

The minstrel fell—but the foeman's chain
Could not bring his proud soul under;
The harp he loved ne'er spoke again,
For he tore its cords asunder
And said, "No chains shall sully thee,
Thou soul of love and bravery;
Thy songs were made for the pure and free—
They shall never sound in slavery!"

The spirit above described is as fertile and as fair in the descendants of the Irish in this country as it was in the days of It was this selfsame spirit that animated and suslong ago. tained the Irish settlers in the trying days when the Pan Handle was a wilderness.

In the early days there were no roads to guide the Irish settlers over the vast prairie. They followed the trails that wound here and there over the knolls and around the swamps. And when they had erected their homes they proceeded to plant their crops. In the swamps they found the germs of ague and malaria lurking and ready to fasten their grip upon them. Many of the Irish fell a prey to those diseases. Physicians were scarce, and what few there were could not attend all. There were times when there were not sufficient well people to wait upon those who were sick. Thank God, there were doctors, if I may call them so, who understood quite well the simple remedies that do much to alleviate the sufferings of those afflicted with those diseases, and who as nurses were unequaled. They were the women. Through all hardships and privations they were ever ready to do their part in the great work of settlement. The good old Irish machree (mother) was an indispensable factor. Her charm and nobility are well summed in the following lines of the poet:

I summed in the following lines of the poet:
Pray come and unfold the strange secret to me,
And tell what an Irishman means by machree.
The tight of the day and the warmth of the sun,
The ripple of waters that laughingly run,
The sweet bloom of youth, the harvest of years,
The gold of all smiles, and the salt of all tears;
The gold of all smiles, and the salt of all tears;
The grow of the cheek, and the light of the eye,
The grow of the cheek, and the lip's softest sigh;
The tight shadness of welcome, the pang of farewell,
And the loneliness left by the funeral knell;
The music of woman's—the wine of man's life;
The music of woman's—the wine of man's life;
The all that he lives for and hopes for above;
The whole of creation, and one isle in the sea;
And that's what an Irishman means by machree.
The spirit was manifested by those good old Irish

What a spirit was manifested by those good old Irish men and women! God bless them, every one. They were firm believers in toleration and practiced the virtues of faith, hope, and char-No stranger was ever sent hungry from the door of any ity. No stranger was ever sent hungry from the door of of them, and the latch string always hung on the outside.

Kind-hearted, courageous, and generous, they made all feel who came in contact with them the fullness of those virtues.

They laid broad and deep the foundation of good citizenship. Side by side they erected the church and school. In the development of true citizenship they realized that religion and education go hand in hand.

In the technique of mathematics and rhetoric they did not excel, but in natural ability, keen perception, and genuine honesty they were unsurpassed. America needed them, as she does to-day-men and women possessed of the latter qualities more than of the first two mentioned.

History shows that in the part played by the Irish in America they have borne their share with great credit and honor to themselves and the Republic. Lest we forget, let it be remembered that the first Commodore of the American Navy was John The convincing and eloquent orators of Barry, an Irishman. the Colonies were Matthew Lyons and Patrick Henry, both of Irish descent. John Hancock, the first signer of the Declara-tion of Independence, was the descendant of an immigrant from Ireland. The secretary of the Continental Congress, Charles Thompson, was born in Maghera, Ireland. John Nixon, who was the first to publicly read the Declaration of Independence from the statehouse in Philadelphia, July 8, 1776, was the son of Richard Nixon, of county of Wexford, Ireland. The man who first printed the Declaration of Independence was John Dunlap, who was born in Strabane, county of Tyrone, Ireland. Ten signers of the Declaration of Independence were of Irish birth or Irish descent. Prominent among those was Charles Carroll, of Carrollton.

When the Continental Army was in dire distress and Congress was unable to supply its needs, "the plan of the Bank of Pennsylvania" was created by a number of gentlemen for the purpose of supplying the Army with provisions and clothing. total sum raised to supply the Army was \$1,575,000, of which amount \$560,000 were subscribed by members of the Friendly Sons of St. Patrick and the Hibernian Society.

One historian, speaking of the Friendly Sons of St. Patrick,

has this to say:

In December, 1781, Gen. George Washington was elected an adopted member of the Society of the Friendly Sons of St. Patrick of Philadelphia, and in his letter of acceptance to the president of the society he said: "I accept with singular pleasure the ensign of so worthy a fraternity as that of the Friendly Sons of St. Patrick—a society distinguished for the firm adherence of its members to the glorious cause in which we are embarked."

Brilliant are the pages of our country's history with the deeds and courage of the Irish race. From the birth of the Republic the Irish have shed their blood and sacrificed themselves upon the altar of our country in order that liberty might prevail throughout the land and the government of a free people be maintained. In all the wars of our country they have been ever ready to do and dare and die. And they stand to-day, as of yore, ready to do their country's bidding.

No braver soldiers ever wore the trappings of the United States than men of Irish birth and descent. This was shown in a splendid manner in the late Civil War. The correspondent of the London Times, writing to his paper, had the following to say of the charge of Meagher's Irish brigade up the slopes of

Marys Heights at Fredericksburg:

Never at Fontenoy, at Albureau, or at Waterloo dld men show the daring and the courage of their race than was evinced by the sons of brin in their sixth frantic dashes against the impregnable position of the foe. That any mortal man might carry the position seems idle to believe, but the dense masses which lay within 40 yards of the muzzles of Coi. Walton's guns is the best evidence of what manner of men were they that pushed on to death with the dauntlessness of a race that have won glory upon a thousand battle fields and never more richly deserved it than at the foot of Marys Heights, December 12, 1862.

Not alone in warfare but in the material pursuits of life they have contributed a large share of our country's brain and brawn. And they will continue to do so, for an Irishman is by nature a true American citizen in all that the word typifies.

The Irish settlers of the Pan Handle were scoffed at because of their rough appearance and lack of education, but those who scoffed were ignorant of the character of those people. Little did they know about the Irish, and they took no trouble to find out anything about their past. But character will always tell, and those who scoffed soon found out how foolish they were, for the Irish people from the beginning showed themselves thoroughly adapted to their new condition.

Those men and women had suffered for liberty and justice as their fathers before them. They had come to America to enjoy those natural rights which God ordained that all men should enjoy, and which are so clearly annunciated in the Declaration of Independence. They found in the Pan Handle that haven where under the Stars and Stripes they could practice and enjoy true liberty and contribute their share in the

upbuilding of the State and Nation.

It was my good fortune to have grown up among those peo-le. A child of the race I learned early their characters and as time went on my desire to emulate those good old men and

women grew upon me.

Often have I stood for hours 'neath the shade of one of the clustering trees of a grove in a favorite spot where they were wont to gather and listen to the jestings and banterings of the men folk. What wit! Humorous and keen, that flowed in as natural a manner from their lips as the water trickles from the miller's wheel. No Grecian god ever enjoyed a feast more than I enjoyed those gatherings. As I recall to mind many of those occasions I laugh at the quaint things said and marvel at the wonderful natural ability shown by them,

Who of our generation can accurately portray the sufferings endured by the Irish settlers? Yea, to do that, one must have suffered with them. They endured hardships and suffered privations because they loved liberty and justice. No poor words of mine can pay those men and women a higher tribute than to say, that they were honest, generous, industrious, Godfearing, liberty-loving Americans. And of them the poet has well said:

They came from the hills of Erin away from a tyrant's ban, Seeking a home on your kindlier shore, where a man may be a man; Holding your friends as chosen friends, your foes as their hated foes, Faithful to death in blood and breath were those loyal Mac's and O's. Columbia, Queen of the Western Gate, whose bountiful hands outspread To the exiled poor of the older lands give succor of peace and breat. We ask no boon but the best you have, the highest you ever knew, For the rank and file of the ancient isle who has given its best to you.

Immigration.

EXTENSION OF REMARKS

HON. JOHN H. STEPHENS.

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 25, 1916.

Mr. STEPHENS of Texas. Mr. Speaker, the subject of foreign immigration has been passed upon by the two great political parties of this country. In 1896, the year when Mr. Bryan was the Democratic nominee for President, the Democratic platform, which he indorsed, made the following declaration:

We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

In the same year the Republican national platform contained the following declaration:

For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor we demand that the immigration laws be thoroughly en-forced and so extended as to exclude from entrance to the United States those who can neither read nor write.

The candidates for President and Vice President of the United States nominated upon the platform containing this latter declaration were elected.

It will be remembered that Mr. McKinley, running on the Republican platform, the platform which specifically demanded the exclusion from entrance to the United States of immigrants who could neither read nor write, was elected President, and Mr. Bryan, whose platform only demanded exclusion of foreign pauper labor, so as to prevent competition with American labor in the home market, was defeated. Therefore when President Wilson, in his recent message vetoing the Burnett immigration bill, asked the following question, "Has any political party ever avowed a policy of restriction in this fundamental matter?" the answer is, "Yes; and it is found in the platforms above quoted of both great political parties." Further answering the President's question, I will state that the voters in that presidential election ratified that avowal at the ballot box; and if the voters of the United States have ever given their indorsement to any measure of legislation it has certainly indorsed, by their votes, the principles embodied in the Burnett immigration bill before Congress in its recent session. Not necessarily for your information, but because of the enlightening effect the Congres-SIONAL RECORD may have on this subject, I will further state that in 1896-97 the Senate and House passed an immigration bill containing the literacy test found in the Burnett bill vetoed re-

cently by President Wilson.

It was also vetoed by President Cleveland, and the House passed the bill over the President's veto. In the Senate it failed of passage over the veto by a few votes. In 1898 the Senate passed an immigration bill containing the literacy test, but the bill, it is generally conceded, was crowded out of consideration of the House of Representatives by reason of the Spanish-American War. In 1902 the House passed an immi-Spanish-American War. In 1902 the House passed an immigration bill containing the literacy test. In 1906 the Senate passed an immigration bill in which the literacy test was embodied. The House substituted a bill creating the Federal Immigration Commission. This commission consisted of nine members, eight of whom recommended the adoption of the literacy test as the most practical means for restricting, limiting and better regulating immigration.

ing, and better regulating immigration.

Mr. Speaker, in 1913 the Senate and House passed an immigration bill containing the test recommended by the com-

mission. The bill was vetoed by President Taft. That bill passed the Senate over the President's veto, but failed to pass

the House over the President's veto by 4 votes.

Gentlemen, I voted to pass that bill over President Taft's veto and on the same ground that I voted to pass the Burnett bill over President Wilson's veto. I advocated the passage of these immigration bills over presidential vetoes, because I was following the doctrine in the Democratic platform of 1896, namely, "to prevent the importation of foreign pauper labor to compete with our American labor in the home market," and also because I was then and am now fully persuaded that the needs of the people of our country require some means to protect them, their rights, their work, and their future, against wholesale immigration; immigration planned on a great scale first so that steamships may profit; and second to depress the condition of the workers here by large numbers who may and do supplant them and take from them their opportunities to earn a livelihood; immigration which is so potent a factor to in-tensify and make acute the industrial and social injustice to our own people. In a word, there must be some provision to meet a serious and menacing situation jeopardizing American standards of life and American concepts of freedom. If there be any desire for further information as to the justification for the attitude of the advocates of immigration restriction, for the attitude of the advocates of immigration restriction, ample evidence can be found in the report of the Federal Immigration Commission, the report of the Federal Bureau of Labor upon an investigation in Bethlehem, Pa., the report of the House committee giving the results of its investigation of the conditions in the steel industry (known as the Stanley Report), the statistics of immigration for the last 20 years, and many other sources of official and authentic information.

Mr. Speaker, in order to rightly understand the motives of the men prompting this veto message I quote from a Washington paper what took place when this Burnett bill was before the

President for his consideration:

Heading the list of opponents to this bill is Tammany and big business. Why? Because big business wants cheap labor and Tammany wants cheap votes. Next comes Bourke Cochran, of New York, a politician who at some time in his life has belonged to almost all of the modern political parties and been true to none; and as to Congressman Gallivan, who opposed the bill, I will let his remarks on this bill made in the House of Representatives on February 4, 1915, speak. He shows plainly that the Catholic Church, to which church he belongs, opposed this bill and favored its veto. His remarks and their introductory headnotes are as follows:

"THE ROMAN CATHOLICS OF AMERICA AND THE KNIGHTS OF COLUMBUS— SPEECH OF JAMES A. GALLIVAN, OF MASSACHUSETTS, IN THE HOUSE OF REPRESENTATIVES, FEBRUARY 4, 1915.

"THE ROMAN CATHOLICS OF AMERICA AND THE KNIGHTS OF COLUMBUS—
SPEECH OF JAMES A. GALLIVAN, OF MASSACHUSETTS, IN THE HOUSE
OF REPRESENTATIVES, FEBRUARY 4, 1915.

"Mr. Speaker, let it never be said that within less than 150 years of
the Declaration of Independence a Congress of the United States, so
far forgetting the foundations of our own America, gave the lie to the
hopes and to the aspirations of people struggling under the absolutism
of Europe and other countries, and who, yearning for opportunities for
improvement for themselves and those that came after them, found
closed upon them the doors of a country which in the providence of
God had been reserved as a haven for the struggling, aspiring manhood,
wherever found on earth. [Applause.]

"'The earth is the Lord's, and the fullness thereof.' All men are
his creatures. Shall we dare to say that man, the image of the
Creator, shall not have a share in the fruits of the fairest land upon
which the sun shines upon?

"Mr. Speaker, I can see influences back of this proposed legislation
other than those exercised and controlled by organized labor; I can
see influences which dare not come out into the light of day, but which,
under the cover of an inky, slimy darkness, masquerading in the guise
and garb of so-called patriotic orders, are ceaselessly endeavoring to
divide the great body of American citizenship along lines of racial and
religious prejudice. I ask every fair-minded man in this body to listen
to this extract from one of these so-called patriotic publications, and
when you have heard it ask yourselves whether there be even the
shadow of truth in its base reference to 'Rome and its lobby.' The
paper said in its last issue:

"What the Menace said:

"On January 14 the Senate agreed to the conference report on the
Burnett immigration bill without a record vote. Senator Reed, of Missouri, after four weeks of talk and fillbuster in opposition against this
meritorious measure, finally tired of talking and allowed the Senate to
take the vote resulting in agree

Gentlemen, we will let a Washington daily paper speak fully on the reasons for this veto by President Wilson. They are as follows:

IMMIGRATION BILL IS DISCUSSED—FRESIDENT WILSON HEARS ARGUMENTS BY BOTH SIDES AT OPEN MEETING—THE AMERICAN FEDERATION OF LABOR, RAILROAD EROTHERHOODS, AND FARMERS' ORGANIZATIONS PLEAD FOR THE LAW—CHARLES EDWARD RUSSELL INFORMED THE CHIEF EXECUTIVE "ONE MILLION SOCIALISTS" OPPOSE BILL—"TAMMANY AND BIG BUSINESS" ALSO PROTEST.

WASHINGTON, JOHNBUL 20

WASHINGTON, January 30.

In the White House last week 300 men and women urged President Wilson to sign and urged him to veto the Burnett immigration bill. It was an interesting assembly that arranged itself in a semicircle around the Nation's Chief Executive, who gave close attention to the workers'

pleas for restriction and the oratorical flights of "big business" representatives. The battle was waged on the section of the bill providing for a literacy test. Unions affiliated to the American Federation of Labor, the railroad brotherhoods, and the farmers' organizations asked that the bill be signed. On the other side were the patriotic representatives of "big business," vote-hunting politicians from every party, and those who opposed the bill for sentimental reasons.

Ex-Congressman Bourke Cockran New York lawyer, and Congressman Gallivan, of Massachusetts, led the opposition. Their rounded sentences and inspiring appeals for the American flag might well be termed classics for schoolboys. Such gems as these were common: "A constellation in the firmament of civilization."

Mr. Cockran indicated who he represented, however, when, in opposition to the literacy test, he said: "I believe a hand calloused with labor should be a better passport."

Former Lieut. Gov. Whitman told the President he represented Tammany and that that organization was opposed to the bill.

Charles Edward Russell, magazine writer and lecturer, said, "one million socialists" oppose the bill, which, he declared, was "unsound and could not be enforced."

Secretary Morrison, of the American Federation of Labor, diplomatically called attention to the opposition of some associations "that depend for existence for contributions from the employing class." In referring to the \$60,000,000 annual income of steamship companies, he said: "This will account in a great measure for the opposition of societies of various nationalities composed wholly or partly of business men and the attorneys of business men," whose freight charges might be lincreased to meet the companies' deficit if immigration was restricted. The unionist presented organized labor's position on this question, and showed, by the testimony of investigators, that workers are correct when they state that ignorant aliens are beating down the living standard of Amercan wage earners.

The

year.

Prof. Fairchild, of Yale University, insisted that the illiteracy test is American and fair. He stated that when this same bill was up for consideration in previous Congresses Italy built schoolhouses in anticipation of its passage. The schoolhouses were abandoned when the bill was defeated.

Prof. Ross, of Wisconsin University, said that of all the tests that had been proposed to restrict immigration, the one of illiteracy was the best.

Mr. Speaker, the opponents of the bill showed much alarm at the prospects of this country running short of labor. Many opponents declared in favor of restriction, but "not this kind." None of them, however, even hinted of an effective substitute. Among the other speakers against the bill were Representatives Sabath, Illinois; Goldfogle, New York; J. Hampton Moore, Pennsylvania; and Prof. Larned, of the University of Pennsylvania; Oscar Villard, editor of New York Evening Post, and several representatives of foreign fraternal and other organizations.

President Wilson stated that he vetoed the immigration bill because it seeks to exclude "those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable right of man," and because it excludes "those to whom the opportunities of elementary education have been denied without regard

to their character, their purposes, or their natural capacity."

President Cleveland, President Taft, and President Wilson, all three, vetoed the literacy test. The House tried and failed to pass these bills over the President's veto. The literacy test in the last vetoed bill would have excluded chiefly Russian Jews and southern Italians. The objections to these immigrants was not altogether that they can not read nor write. The advocates of the measure wishes to exclude the southern Italians and Russian Jews because they did not believe in the quality and character of these people. Failing to find any test of quality and character the literacy test was used. Our melting pot is not capable of handling all kinds of people in unlimited quantities. We are afraid to put the Chinese and Japanese into the pot. We are finding out that in times of stress it has not Americanized all the other peoples whom we have admitted to our shores. The situation in which we find ourselves now, however, has an element in it which we have not faced in the past. The English, Irish, German, and Scandinavian people that have come to the United States assimilate more readily than the immigrants that are coming now. The immigrants of the past were more productive people at home than the present ones. They were held in higher estimation in their own countries. Their quality and character were better. A policy that worked well with a Swede in 1890 will not be equally beneficent with a Sicilian in 1915. The melting pot can

not melt and transform the present stream of immigration. It is equally certain that there is a limit to its efficiency, and I believe that in the recent past we have overtaxed its abilities, and must call a halt by enacting an educational-test law. If so many of one kind of immigrants come that they remain un-Americanized let us meet the situation frankly and put a limit upon the numbers we will take from any one country and add to this any tests of quality and character that may be devised, and no better test than the educational one can be found.

Mr. Speaker, the Bible tells us that a man can not serve two masters, and human experience abundantly sustains this doctrine; therefore there can be no English, German, Irish, or Catholic American, because a man can not serve two masters; if they are Americans they can not be a German, Britisher, or Irishman. I regret to state that many men who have isher, or Irishman. I regret to state that many men who have taken the oath of allegiance to the United States, thereby renouncing their allegiance to any foreign prince, potentate, or power have, since the beginning of the present great European war, forgotten their oaths, and are now boldly taking the side of their relatives by blood, and have also boldly criticized our Congress and our President, thereby rocking our ship of state, making it much harder for our good and great President to steer clear of all foreign complications that might lead our country into war, which God forbid.

Had these kickers (of foreign extraction) not been permitted to immigrate to our country this danger would have been avoided, and it behooves us to close this door to all persons who are not willing to become in good faith only American citizens. President Wilson was right when he said in his message vetoing the immigration bill that it would exclude "those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of man." Because no civilized country will harbor in its bosom the anarchist, such as Herbert Parsons, who wrote on February 2, 1915, the following letter to me, namely:

FEBRUARY 2, 1915.

Hon. John H. Stephens,

House of Representatives, Washington, D. C.

Dear Sir: To us it seems of very great consequence that the right of political asylum shall be maintained inviolate in this country.

The history of nations—of others as well as of our own—teaches that at times only through the unlawful destruction of property and the advocacy of this may despotism be thrown off and representative government attained.

We can only urge you to vote against passing the immigration bill (H. R. 6060) over the veto of the President. This we do solely on the ground that the bill, in our opinion, runs counter to the proper and historic policy of this country in excluding and deporting (sees. 3 and 19) aliens "who advocate or teach the unlawful destruction of property," and in subjecting to fine and imprisonment (sec. 28) "any person who knowingly aids or assists any * * * (such) alien to enter the United States."

Yours, very truly,

Herrent Parsons,

President Friends of Russian Freedom.

HERBERT PARSONS, President Friends of Russian Free

Mr. Speaker, I maintain, with President Wilson, that no other civilized country would accept as a citizen such a man as Herbert Parsons, who boldly advocates and teaches the destruction of property in the foregoing letter in order to carry out his diabolical purpose of rushing this country into a reign of anarchy and despotism. But I wholly and respectfully dissent from the views of the President, who, it seems from his lan-guage above quoted, would admit to citizenship in this country men who claim that it is one of the inalienable rights of man to destroy property, as is shown by the aforementioned letter of All classes of anarchists are rightfully excluded by Parsons. the Burnett bill, therefore I shall again vote for the bill vetoed by the President this year. I believe that the allegiance of the American citizen, whether by birth or oath of allegiance, should be of the loftiest and most exclusive type, and in our country's intercourse with foreign nations may she always be right-but right or wrong, our country. Our first duty is to our family and our country before we think of the other fellow, especially when the other fellow desires to come to our country to rock our boat, criticize, find fault with, and defy our laws and institutions, and in two instances murder our Presidents.

Mr. Speaker, the following letters from labor organizations express fully my views on this subject, and are as follows:

Boston, Mass., January 30, 1915.

Hon. John H. Stephens, Washington, D. C.

GREETING: The 45,000 members of the Boot and Shoe Workers' Union desire the passage of the immigration bill now before Congress, because a slight measure of restriction will tend against the glutting of an already overstocked labor market. Many of our members are of foreign birth, but they are here and must live on what they earn.

Large employing interests want to flood the labor market in all trades. Therefore they oppose the literacy test as they would any other test that would impose the slightest restriction. If restriction is desirable, upon what better basis can it rest than that of intelligence and education. Surely one would not impose a property qualification.

It is said that the percentage of illiteracy is high in the United States. If that is so, the literacy test can be no hardship on the immigrants from the nations of higher education than ours. Also, if we are more illiterate, it is because we have admitted a million or more each year with no educational test, and we need the protection of the literacy test to raise the standard of immigration.

With due respect to the President, we do not think he understands the wage-earners' battle for a living, and we respectfully ask you to vote to pass the bill over the veto of the President.

Very truly, yours,

O. L. BAINE, General Secretary-Treasurer.

Hon. John H. Stephens, M. C. CLEVELAND, Ollio, February 1, 1915.

CLEVELAND, OHIO, February 1, 1915.

Hon. John H. Stephens, M. C.

Dear Sir: The American labor movement deeply regrets the action of President Wilson in vetoing the immigration bill, and on behalf of several thousand organized workers, with whose sentiments on this question I am familiar, I wish to express the hope that you will vote to repass the bill over the President's veto.

With all due respect to the President's sincerity we should like to know what surer test of sentiment could be obtained than the fact that this question has received the approval of Congress twice within three years by overwhelming majorities? Congress has, without a doubt, recorded the sentiments of the American people. Those who are denouncing the bill on the ground that an educational qualification furnishes no test as to character or industry, have, with few exceptions, opposed as strenuously every other means of restriction that has been considered in the past. However, restriction is the big issue here, and not so much the method by which the restriction is to be brought about.

The statisticians who tell us how few people we have to the square mile or how many more millions our acres can support don't seem to have done much toward putting the incoming millions on to those untilled acres or from preventing those millions from settling down in the industrial centers, to make worse a labor situation in which there are several applicants for every available position.

With the products of the farm the highest in years, and with hundreds of thousands of workers unable to secure employment, large numbers of whom are in the charity line, we are confronted with a situation that can not be either settled or relieved by the theorist with his handy pencil.

The labor movement is earnestly concerned in this immigration question, and we again express the hope that you are in sympathy with the purposes of the Burnett bill, and that you will give your approval at the purposes of the Burnett bill, and that you will give your approval at the pro

UTICA, N. Y., February 1, 1915.

Hon. John H. Stephens.

House of Representatives, Washington, D. C.

Dear Sir: The undersigned is directed by the executive council of the New York State Federation of Labor, a body representing 700,000 organized workers of the State of New York, to respectfully request you to vote and use all honorable means to override the veto by the President on the Immigration bill. The organized workers of this State feel that this bill is of the greatest importance for the future welfare of the workers of this country, both organized and unorganized. The ending of the present war will more than likely send to these shores millions of workers to crowd an already overcrowded labor market. It is only tair to the organized workers of this country who are using every effort possible to assimilate and educate the foreign worker to provide some safeguard against the influx of the lilliterate of the Old World. Thanking you in advance for complying with this request, I am. respectfully,

Edward A. Bates,

EDWARD A. BATES, Secretary-Treasurer New York State Federation of Labor,

Mr. Speaker, I have very recently received many letters from numerous labor organizations throughout the country favoring this bill. I will here insert the following ones as part of my remarks, namely:

BUILDING TRADES COUNCIL OF DALLAS AND VICINITY, Dallas, Tex., February 19, 1916.

To United States Senators and Congressmen of Texas, Washington, D. C.,

To United States Senators and Congressmen of Texas, Washington, D. C., greeting:

This is to notify you that the Dallas Building Trades Council of Dallas and Vicinity is especially interested in the passage of the Burnett immigration bill, which will come up, we are informed, for passage at this session of Congress; and we are joining with all organized labor, not only of Texas but of the entire United States and Canada, and particularly the South, in asking our Senators and Congressmen to support this bill when same is presented to Congress for final passage.

You may have supported the bill at the last session of Congress, when it almost became a law over the veto of the President, but we are asking you to use your influence and vote this time to have this bill enacted into law and become effective before the great European war is over, when we believe a great influx of undesirable immigrants will pour into this country if this bill is not a law at that time.

Thanking you in advance for your support of the Burnett immigration bill when 't is presented to Congress for final passage, which we believe is a solution to this question, we beg to remain,

Very truly, yours,

Dallas Bullding Trades Council,

Dallas Bullding Trades Council,

DALLAS BUILDING TRADES COUNCIL, DAVID G. HINCKLEY, President, W. A. GOODE, Secretary.

SAN ANTONIO, TEX., February 18, 1916.

Hon. John H. Stephens,

House of Representatives, Washington, D. C.:

Realizing that the Burnett immigration restriction bill is of the greatest importance to the workingmen, therefore it is requested upon your part that you vote for the passage of this bill, and, if necessary, vote against the President of the United States, should he veto the bill if passed in the House and Senate.

Organized labor realizes that the workingman will bear the brunt of the battle after the European war is over, and in order that the social conditions under which the American workingman is living shall be

continued it is necessary that a restricted immigration bill, such as the Burnett bill, should be passed.

SAN ANTONIO TRADES COUNCIL, JAS. R. WEBB, President. HARRY M. SPANGLER, Secretary.

THE ILLINOIS STATE FEDERATION OF LABOR, Chicago, Ill., February 21, 1916.

To the Members of the Sixty-fourth Congress, Washington, D. C.

Chicago, Ill., February 21, 1916.

To the Members of the Sixty-Jourth Congress, Washington, D. C.

GENTLEMEN: The Illinois State Federation of Labor, representing nearly half a million organized working people in the State of Illinois, requests you to vote for the Burnett immigration bill, and, in event that it is vetoed, to vote for its passage over the veto of the President.

The legislation proposed in the Burnett bill is becoming more and more necessary. Evidence of this can be seen in every industrial center in the country. Thousands of illiterate foreigners, with whom it is difficult and in some cases almost impossible for other working people to even communicate, are at the mercy of cheap-labor exploiters. This condition should not be permitted to grow worse. It must be improved if the American standard of life is to prevail.

To speak of America as "the haven of refuge for the oppressed of the world" is mockery when that phrase is merely used as a cover under which to bring into the United States the oppression existing in some foreign lands. Immigrants coming to this country should be of the kind capable of quickly adjusting themselves to the standards of life here and to the American ideas of democracy, progress, and freedom. The invasion of our country by stimulated immigration, particularly from southern and eastern Europe, may be profitable to steam-ship companies, to the Steel Corporation, to mine owners, and to other employers of cheap labor, but it is a danger to American institutions so grave that the necessity for a check upon it, such as is provided for in the Burnett immigration bill, is so obvious that we believe it scarcely needs argument.

We respectfully urge that you join with us in this effort to protect American standards, and that to this end you do everything in your power to bring about the enactment of the Burnett immigration bill at the present session of Congress.

Respectfully,

ILLINOIS STATE FEDERATION OF LABOR,

ILLINOIS STATE FEDERATION OF LABOR, By V. A. OLANDER,

Secretary Treasurer.

Chicago, Ill., February 21, 1916.

To the Honorable Representatives of the Sixty-fourth Congress, Washington, D. C.

To the Honorable Representatives of the Sixty-fourth Congress, Washington, D. C.

Dear Sirs: The Chicago Federation of Labor, representing over 250,000 organized men and women, request that you vote for the Burnett immigration bill and also vote for same in the event this legislation is vetoed by the President.

We make this request on the ground that American standards of living can not resist the onslaught of immigration from southern and eastern Europe that it stimulated by steamship companies, mine operators, the Steel Trust, and other employers of cheap labor.

We are aware of the sentimental protests against this bill that have so artfully been manufactured by those who would degrade and exploit the men and women of labor; but we call your attention to the report of the United States Commission on Immigration that investigated this question, and which, after nearly four years' study, and at an expense of approximately \$1,000,000, took a position identical with that of the trade-union movement.

We are asking our Representatives in Congress to protect us from this unnecessary and unfair competition. Our battle for a continuance of American living standards should enlist the sympathy and support of every one whose ideals of democracy are not dimmed by the pleas of those who are blind to national dangers because of cheap labor and an illiterate citizenship.

We respectfully request that you join with us in this effort for American standards and do all in your power to obtain positive action by Congress during this session.

We hope you will vote for the Burnett immigration bill on its final passage and also in the event of its being vetoed by the President.

Thanking you for consideration of same, we beg to remain,

Most respectfully.

Chicago Federation of Faberation of Labor,

E. N. Nockels, Secretary.

CHICAGO FEDERATION OF LABOR, E. N. NOCKELS, Secretary.

MINING DEPARTMENT OF THE AMERICAN FEDERATION OF LABOR, Washington, D. C., February 16, 1916.

AMERICAN FEDERATION OF LABOR,
Washington, D. C., February 16, 1916.

House Office Building, Washington, D. C.
Dear Sir: In the name of the nearly one-half million men affiliated with the mining department of the American Federation of Labor, and for the good of all the workers of America, I am hereby requesting you to vote for the passage of the Burnett immigration bill.

Employers of labor, especially those connected with employers' associations and shipping trusts, are utterly selfish and un-American in their desire for unrestricted immigration conditions. Their greedy desire for profit overshadows all attempts of the workers to resist the breaking down of American standards of working and living, and, as some of them have brutally stated, they find the pauper immigrant laborer an excellent "wage regulator."

We in the ranks of labor do not propose to be so regulated; we object to being brought to the economic and social conditions of the southern European pauper laborer, and we ask you, in the name of Americanism, justice, and common decency and honesty, to vote for the passage of this bill, even over the President's veto.

The American Federation of Labor and all the affiliated international, district, and local unions are unanimous in their desire for the provisions of the bill, and we sincerely hope that our plea to you will not be in vain.

Yours, truly,

President Mining Department, A. F. of L.

President Mining Department, A. F. of L.

Mr. Speaker, I believe with Mr. Bates that at the end of the present European war millions of foreigners will seek our shores to escape the fearful taxation that will be levied by all of the belligerent nations upon their citizens.

They will also be induced to emigrate to this country because of better wages and because our money will be good all over the world, while their home wages will be small and their money far below par in value.

They will further seek citizenship in this country in order to escape military service in future wars in their country.

Mr. Speaker, every foreign soldier becoming a citizen of and securing a job in this country after the close of this war will deprive an American citizen of a job. Why, then, should any lover of our country vote to take the bread out of the mouths of our American children, or clothes off of their backs, to give some illiterate foreigner the jobs of our own needy countrymen?

We are told by the Bible "that charity should begin at home." Now, let us practice as well as teach this wholesome home." Now, let us practice as well as teach this wholesome and just doctrine by voting for this bill, and thus carry into

effect this Divine command.

Sugar.

EXTENSION OF REMARKS

HON. MOSES P. KINKAID,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1916,

On the bill (H. R. 11471) to amend an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1916.

Mr. KINKAID. Mr. Speaker, I am heartily in favor of the ill. The revenue it will permit to be realized will help to replenish our depleted Treasury, and necessity makes it impera-tive that money for that purpose be realized. But I favor it also because the principle involved is in accord with the policy of the protection of American industries. I voted against the law now sought to be repealed when it was enacted, and I had previously to that time so voted. To encourage this industry, yet young, to help to expand and increase the production of sugar is a thoroughly economic and sound policy for America to pursue. It is obvious to everyone that the high cost of living is directly involved, and this problem, so serious to American consumers, may be solved by increased production and the price lowered in keeping with the irresistible law of supply and demand.

Mr. Speaker, the sugar-beet industry has helped to diversify farming here and there in the old-developed sections of our country, while at the same time it has contributed directly and very noticably to the development of newly settled sections of the West. Observation shows it goes hand in hand with the irrigation of arid lands, the most productive home-making, homebuilding land act that was ever passed.

In connection with the operation of the national reclamation law, the fostering of the raising and the manufacture of sugar beets inures to the mutual benefit of the Government and water users under irrigation projects. It is a fact that, viewed from a practical standpoint, the growth and manufacture of sugar beets under these projects has become almost indispensable to the

interests of the Government and the water users

It would be very easy to secure verification from the officials of the Reclamation Service that wherever sugar-beet culture is practiced on these projects water users are able to make prompt payment to the Government of construction and maintenance charges, while, on the other hand, if the irrigation project is located too distant from a sugar-beet factory the making of the annual payments to the Government for the cost of building canals and reservoirs and upkeep of same is found to be difficult, and water users fall behind. It is very clear to me that if the irrigation projects started under the national law were supplied with a sufficient number of sugar-beet factories to consume the sugar beets that would be raised, the Government would soon be repaid the large sums of money it has invested in the construction of the project.

Many object lessons of the existence and operation of the sugarbeet factories in the Mountain States could be cited, coupled with reliable statistics which would abundantly and conclusively prove the correctness of the assertion I have just made.

Mr. Speaker, even under ordinary circumstances I have for years been a believer in the wisdom of a country making itself as nearly self-sustaining and industrially independent of other countries as the natural resources and genius of the people may

permit. When this European war is over the reason for more self-reliance upon the resources and industries of our own country will be greatly increased. Already a trend in Europe, particularly in Great Britain, has manifested itself in favor of pursuing a policy of more reliance on home products, home industries, and correspondingly less reliance for these upon foreign nations. In other words, they will favor and follow a policy of a protective tariff more than ever before. The object lesson afforded by the great industrial development in Germany prior to the present war and the value this has been and is to its war and food crisis commends the adoption of such a policy. It has been sugar-beet growing and their manufacture into sugar that has perhaps done the most for the solving of the food question and the high cost of living in Germany of any single factor. Besides the direct beneficial effects of the sugar-beet industry to that country, the yields of other crops have been greatly augmented by the fertilization of the soils by the growing of beets. Besides, the production of cereals has been increased 50 percent and the yields of all kinds of crops have been noticeably increased by the rotation of sugar beets with the other crops.

Mr. Speaker, it is plain to anyone who has given the question consideration that the production in our country of crops which are grown where sugar beets may be profitably cultivated, may be readily increased from 30 to 100 per cent by the previous cultivation of sugar-beet crops in the same soil. And is not this the cheapest and best way to solve the high cost of living? And is it not also the best way for this country to become self-sustaining, to become at least self-sustaining as to foodstuffs, to say nothing of the advantage of production for exportation? Will not such a policy materially help to secure the result of the balance of trade in our favor in our dealings with foreign countries, and thus sustain and increase the volume of currency in our own country?

Mr. Speaker, I advocate such a degree of protection for this industry, not yet one-fourth developed, as may enable the growers of sugar beets and the manufacturers of the same into sugar to successfully compete with producers in foreign countries who would participate in our home markets. I would protect every other agricultural product to a like extent when needed, as well as every other American industry.

But, Mr. Speaker, as I started out to say, after the close of the great European war, which stands without a parallel in all our history, the signs are that the warring nations are going to pursue a policy of protection for home industries similar to the practice of our own country, more or less broken by occasional party political changes in our national administration. When our country has pursued this policy of protection, prosperity has prevailed; but when a change has been made toward free trade, business depressions, if not commercial and industrial disasters, have been the result. And in this instance the effects upon the sugar industry would have been very damaging by the operation of the act this bill will repeal had it not been for the occurrence of the European war.

Mr. Speaker, it has well been said that America is another name for opportunity. It is plain to me that this opportunity, the opportunity of the foreigner to better himself by coming to our country, has consisted very largely of the condition that industrially we have stood upon a protective-tariff basis. [Applause.]

Pacifists' Dream of Perpetual Peace.

EXTENSION OF REMARKS

HON. WILLIAM H. MURRAY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 25, 1916.

Mr. MURRAY. Mr. Speaker, out of all discussion we find those who believe in "preparedness" divided on the program as to degree or amount necessary. Many believe sufficient what we now have, others favor an increase of Navy only, and yet others an increase of both Army and Navy, and in turn these disagree upon the amount or degree of each. But it is not my purpose here to discuss preparedness. I shall take the opportunity to do that at a later date. It is my purpose now to discuss the pacifists' dream and to answer the question, Will the world ever have universal and permanent peace?—and to try to show that this can not be expected. I regard this necessary since it is observed that those who believe that it can will not

consider any degree of preparedness as essential to national safety.

There is nothing to justify the belief in permanent and universal peace, either from man's nature, his past experience, or his religion, nor from Divine purpose or the tendency of the times.

Of the five great religions making for peace—Confucianism, Buddhism, Zoroastrianism, Judaism, and Christianity—the last named is regarded as the most altruistic, while all the rest, particularly Mohammedanism, are religions of war and brute torce. Nevertheless, Christianity pleads with all men to become righteous and to live a life of rectitude with "peace on earth and good will toward all men," but enjoins upon its votaries perpetual contest and war with evil, with Christ himself saying, Matthew x, 34 "I am not come to send peace on earth but a sword."

The heart of the religion of the 600,000,000 Chinese and the soul of their code of morals, the sustaining power of their hopes and the preserving strength of their Government for upwards of 24 centuries, is this simple truth, known as the maxim of Confucius: "Learn the past and you will know the future." This is but another statement of the universal truth so admirably expressed in English adage, "Experience is the best teacher." He who would judge the future must judge it by the past; he who would solve the problems of the future must do so from a knowledge of the experience of humanity in ancient and medieval ages, not from a knowledge alone of the present. A knowledge of the present is but a knowledge of a condition. A knowledge of the past will give the statesman the philosophy for the solution of the problems of the future. Hence, all statesmanship founded alone on modern history will prove shortsighted.

I have scrutinized the philosophy forming the superstructure of the nations of all ages; I have read all political history worth reading; and I challenge any man to point out a single nation in any age (except a portion of Chinese and Japanese history) and in this I include our own Republic, that did not have a war every generation, I care not what the form of government or degree of civilization, or the race or religion of its people.

The thirteenth century was one for the awakening of constructive forces, and yet civilized nations of that century had a war every five years. Perhaps you say we have progressed toward peace. Let us see about that. The twentieth, or present century, has run now 15 years, and we have had a war in the civilized world on an average each one and one-half years. Moreover, the United States, since July 4, 1776, has been in war one day out of every four—the French and Indians wars, the campaigns against the Seminoles, the Creeks, and Tecumseh, and the Indian wars of the West, aggregating more than twenty years. Add to these the Revolution, the war with the Barbary States and of 1812, the Mexican, the Civil, the Spanish, and Philippine wars and you will find that this is not overstated.

The longest period of peace during the one thousand or more years of the Roman Empire and Republic was just 44 years; and in fashions, hopes, social conditions, and evils, as well as in political propaganda for their solution, we are to-day traveling for the most part along the same road of the last century of the old Roman Republic.

P. H. Von Treitschke, in "Politik," has said:

It has always been the weary, spiritiess, and exhausted ages which have played with the dreams of perpetual peace.

I know of no better reply to the pacifist who wants us to believe that our civilization has reached the summit and who overlooks the civilizations of other peoples, than to quote from President Wilson in his speech in New York:

We live in a world which we did not make, which we can not alter, which we can not think into a different condition from that which actually exists. It would be a piece of provincialism to suppose that because we think differently from the rest of the world we are at liberty to assume that the rest of the world will permit us to enjoy that thought without disturbance.

Moreover, I can not understand how men can even think our own civilization above the brutish impulses of war so long as our cities must needs be protected and peace preserved by prisons and police. Alas! Iceland is the only country having neither. Why, indeed, the police force of our American cities surpass in number the standing Army of the Republic. Should they be removed for a single day in the great populous centers like New York and Chicago, robbery, arson, and murder would gain such headway as to require a standing army to suppress it, so that President Wilson is correct in saying that we can not change the conditions of the world by thinking them different. The conditions of the world are so replete with human nature, with conditions not to escape the observation of a practical man

if he will but look at those conditions and take his mind off of academic theories and look among men to find them instead of

the books of impractical dreamers and pacifists.

This belief-1 do not say doctrine, for those who believe it have not sufficient information of the world's history upon which to found a doctrine—is not new. It has recurred from time to time since the dawn of civilization, and was acted upon by the ancient Greek, when they refused to heed the warning of Demosthenes: "Let us arm and go against Philip," leading to their downfall; and as it was taught by Malthus, who, upon this belief gave expression to the political dogma: "The time this beilef gave expression to the political dogma: will come in the world when the world can not feed the world." This is true if his premise (permanent peace) were true. Such doctrine was believed in Germany even at the close of the seventeenth century. Every nation and people, in a natural desire to avoid strife or to become disturbed in their ease and comfort or in their effort at money making and financial aggrandizement, have embraced this belief whenever their people became "book readers." By this term I mean they "read" books, but do not study them. They believe books (and magazines) and whatever is written in them without analyzing or criticizing their contents to determine whether true or false. Many modern writers put popular theories into books just to satisfy a popular belief, and all such books have a ready sale.

History of the fifth century teaches us that Attila, the military genius of the Huns, the philosopher of his age, when he marched upon the municipalities of Greece for the purpose of carrying away their wealth and making his armies rich with the spoils, found the Greeks hugging this delusive phantom. When his soldiers had gathered together all the spoils of the city they also gathered all the books and manuscripts of science and learning, piled them in the market place and were ready to apply the torch, when this old Hunnish philosopher bade them not to burn the books, for, said he, "The books constitute the reason we are here. If you destroy the books of the Greek we shall never be enabled to return. Without their books they will be compelled to study men and nature, and will thereby become practical men. Take everything else, but leave them their

books."

Many Americans have reached that stage now, and this is the explanation of the belief that universal peace is possible. This is the reason for so much mollycoddleism, for so many fads, for our epidemic of beliefs and opinions. Too many people believe whatever they read if it conforms to their natural de-Too many people sires, to their hopes, and particularly to their beliefs. But we must remember that belief begins where information ends. I have found the ignorant man ready at any time to give me a complete formula and program of government involving all the relations of man, whether under local, State, and National laws or of international policy, and they are cocksure that they are right upon all these questions-questions that I have not solved, and I have spent 30 years without a holiday at the job. While on the other hand the wisest men in my acquaintance, men whom I know to be students and learned, confine their recommendations to a few questions which to them "after serious contemplation, seems to be sound," and they request my "most earnest consideration of them." Their appeal, in any event, is in more modest language than the man who is really ignorant and who has been environed by an epidemic of beliefs and opinions. To say the least, this is our most dangerous sociological condition. The wise man who has not mastered a subject says, "I do not know; I shall investigate." And this is the only course to pursue in this, the world's greatest crisis since the dawn of modern civilization. There are many things in the propaganda of political reform, in social habits and fashions, including the slit skirt and bear hug dance, and in the beliefs and opinions of the public that are but a repetition of fashions and measures tried and believed 2,000 years ago, many of them abandoned after lessons which experience has taught. These things invariably serve the student of history, not the "reader of books," but the man who extracts philosophy from history, learns by experience, and judges the future by the past. This of all times requires the deepest study, and above everything else the greatest courage, even at the sacrifice of political pro-This is no time for an appeal to practical politicspolitics that leads to continuous victory-but is the time to adopt measures of safety, to adhere to principles of sound statesmanship if the United States shall be steered clear of the shoals and shallows that civilization and republican institutions may endure.

THE FOUR BATTALIONS OF PACIFISTS

Have each proposed a remedy which their several enthusiastic followers proclaim would bring universal peace. These four are: "Disarmament," "Arbitration," "Commission of inquiry

and delay war a year," and the "Federation of the world," or "World's court."

The three first of these I subscribe to as wholesome and worthy of adoption. The last I regard as an unmitigated evil and most dangerous, not only because it violates the fundamental principles of government, but for the other and further reason that the so-called Carnegie Peace Foundation has and is now promoting it with a fund of a half million dollars annually to publish books and spread its propaganda. Let us analyze these propositions, with a view of determining: First, whether they will vouchsafe universal, permanent, or continued peace; and, second, with a view of determining to what extent they may become wholesome, with this object in view.

DISARMAMENT.

Will this bring universal peace? If it would, why was it that men have fought during every stage of their march up and down the long slope of civilization, irrespective of their armament or lack of armament? Why did they fight when their military preparation consisted of but bow and arrow and the Bowie knife? Why did they war with one another when they made the Spanish blunderbuss, then the cannon, the machine gun, the dreadnaught? The only difference has been that the smaller the armament the more often they fight and the greater the duration of the war, while the greater the armament the shorter the wars and the longer the duration of peace between them, but the greater the destruction of life and property by war. It can therefore be observed that in every country since history began, comparing the number of people and the amount of property, there has been proportionately the same destruction of life and property in every century since this The answer to this is the conclusive proof that world began. we can not hope for disarmament to relieve us from the natural True enough we can afford, as we ought, to and inevitable. reach protocols with all of the great nations, agreeing that all shall together disarm; but I submit until they reach that agreement and lay down their great guns we, at least, should keep our pistol.

ABBITRATION.

This has always proven a wise policy whenever used to settle those disputes properly subject to arbitration, but we are left where it is neither wise nor safe to submit all questions to arbitration. We could not arbitrate the Monroe doctrine or the law excluding the Japanese and Chinese from coming to our shores; and did we do so, we shall lose both. In the case of the Monroe doctrine no nation has ever agreed that it is a part of international law. They have obeyed it either because, as in the case of England, it was in their interest; and in the case of Germany, Italy, and Japan because our Navy was strong enough to compel obedience.

Upon the old dispute between us and Japan, wherein she for many years has claimed the right of being treated on the 'same terms as the most-favored nations of Europe," we would also lose here in any arbitration court, because Japan would prove that, under Commodore Perry, we made a treaty in the early fifties agreeing to the terms expressed in the very same language which the Japanese used in their diplomatic notes to We could not arbitrate the form of our Government. We could not submit certain constitutional safeguards to an arbitration court composed even of the representatives of the American Republics, for we have the only Republic on the Western Hemisphere whose constitutional provisions guarantee both that palladium of liberty, the right of trial by jury, and total separation of church and state. We fought for these. We may have to fight for them again, and we could not risk them to the arbitration courts of republics who do not agree with them nor to abritration boards selected by monarchies from whom we wrested them.

A COMMISSION OF INQUIRY AND DELAY WAR FOR A YEAR.

This will not give us peace. It is worthy of adoption because it would delay war 12 months honorably, and whatever would delay it for one day honorably should be adopted; but let us analyze its effect upon human nature. Suppose we had a dispute with one of the great powers of the world and both in good faith undertake to carry out the provisions of a treaty requiring such "commission of inquiry and delay war for 12 months"; would that nation, would our Nation know whether at the end of 12 months the other intended to fight or not? They would both answer this question by preparing, so at the end of 12 months of newspaper campaign and political controversy the people of both nations would be nearer the breaking point then than at the beginning, and the only difference would be both would be better prepared to fight than they were at the beginning of the quarrel. The conduct of Italy in the present

struggle is a concrete illustration of this course. She had a treaty of alliance, offensive and defensive, with Germany and Those two nations had a right to expect that Italy would at least remain neutral; but the Italian people, following the statesmen out of power, joined in, as they do in all nations, and began an agitation for war, knowing that the King and cabinet in control of the Government had made such a treaty and desired to keep it. This agitation, by taking the form of an appeal for the restoration of three northern Provinces of Italy, the garden spot of her once great empire, all shades of popular opinion against the cabinet grew so strong that they made bold to placard the streets with the warning, "Give us war with the allies or we will give you a republic," forcing the King to enter the conflict on the side of the allies in violation of their solemn treaty, and that, too, in the face of 10 months of the most gigantic and destructive war that history has ever recorded. so would it be with the policy of a "commission of inquiry," because the party out of power would begin an agitation the very reverse of the party or cabinet in power. This is true of all nations the world over. This is the human nature of all peoples. It is true of our own Republic. There is one saving power with us, however, and that is in the midst of a crisis both the great political parties in all the history of the past have willingly laid down their differences and supported the Govern-ment. That was true in the breaking out of the Spanish-American War. The Democrats began an agitation for a war to liberate Cuba, knowing that President McKinley wanted to maintain peace with Spain, nor did the Democrats want war; they wanted to build up an issue, but the waves of popular demand grew so strong they engulfed McKinley and his Cabinet, forcing us into the war. Then the Democrats, like true patriots, ceased their criticism and supported the policy of Mc-Kinley with such unanimity that it swept him and his party back into power with greater majority. We heard last winter much criticism on the floor of Congress about the foreign policy of President Wilson, and that continued until the sinking of the Lusitania and it looked like German guns were pointed toward us; then the Republicans, with equal unanimity—to use the language of the Republican governor of Ohio, whom I heard say, It is the duty of every American to stand in this crisis behind the man in the White House." Recently, in the present Congress, when it was made clear of threatening danger to us in Europe, we witnessed the minority leader, the Hon. James Mann, boldly, fearlessly, unselfishly announcing his intention to uphold the President.

So long as this remains the attitude of the American people it will prove the saving power of the Republic.

I repeat again, in international crises or in international policies there is no room for either the demagogue or the partisan.

FEDERATION OF THE WORLD, OR WORLD'S COURT, TO ENFORCE PEACE.

The advocates of this provision do not seek to avoid all armament. They tell us that they will need soldiers and battle fleets, supported by the various nations of the world in such proportion as this court may determine, but all under the com-mand of the "world's court." I submit if such court can not assume the functions of anything other than the questions willingly submitted by all nations to it, or agreed to be submitted by treaty, then it is no more than a court of arbitration. If it assume and possess the power to decide any disputes not agreed to be submitted, it would have the power to settle all disputes; and this would make of it a world's nationality, or "republic of the world," as some seek to call it. Then it would settle all questions of difference, whether difference in the construction of a treaty or whether there is any treaty provision at all on the subject, and hence it will decide all disputes between Then international law would not be made up of 'precedents" founded upon practices of the nations and gen-bining all the powers of supreme nationality in one body, which is fundamentally opposed to our view of a separation of the three powers of government. The advocates of this provision overlook the most fundamental principles of government and adopt, rather than the practical view, the academic view, that every theory of government is capable of being installed among all nations, irrespective of race, religion, or degree of civiliza-tion, when in truth government is a practical thing. Its very form must depend upon the intelligence, the character, the heart throbs, the hopes, and ambitions of its citizens. By this view a republic could exist in one nation while it could not in I tell you that government must not only take into consideration all these things, but, in addition, the races and religions, the appetites, and passions of men. In the making

of Oklahoma we considered, when our attention was called to the fact that an Indian, unlike a white man, when under the influence of liquor becomes poor, while a white man gets rich and can buy the earth. The Indian remembers all of the wrongs committed against him, every quarrel and difference, and this leads him while thus intoxicated to kill his best friend, and he is unable to stand up against the temptations to drink; hence we provided that intoxicating liquors should never be manufactured or sold in the State of Oklahoma. Now, if our people had been Germans it would have been quite different. A German can have a half day's fun on one little bottle of beer, while an Indian would want a keg. We have considered in Congress the passions of men by the enactment of the whiteslave law; the greed of men by the enactment of the childlabor law; and wherever you go, on every hand, the wise system, the best system, is the one that takes into consideration all the relations of the citizen. In proportion to your falling short of a correct analysis of humanity as it exists in a nation, in that proportion is your government a failure. This "federation of the world" is but an attempt to put into concrete governmental policy the poetical dream of a world power and "brotherhood of man"; but before we subscribe to it let us ; but before we subscribe to it let us first remember that poets have poetical "license" to violate every rule of language in the interest of rhyme, and in this every sound principle of government is sacrificed for the rhythm and beauty of the verse.

Tennyson's "Locksley Hall" also doubtless became the inspiration of this academic or book statesman who first conceived the notion of a "federation of the world."

Tennyson's dream, in part, is contained in these couplets:

Till the war-drums throbb'd no longer, and the battle-flags were furl'd In the Parliament of man, the Federation of the world.

There the common sense of most shall hold a fretful realm in awe, And the kindly earth shall slumber, lapt in universal law.

However, after thus expressing his dream, he doubted the philosophy of it, particularly in its effect upon the "wisdom" of the "individual," who must needs "wither" under such a system. This philosophy is expressed in these couplets:

Knowledge comes, but "wisdom lingers," and I linger on the shore, And the "individual withers," and the world is more and more.

And then Tennyson sums up and concludes his philosophy in the following couplets:

Thro' the shadow of the globe we sweep into the younger day; Better fifty years of Europe than a cycle of Cathay. The old poet's dream of "brotherhood of man," coupled with

The old poet's dream of "brotherhood of man," coupled with an erroneous ethnological theory that all races can become amalgamated, constitute the basis of this book form of statesman-

While it is true that every great civilization in history was the result of a mixture of races—this was true of Greece, Rome, and Egypt, and in a great measure of the United States-but in each case a cross of allied races, which produced strength and virility. This historical fact has caused many ethnological scientists, with but a superficial knowledge, to conclude that it would be wise to eliminate all races by their complete amalgamation. In this they overlook the further scientific fact that, whether in plant or animal life, unallied crosses in blood, mental, nerve, and moral fiber tend to weaken. This was thoroughly understood by the old philosophers who founded the Brahaman religion, creating a caste system based upon race, giving to each race a sphere in life, but never permitting one to rise above that sphere or his caste, or to entertain hope or desire to do so. At the time of the promulgation of Brahamanism the races lived together in Central Asia, and these old philosophers realized that races must be kept separate, which succeeded until these races scattered to other continents. Then this religion began to wane because its necessity had ceased to exist. Modern dreamers of the "brotherhood of man" to the extent of complete amalgamation have not as yet reached that degree of philosophy which the ancient understood, making it of great importance that governmental policies shall not be framed in obedience to their one-sided scientific be-That like mental, moral, and nerve fiber of race crosses gives strength and virility, and that the crossing of races unallied in these particulars produce mongrelism, weakness, or sterility runs through both animal and vegetable kingdoms. We find this notably so in the progenitors of the mule. be something poisonous in the serum of plants and in the blood of animals of unallied species either in grafting or crossing them, as in the case of grafting an apple upon the red haw, once the same plant, but which forbids a like grafting of the peach, and, as Dr. Carver, of Harvard, showed that he could graft a dog's leg on a wolf's leg, but not a cat's leg. The same rule which applies to this experiment of grafting applies with equal or greater force, both in the animal and vegetable kingdom in producing either weakness, sterility, or mongrelism in the crossing

of the unallied species.

My conception of the "brotherhood of man" is that even if a negro be hungry that I should feed him, but it does not comprehend that I should take him into my family; and likewise I should not take any alien races into my national family when dangerous to our prosperity or our civilization. If this were not true. God Himself would not have placed a ban on certain crosses, producing sterility and mongrelism. We do know that upon this principle in nearly all the Southern States the provision in the constitution prohibiting the amalgamation of the white and negro races only extends to the third degree, because in the fourth degree they cease to breed further toward the white race. This is verified by Burbank's experiments in the agricultural world, by his cross between the petunia and tobacco plant, and between a wild dewberry and an apple, pear, and mountain ash, which last produced berries, the seed of which in turn produced plants, but the seed of them in turn were hollow, although these plants were originally the same, but so thoroughly changed, although of the same species, by centuries of environment they became wholly unallied, and therefore the serum became poisonous to each other, which is but following Darwin, and applies with equal truth to the animal world. In commenting upon this he warns us against the Turk-Semitic of Asia, the Jup and Chinaman, and against the southern Italian, who has a strain of blood disclosed by his curly hair and aureo eve mixed from the shores of Africa during the Saracen in-

Let us also take warning that now and for years past the greatest migration of peoples in all history is going on toward the United States.

A federation of the world is another impractical principle of government. Governments in all the past ages have been bounded for most part according to race or religion. We live in peace with Canada, a province of a monarchy, because we are of the same race and religion, but we do not live in equal peace, because they are of another race, with Mexicans, although of the same Christian religion. If they were pagans, that difference would prove more marked.

So it does appear that in all the years of the future these things must be considered, and that it is incompatible with our liberties, religion, and civilization to join a federation of the world for the settlement of disputes, except those we agree to.

How will this federation be formed? Certainly by selecting proportional number of representatives from each nation, either by the chief executive, the legislative branch, or some other method, or by a combination of all of them, more likely by the same method we select arbitration courts and ambassadors by the Chief Executive. In such a deliberative body, with the power to make international law, to construe it, and enforce it, fortified with all armies and navies of the world, I warn you that those of the white race would be in the minority; Christianity would be outnumbered by the followers of Mahomet and Confucius. Those who believe in republican government would be outvoted 5 to 1 by those who believe in monarchy. We can not afford, from either of these considerations, to take the risk.

History discloses to us that all the wars in the world have been fought for one or more of the following reasons:

First. Because of race prejudice.

Second. Because of religious prejudices.

Third. Because of pressure of population and economic struggle for existence, the same thing which caused the war in

Fourth. A few, comparatively a very few, have been fought for liberty.

It therefore follows that you will never have universal peace until all religious prejudice, race prejudice and jealousy, the desire to acquire property, and the love of the flag are totally banished from the breast of man-from all men of all the earth. To do this would not only overturn in part the highest ideals of our Republic, but would require a change of human nature, which to-day is just what it was when the Shepherd Kings of ancient Egypt laid the Pyramids and has continued to be down to the laying of the keel for the latest dreadnaught, and God alone can change it. War can not be abolished. We may prepare against it and to alleviate the suffering; we may provide for the sick and wounded; we may counsel peace and approach as near as our limited wisdom will permit to prevent it, but it seems to be the one universal fate. It appears God's scourge for man in wrongdoing. In all nature, in all the experience of man. it has been one of constant war. By war all the kingdoms of the earth have perished or advanced.

War has sometimes proved individual strengthening of man. It is his great leveler. In gigantic military struggles the wealth trade of all of them and of our own Nation, compelling us to

of the world is soon dissipated. The soldier returns from the battle field a scar-worn veteran with a crown of heroism upon his head, physically able and prepared to start life new; the rich by the revolution have lost their all, have sunk into poverty, and in the following generation the top layer of society becomes the ground sill. This has characterized all wars. It was shown in the great Civil War, as in numerous other instances of all history.

"The federation of the world," the "republic of the world," the "government of the world," if no other danger from this policy should arise, should it start out a republic with a written constitution and every part sound, can any man guarantee that this body of men, responsible to no one, fortified with all the armament of the world, would not grasp power and encroach upon all the liberties of the nations? Did they not do so they would be the one exception in all history. It will be remembered that the States of the American Union early in the history of the formation of the Republic, with extreme reluctance, and that in order to create a national power for self-preservation, gave up any of the powers of the States, although they were of the same race and religion, with the same hopes and ambitions, and yet we have seen it grow from when no man would dare introduce a resolution in Congress affecting the morals or material habits of the citizen to such a centralized nationality that the National Legislature has but recently passed a law prohibiting the citizen of the State, even though the State did not choose to pursue that policy, from working for more than eight hours a day and those under 14 years of age from working at all at certain public industries of the country.

Such a federation of the world would affect the civilization of mankind, just as did the Roman Empire, by jealousies between the central national power and different sections, races, and peoples, engendering internal strife and turmoil, and thus hastening the downfall of civilization. Civilization is best preserved by leaving each race or group of people to work out its own destiny. Herein lies the reason for local self-government.

I warn you also that in this "federation of the world" we shall give up the Monroe doctrine and the Chinese and Japanese exclusion acts; California and Oklahoma must abandon their alien land laws; we will give up all power to legislate against foreign immigration; we shall ultimately surrender the power to create armies, tariffs, commercial relations, and all international questions will be yielded to the "federation of the world," just as we have yielded all the power of the State government wherever questions between State and State or citizens of different States may arise. In other words, this supreme nationality will exact absolute obedience to its will, and if we do not choose to do so, they will have all the armies, including our own, to enforce that decree.

do not know how you look upon it, but God forbid the day shall ever come that an American soldier shall ever obey the command or consult any governmental power upon the field of battle over and above Old Glory!

EFFECT OF EUROPEAN WAR.

We do not know what evils or benefits may flow from the present European war. It is incomparable. It is beyond our limited philosophy to foresee. However, there are some things we may with tolerable certainty, drawing from the philosophy of the history of the past, foretell.

First, following the present war in Europe, monarchy will be stronger in all the belligerent nations than it has been since it received the shock of the French Revolution and the rise of Napoleon, for the reason that history discloses to us that never was the liberty of the citizen, nor was local self-government strengthened by war except in those cases where that was the

direct object of the war.

No person except one independent in the financial and social world can resist aggression of power, whether political, social, financial, or otherwise. A dependent man in society can no more resist the aggression of power from the ruling classes of a country than can a tenant cotton farmer resist exorbitant rates of interest of the money lender when he is compelled in order to make his crop, to mortgage that crop in advance, together with his team and plow tools. Only the independent class-the great middle class—in every government are situated so as to lend a helping hand to the dependent class and at the same time aid in restraining the cupidity and selfishness of the powerful When this European war is over this middle class will be reduced to a dependent position and will not have the time nor the power to resist the aggression of the crowned heads of Europe who, following the human nature of all ages, will take all power that the people will permit them to take.

Second. We may expect a shifting of the commerce and of

embark upon a new field in order to give security of market and of trade, prosperity to the farmer, and keep our labor employed; for we can certainly conclude that with the loss of many thousands in Europe there will be many thousands less in Europe to buy our supplies, and they will have many millions less with

which to buy.

Leaving belligerent nations out of the question, we shall be compelled to recoup that trade elsewhere in order to keep our labor employed and give the farmer markets. That trade can be found nowhere else except in South America and China, and a trade can not be established with them without a merchant marine for transportation of our products to such markets; but a merchant marine without naval protection will constitute an open invitation to war. Any and all nations finding our trade and commerce competing with theirs and imperiling their industrial prosperity would pick a quarrel with us just to destroy our ships of commerce and our foreign trade, knowing that, even though they might be compelled to pay an indemnity at the end of the war, which neither our defeat nor our idealistic policy would permit, they would yet be the gainers; but if we had a naval fleet equal to theirs they would hesitate long in a desire to sink our "tubs" for fear of getting theirs sunk. Without such naval fleet where would we be at the end of such

In this connection I call your attention to the fact that no nation can become great or strong, and none has become such in the history of the past, retaining for any length of time prosperity, work for its laboring men, and markets for its agriculturists, without being a maritime nation. All the maritime nations of the past have been told in story and song, and ours can not become a maritime nation without its merchant vessels, and it can not have the merchant vessels without guns to protect them. For 40 years England, with all the power of her navy, has stood behind the Monroe doctrine, although not subscribing to it, in consideration of our having surrendered to her the control of the seas and monopoly of foreign trade. would continue to do so if we would continue that policy, but I called your attention a while ago to the necessity of a change, because of our loss of markets in Europe, so we may not expect even that continued friendship with England if we hold the merchant fleet that has come to us as a result of this conflict

and build it greater.

There is a third result which we, with the philosophy of history to back us, may conclude as inevitably flowing from the present conflict in Europe, and that is, there will be a revival of religion. Mark you, I do not say Christianity in its altruistic purity, but religion. It is through these periods of the coming of some awful catastrophe that cause men to realize the lack of strength for self-preservation. Then naturally they turn to a supreme power for strength and guidance. Hence, if the European war should continue for 30 years, as it may, if the allies are not satisfied with defeating, but determine to crush and disarm, Germany at all cost, this selfsame religious spirit may, as it did in the Middle Ages, degenerate into a fanaticism and intolerance of opinion, now rife in our own Republic, as shown by the strife between branches of the Christian religion. And through such fanaticism, engendering internal strife, is history to repeat itself, with the reign of terror in France, when more than 1,000,000 people were killed by massacre and fusillades? If it reaches this period, it inevitably follows there will be a universal war of revolution and bloodshed, from which the United States might not hope to escape. At any rate, after it is over in Europe, civilization, old man Civilization—Christian civilization—will be a nervous wreck, walking up and down the earth in search of a fountain whose waters may restore him to vigor and health again. America may become the beacon light of weak and nervous civilization, or, by the wrong policy, she may become the stumbling block upon which civilization will fall, and, falling, he may lie prostrate, as he lay before for centuries, too weak to rise again, ushering in a second period of the Dark Ages, with all of its fanaticism and superstition, when men reveled in debauchery and brute force, intolerance, despotism, and crime.

America can avoid it by preparing not only in military and naval fleets but with markets and trade, by the development of her industries, by keeping the farmer happy and prosperons, and giving employment to labor and making them contented. The giving employment to labor and making them contented. wisest of us do not know how to approach the question, but we do know how to prepare against the worst. that our wise course is to stay clear of entangling alliances with the Old World, to remain absolutely neutral, and be prepared to husband our own resources and to protect them, if need be, by naval and armed strength, which our rich Nation is capable of paying for. I say we do not know. It may be that Russell, the English scientist, was right when he stated that civilization

went up and down-like the elevator of the House Office Building, sometimes rising to the second floor, sometimes to the third, but to go down again, and sometimes reaching the top, but then sure to start down again. It may be, sirs, that civilization is not unlike our planetary system, not unlike our seasons, not unlike nature all about us, revolving in cycles. It may be that in our steady, striding step up the long slope toward the mountain peak of a perfect civilization we have reached the summit and that the summit is the last way station, the nearest approach of man's earthly existence to his Maker, and that way station once reached we can not remain stationary, but thereafter must needs take the decadence toward the valley and shadow of ignorance and weakness from which we scaled those

Does it not follow that death ends the life of man? Who, with all man's past experience, can deny this same fate also awaits nations and civilizations-life, then death? The summit of intellectual development, or life, may have been reached, now to totter and fall over into insanity and barbarism.

As the decline of the ancient culture of Egypt, Greece, and Rome was followed by the lapse of Europe into a thousand years of night, so also modern culture may have reached its summit, just now to begin to totter to the final fall, and the whole world lapse again into death-when men shall revel again in ignorance and brute force. Who knows? Shall we not therefore strive to steer the American ship of state off the rocks and shoals? The stakes are worth the trial.

Thus this Government, every government, is a plaything with fate—a mere toy in the hands of providence—all depending on whether its destiny shall be guided by wisdom and statesmanship or by the error of impractical beliefs and opinions.

Address of Hon. Charles M. Stedman.

EXTENSION OF REMARKS

HON. EDWIN Y. WEBB, OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 25, 1916.

Mr. WEBB. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of my colleague [Mr. Stedman] delivered on the 21st of March, 1916, at Confederate Memorial Hall, District of Columbia, by request of the Confederate Veterans' Association of the District of Columbia

The address is as follows:

"Ladies and gentlemen, comrades, when I received from the Confederate Veterans' Association of the District of Columbia an invitation to deliver an address here to-night, it could not be aught but a very great pleasure to me to accept. It came to me from a camp named in honor of one whom it was my high privilege to know, to whose division I belonged in the Army of Northern Virginia, and for whom I had profound respect and admiration. Maj. Gen. Harry Heth, by his example and conduct upon every field, inspired his men with those high sentiments and great qualities which will perpetuate the fame of the Confederate soldier in ages yet to come. It is an occasion which appeals to the hearts of all who admire moral and per-sonal heroism as exemplified by its greatest exponents. It is a monthly reunion of Confederate soldiers, a small remnant of those who have preceded us by a day's march along the route of the innumerable caravan—the mighty dead—not inappropriately called the deathless dead—for though they have yielded in the order of nature to the conqueror of humanity, they are not dead but sleeping. Their lives are still continued in their uttered thoughts—their spoken words—in their undying acts and unfading example. Their history shall ever be kept alive, that invoked by the brightness of its record, the pages of the book will be kept still illuminated, that at some future day yet farther down the aisles of time, the youth of that generation may be directed to a still unfalling and continuous panorama without tarnish or blemish.

The historian in ages far remote from the era in which we live will record the glories of this great Republic. He will gild his pages with its achievements in war and in peace. The reader will linger long over their recital. The description of this beautiful and attractive Capitol will not fail to charm and delight him. He will be lost in admiration and wonder when he learns that within its limits, more than half a century after the close of the Civil War, which shook the continent to its foundations, there was a Confederate camp where representatives of every section of our common country met in friendly intercourse, proclaiming to the world the complete unity of sentiment existing everywhere throughout this broad land, and foretelling its grandeur and enduring greatness through all the ages to come.

I have been requested to adopt as the theme of my discourse "North Carolina in the War between the States." A subject so splendid in itself, so replete with great and heroic action, seldom falls to the lot of any speaker. When I reflect upon the self-denial and the unshaken fortitude of the people of North Carolina during that unhappy period, when the splendid and unexcelled achievements of North Carolina soldiers during that same era pass in review before my mental vision, I can but feel my inadequacy to so great an undertaking.

If aught I say shall seem to detract in the slightest degree from the merit of any Confederate soldier from any State or from my loyalty to this great Republic, whose flag protects and shields all its citizens, I ask that you do not so construe my words, out ascribe them to the enthusiasm which characterizes all the children of North Carolina for her great name. The character and reputation of every Confederate soldier will ever be near to my heart, and the glory and honor of our common country will ever command my sincere and unchanging fealty.

The part acted by North Carolina in the greatest drama of modern times—the War between the States—history will preserve vithout blemish upon its pages. It has long since passed beyond the pale of legitimate controversy that in the number of troops furnished to the Southern Confederacy, in proportion to its white population, and in the losses sustained by those troops, she stands first of all the States which made up that galaxy of great names.

It is likewise true that no troops in any corps of the Confederate Army were more thoroughly equipped and provided for in every way necessary to their efficiency and comfort, both as to arms, food, and clothing, than were the soldiers from North

In considering the number of troops furnished by North Carolina to the Confederate Army, her attachment to the Union of the States will ever demand your consideration and attention, and her loyalty to her sister States of the Confederacy when once her faith was pledged, will claim the admiration of all who have an honest pride in national honor, wherever it may be found. North Carolina was next to the last State to secede from the Union, and in February, 1861, voted against secession by more than 30,000 majority; yet with a white population of 629,942, and a military population of 115,369, being one-ninth of the military population of the 11 seceded States, she sent to the Confederate Army 125,000 men, one-fifth of its entire enrollment, which was 600,000, according to the accepted estimate approved by Gen. Cooper, the adjutant general of the Confederacy. Maj. A. Gordon, who was on the staff of the adjutant general of North Caroline, and who was thoroughly conversant federacy. Maj. A. Gordon, who was on the staff of the adjutant general of North Carolina, and who was thoroughly conversant with the organization of the North Carolina troops, estimates her contribution to the Confederate Army at 127,000. Gov. Vance, after a thorough examination of the records of the adjutant general's office, stated the number to be 125,000, and Capt. S. A. Ashe, who, at the request of the State Literary and Historical Association of North Carolina, gave to the consideration of this subject careful research, adopted the figures given by Gov. Vance, and in his report says they are as correct as it is possible to make them. Lieut. Gen. Stephen D. Lee, in an address delivered at Asheville, N. C., stated North Carolina furnished 22,942 more troops than any other State. Of the troops furnished to the Confederate Army by North Carolina, four regiments of infantry and one of cavalry were sent to the Army of Tennessee.

Of the soldiers present for duty, North Carolina had a larger proportion than naturally fell to her lot. They were ever ready in camp or upon the field of battle. Of the 92 regiments which assailed and defeated the right flank of McClellan's army in front of Richmond, 46 were from North Carolina. Of the 16 brigades engaged in the first day's fight at Gettysburg, 7 were from North Carolina.

The First North Carolina Regiment, commanded by Col. D. H. Hill, later a lieutenant general, was the first regiment sent by the government to Yorktown and the first to arrive at Bethel. Over 800 of the 1,200 present when the action commenced were from North Carolina.

The first Confederate soldier killed in battle was Henry L. Wyatt, of the Edgecombe Guards, Company A of that regiment, who fell at Bethel on the 10th of June, 1861.

At Reams Station, on the 25th of August, 1864, after a previous assault by other troops had falled, the three North Carolina brigades of Cooke, Lane, and MacRae, in number less than 2,000 men, drove the Federal troops from the field, capturing their breastworks, with 2,150 prisoners, 3,100 stands of small arms, 12 stands of colors, 9 guns and caissons. The result of this brilliant engagement was hailed with great re-joicing throughout the South and shed a declining luster upon the Confederate battle flag, upon which the sun of victory was about to go down forever. Gen. R. E. Lee publicly and repeatedly stated that not only North Carolina but the whole Confederacy owed a debt of gratitude to Lane's, Cooke's, and MacRae's brigades which could never be repaid. He also wrote to Gov. Vance, expressing his high appreciation of their services. From his letter I make this extract:

HEADQUARTERS ARMY NORTHERN VIRGINIA.

August 29, 1864.

His Excellency Z. B. VANCE, Governor of North Carolina, Raleigh, N. C.:

Governor of North Carolina, Raleigh, N. C.:

I have frequently been called upon to mention the services of the North Carolina soldiers in this army, but their gallantry and conduct were never more deserving of admiration than in the engagement at Reams Station on the 25th ultimo.

The brigades of Gens. Cooke, MacRae, and Lane, the last under the temporary command of Gen. Conner, advanced through a thick abatis of felled trees, under a heavy fire of muskerry and artillery, and carried the enemy's works with a steady courage that elicited the warm commendation of their corps and division commanders and the admiration of the army.

On the same occasion the brigade of Gen. Barringer bore a conspicuous part in the operations of the cavalry, which were no less distinguished for boldness and efficiency than those of the infantry.

If the men who remain in North Carolina share the spirit of those they have sent to the field, as I doubt not that they do, her defense may securely be trusted in their hands.

I am, with great respect,
Your obendient servant,

R. E. Lee, General.

R. E. LEE, General.

The regiments from North Carolina engaged in this battle again illustrated those high qualities which will perpetuate the name and fame of the Confederate soldier in years to come. Unshaken by the fall of Vicksburg and the disaster at Gettysburg, undismayed amidst the general gloom which was settling upon the fortunes of the South, they exhibited the same enthusiasm and valor which had marked their conduct upon every field where they stood for the honor, glory, and renown of their

The greater part of the Confederate infantry who were engaged in the last battle fought at Appomattox were from North Carolina. They were commanded by Maj. Gen. Bryan Grimes, a North Carolinian.

The last charge made and the last volley fired at Appomattox was by a North Carolina brigade, commanded by Gen. W. R. Cox, of North Carolina.

The last capture of cannon by the Army of Northern Virginia was made by Roberts Brigade of North Carolina cavalry.

No State stacked so many muskets at Appomattox as did North Carolina.

These facts are beyond dispute. The accuracy of the first two just mentioned in connection with the light at Appomation has been established by a statement made in writing in the year 1879 by Gen. Grimes, which will be found in volume 11 of Moore's History of North Carolina, and which has never been contra-dicted. The statement of Gen. Grimes is corroborated by a statement made by Gen. William R. Cox, which wa. also published during the same year in volume 11 of Moore's History of North Carolina. If more evidence could possibly be needed, it is furnished by the statements of Brig. Gen. W. L. London, of the Second Brigade in the North Carolina division of the United Confederate Veterans, who was serving on Gen. Grimes's staff on the morning of the surrender, and of Hon. Henry A. London, of the Thirty-second North Carolina Regiment, who carried the last orders at Appomattox. Both Gen. W. L. London and Hon. Henry A. London are now living in Pittsboro, N. C., model examples of the highest order of citizenship represented by Confederate soldiers, equally distinguished in war and peace.

Wherever the flag of North Carolina floated on land or sea it was without tarnish, the emblem of honor, of courage, and unchanging fortitude which endured to the end.

The Shenandoah, commanded by James Iredell Waddell, a North Carolinian, flew the Confederate battle flag at its mastheac more than six months after Gen. Lee's surrender.

Shall their immortality be reckoned by their blocd? thousand two hundred and seventy-five soldiers from North Caro-lina gave their lives to the Confederacy, more than one-third of her entire military population, and a loss more than double in percentage than that sustained by the soldiers from any other The entire Confederate loss during the Civil War, killed on the battle field and died of wounds, was 74,524. The loss of North Carolina soldiers was 19,763, more than one-fourth of the whole.

Of the 10 regiments of either side which sustained the heaviest loss in any one engagement during the war Georgia, Alabama, Tennessee, Illinois, New York, Pennsylvania, New Jersey furnished one each, and North Carolina furnished three.

The Confederate loss at Gettysburg was 2,592 killed and 12,707 wounded. Of the killed 770 were from North Carolina, more

than one-fourth.

Wherever the tide of battle was strongest and the harvest of drath greatest on that field of carnage, there could be seen the battle flag of North Carolina. Her dead sons were found far up its blood-stained slopes.

The three rigades at Gettysburg suffering the heaviest loss were Pettigrew's from North Carolina, with 190 killed; Davis's from Mississippi—composed of three regiments from Mississippi and one regiment from North Carolina—with 180 killed;

Daniels's from North Carolina, with 165 killed.

No brigade in Pickett's division, whose laurels won upon that field I trust may grow brighter with each revolving year, suffered so great a loss as the Twenty-sixth North Carolina Regiment. Its loss was 86 killed and 502 wounded, the largest sustained by any regiment on either side during the Civil War. Company F of that regiment, with 3 officers and 84 men, lost every officer and 83 of the 84 men in killed and wounded. Thirteen standard bearers of the regiment were shot down. Upon that same field one company in the Eleventh North Carolina Regiment lost 2 of its 3 officers killed and 34 of 38 men killed or wounded. The color company of the Thirty-eighth North Carolina Regiment had every man either killed or wounded.

At Sharpsburg the Third North Carolina Regiment lost 330 in killed and wounded of 520 men which it carried into action, and upon that field Company C of the Fourteenth North Carolina Regiment lost every man, either killed or wounded. At Chancellorsville the same company, which carried into the fight

43 men, lost every one in killed or wounded but 1.

The charge of the Fifth North Carolina Regiment at Williamsburg ranks in military history with that of the Light Brigade at Balaklava. The regiment lost 197 in killed and wounded of 240 men which it carried into action. That charge gave to immortality its illustrious commander, Col. D. K. MacRae.

At Seven Pines the Fourth North Carolina Regiment went into the fight with 25 officers and 520 noncommissioned officers and men and lost in killed and wounded every officer and 462 men. At Bristoe Station the Twenty-seventh North Carolina Regiment lost 291 of 426 men in less than half an hour.

The four regiments of North Carolina infantry—the Twenty-ninth, the Thirty-ninth, the Fifty-eighth, and the Sixtieth—and the Sixth Regiment of North Carolina Cavalry, upon the field of Chickamauga, rivaled the deeds of their brothers in the east and linked their names forever with imperishable renown. It has been established by the highest and most impartial testimony that "the point where the topmost wave of the tide of southern battle broke nearest to the unbroken line of Thomas's defense" was reached by the Fifty-eighth North Carolina Infantry.

This was the unanimous report made by five commissioners appointed by Gov. Carr, of North Carolina, to locate the position of the North Carolina regiments upon the field of Chickamauga. One of the commissioners was an officer of high reputation in the Federal Army who afterwards made his home in North Carolina and won the friendship and esteem of all who

knew him. I allude to Judge Clinton A. Cilley.

When stating the exceptionally great losses sustained by the troops from North Carolina there is no intention to assert that they were braver or better than those of any of her sister States. The soldier from North Carolina desires no praise, no laudation, no eulogy, at the expense of his brother Confederate soldier. The fortune of battle on many different fields furnished North Carolina soldiers the opportunity for their great achievements, and they ever proved themselves to be equal to the occasion.

It has been said by some writer that the qualities which distinguished the soldier from North Carolina were like unto those which made the legions of Julius Cæsar famous.

Lieut. Gen. A. P. Hill, when asked what troops he preferred to command, replied:

Unquestionably North Carolinians; not that they are braver where all are brave, but brave as the brayest; they are the most obedient to command.

To this trait of character, obedience to orders, many have ascribed their preeminence.

Without underestimating this great quality in a soldier, it will be found upon scrutiny that a higher, nobier, and more exalted virtue than even the spirit of obedience to orders gave to the Coufederate soldier, from whatever State he came, his superiority on the battlefield.

A supreme sense of duty was the cardinal trait of character which gave to him that moral power against which it is vain to hurl trained legions and endless battalions. It was the dauntless moral resolution of the soldiers of the South which

made their great deeds possible.

Without that moral power to sustain them, the incomparable legions of Lee would have in vain struggled for so long a time to roll back the tide of invasion across the banks of the Potomac, and the marvelous campaigns of Stonewall Jackson would have found no place in history to gild forever with a romantic luster the beautiful valley of Virginia. Neither famine nor pestilence nor mighty armies carrying in their track the destruction of all that was near and dear to them could subdue their invincible will. In the splendid future which awaits the southern portion of this Republic there is no character the study of which will more elevate its citizens and fit them for its blessings than that of the Confederate soldier. The capstone of the arch of his glory was the moral power which sustained him upon the buttle

field and which will forever perpetuate his fame.

An incident which illustrates the supreme sense of duty which can only be imparted by moral firmness, as exhibited by a North Carolina soldier, deserves to be recorded amidst the feats of heroes. The conduct of a private by the name of Tillman, in the Forty-fourth North Carolina Regiment, had attracted the favorable notice of his brigade commander, and he was at his request attached to the color guard. Tillman's name was also honorably mentioned in orders of the day brigade headquarters. Soon thereafter, in front of Petersburg, the regiment became severely engaged with the enemy and suffered heavy loss. The flag several times fell, as its bearers were shot down in quick succession. Tillman seized it and again carried it to the front. It was but an instant and he, too, fell. As one of his comrades stooped to raise the flag again, the dying soldier touched him and in tones made weak by the approach of death said, "Tell the general that I died with the flag." The tender memories and happy associations connected with his boyhood's home faded from his vision as he rejoiced in the consciousness that he had proved himself worthy of the trust which had been confided to him.

Wolfe died upon the heights of Abraham the death of a hero, and his spirit took its flight to another world and left as a legacy to his countrymen words which will forever live.

Nelson, at Trafalgar, illustrated by his conduct and speech

his supreme sense of duty to England and her glory.

The Scotchman who died at Waterloo with his bagpipe in his hand, by the sabre of the curassier of the guard, whilst thinking of Ben Lothian and playing an air of his native land, has been immortalized by Victor Hugo. But which of these three—aye, who of all those who live in song and story—is more worthy of the crown of immortality than that humble country lad whose grave to-day is unnoticed and unknown?

It would be idle for me to attempt to-night to give a record of the achievements of North Carolina soldiers upon the different fields of their glory. There was not an engagement in which the Army of Northern Virginia participated in which they did not contribute to its immortal renown. The day has come when our whole united country accords to them the full measure of praise to which they are entitled as representing the

highest and best type of American manhood.

I am greatly indebted to Chief Justice Walter Clark, of North Carolina; to Hon. Henry A. London; and to Capt. S. A. Ashe for assistance in securing, as far as it can be furnished with accuracy, a statement of the number of troops furnished by North Carolina and their losses. I have used for reference the History of North Carolina Regiments, edited by Chief Justice Clark, to which work he gave great and unstinted labor without renumeration or reward, except the gratitude of the Confederate soldier. I have also been aided by the information gained from an eloquent speech of Hon. Henry A. London, of North Carolina, delivered by him a few years a.jo, which was reproduced in the fifth volume of the History of North Carolina Regiments, and by the report of Capt. S. A. Ashe, of North Carolina, made to the North Carolina Literary and Historical Association.

For the splendid organization which equipped and supplied North Carolina troops, they are largely indebted to the provident foresight, practical business ability, and untiring efforts of Gov. Z. B. Vance, the great war governor of their State, who thereby endeared himself forever to all North Carolinians.

North Carolina not only clothed her own troops during the entire war, but furnished clothing for troops from other States, and when Lee's army surrendered had in store and ready for use 92,000 suits of uniform, with many thousand blankets and a large amount of leather. During the winter succeeding the battle of Chickamauga, North Carolina sent to Gen. Longstreet's corps 14,000 suits of clothing, and when the great drama was drawing to a close North Carolina was furnishing food and supplies to a large part of Lee's army.

Gov. Vance in a memorable speech delivered at White Sulphur Springs, W. Va., 18th of August, 1875, stated that he was told by Gen. Joseph E. Johnson "that when his army was surrendered at Greensboro he had in his depots at North Carolina, gathered in the State, five months' supplies for 65,000 men and that for many months previous Gen. Lee's army had been almost entirely fed from North Carolina."

For the comfort of her soldiers when at home sick, wounded, or traveling to and from the army North Carolina established hospitals and inns at many different points in the State along the lines of railway.

She did more than this. For the helpless wives and children of soldiers who might be in distress she established depots of grain, salt, and provisions for their subsistence and appointed committees to provide for them and see that they were not neglected.

The soldier who was sleeping upon some field afar off under the stars in northern Virginia rested calmly as he dreamed of the loved ones at home, for he knew that if he fell in the conflict of to-morrow that they would be cared for by the great State which sent him to the battle field.

My friends, can you wonder that North Carolina is still to all her children the well-beloved mother and sovereign, whose name ever brings to them when exiled from home by the decree of fate that poetry of youth and memory of early happy days which neither gold nor power nor place can buy.

neither gold nor power nor place can buy.

If commemorative words were needed to perpetuate the fame of the Confederate soldier, I should be all unhappy here to-night. But it is not so. It will live, transmitted from generation to generation, when the costliest tombs erected by the love of their countrymen have perished by decay and crumbled into dust.

It may not seem proper for me to make this prediction, but I do so with a reverent love for all portions of this great Republic. The day will come, though I trust it may be far distant, when the intentions and ideas of the founders of this great Government will be disregarded by those who, in the wild greed for money and amidst the dissolute luxury engendered by the vast accumulation of wealth, have forgotten the teachings of better and purer days and the very existence of a constitutional form of government, as framed by our ancestors, will be in jeopardy. Then will be found amongst a people regenerated by fire and blood that high and broad and lofty patriotism which shall constitute them the strongest, safest, and best defenders of the land of our fathers in its entirety, and as the suffering and oppressed of every land and every clime shall still turn their steadfast gaze toward this Western Hemisphere they shall rise up and call you

Have we learned naught from the silent endurance, the patient agony, the deathless valor of the Confederate soldier? It can not be, His life and his conduct have taught us the lesson over again which history has ever repeated.

It is neither on the greatest fields of battle nor places where the most calamitous bloodshed has taken place that the recollection of future ages is chiefly riveted. It is moral grandeur which produces a durable impression. It is patriotic heroism which permanently attracts the admiration of mankind. The day may come when the memory of the fields of Gettysburg and Chancellorsville, of Fredericksburg and Sharpsburg, shall be dimmed by the obscurity of revolving years and recollected only as a shadow of ancient days, but even then the enduring fortitude and patriotic valor of the Confederate soldier who followed the banner of Robert E. Lee and Stonewall Jackson will stand forth in undecaying luster amidst the wreck of ages and survive unshaken above the floods of time.

Friends and comrades, let us never fail to defend the fame and achievements of the brave men whom the South sent to the

Death, which destroys the pomp and power of this world, has only placed the seal of immortality upon their lives. The sacred charge of their fame is intrusted to you, my countrymen and countrywomen. Guard it devoutly, gravely, justly, and truly, that it may remain untarnished in its pristine glory, not alone with this generation but with all those who may come after us

until time shall be no more. Let the glorious example left by them be preserved for untold ages and for every people from the rising to the setting sun. If history be false, let tradition preserve it, and on every anniversary of our memorial days let eloquence proclaim it as a heritage for all humanity, which it has elevated and adorned with a pathos and glory which belongs to the civilized world.

Religious Liberty.

EXTENSION OF REMARKS

OF

HON. W. H. COLEMAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 25, 1916.

Mr. COLEMAN. Mr. Speaker, in view of the injection of the religious issue into the debate on the immigration bill under leave to extend my remarks, I desire to discuss the principle of religious liberty. A principle that is firmly imbedded in our institutions, the supreme law of the land, the Constitution of the United States, Article VI, section 3, providing:

No religious test shall ever be required as a qualification to any office of public trust under the United States.

And as if this were not sufficient protection to the people in the exercise of their religious freedom one of the original amendments to the Constitution further provides:

Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof.

Similar provisions are contained in the constitutions of the various States of the Union. The constitution of my own State of Pennsylvania providing in article 1, section 3:

All men have a natural and indefeasible right to worship Almighty God according to the dictates of their own consciences; no man can of right be compelled to attend, erect, or support any place of worship, or to maintain any ministry against his consent; no human authority can, in any case whatever, control or interfere with the rights of conscience, and no preference shall ever be given by law to any religious establishments or modes of worship.

Section 4:

No person who acknowledges the being of God and a future state of rewards and punishments shall, on account of his religious sentiments, be disqualified to hold any office or place of trust or profit under this Commonwealth.

Analogous provisions in the fundamental law of the different States ratify and confirm the principle enunciated in the Federal Constitution and justify the statement of Chancellor Kent, as follows:

The free exercise and enjoyment of religious worship may be considered as one of the absolute rights of individuals, recognized in our constitutions, and secured to them by law.

But notwithstanding these provisions in the fundamental law of the States and the Nation, we find ourselves to-day surrounded with religious antagonisms that surely can have no permanent abiding place under our free institutions. And under these conditions it is the duty of those who believe in the American principle of religious freedom to speak out plainly in its defense and to range themselves in opposition to every movement, from whatever quarter, that aims to curtail in the slightest degree that liberty of conscience guaranteed by our constitutions—State and National—and which is America's most precious gift to human kind.

ROGER WILLIAMS.

Feeling deeply on this subject, I purpose speaking plainly. The history of the past is full of political persecution, which other Governments have vainly sought to justify.

Most of these persecutions are traceable to the Old World idea on interdependence of church and state. But when the Puritans of Massachusetts, who sought a home in this western wilderness in which they might worship Almighty God as they deemed best, drove from their community that champion of religious liberty, Roger Williams, they prepared the way for the colony of Rhode Island, where was founded the first State to establish itself firmly on the rock of liberty of conscience for all men

True, for a brief period under the Empire in the time of Constantine, the edict of Milan introduced a universal and unconditional religious freedom. The Emperor, while encouraging the Christian religion, was able to see and argue that constrain by fear was no proper means of conversion. He saw clearly what became the cornerstone of the little colony of Rhode Island, that conscience demands for all men what it

asks for itself. Yet this brief period of time in the fourth century was the only exception among the Christian nations to the rule of union or dependence of church and state.

UNION OF CHURCH AND STATE

The reason for this universal idea is found in the supremacy of the church after the fall of the Empire, for with that fall civilized Rome was face to face with the barbarism of the north. It was the church to which all eyes turned, and to the church is due the credit of saving society from the wreck. It was the only stable thing in the midst of that universal ruin; and, faithfully performing its duty, it not only saved society but civilized and made Christian the northern invaders. supremacy of the church was the inevitable result, and it continued to sway a powerful influence in civil affairs until checked by the rise of nationalism, following in the footsteps of the Reformation.

But with the establishing of the nation followed the desire of the nation's chief to control the religion of his realm; and so, whether under Catholic or Protestant rule, the religion of the king became the established worship of the State. Unity of faith, all reasoned, was essential to the integrity of government. The Reformation, therefore, did not introduce religious liberty. religious war following Luther's death resulted in a victory for Charles, but brought no peace to warring religion; and the peace of Augsburg, in 1555, could only legalize the Lutheran religion for the time, with the understanding that the religion of the community in the future was to be determined by the religion

Even Calvin, who insisted upon the independence of the church from the civil authorities in matters of order and discipline, demanded, on the other hand, that the secular power should enforce the censures of the church in the punishment of heresy and vice; but the magistrates in the Swiss Republics did not agree with Calvin, even to the extent of his teaching, and the leading reformers held that excommunication should be in the hands of the civil authorities.

I refer to Calvin because, like the gentleman from New York [Mr. Benner], I am largely Calvinistic in my beliefs and can not therefore be accused of reflecting on another's religion. And as a student of Calvin I am mindful of the fact that the Spaniard Servetus was committed to the flames in Geneva in 1553 for committing the offense of writing his views on the doctrine of the Trinity. Calvin himself was largely to blame for this crime against freedom of conscience and freedom of speech and can be excused only on the ground that his error was the error of the time in which he lived.

RESULT OF STATE RELIGION.

As a result of this clinging to the old idea of union of church and State followed, in time, the religious wars, with their persecutions and counter persecutions, all of which history should impress us with the truth of the words of Grotius: "To put men in prison on account of their religious belief or persuasions is a great oppression and, properly speaking, false imprisonment; to fine them or take away their estate for that cause is robbery; to put them to death for not acting against their conscience is murder." And so likewise, my friends, in this day it is equally wrong to punish men by opposing them for public office on account of their religion or denying them equal rights with you in all civil matters.

Let us draw nearer to the Rhode Island spirit, which has come to be the American spirit; let us endeavor to understand it better and carry out, in our individual practice, what we so

appland in the attitude of the State.

Listen to the appeal in the application for a charter to merge Providence with the other settlements into the Colony of Rhode Island: "It is much in our hearts to hold forth a lively experiment that a most flourishing civil state may stand and best be maintained with a full liberty of religious concernments." King Charles granted this charter, and Roger Williams described this act as "the King's extraordinary favor to this Colony, in which his Majesty declared himself that he would experiment whether civil government could exist with such liberty of con-science." The charter, in its section pertaining to religion, The charter, in its section pertaining to religion, read: "No person within said Colony at any time hereafter shall be in any wise molested, punished, disqualified, or called in question for any difference of opinion in matters of religion. Every person may at all times freely and fully enjoy his own judgment and conscience in matters of religious concernments.

THE AMERICAN IDEA.

Thus was constituted, in contradiction to the ideas of the Christian world, a genuine Republic-the first thoroughly free Government in the world, the conscience of the individual at liberty to express itself in any way of doctrine and of worship. This Government was the answer of Roger Williams to his

Puritan persecutors for conscience sake. This was his great gift to the people of Rhode Island, and his principle of religious liberty has come to be the great American principle, and the spirit of Rhode Island is now the boast and pride of our great To Williams a state church was an abomination. held civil law had nothing to say of religion save that each individual should be left free to the guidance of his own conscience and the church or churches should be molded by the members therein. He insisted on the Lordship of God alone over man's conscience, and for liberty for all kinds of consciences. It was impossible, he argued, for man or men to maintain their Christ with a sword and worship a true Christ, and his work has proven that there is no more prudent way of preserving peace in the world but by permission of differing consciences

We need argue no further for the right of the Rhode Island spirit or show the persecution on the part of religious zealots in other of the Colonies, but remembering only that there was persecution. That Episcopal Virginia persecuted Quaker, Presbyterian, Baptist, and Catholic; that New York persecuted Lutheran, Baptist, Quaker, and Jew; that Puritan Massachu-setts banished Nonconformist, punished the Baptist, which sect, as early as 1524, drew the distinction between the kingdom of nature and the kingdom of grace, and insisted that freedom of conscience and worship was fundamental, and that religion should be entirely exempt from the regulation or interference of the civil power, so that a man's religion should not work his civil disability.

MADE MEN THINK.

But Puritan Massachusetts, with its intolerance, met in the grapple of death with religious liberty under the guise of Quakerism, when her unjust laws sent four Quakers-one a woman-to the gallows. From the gallows the blood of those representatives of a peaceable, industrious, and Godly people cried aloud until in time the Quakers won the victory, and Puritan Massachusetts was obliged to give up her theocracy, in which state and church were merged, and none but communicants were privileged to exercise the franchise. Martyred Quakers made men think, and the spirit of Rhode Island, which was the spirit of the banished Roger Williams, long years after his death conquered the Puritan intolerance that had persecuted

No argument, I take it, is required to this congressional audience to convince you of the virtue and the justice and the right of the spirit of Rhode Island, which spirit from this, the smallest of the Colonies, spread abroad until its influence broke down the intolerance of its neighbors and after the Revolution became the accepted doctrine of the new Republic. Our country to-day furnishes an answer complete and satisfactory to the questioning of King Charles as to whether civil government could exist with such liberty of conscience. Here we have not only proven that diversified religious opinions can live in harmony together, but have demonstrated that this liberty of conscience is the best foundation on which to rear a State.

If, then, this right of private judgment in every concern respecting God is superior to the control of all human authority, we should set ourselves against every phase of religious perse cution, for persecution of man to-day because of his faith, in view of our enlightenment, is worse than that of Puritan persecution and has less of justification than the spirit which sent the founder of Christianity to the cross.

PERSECUTION INDEFENSIBLE.

Persecution can not possibly be defended upon Christian principles. "If I am wrong," said Robert Wedderburn, when being tried for blasphemy, "they—the Christians—ought to pity and pray for me and endeavor by argument and persuasion to convince me of my error; but all attempts to force me are absurd because impossible, tyrannical because unjust." And again, in the words of the Rev. Robert Taylor: "He who can be angry with another for not being a Christian is himself no Christian; or he who can love another the less, or withhold his confidence for the avowal of dissent from his opinions, only holds out a bribe to purchase insincerity. He pays to be deceived, and he is so."

I rejoice that my own State of Pennsylvania occupies so conspicuous a place among the early communities contending for the right of religious freedom; for it was under Penn's government that the second State was established, though 40 years after Rhode Island, on the expressed purpose of the founder of trying an holy experiment on the cornerstone of freedom.

Members of Congress and citizens of the United States, let us set our faces against all intolerance or persecution for conscience' sake; let us range ourselves with Roger Williams, demanding freedom for ourselves and, with it, freedom for all

That minister who lends himself to any movement tending to curtail this priceless boon, whether Catholic or Protestant, does not measure up to the requirements of the age. That organization, secret or otherwise, that teaches opposition to men in civil affairs because of their religion is an un-American organization and can not live for long in our free soil. That individual who is governed by narrow religious prejudice that prompts him to antagonize his fellow man because he holds opposite opinions on matters of religion is not the kind of a citizen that helps to make a great State. That candidate for public office who seeks support for position in the civil state on the ground of his religious beliefs is unworthy to hold public office in this free land.

ABOLISH INTOLERANCE.

Let us strike down this intolerant religious attitude. Because, in this enlightened age, there is neither justification nor excuse for its exercise; but, on the other hand, it is more reprehensible, because of changed conditions, than the Puritan punishment of Roger Williams or unjust execution of Quaker.

Oh, that men could rise above all such petty prejudices and, with reason as their guide, conduct themselves in this age as becomes an American freeman. Let us remember that there is one Lawgiver who is able to save and to destroy. Who art thou, then, "that judgest another"?

Did you ever hear the Athenian story of the Aeropagites assembled on the mountain top? A sparrow, pursued by a hawk, flew into the bosom of one of their company in its flight for safety. He was of harsh, repulsive disposition, who, taking hold of the little trembler, threw it from him violently, so it was killed on the spot. He was arraigned by his comrades, and for his lack of mercy was degraded from his senatorial dignity with which he had been graced. Shall we, as Christians, show less of love and mercy than these men? Shall we oppose our fellow Christians of different denominations or even men of other faiths who do not believe in Christ? To do so is the very antithesis of Christianity. It is only the little, narrow minds that pose as completeness in themselves and act with bold, assuming air of infallibility.

STAND FOR PRINCIPLE.

I range myself on the side of those who battle for religious freedom.

I stand with Constantine, whose lonely figure rises out of that bygone age as one of the foremost defenders of liberty of conscience. I stand with Roger Williams and the other leaders of the great Baptist Church, which church did more for religious freedom in America than any other sect. I stand with Lord Baltimore, under whose brief reign Catholic Maryland gave religious liberty to other faiths. I stand with William Penn, the Quaker founder of Pennsylvania, who said, "I abhor two principles in religion—the first is obedience to authority without conviction and the other is destroying them that differ from me for God's sake." I stand with James Gibbons, a cardinal in the Catholic Church, as he says, "Religious liberty is the true right of every man, because it corresponds with a most certain duty which God has put upon him. Every act infringing on man's freedom of conscience is justly styled religious intolerance." I stand with Alexander Campbell, founder of the Christian (Disciples) Church, as he says, "There is nothing more genial to civil liberty than to enjoy an unrestrained, unembargoed liberty of exercising the conscience fully upon all subjects respecting religion."

I believe with Chancellor Kent that-

Civil and religious liberty generally go hand in hand, and the suppression of either for any length of time will terminate the existence of the other.

I agree with Daniel Webster when he says:

It is established as our principle that a man's religion is a matter above human law, because he is responsible to none but his Maker for it.

I am in accord with the words of James G. Blaine, as follows:

I am in accord with the words of James G. Biaine, as follows: I abor the introduction of anything that looks like a religious test or qualification for office in a Republic where perfect freedom of conscience is the birthright of every citizen.

I stand with Macaulay, English statesman and historian, who, Protestant strongly as he was, ever raised his voice in the English Parliament in behalf of persecuted Catholic and Jew, and in one of his fervent speeches said:

For my own part, I will give a strenuous support in this House to any attempt to take away any civil disability imposed upon men in consequence of their religious opinions.

And at another time, with equal force, Macaulay used these words:

Infliction of any penalties on account of religious opinion is persecution, and I can not conceive any argument to be adduced in favor of the mildest degree of this injustice, which, logically speaking, though not morally, indeed, might not be used with equal force in favor of the most cruel inflictions from similar motives.

And these sentiments, my friends, concurred in by the best thought of the world, should meet the approval of all lovers of liberty, and especially of all who live beneath the folds of our flag, which represents, among other things, first and foremost the principle—the American principle—of religious freedom. Let us as citizens of this land stand together with our feet firmly fixed on this rock, guaranteeing to every man the rights we claim for ourselves, remembering, in the words of William McKinley, that—

That citizen is the best citizen who does his best, who follows the light as God gives him to see the light, and freely accords to others the rights and privileges which he claims for himself.

Let us remember that the American principle of religious liberty is for all—liberty of conscience, for the white man and the black man; freedom of worship for the Jew and the Gentile; equality of rights for the Catholic and the Protestant—liberty, freedom, equality, for you and for me, forever and for all,

The Military Establishment.

EXTENSION OF REMARKS

OF

HON. ELIJAH C. HUTCHINSON,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1916.

Mr. HUTCHINSON. Mr. Speaker, I feel that it is my duty to give this House the benefit of my experience and knowledge concerning the portion of this bill known as section 82, as my business has been largely along the lines and with the commodities treated of therein. This section of the Military Establishment bill reads as follows:

That to provide for the fixation of atmospheric nitrogen by the development of water power, or any other means, necessary to establish an adequate supply of nitrogen, the appropriation of such sum or sums of money to construct the necessary plant for such purpose is hereby authorized.

This, to my mind, is one of the most important sections of this bill, and to remove it would mean the defeat of some of the most

important purposes of the bill.

This bill is looked upon by the country at large as a preparedness measure, and by one of its provisions we increase the strength of its Army. By removing section 82 this purpose is defeated, as you are making this country entirely dependent upon foreign countries for its supply of ammunition. I can not see the usefulness or advisability of increasing our Army to 140,000 men, or any other number, if you are not going to make some provision to supply that Army with ammunition other than the dangerous uncertainty of depending upon foreign countries for it. At present we are depending entirely upon Chile for nitrate of soda. This means that in times of war an enemy could very readily cut off our supply of this essential in ammunition manufacture. There is but one plant on the continent of North America producing cyanamid at the present time and that plant is situated on British territory at Niagara Falls, Canada. This plant is to-day manufacturing large quntitles of nitrogen from the air. Atmospheric nitrogen is a cheap product, and I am of the opinion that if this Government should establish a plant or plants for its manufacture, it could be obtained at a much lower figure in normal times than here-

I am not considering this section from the standpoint of the manufacture of ammunition alone, but from the standpoint that it will reduce the cost of ammonia to the farmer as well. This, in my opinion, is another step, and an essential one, toward preparedness. It will enable the farmer to produce larger crops and will go a long distance toward making this country self-supporting in times of war as well as reducing the cost of living in times of peace.

The prices of cyanamid, sulphate of ammonia, and nitrate of soda are double to-day what they are in normal times. To-day's prices of nitrogen, reduced to ammonia on the unit basis, are: Cyanamid, \$2.65 per unit; suplate of ammonia, \$3.12 per unit; and nitrate of soda, \$3.89 per unit; or, by the 2,000 pounds, cyanamid, basis 20 per cent ammonia, \$53 per ton; nitrate of soda, basis 19 per cent ammonia, \$74 per ton; and sulphate of ammonia, basis 25 per cent ammonia, \$78 per ton.

I am informed that at the outbreak of the present European war Germany had stored in her warehouses \$30,000,000 worth of nitrate of soda, and that in less than four months this supply was exhausted. To-day in Germany there are 8 or 10 cyanid plants manufacturing atmospheric nitrogen for the use of her

ammunition factories.

The high prices of these commodities have made it impossible for the farmer to purchase them for fertilizing purposes, and we must surely look for a diminished crop this year as a result. That the farmers are alive to this condition is borne out by a resolution which I have recently received concerning section 82 of this bill and which is as follows:

Resolution adopted by the National and State officials of the Farmers' Educational and Cooperative Union of America and of the National Grange in joint conference, with a unanimous vote, urging Congress to enact such legislation as well authorize the building of dams by the Government for the development of water power for the fixation of the nitrogen of the atmosphere as a fertilizer, and to provide nitrates for the manufacture of powder to supply the Government needs.

Whereas nitrogen is an indispensable element of plant food and on a great many of our soils is the limiting factor of crop production; and Whereas this country is entirely dependent upon the country of Chile for its supply of nitrates, both as to quantity and price, which fact the Government of Chile has used to exact an export tax of between \$11 and \$12 per ton on nitrates which we pay; and Whereas the cost of Chilean nitrates before the European war so high as to almost prohibit its use, and since the European war there is not even a supply of Chilean nitrates at any cost: Therefore it is, hereby

ti is, hereby

Resolved, by the National and State officials of the Farmers' Educational and Cooperative Union of America, and by National and State officials of the National Grange, in joint conference—

(1) That we hereby as strongly as possible appeal to the President and Congress of the United States that during the present term of the Sixty-fourth Congress such legislation shall be enacted as will authorize the construction of a dam or dams for the development of the necessary power for the fixation of the nitrogen of the atmosphere as a fertilizer and in such quantities to supply the needs of the Government and, as far as possible, supply the demands of agriculture and by this development free in part the farmers of this country from the Chile saltpeter monopoly.

ment free in part the fallier.

(2) That we ask, in order to prevent this great necessary industry from becoming a monoply, that any dams built by the Government to create this industry shall forever remain in the ownership and control of the Government.

from becoming a monoply, that any dams built by the Government corrected this industry shall forever remain in the ownership and control of the Government

(3) We insist that the location of this air-nitrate industry be determined with reference to the agricultural interests of this country, and that a site be selected that has near it a source of limestone, coke, and phosphate rock, as has been recommended by the Department of Agriculture, and that, furthermore, if possible, it be selected closest to the greatest consumption of fertilizer in this country.

(4) We recommend Government ownership and control in order that the cheapest money available may be used in the development of this industry and in order to regulate the prices of air fertilizers and protect the farmers of the country against monopoly, and since nitric acid is an essential munition of war and this Government is now dependent upon the country of Chile for its supply of nitrates for the manufacture of powder, and water-power development by the Government should be owned by the Government.

(5) That our legislative representatives are requested to present a copy of these resolutions to the President and to each Member of the Senate and House of Representatives of the United States.

Adopted unanimously February S, 1916, at Washington, D. C.

I urge that this House very carefully consider this important

I urge that this House very carefully consider this important section before voting to eliminate it from this bill, or we may find ourselves in the same position regarding these articles as Germany has placed us in regarding potash, another great factor in preparedness and the manufacture of ammunition, which normally sells at \$35 per ton and which to-day is bringing \$500 per ton, with every possibility that the small quantity that still remains in this country will bring \$1,000 per ton if some relief is not soon forthcoming.

Preparedness.

EXTENSION OF REMARKS

HON. CARL HAYDEN. OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 18, 1916.

Mr. HAYDEN. Mr. Speaker, under the leave granted to all Members of the House to extend their remarks, I desire to print in the RECORD a number of statements that I have made during the past five months on the subject of preparedness for national defense. In Phoenix last November I addressed a meeting of the Arizona Branch of the Navy League, at which time I said,

"The war in Europe forces the American people to think of preparedness. This war is a fact—a stubborn, unyielding fact that, however much we may prefer peace, we can not waive aside. The colossal conflict came upon the world with bewildering suddenness. The common people of Europe loved peace, just as we do, for they had enjoyed its blessings, just as we have I

for over a generation. Yet the fact that these same people are now in the death grip of war, slaughtering each other by millions, makes it certain that no man here and no man elsewhere can give us a promise of permanent peace.

"We must therefore look to the armed American, for we are

not yet ready to do without him.
"There are two ways for the United States to invite warone is to be so well prepared that we are tempted to attack some other country; the other is to be so defenseless that some other country is tempted to attack us. Our true military policy lies between these two extremes.

"There are some things worse than war. No man who is not afraid to die need be a slave, and no people are fit for the blessings of liberty unless they are ready to fight for it. As for myself, I am for America, whose glorious past has been sanctified by the blood of her sons, whose prosperous and progressive present we are therefore permitted to enjoy, and whose peaceful future we hope to insure by being prepared to defend our freedom whenever it may be attacked."

THE ARMY REORGANIZATION BILL.

After referring to the bill that is now before the House, I have said:

"The Committee on Military Affairs, after three months' hard work, unanimously reported this measure; and, while the bill will not please either the militarists or the pacifists, I am confident that it will meet with the approval of the great ma-

jority of our citizens.

"You will note that nothing is said in the Hay bill about the continental army advocated by ex-Secretary Garrison, but that provision is made for greater Federal control over the militia. The committee became convinced that the continental-army scheme in reality meant universal compulsory military service, and the plan was thereupon abandoned, because a majority of the people of the United States are not in favor of conscription in time of peace. By properly federalizing the National Guard we can obtain an adequate military force without endangering our liberties.

"The American people will submit to conscription after their country has embarked on a great war, just as they did in both the North and the South during the Civil War, and just as have the English in the present war. America has a right to demand that the burden of war shall rest with equality on all of her sons, and whenever a real crisis comes I am sure that Congress will require that military service be universal. It does not follow, however, that our people are willing to accept the principle of compulsory military training in time of peace. I am inclined to agree with ex-President Taft that no political party could live that advocated conscription except when our country is at

"The Committee on Naval Affairs is still considering the naval bill, and I feel sure that as a result of their deliberations a measure will be reported which will be generally satisfactory to the country. Most people are convinced that the Navy is our first and best defense, but the sentiment in Congress is that it would be both foolish and useless to attempt to exceed Great Britain in naval strength. Like the Army bill, our naval policy when finally adopted will appeal more to the good judgment of the great mass of the people than it will either to those who advocate peace, whether honorable or not, or to the other extremists who, if they could have had their way, would now have this country embroiled in war."

APPROPRIATIONS FOR ARIZONA.

I have also received a letter signed by certain good citizens objecting to "pork-barrel" appropriations for Arizona and favoring large expenditures for national defense. After mentioning a considerable number of requests for assistance from the United States that have been sent to me I continued my

reply by saying:
"There are Congressmen residing on the Atlantic seaboard who, because they fear that some fine morning a foreign fleet will bombard the towns in their districts, would not hesitate to denounce each and every item of appropriation that I have just mentioned as 'pork that smells to heaven.' They will insist that every dollar that is asked for work in Arizona had

better be spent on coast defense or the Navy.

"Now, I do not intend to be so narrow minded as to vote against appropriations for coast defenses and an adequate Navy merely because it so happens that Arizona is not open to attack from the sea. My name will be found recorded in favor of reasonable preparedness when the roll is called on the Army and Navy bills, but each one of you sadly misjudges me if he thinks that in the meantime I intend to neglect any opportunity to obtain what assistance I can from Congress for the people of Arizona. I can 'think big' enough to comprehend

the needs of the Nation and my State at the same time. And when I do vote for a greater Navy nothing will keep me from realizing that the cost of one battleship is greater than the combined total of all the requests for help from Congress that I have received from Arizona during the four years that I have been a Member of the House.

'I am here to serve every part of Arizona, and if any citizen or group of citizens asks me to present their wants to Congress I shall certainly do so. Any Congressman who would re-fuse to heed the cry of his people for help would not be acting

as a true Representative.

I realize that you earnestly favor such preparation for national defense as will tend to keep this country at peace. You are mistaken, however, in your belief that the money for preparedness should be obtained by cutting down other expenses, which in themselves are entirely legitimate. There is ample wealth in the United States that can be taxed to pay for the increased cost of the Army and Navy. Personally I am in favor of obtaining such sums as are necessary for this purpose by raising the rate of taxation on incomes, by an inheritance tax, and, if possible, a tax on the profits of the manufacturers of munitions. When these new revenues are available I intend to vote for ample appropriations not only for national defense but also to make it possible for every department of this great Government to perform its proper functions.'

REPLY TO MEMORIAL BY ARIZONA STATE BOARD OF TRADE.

Mr. JOHN F. MEYERS, Secretary Arizona State Board of Trade, Tucson, Ariz.

My Dear Mr. Meyers: I am in receipt of your letter of recent date transmitting a memorial in favor of "a Navy second to none" and "an Army larger than any that could possibly be landed on our shores," which was unanimously adopted at the recent meeting of the Arizona State Board of Trade. I am very glad to have this expression of the views of the Arizona State Board of Trade, and I heartly agree in the patriotic sentiments set forth in this resolution. As practical business men, however, the members of your organization are well aware that too high a price can be paid for any service or commodity. Adequate preparedness for national defense will cost large sums of money, and it must be measured in terms of dollars.

I doubt whether there is a member of your organization who does not carry fire insurance on his home or who does not have life insurance for the benefit of his family. It is the universal practice of all good business men to seek this form of personal protection, but no sensible man spends all of his income in pay-

ing fire and life insurance premiums.

The great majority of the American people look upon expenditures for the Army and Navy as an insurance against the ruin that would follow the defeat of this Nation in a great war. I find that, regardless of politics, the duly elected Representatives of the American people take this same sane view of the situa-

tion, and they intend to act accordingly.

We have not had a war with Great Britain for over a hundred years, and most people believe that we are in no danger of an attack from that source. For this reason there is very little sentiment in Congress in favor of the construction of a Navy "second to none." Most people are opposed to conscription "second to none." Most people are opposed to conscription in time of peace, otherwise called "universal military service." For this reason practically no sentiment could be found in Congress in favor of the continental army plan, and it has been abandoned.

A serious and, I believe, a successful effort will be made to federalize the militia to the extent permitted by the Constitution. There will be an increase in the Regular Army sufficient to man our coast defenses and to provide for the garrisons that should be maintained at Panama, the Hawaiian Islands, and in the Philippines until we give up our jurisdiction over the last-named islands. There will be a substantial increase in the appropriations for the Navy, but not enough to make it "second to none." In short, this Congress will adopt a military and naval policy that will be satisfactory neither to the radical advocates of preparedness nor to the extreme pacifists, but which will meet with the approval of the great majority of the American people.

I have no doubt of the sincerity of the members present when they adopted the final paragraph of the resolution describing your organization as the "voice of Arizona." I must advise you, however, that I have received a very large number of communications in opposition to preparedness from professional men, bankers, farmers, workmen, and other persons repre-senting all walks of life in Arizona. Since there is such a great diversity of opinion as to what ought to be done in behalf of national defense, I have reached the conclusion that it is my duty to carefully examine the bills to increase the efficiency of our Military and Nava: Establishments and to vote in accordance with my honest judgment, after considering all of the facts that will be presented to the House. I assure you that I shall be guided by no other motive than to render real and practical service to my country.

Yours, very truly,

CARL HAYDEN.

Immigration.

EXTENSION OF REMARKS

HON. THOMAS M. BELL.

OF GEORGIA. IN THE HOUSE OF REPRESENTATIVES.

Saturday, March 25, 1916.

Mr. BELL. Mr. Speaker, the amendment I offer is to increase the head tax on all aliens coming into the United States.

The bill under consideration provides for a head tax of \$8 instead of \$4 under the present law. I am convinced that my amendment ought to pass, because surely no intelligent foreigner who desires to become a citizen of our great country, and whose application for entrance conforms with the other provisions of the law, can object to paying this nominal fee, which goes into the Treasury of the country he is to become a part of. I shall not argue that the amount of money a man has in his possession establishes the standard of citizenship desired, but since re-stricted immigration is desired by the majority of the people of the country, especially the section which I have the honor to represent, it must, as we see it, be done by selective methods of some kind, and this is one means of doing this, and my amendment certainly will tend to lessen the danger of these people becoming charges upon us. I think the amount of money which aliens should have in their possession ought to be enacted into law and would be in keeping with the spirit of this legislatien, and I am willing to support an amendment making this amount \$100.

In my humble judgment, Mr. Speaker, the time has come when we should enact drastic legislation on the lines of restricting foreign immigration, because it is my opinion this country will be the objective point of thousands and possibly millions of foreigners of every kind and character after the European war has ended who can qualify for admission to this country under our laws and shelter themselves under the protection of this Government. It will not be the rich and edu-cated and well-mannered Italians, Slavs, Poles, and Hungarians who will come over; but, on the contrary, it will be the ignorant, the shiftless, and poorest class, and those who have contributed the least toward making their own country what it is.

The following statement, taken from the last annual report

of the Commissioner General of Immigration, shows the number of South Italians arriving in the United States each year from 1899 to 1915, inclusive:

Number arriving, by years.

1899	65, 639 84, 346
1900	115 704
1902	152, 915
1903	196, 117
1904	159, 329
1905	186, 390
1906	240, 528
1908	242, 497 110, 547
1909	165, 248
1910	192, 673
1911	159, 638
1912	135, 830
1913	231, 613
1914	251, 612 46, 557

It will be seen from the above table that at the end of the fiscal year June 30, 1915, there were 251,612 south Italians that came into the United States, almost 10,000 more than in any year since 1899, and 185,973 more than in 1899, hardly 17 years ago. Of course in 1915, after the European war was in full blast, but few came to us, while a large majority returned to their home country. What, in my judgment, will be detrimental to us will be the influx of these people when the war is over, hence I favor the legislation proposed in this bill. I prefer population from Anglo-Saxon mothers.

These people have been told of the great possibilities of this country, and when they are at liberty to take passage from their own country and try new fields of labor, because of the devastation and ruin of their own country, they will take advantage of the opportunity. I have no objection to admitting good people into our country, but we must look to it when we make our laws that they are so constructed as to prevent the admission of the vicious class, who will not and can not assimilate with our institutions and become a body part of this the greatest country on the face of the earth.

It will be argued by some that the adherents of restricted immigration are not consistent because, as they say, we ourselves are immigrants. This I deny. We should be considered, and are in the true sense discoverers, and, as such, have built up and made possible the United States of America, which is to-day the greatest, the richest, and most powerful nation in the world and inhibited by the most progressive, the most in-dustrious, the mest moral, and the most God-fearing people

existing in all the earth.

The bone of contention in this bill is not the head tax, but the literacy test, which, to my mind, is the redeeming feature of the proposed legislation and which, by all means, should be enacted into law, and must be before we may feel safe from interference with our institutions, with our labor problems, and, in a great

measure, our homes and firesides.

Shall we invite a mature person who can not speak or understand our language to come to us and assist us in the financial development and moral and religious uplift of our country? Of what use could they be to us in building up our churches and our schools, our military and civil institutions? None on earth. Then why and under what pretense can any Member of this body defend his attitude when he proposes by his vote to open the doors of the country to the ignorant, vicious, lazy, and pauper element, which, I fear, we will have unless we proceed before the end of the European war to enact a law which will prevent this movement. I feel proud that the South, as a section, has never invited indiscriminate immigration, for by her refusal and constant care along these lines we have left the nearest a pure Anglo-Saxon blood in our whole country. I trust it will always remain so, and though our growth numerically and financially may not keep pace with some other sections we will be on a safe basis and, upon the whole, we will be happy, with nothing to molest or make us afraid. This is substantially the same bill as was reported and passed the House while I was a member of the Immigration Committee, and I am heartily in favor of its passage.

I am sure I represent the sentiment of a very large majority of all classes of the people of the South in insisting upon restricted immigration. I know I represent the wishes of the people of my district and of the State of Georgia, which is regarded by all as the Empire State of the South, and I believe the Empire State of this Union, because within her borders is enough gold to purchase the fields of California, within her borders is enough marble to supply building material for this Government, within her borders is enough coal to supply the demands of her Commonwealth, within her borders is enough water to run the machinery of this great age, within her borders are as true-hearted men as the world ever knew, and within her

borders are as pure women as God ever let live.

Militia.

EXTENSION OF REMARKS

HON. ROLLIN B. SANFORD. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 21, 1916.

Mr. SANFORD. Mr. Speaker, the legislature of the State of New York has pending before it a bill which is likely soon to become a law providing a system for the people of that State of universal compulsory military training. I do not claim that my State is more patriotic than other States of this Union, but I do claim that the people of that State are fully alive to their obligations to this Government. In taking the proposed action they will not be adopting a new institution. The principle of compulsory universal training was recognized and practiced by all of the original Thirteen Colonies. The first constitution of the State of New York, adopted in 1777, emphasized the duty of every man who enjoys the protection of society to be pre-

pared and willing to defend it. Washington declared this obligation to be the main pillar of a free government and held that every man of proper age and ability was "firmly bound by the social compact to perform personally his proportion of military duty for the defense of the State."

The real strength of this Government is in the militia of the Constitution, the militia which the founders of the Republic well understood to mean all men of fighting age. Upon that militia they imposed compulsory training, but the training days were few and far between and finally were neglected

altogether.

All of the armies of continental Europe to-day are organized on the theory of universal training copied after the system that the American colonists practiced under their militia laws.

It may not be an unneutral act to acknowledge that no nation ever had a finer motto than that which is literally translated "I serve." A nation that relies on the political philosophy that writes into the military law the principle of all for one and one for all, can not easily be crushed.

England's voluntary system has broken down under the test. In 1911 Lord Roberts warned the English people of the weakness of the vountary system in the following language:

The requirements of our defense either at home or abroad can not be met in any possible way under the volunteer system. Nothing short of universal service will give us the strength we need, and the only question to consider is, in what form the principle of universal service can be best adopted to our complex requirements.

But England clung to her voluntary system with her "first shock" or "nucleus" army, and now with that army prac-tically wiped out and with all her strong men gone, the married cowards are quarreling with the single cowards as to who will enlist and train.

The statesmen who doubtless were applauded when they opposed universal training in England in 1911 are wiser to-day.

The bill before us continues the voluntary system in the face of England's horrible example. Every line of the bill places the obligation squarely on the patriotic as if lack of patriotism were a virtue to be protected.

The following address recently delivered by the adjutant general of the State of New York, Hon. Louis W. Stotesbury, shows clearly that there is nothing essentially American in the voluntary system.

ADDRESS OF HON. LOUIS W. STOTESBURY, ADJUTANT GENERAL OF THE NATIONAL GUARD OF THE STATE OF NEW YORK.

Mr. Chairman and ladies and gentlemen, the object of civil government can not be better expressed than in the words of our Constitution, "To establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty."

Of these objects, that upon which the strength and stability of the whole structure depends is the common defense.

From the beginning of our history provision for the common defense has been an impelling motive in the development of our governmental system.

The first union among any of the Colonies—that formed in 1643 between Massachusetts, Plymouth, Connecticut, and New Haven, known as "the United Colonies of New England"—was for common defense against the Indians and to resist the claims and encroachments of the Dutch.

After the Declaration of Independence and the establishment of a

Dutch.

After the Declaration of Independence and the establishment of a central government under the confederation, provision for the common defense was formally declared in the articles of confederation as the primary object of that firm league of friendship.

The weakness of the common defense during the confederation was abundantly manifest. It was said that Congress had the power to declare anything, but could actually do nothing. They were authorized to contract debts, but 13 independent legislatures, according to their own convenience, granted or withheld the means which were to enable the General Government to pay them. Congress might declare war and determine what number of troops were necessary to carry it on, but could not raise a single soldier. They had only the power to agree upon the number of land forces, and to make requisitions upon each State for its quota, in proportion to the number of white inhabitants of such State.

agree upon the number of land forces, and to make requisitions upon each State for its quota, in proportion to the number of white inhabitants of such State.

The experience of the whole country during the Revolutionary War demonstrated the utter inadequacy and impropriety of such a system of requisition. It was equally at war with economy, efficiency, and safety.

It was not surprising that Washington should write as he did to a Member of Congress:

"You talk, my good sir, of employing influence to appease the present tumults in Massachusetts. * * But influence is not Government. Let us have a Government by which our lives, liberties, and properties will be secured, or let us know the worst at once."

To devise a new plan which would give strength and authority to the Central Government, consistency, stability, and dignity to the Union, was the great problem of the time, and when there was finally substituted for the loose and unsatisfactory confederation of the States a real union of the people of the United States as one Nation, under the Constitution, provision for the common defense was declared in the enacting clause to be one of the express purposes for which "this Constitution for the United States of America" was ordained and established.

stitution for the United States.

No provisions of the Constitution were the subject of more careful deliberation than those by which there were finally committed to the General Government the abundant powers and authority for providing the means of common defense.

By the powers conferred upon the Congress, and the prohibition enjoined against the keeping of "troops or ships of war" by the States,

the responsibility, as well as the obligation of providing for the common defense, was placed upon the Federal Government.

In pursuance of this object the Congress was given power—
"To lay and collect taxes, duties, imposts, and excises; to pay the debts and provide for the common defense and general welfare of the United States, ""To raise and support armies. ""To provide and maintain a navy, "To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.
"To provide for organizing, arming, and disciplining the militia, and or governing such part of them as may be employed in the service of the United States reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

"To make all laws which shall be necessary an proper for carrying

"To prövide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States reserving to the Strates, respectively, the appointment of discipline prescribed by Congress."

"To make all laws which shall be necessary an i proper for carrying into execution the foregoing powers."

"To make all laws which shall be necessary an i proper for carrying into execution the foregoing powers."

"To make all laws which shall be necessary an i proper for carrying into execution the foregoing powers."

"To make all laws which shall be necessary an i proper for carrying into execution the foregoing powers."

"To make all laws which shall be necessary an i proper for carrying into execution to the control of the And forces of the United States. The one is to raise and support armies, with no limitation upon the number to be raised, the purposes for which it may be used, or the manner in which it is to be supported, save that the congressional term. This gives the virtual control of the Army to the people. The other is the provision for organizing, arming, and disciplining the militid, with a limitation upon the governing of the strain in the property of the provision for organizing, arming, and disciplining the militid, and they of the provision for organizing, arming, and the people. The organization and disciplined, would undoubtedly, from the standpoint of effectiveness alone, completely meet the requirements of adequate defense; but the ostification from a many even assuming that the met were available in prohibitive.

There has always been a prejudice in this country against a large standing army, and the people more readily stand for the expense of a body of professional soldiers audicately in the common defense.

The prejudice against a standing army existed during the Revolution, and has been diligently kept up to this day, it is due in large measure as the proposal proposal paid military force.

The result of the proposal proposal proposal

appear so armed. accourted, and provided when called out to exercise or into service.

Instead of providing for the organization of the militia Congress expressly delegated such authority to the several States and provided only that the militia should be organized into such divisions, brigades, regiments, and companies as the legislatures of the several States should provide. In respect to the discipline, while Congress had every authority to provide continuous training for one or more years or for six months, or intensive training for two-months or one-month periods in each year, it did none of these things, but again refused to interfere with a system which had grown up under the confederation and left it to the disposition of the several States to prescribe their own system of training. In New York State the legislature provided for three so-called parades in each year—twice by company once by regiment.

The militia law passed by Congress in 1792 remained substantially without amendment until 1867, when provision was made for the enrolling of negroes by striking out the word "white" from the provision for the enrollment of "white male citizens."

The militia organization planned by the Constitution has never had a fair test. It has never had any test at all.

No system of training for the militia as such was ever provided. The so-called militia system is characterized rather by its defects than its inherent character and possibilities under the Constitution. Washington did his best to induce the Congress to revise the system. In his fifth message, after the enactment of the militia law under which these defects subsequently grew up, he said, referring to the militia:

"They may be trained to a degree of energy equal to every military exigency of the United States, but it is an inquiry which can not be too solemnly pursued, whether the act which is to provide for the national defense by establishing a uniform milita throughout the United States, has organized them so as to produce their full effect, whether your own experience in the several States has not detected some imperfections in the scheme, and whether a material feature in an improvement of it ought not to be to afford an opportunity for the study of those branches of the military art which can scarcely ever be attained by practice alone."

Under the authority of the act itself, which permitted such other exemptions from the enrollment as the States might provide, every State eventually abandoned the enrollment, and substituted a system of State volunteers in its place.

The State of New York continued nominally under the system of enforced universa service until 1846, when, under the authority conferred by the Federal militia law, it exempted everyone from service on payment of a commutation fee of 75 cents per individual per year.

The so-called "uniformed militia" had in the meantime grown up as a protest against the lack of organization and training

Other States were quick to follow the lead of New York State in this respect, and passed similar laws, doing away with the old system of compulsory service and substituting in its place the system of State volunteers.

State volunteers.

The difficulty of enforcing the fines and collecting the commutation became so great that the enrollment periods were extended to two years and the fee for commutation reduced from 75 to 50 cents. This continued until 1869, when the enrollment period was changed to every five years, to commence in 1871, but in 1870 the first military code was adopted, which provided that there should be an enrollment only when the governor deemed the same necessary, and while that provision is still in our military law, there has been no enrollment since that time.

The Federal militin law of 1792 remained in force military in the same in the s

The Federal militia law of 1792 remained in force substantially without change until 1903, notwithstanding that the privilege of exemption which had been granted to the State had been exercised to the extent of exempting everyone from enrollment and service, and the only organizations left in any State were the State volunteers, which had been variously termed Organized Militia, National Guard, or volunteer organizations under the constitution and laws of the several States.

Volunteer organizations under the constitution and laws of the several States.

The great possibilities for national defense which had been pointed out by Washington and Jefferson and Madison had all disappeared. Compulsory service, which was to have been the safeguard and reliance of the Nation, the citizenty in arms, did not exist.

Even the enrollment, which at least had had the effect of recalling to the citizen the obligation of service, which was reciprocal to his rights as a citizen, had been abandoned and was no more.

And it had disappeared, not by reason of any right or authority withheld to the States under the Constitution, but under the express provision of the militia law, which provided among those exempted from the enrollment "All persons who now are or may hereafter be exempted by the laws of the respective States."

At the time of the Spanish-American War we had no Organized Militia, in the national sense, ready to be called into the service of the United States, and our Federal volunteer laws were so defective and inadequate that there was no authority by which the National Guard organizations—the only forces available other than the Regular Army—could be accepted into the service of the United States as part of the Volunteer Army, save as individuals.

That defect in the volunteer law has been only recently corrected, and even now what is regarded as one of the most essential provisions of our present militia law, providing for the use of the troops beyond the territorial limits of the United States in time of war, is concededly unconstitutional.

With the great world conflict raging all about us, we have at last had forced upon us the realization of the defects in our military system.

The most pressing and important problem of the day is to determine the plan upon which our future military and the day is to determine the plan upon which our future military and the day is to determine

had forced upon us the realization of the defects in our military system.

The most pressing and important problem of the day is to determine the plan upon which our future military policy is to be established.

It is so vital to the right determination of this problem that we should have the courage and wisdom to apply the lessons to be derived from our own past experience and present world conditions, that we should disregard expediency and establish ourselves once and for all time according to correct military principles.

All military students agree that the only safe and sound policy for any nation that is free and intends to remain so, is to adopt a policy, based upon compulsion, by which every man, whether he wants to or not, is required to perform a patriot's duty, by which every man when he attains the high privilege of citizenship, and even before, is taught the practical lessons of military training and exercise.

Whatever is done, whatever plan may be finally adopted, the definition of militia incorporated in the present militia law should be wiped out of the statute, and in its place should be substituted the enunciation of principle that was declared for many years in the Constitution of the State of New York, that "It is the duty of every man who enjoys the protection of society to be prepared and willing to defend it."

We must enforce the recognition of the obligation of service as reciprocal to the rights of citizenship.

We hear much talk to the effect that the people are not yet ready for universal training. It is the oldest principle of our institutions. If the policy had been maintained in good faith, there would have been no question to-day about our preparedness to meet any and every contingency.

It is the most democratic system that could possibly be devised. Under such a system none can complain. All are treated alike; all are required to render the same sort of service, to submit to the same system of discipline. Nothing so much increases the spirit of loyalty and patriotism as service. To make every citizen feel that he udividually is part of the defensive force of the country would make him justly proud; the physical and mental training and discipline and practical instruction which is part of the education of a soidler to-day would make him a more valuable citizen in every way, and the time spent in his military service would be returned to him manifold in increase of efficiency and ability for sustained and disciplined effort in all his subsequent career.

Such a system early inculcates the more trying duties which devolve at times upon free men, and these duties become a matter of course. It is the only system under which a real national spirit can be engendered and impressed upon the heart of every citizen.

The first step in any system of compulsory training or service is an enrollment. Before the force can be organized, trained, educated, or utilized it must be ascertained of what it consists. That is a mere inventory to ascertain the Nation's military asset. If compuision is to be applied at all or to any extent, it must be based upon an enrollment, and an enrollment may as well include all citizens between the ages of 12 and 64 as between the ages of 18 and 45.

It is as easy to make an enrollment of all of our male citizens as of any particular part of them.

When it comes to the application of the system, compulsory military training without arms between the ages of 12 and 15 may be deemed.

It is as easy to make an enrollment of all of our male citizens as of any particular part of them.

When it comes to the application of the system, compulsory military training without arms between the ages of 12 and 15 may be deemed advisable—the teaching between those years of the fundamental principles underlying our military service, particulum, punctuality, diligence, obedience, courtesy, and the obligations to duty.

Between the ages of 15 and 18 may be taught the principles of drill and hygiene and the knowledge of the rifle. Actual military drill it may be found expedient to confine to ages between 18 and 21. These are all details, to be worked out according to the best information and independent obtainable. But universal service, as the obligation of the citizen, is at the foundation of the system.

In addition to this system of universal training and education, which is to make a man able and prepared to serve his country in time of need, we must have a Regular Army of sufficient numbers to adequately garrison the coast defenses of continental United States and our oversea possessions—a sufficient mobile army maintained at all times and ready upon the call of the President for internal disorders, sufficient tumber of officers and noncommissioned officers to conduct the training and instruction of our other forces, whatever they may be.

We have said nothing as yet of the part to be taken by the National Guard, the only present existing organized forces outside of the Regular Army. It is doubtful that we will be able to secure at once a Regular Army sufficiently large to meet present requirements. It is necessary that the existing organization of the National Guard be placed in a situation, through appropriate legislation, to be utilized to the fullest extent as a national force. That they are not at this time capable of being so utilized is not due to any disposition on the part of the States or on the part of the organizations themselves to withhold such service, but wholy through the defects in the

a force.

The State of New York, for example, has invested in its armories used by the National Guard more than \$26,000,000, and is spending each year between two and three million dollars toward the maintenance of its military forces, and the organizations could not be maintained under present conditions without such expenditure. It is unlikely that the Federal Government would undertake the full cost of maintaining the armories occupied by these organizations and supply them with military funds, beadquarters, allowance and other moneys which the States are now contributing to their support; but the Federal Government is at the present time contributing largely in funds and property for the support of the National Guard organizations, in providing or affording the opportunity of participation in camps and maneuvers, in the establishment and maintenance of rifle ranges, and the furnishing of equipment.

of equipment.

It is proposed to remove the limitation upon the use of the National Guard in time of war beyond the territorial limits of the United States by providing a double form of enlistment by which the member of the guard at the time of his enlistment will undertake not only to perform his duties as a soldier in time of peace, according to the regulations governing the State forces, but will at the same time, in the event that the President of the United States shall order the National Guard into active service because of war or imminence thereof, agree to serve as a member of the National Guard in the service of the United States within or without the continental limits of the United States for the period of two years, unless sooner discharged by order of the President of the United States.

This form of enlistment, it is better the period of two

states.

This form of enlistment, it is believed, will remove the limitation upon the service heretofore existing under the militia law, and justify the further support of the National Guard by the Federal Government.

At the same time, it is proposed by proper legislation to exercise the right which is given to Congress, under the Constitution, to provide for the organization and discipline to a fuller extent than has heretofore been enforced, so as to make of the National Guard of the several States a truly unified and coordinated force.

These are details which, with the concentration of thought and council devoted to the common purpose of making of the National Guard a real national force, it will not be difficult to work out.

But the most important feature of the whole scheme of national defense, and the one on which the success of any plan must depend, is this for which your organization stands and which is set forth as the subject of this convention on the very first page of your calendar—that of universal compulsory military training.

Our plan of national defense will be safe, our military polley secure, if we can impress upon the heart of every youth in our land the fact that he individually is part of the defensive force of the Nation, and make him proud that he is truly a defender of the liberties of the country and one of the guardians of our glorious Republic.

"Let Us Take Every Precaution Which Will in the Slightest Degree Assist in Keeping Us Out of that Awful War in Europe."

EXTENSION OF REMARKS

HON. FRED A. BRITTEN, OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 23, 1916.

Mr. BRITTEN. Mr. Speaker, I desire to address the House briefly on what I conceive to be a question of considerable importance which has grown out of the recent controversy in the Senate and in the House upon certain "warning" resolutions. It is not my purpose, Mr. Speaker, to discuss generally the

resolutions which were introduced warning or requesting American citizens to refrain at this time from travel on armed belligerent ships excepting in so far as it is necessary to correct the mistaken impression that Members in the House who voted to table the McLemore resolution "stood by the President," while those who voted against tabling this resolution "were against the President."

First of all, let it be understood that the Gore resolution in the Senate and the McLemore resolution in the House were in themselves distinctly undesirable, and could not have received a handful of affirmative votes without first being properly amended so as to constitute a simple advisory warning from a zone of danger while at the same time relinquishing no rights which any American citizen might have any place on earth.

Mr. Speaker, on August 20, 1914, about three weeks after the terrible war now devastating Europe had started, the President issued a statement directed to "My fellow countrymen,"

which he stated:

The United States must be neutral in fact as well as in name during these days that are to try men's souls. We must be impartial in thought as well as in action: must put a curb upon our sentiments as well as upon every transaction that might be construed as a preference of one party to the struggle before another. My thought is for America.

Those are fine words, Mr. Speaker, and I have tried to live up to them, but I could not fail to recognize in all subsequent controversies between Germany and the United States that our demands were strict and severe, while England's flagrant vio-lations of international law, her arbitrary confiscation of our mails to neutral countries, her thorough disregard of the rights of neutrals on the high seas, have only caused us to send notes of flexible mildness, each of which in turn has been politely ignored.

Since the issuance of the President's statement it has been my pleasure to visit the Hawniian Islands, the Philippines, and a great portion of China and Japan, and it was my firm inten-tion to voyage through the Suez Canal, the Mediterranean, and the Atlantic Ocean back to God's own country in a trip around the globe.

But while in that far-away land of perpetual sunshine, I was forced to realize that a voyage through European waters must be fraught with danger from submarine and mine, irrespective of the character of ship we might travel upon, and it did not take me long to conclude that the best interests of my country lay in a complete avoidance of the danger zone, and we returned to the United States over the broad Pacific without having finished our contemplated travels.

I am sure that no one will say that we (I was accompanied by Mrs. Britten) did not have every legal right under international law and custom to negotiate our voyage as intended, and am equally certain that every Member in this House will agree with me that my decision not to tempt danger for the sake of a little temporary pleasure was the sensible course to pursue, and after all, if common sense were displayed, there would be no necessity for all this wasted time in both branches of Congress over the matter of a simple warning to American citizens who might be foolish enough to court fate during these days when "men's souls are being tried" to their utmost.

Mr. Speaker, there is no disputing the fact that rights of

neutrals on the high seas are clearly defined by the principles of international law, but when you realize that Great Britain, Germany. Austria, and Italy have repeatedly violated or modified recognized principles as an exigency of the present war, due to the appearance of submarines, mines, acroplanes, and Zeppelins, or to the necessity of an existing condition, it surely is the moral and patriotic duty of American citizens to refrain from traveling on armed belligerent merchant ships.

As a member of the Committee on Naval Affairs, I have watched the European war most earnestly, and you may rest assured that as I was one of the 37 out of more than 400 Members of this House who voted against the President's Mexican war resolution, nearly two years ago, so I will surely be one of those who would vote against a war with any of the European belligerents, without first being unquestionably satisfied that the honor of my country was at stake or that my flag had been degraded.

The American people desire no war over a technicality, nor will the Congress be stampeded into one in defense of a citizen who deliberately endangers the welfare and peace of his country by recklessly insisting upon the exercise of a "doubtful

legal right."

And yet if war must come, can any sane individual doubt that we all will stand by the President of the United States, for this is no partisan question? Mr. Wilson is not the President of the Democratic Party. He is the President of the entire American people. He is our President and should receive our sympathies and support regardless of political affiliations when we can conscientiously give same, and yet, let us not forget that Mr. Wilson is only the President, and, as such, it should be his sincere desire to carry out the mandate of the American people.

Since practically every Member who spoke on the McLemore resolution has indicated a preference that a plain resolution warning our citizens from travel on armed belligerent ships could not possibly be objectionable, it must therefore be the consensus of opinion of the great American masses that its reflection in Congress is true, and there could be no good reason

for withholding same.

Mr. Speaker, I do not think it will take long to prove to the complete satisfaction of anyone who is not biased, or whose opinion is not completely swayed by sentiment for or against some of the warring powers, that neither the President nor the people obtained their desires for a direct vote on a "warn-

ing resolution."

I do not mean to be discourteous or offensive to the Members who concocted that parliamentary trick for a special gag rule that prevented the "full discussion" suggested by the President, but I would be untrue to my convictions if I had voted to lay the resolution on the table, and by so doing "straddle" a momentous question. I could then go to all my constituents and say that no direct vote on the resolution was taken, and therefore their views were my views irrespective of the truth in the matter. The resolution should have been amended and considered on its merits.

This is no time for politics, Mr. Speaker. 'It is a time for honest patriotism and loyal Americanism irrespective of party

affiliation.

Let us follow the trend of diplomatic correspondence between our country and Germany for the past couple of months and then frankly conclude whether or not we would be justified in holding Germany to a "strict account" in order to maintain a doubtful right.

Let us remember that this entire controversy was forced upon Congress by the President and that he wished an honest opin-ion. My personal views in the matter are governed entirely by the facts presented by the State Department and my knowledge of naval warfare, and I hope to see my country enjoy the fruits of a strict neutrality.

Mr. Speaker, it was as late as January 18 of this year that Secretary Lansing wrote foreign Governments the following

most interesting letter:

Prior to the year 1915 belligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war, and the limitation of armament to have been dependent on the fact that it could not be used effectively in offense against enemy naval vessels, while it could defend the merchantmen against the generally inferior armaments of piratical ships and privateers.

POWERLESS IN DEFENSE.

The use of the submarine, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is almost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively for offense against the submarine.

You will note, Mr. Speaker, that the President and Secretary Lansing agree that even a small-caliber gun would make a merchantman strong enough to destroy a submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose

to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive

Now, bear this in mind, only two short months ago the President and Secretary of State said that "Any armament on a merchant vessel would seem to have the character of an offensive armament.

armament."

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent rationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

You will observe that our President has suggested that under

You will observe that our President has suggested that under present conditions it would be reasonable and just "that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever." Some of the armed vessels in question, Mr. Speaker, carry 6-inch guns firing highexplosive shells, which would destroy a submarine just as effectively as could the largest guns of a dreadnaught.

In proposing this formula as a basis of conditional declarations by the belligerent Government I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistence upon doubtful legal right, which may be denied on account of new conditions.

Thus, in January the President is most desirous of saving the lives of people rather than the insistence on "doubtful legal right." Can it be possible that this same President is now willing to go to war over the violation of a "doubtful legal right"? If it was doubtful in January, what could possibly make it the basis of war to-day? If it was honorable to write these views in January, what makes them so dishonorable to-

I would be pleased to be informed whether your Government would be willing to make such a declaration, conditioned on their enemies making a similar declaration.

The next paragraph, Mr. Speaker, evidences the President's complete familiarity with the contents of this letter:

I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government, and is seriously considering instructing its officials accordingly.

Secretary Lansing's reference to "my Government" certainly means the President of the United States, with whose collabora-tion this letter was surely written on that memorable January 18.

Mr. Speaker, I have many times said that our foreign policy in Mexico was a farce, and I am constrained to believe that most of the Members of the House will agree with me, at least in confidence, that this last piece of European diplomacy ranks very well with that which has been inflicted upon Mexico for

nearly three years past.

When the President has said to Germany that if the life of an American citizen was sacrificed on board an armed merchant ship, without warning, by a German submarine, "I will hold you to strict account," stripped of its diplomatic language the note indicated that the loss of American life meant war. I am willing to go to war if need be to uphold American honor and right, but not over any "doubtful legal right." It must be a vital right. My father and uncle fought in the Civil War to preserve our

flag, the latter receiving gunshot wounds on two different oc-casions, so that I can rightfully feel a special pride in upholding

the flag for which the blood of my own people was spilled.

The private citizens, however, the men who pay the taxes, the men who in war will die in the trenches, and whose homes will suffer from raids by airships and from asphyxiating gases, will want to know before war is declared what it is all about. And who will dare tell them that another bloody carnage is upon us because of a "doubtful legal right" and the persistence of some foolish American to enjoy the thrill of a voyage through water where deadly submarines are preying day and night for one fair shot at the ship he has so ruthlessly, so unpatriotically, so fanatically dared to embark upon?

Although international law takes no cognizance of the submarine, it has nevertheless been recognized as an implement of modern warfare and as such takes its place with other war-craft. I am unwilling to give, even to the President, the power to determine what our future policy shall be in the use of these

destructive engines of war. The status of a nation determines the status of its ships, and a merchant ship of a country at war equipped for destructive purposes must be regarded as an im-

plement of war.

Mr. Speaker, let us take a concrete example in order to establish the rights of a neutral traveling on an armed belligerent ship. Suppose we were at war with Japan, and one of that country's great fast liners loaded with munitions was heading for Magdalena Bay, in a neutral country. Do you suppose that our submarines would refrain from torpedoing that ship because we had been informed that two of its passengers were Chinamen, citizens of a neutral Government? Do you suppose that one of our few submarines would lay itself open to positive destruction by first communicating with the merchant ship in order to ascertain its armament and list of passengers? And yet this is the very dangerous precedent our President is aiming to establish.

It takes a submarine from two to six minutes to submerge, depending upon the condition of its deck, and when totally submerged is completely useless in offensive or defensive. It must have at least its periscope above water in order to see its target. It is unwieldy and slow of operation, the entire boat having to be pointed directly at the target before launching a torpedo. Thus a small rapid-fire gun on a merchantman could destroy a submarine as effectively as could a battleship.

Should our Navy, which the President says is fourth among the great navies of the world, ever be wiped off the seas, it might be necessary for us to depend entirely upon the submarine for Let us not withhold from any European belligerent a right which may some day very properly be the straw on which would float or sink our national honor.

"My thought is for America." Let us take every precaution which will in the slightest degree assist in keeping us out of

that awful war in Europe.

Sugar.

EXTENSION OF REMARKS

HON. RICHARD W. AUSTIN.

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1916.

Mr. Speaker, the bill under consideration Mr. AUSTIN. means the restoration of a Republican tariff duty on foreign or imported sugar, protection to an important American industry, safeguarding the interests of the cane-sugar industry in Louisiana, Texas, Porto Rico, the Hawaiian and Philippine Islands, and the beet-sugar farmers and mills in 16 States of the American Union. It means the Republicans in the Sixty-third Congress were right in opposing the provision in the Underwood-Wilson bill placing foreign or imported sugar on the free list. and that President Wilson was wrong in approving such an unwise measure. The pending bill is a confession, an admission to the people of the United States that the party in power, on account of a depleted Treasury, is forced to repudiate its record and undo in part some of the destructive work contained in the un-American tariff law, which will be repealed by a Republican administration and Congress after the 4th of next March. This action comes after a partial reduction in the tariff on sugar, during which invested millions in Louisiana were wiped out, sugar mills dismantled, abandoned, or transferred to the West Indies, thousands of acres of sugar lands given up in the South, and 12 prosperous beet-sugar mills in the Western States closed, and a desirable local market for the farmers' beet crop destroyed.

This is not the whole story. The records of the Treasury Department show that we lost in customs duties during 1914 \$16,824,481 and in 1915 \$16,606,075, or a total of \$33,430,556. This sum represents the loss sustained by the people—the taxpayers of the United States-on account of a reduction of 25 per cent of the duty on imported sugar. It represents a great loss to the Treasury of the United States in a time of financial stress and a great gain for the coffers of the sugar refiners who supply the foreign or imported sugar sold in this country. The very companies and men who have been successfully prosecuted by our Government for frauds in false and dishonest weights and crooked methods in connection with imported sugar; who have paid the present administration countless thousands of dollars for cheating and defrauding the Government: have been the beneficiaries of the first cut or reduction in the

tariff on sugar. Under this Democratic law they are favored in 24 months to the extent of \$33,430,556. They were relieved of the payment of this amount of taxes and the Treasury of the United States deprived of the same, which was badly needed to meet the necessary and legitimate expenses of the Government,

If Congress fails or refuses to pass the pending bill, it will mean an additional annual gift of more than \$50,000,000 to the same Sugar Refining Trust and a shameful robbery of the American people-a transfer of this amount from the vaults of the Treasury to the pockets of the men who seek to destroy a great American industry scattered through 18 States and in our insular possessions, which purchase annually goods and supplies to the value of \$90,000,000 made in American mills by an army of our deserving mechanics and operatives. The men who served in this House during the last Congress remember the campaign for free sugar, led by a representative of the sugar refiners, in the person of Francis C. Lowry, who now modestly offers us a new "gold brick" in proposing a so-called consumer's tax of 1 cent on every pound of sugar used in the United With the experience before us, Congress will act wisely States. and in the interest of the people and the Treasury Department by opposing any proposition proposed by the Sugar Refiners' Trust or anyone representing it.

The Members of Congress were elected to look out for the interests of the people and not the interests of the Refiners If they heed the advice of a trust which has virtually confessed its frauds against the Government of the United States, their constituents will elect men who will place the interest of the people always above the interest of this trust. For the benefit of the new Members of this House—those who did not serve in the Sixty-second and Sixty-third Congresse when free-sugar legislation was under consideration—it will be well to briefly review the activities of Mr. Lowry in his previous campaign for free sugar and also his present campaign against the repeal of the free-sugar clause of the Underwood bill, favoring in lieu thereof an internal-revenue tax upon all

sugar consumed in this country.

I will not dwell upon the history of his activities as secretary of a mythical "committee of wholesale grocers, formed to assist in obtaining cheaper sugar for the consumers by a reduction in the tariff duty." How Mr. Lowry was "smoked out" and compelled to admit that this so-called "committee" was a mere creature of his imagination, and that the whole proposition was purely a scheme of the Federal Sugar Refining Co. to secure free sugar, not in order that the refining interests might reduce the price of sugar to the consumer, but that the refiners might obtain a weapon with which to kill their only competitor, the domestic beet-sugar industry, and thereby add millions of dollars to their profits after they had obtained a monopoly of the domestic sugar market.

Mr. Lowry adopted a high-sounding phrase-" cheaper sugar for the consumer"-and our Democratic friends fell for it. They were warned at the time that the only beneficiaries of sugar-tariff reduction would be the seaboard refiners of for eign or imported raw sugar. They were warned that the refiners would absorb all of any small reduction which might be made, and a large portion of the remission, if sugar were placed on the free list. We already had an illustration of what free

on the free list. We already had an raw sugar would do for the refiners.

In 1890 Congress placed imported sugar on the free list and provided for a bounty on domestic sugar, but the refiners did not reduce their price the full amount of the duty remitted. They reduced it a little over one-half the amount of the duty taken off, but under the free-sugar law, they steadily increased their margin between raw and refined from 72 cents per 100 pounds in 1890, to \$1.15 per hundred in 1893, the last complete year of free sugar. Thus instead of the full benefit of the tariff reduction going to the consumer, as they argued then it would, and as Mr. Lowry now is arguing it will, the refiners absorbed 45 cents per hundred pounds, thereby increasing their margin by 64 per cent. As a result of free sugar, the Sugar Trust increased its dividends from 4 per cent to 211 per cent, and during the seven-year period of free sugar and the ad valorem duty which followed, this one corporation not only paid out \$48,500,000 in dividends, but accumulated a surplus of \$50,000,000.

After sugar was returned to the dutiable list in 1894 the refiners were compelled to reduce their average margin between raw and refined from \$1.15 to 88 cents per hundred for that year, and the yearly average margin from 1895 to 1913 was 84 cents per hundred pounds.

During this latter period the domestic beet-sugar industry had grown by leaps and bounds. From an annual production of 40,000 tons in 1897, the output had increased year by year until in 1913, when the Underwood bill was passed, the production amounted to 733,401 tons. This sugar, produced mostly in Michigan and the Middle and Far West, was at first practically all locally consumed and did not come into competition with the product of the seaboard refiners except to deprive them of a long-haul market which heretofore had obtained. But as the beet-sugar industry began to grow with such rapid pace production in the Western States exceeded local consumption, and the beet-sugar manufacturers had to look for new markets for the sale of their product. They gradually began to encroach on the territory which the seaboard refiners considered their "exclusive own," beet sugar underselling the refiners' product from 10 to 60 cents a hundred pounds; and whereas a few years ago refined cane sugar had a complete monopoly of the markets east of Chicago, to-day the refiners have to meet beetsugar competition in all Eastern States-from Maine to Florida.

Realizing that by stifling this competition the refiners would add millions of dollars annually to their profits, Mr. Lowry, as general spokesman, started a propaganda for the removal of the import duty on sugar, knowing that this would place in the refiners' hands a means by which they could destroy the domestic beet-sugar industry at will. One of the main advantages to the refiners of the retention of the free-sugar clause and the imposition of a consumption tax on all sugar consumed lies in the fact that under such a proposition the beet-sugar manufacturer would still be compelled to pay the same price as he is paying to-day for his raw product-sugar beets-while the refiners could, under free sugar, purchase their raw product at a reduction in price of practically 1 cent a pound, thus giving the refiners the opportunity, when they desired, to reduce the price of their product below the cost of production of domestic beet sugar and consequently drive the domestic industry out of Then, having a monopoly of the domestic market, business. they would be at liberty to regulate the price of sugar at will.

When the Underwood tariff bill was under discussion solemn warning was given to our Democratic friends that if they passed the bill reducing the sugar tariff 25 per cent to take effect March 1, 1914, and automatically placing sugar on the free list on May 1916, they would play into the hands of the seaboard sugar refiners; that the refiners would absorb the reduction; and that, except possibly for a short period, the price of sugar to the consumer would not be lowered, notwithstanding the fact that Mr. Lowry claimed that the full amount of the reduction would be

reflected in the retail price of sugar.

Our Democratic friends may have been sincere in believing that a 25 per cent reduction in the sugar tariff and the placing of sugar on the free list would benefit the consumer. I will at least give them the benefit of the doubt; but if they will analyze the results of the sugar clause of the Underwood bill as far as it affects the price of sugar it will open their eyes to the fact that they were duped by the refiners for having secured a 25 per cent reduction in the import duty, the refiners lost interest

in the consumer and began pocketing the reduction.

For a few weeks after the 25 per cent reduction became effective the refiners slightly reduced the wholesale price of refined sugar, but not enough to reflect in the retail price to the consumer. Then, as predicted, the refiners began marking up the price of sugar and for several months previous to the outbreak of war in Europe the price of sugar was higher than it had been for several months prior to March 1, 1914, when the 25 per cent reduction became effective. The refiners absorbed 78 per tent of the reduction, and the consumer did not receive any benefit whatever.

The European war has disrupted the sugar market to such an extent as to make it impossible fairly to compare the conditions as they exist to-day with those prevailing before the passage of the Underwood bill. But we had 22 weeks of the operation of the 25 per cent reduction under normal conditions, and a comparison of the average price of sugar during this period, with the period immediately preceding the passage of this measare, throws considerable light on the effect of the reduction upon the price of sugar to the consumer and the profits of the seaboard

sugar refiners.

For instance, for a period of nine weeks prior to the passage of the Underwood bill, the average New York wholesale price of raw sugar, duty paid, was \$3.373 per hundred pounds. The average New York wholesale price of refined sugar during this period was \$3.92 per hundred, the average refiners' margin being 54.7 cents per hundred.

The 25 per cent reduction in the sugar tariff, which amounted to 33.7 cents per hundred on Cuban 96° centrifugals, became ef-

fective March 1, 1914.

Taking the average price of raw and refined sugar from this date to the outbreak of war in Europe, we find that the average New York wholesale price of raw sugar, duty paid, was \$3.164 per hundred, as against an average price of \$3.373 per hundred during the nine weeks preceding the tariff reduction. On the other hand, the average New York wholesale price of refined sugar during the latter period was \$3.975 per hundred, as against an average of \$3.92 for the former period, the refiners increasing their margin from 54.7 cents to 81.1 cents per hundred pounds. In other words, the refiners purchased their raw sugars for 20.9 cents per hundred cheaper than they did before the tariff reduction became effective, and yet they increased the average price of the refined product 5.5 cents per hundred, thereby increasing their profits 26.4 cents per hundred, or 78 per cent of the 25 per cent tariff reduction.

Let us see what this probably would mean to the New York refiners in the way of profits. During the 22-week interim between the date of the reduction and the outbreak of war, their total meltings, according to Willett & Gray, amounted to 1,370,880 short tons. Applying this 26.4 cents per hundred pounds increase in profits to their meltings, we see that through the 25 per cent reduction they were able to add during this period of 22 weeks \$7,238,246 to their net profits, and the con-

sumer received no benefit at all from the reduction.

In answer to this statement, the refiners probably would say that the average margin between raw and refined sugar during the 9 weeks prior to the tariff reduction was abnormally low, which I concede, but the refiners were making some profit even on the 54.7-cent margin, which more than covered their operating expenses, and so the increase in the margin referred to represented net profit to the refiners.

I am well aware that the refiners claim the average margin necessary to come out even is in the neighborhood of 63 cents per hundred pounds, but every one believes this to be entirely A fair estimate of the actual expense of refining too high.

would be 50 cents a hundred instead of 63 cents.

So much for the effect of the 25 per cent tariff reduction up

to the time of the outbreak of the war.

What the refiners have been doing to their friends, "the consumers," since the outbreak of war is even more astounding than their manipulations of the sugar market before the war

During the week ending October 29, 1914, their margin between raw and refined amounted to \$1.84 per hundred, nearly 2 cents a pound, while the general average of their margin from the date of the outbreak of war, August 1, 1914, to December 30, 1915, was 94.5 cents per hundred pounds. How much additional profit this has meant to the refiners it is impossible to say, but that they have reaped many millions of dollars goes without saying.

The passage of the Underwood bill brought about the situation for which Mr. Lowry had been working for years. abled the refiners to increase their profits under the 25 per cent reduction and upon the free-sugar clause becoming effective, would place in their hands a weapon with which to destroy

the domestic sugar-beet industry.

The prospect of free sugar in 1916 had a demoralizing effect upon the domestic beet-sugar industry. Not only did the beet-sugar companies realize that they could not compete with the cheap-labor foreign product, but the banks through which the companies had financed their sugar campaigns were not disposed to advance funds under these conditions, and consequently 13 domestic beet-sugar factories closed their doors, and had not the European war occurred, it is safe to assume that many more of these immense industrial plants would have gone to the wall. The industry only was temporarily saved by war conditions shutting off the large sugar exports of continental Europe and thus maintaining a price for sugar which would enable the industry to exist as long as these conditions

Due largely to the passage of the Underwood tariff bill, a deficit was created in the Federal Treasury in the neighborhood of \$100,000,000. During the first 16 months of the operation of the sugar schedule of this bill the loss in revenue from sugar imports alone amounted to twenty-six and a half millions of dollars, or over one-fourth of the total deficit of the Treasury. loss was due solely to the 25 per cent reduction in the sugar tariff and not because of a reduction in our sugar imports, for the imports during the first 16 months' operation of the Underwood tariff sugar schedule exceeded the imports during a corresponding period of the previous year by nearly 1,000,000,000

Realizing that the loss of an additional thirty or forty millions of dollars in sugar duties under free sugar would place the Government in an even more embarrassing position than it finds itself at the present time, the Secretary of the Treasury and the President recommended to Congress that the present rate of duty on sugar be retained, and the sentiment among both parties in Congress and among the public generally favored this action. The people had not been able to purchase their sugar any cheaper under the tariff reduction—in fact, the price had increased—and the Government was losing millions of dollars through the reduction in sugar duties. And so under free sugar the people had nothing to gain and everything to lose.

That the seaboard refiners were pleased with the free-sugar clause of the Democratic tariff bill goes without saying. There was great rejoicing over the fact that they had accomplished a purpose for which they had been working for years. But a wet blanket was thrown over their enthusiasm when the Democratic Party, realizing its mistake in placing sugar on the free list, decided to repeal the free-sugar clause and allow the duty to stand as it is. Undaunted, however, Mr. Lowry devised a scheme by which he could throttle the domestic beet-sugar competition under the subtle guise of a consumption tax.

He first importuned Members of Congress to allow the freesugar clause of the Underwood bill to remain on the statute books, and in lieu of the revenues which the Government would lose thereby, to impose an internal revenue tax of approximately 1 cent per pound on all sugar consumed, whether of domestic,

insular, or foreign origin.

When his method of importuning seemed to meet with no success he next cajoled, then threatened, the Democratic Members with political annihilation if they did not grant his wishes.

Mr. Lowry paints a roseate picture, showing how much better off the Government and the people would be with the import duty on sugar removed and a consumption or direct tax

on all sugars imposed in its place.

He still clings to the subterfuge that he and the other seaboard refiners have the interest of the public at heart. But his purpose is clear to those who know his methods, even though that purpose is masquerading under a new cloak. To place sugar on the free list and impose a consumption tax on all sugar consumed would simply mean that the refiners would pay a tax of 1 cent a pound on the refined-sugar product, but this tax would be offset by reason of the fact that under free sugar they would be purchasing their raw sugar for a cent a pound cheaper. In the case of the beet-sugar manufacturers the 1-cent per pound consumption tax would be added to their cost of manufacture, without any reduction in the cost of their raw material. This would give the refiners the same opportunity of killing off their domestic competitors as would the simple retention of the free-sugar clause.

As stated before, domestic beet sugar undersells refined cane sugar from 10 to 60 cents a hundred pounds. We may take 25 cents as a general average of the price at which the entire domestic beet-sugar crop is sold below the refiners' price. On 862,800 tons of domestic beet sugar—the estimated production this campaign—this would make a saving to the consumers of the country of over \$4,000,000 in their sugar bills—a saving which they would not be able to take advantage of if a consumption tax were placed on the production of beet sugars, or if the industry were destroyed through placing sugar on the

free list.

Mr. Speaker, I believe the majority party in Congress realizes that the people of the country are dissatisfied with the present method of replacing indirect with direct taxation. Already have their voices been raised against this character of taxation, and we are informed through the press that the leaders of the Democratic Party are to heed their criticisms and repeal the stamp taxes and perhaps some others of these obnoxious taxes. I do not believe our friends on the other side of the House will follow the advice of the seaboard refiners and add further to the burdens of the people by placing a direct tax on sugar in lieu of the indirect tax now levied on imports of foreign raw sugar.

A glance at any of Mr. Lowry's circulars disclosed his animus to the domestic beet-sugar industry, and I have endeavored to

point out the reason underlying this animus.

I will not attempt to answer his many misstatements and erroneous deductions. I do not think my colleagues will be misled any more by either his figures or his arguments.

I desire, however, to direct the attention of the House to an article which appeared in one of the New York daily papers on February 10, quoting Mr. Lowry's circular concerning the "War profits of beet-sugar companies." In this circular Mr. Lowry gives a comparative table of prices of certain beet-sugar companies' stock. Mr. Lowry's table shows the price of preferred and common stock of four beet-sugar companies March, 1914, and February, 1916.

The following is a copy of the table referred to, to which I tariff changes is simply another argument on a false deduction.

these companies in October, 1912, just prior to the presidential election which placed the Democratic Party in national power.

	Oct. 15,	March,	February,
	1912.	1914.	1916.
American Beet Sugar Co.: Preferred. Common Great Western Sugar Co.:	Asked.	Lowry.	Lowry.
	961 to 100	65	95
	691 to 711	20	68
Preferred Common Michigan Sugar Co.:	80 to 85	91 45	112 14)
Preferred. Common Utah-Idaho Sugar Co., preferred. Price of sugar, per pound.	100	85	100
	85	35	102
	112.80	6, 50	12,50
	24.95	2 4, 00	= 6,00

1 Quotation of November 1.

2 Cents.

Mr. Lowry contends that the beet-sugar producers are the chief beneficiaries of a sugar tariff. I can not acquiesce in this statement. I do concede that a protective tariff on sugar benefits the domestic beet-sugar manufacturers; in fact, they can not exist without some protection from the cheap labor product of tropical and European countries. But the beet-sugar companies are not the only beneficiaries of the sugar tariff; the sixty-odd thousand sugar-beet farmers are benefited by the maintenance of a high price for their beets and the consumer is benefited by securing his sugar at a lower price during the time when domestic beet sugar comes into competition with the product of the seaboard refiners.

Mr. Lowry is an adept in using figures and dates, which, in some instances, while accurate in themselves, do not make a

fair comparison of conditions.

The above-quoted table is a striking illustration of this fact. For instance, he quotes the price of stock of four leading domestic beet-sugar companies in March, 1914, when the 25 per cent reduction in the tariff duties became effective. He contends that the beet-sugar companies are making enormous profits by reason of the high price of sugar, due to war conditions. To substantiate this Mr. Lowry quotes the price of stocks of these companies in February, 1916, showing a considerable increase in price above the quotations of March, 1914.

But had Mr. Lowry been fair in his comparison he would have included in his table the price of these stocks under normal conditions before the domestic industry was threatened with annihilation by the placing of sugar on the free list.

A reference to the table will show that while at present the price of stocks of the beet-sugar companies is considerably in excess of the price in March, 1914, they are not appreciably higher, and, in fact, in some cases are lower than they were in October, 1912, when normal conditions prevailed.

For instance, the price of preferred stock of the American Beet Sugar Co. in October, 1912, ranged from 96½ to 100; in February, 1916, the preferred stock of this company was quoted at 95. Taking the common stock of this same company, we see that in October, 1912, it was quoted at 69½ to 71½, while in February, 1916, it was quoted at 68.

In October, 1912, preferred stock of the Great Western Sugar Co. was quoted at 108, and in February, 1916, it was quoted at 112 an increase of but 4 points above the normal price.

112, an increase of but 4 points above the normal price.

The most appreciable increase in these stocks is that of the common of the Great Western Sugar Co., which was quoted in October, 1912, at from 80 to 85, while in February, 1916, it was quoted at 140.

In the case of the Michigan Sugar Co., the price of preferred was quoted in October, 1912, at 100, and in February, 1916, it was quoted at the same figure. The common stock of this company was quoted at 85 in October, 1912, and in February, 1916, at 102.

The Utah-Idaho Sugar Co. has retired all of its common stock since 1910, and the price of its preferred was quoted on November 1, 1912, at 12.80, while in February, 1916, it was quoted at 12.50.

It will be observed, therefore, that while the price of the stock of these companies was beaten down in 1914, when the 2⁵ per cent reduction it the sugar tariff became effective, with the definite prospect of free sugar in 1916—which caused 13 of the beet-sugar factories to close their doors—the rise in the price of sugar by reason of the war in Europe sent the stocks back only to where they were in 1912; and the conclusion that the domestic beet-sugar companies have reaped untold millions of dollars because of war conditions and the prospect of favorable tariff changes is simply another case of Mr. Lowry basing an argument on a false deduction.

Immigration.

EXTENSION OF REMARKS

HON. JAMES B. ASWELL,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 27, 1916.

Mr. ASWELL. Mr. Speaker, I ask unanimous consent to have printed in the Congressional Record an editorial entitled "The case for the literacy test," which appeared in the Unpopular Review for January, 1916, a magazine published by Henry Holt & Co., of New York City. The editorial is as follows:

THE CASE FOR THE LITERACY TEST.

"When President Wilson vetoed the Burnett immigration bill last January, he gave as his principal reason his conviction that the literacy test which it contained was not wanted by the American people, and his determination to await a more explicit expression of their wishes before giving his sanction to what seemed like so radical a departure from American tradition, This was a surprising attitude, in view of the fact that in the preceding 18 years there had been 7 record votes on the question in the House, with an average of 192 votes in favor to 73 against, and 5 record votes in the Senate, with an average of 52 yeas and 19 nays, while the Congress then in session had passed the measure by a vote of 253 to 126 in the House, and 50 to 7 in the Senate. The President's demand that the question be settled by including the proposal in party platforms, and voting upon it, seems to imply that a party platform is a more reliable indication of the wishes of the people than the repeated votes of their Representatives in Congress. this basis, the President might have found support for his signature, since William McKinley was elected President in 1896 on platform which specifically declared for a reading test. The failure of the measure to become law has been due solely to presidential vetoes, those of President Cleveland and President Taft haveing set the precendent for President Wilson,

"There is no doubt that there is, and long has been, a very insistent demand on the part of a large proportion of the American people—just how large, no one can say—for this particular addition to our system of immigration control. There is every indication that this demand is growing, and will continue to grow until it achieves its end. It is the purpose of this article to examine the arguments for and against the test in question, and to show the validity of the demand for its

enactment into law.

"In order to understand American immigration legislation, actual and proposed, and the literacy test in particular, it is helpful to distinguish three main principles which might serve as guides to action. These are the principles of exclusion at one extreme, free immigration at the other extreme, and regu-

lation as a mean.

"The exclusionist view is that it would be best to deny admission to any and all immigrants without exception, and that we have a perfect right to do so. Perhaps the most eminent exponent of this view was Thomas Jefferson, who expressed the wish that there were an ocean of fire between this country and Europe, so that it might be impossible for any more immigrants to come here.

"The free-immigration theory is that it is desirable to admit any alien whatsoever, without reference to his antecedents, character, or purposes. This view was thus expressed in a

magazine in the middle of the nineteenth century:

"What, though the population which is annually cast upon American shores is all of the filthlest and most degraded kind! " " " Let us welcome the bouseless and naked of every land. " " Let us invite the ill-fed and the starving of every grade. " " Let us urge the oppressed and downtrodden of every name to the blessings of American freedom.

"Between these two extremes there lies the middle ground of regulation. Here the assumption is that immigration is desirable, or at least permissible, but that the best results demand that it shall be subjected to some form of control. As to the method of control, however, there are again two distinct principles, which also need to be carefully distinguished. These are selection and restriction. The general public frequently fails to discriminate between these two, and much confusion results.

"The principle of selection assumes that the only danger lies in the admission of aliens of poor quality—commonly known as "undesirables." There is no menace, according to this view, in

mere numbers, no matter how great. This point of view was concisely stated by President Roosevelt in one of his messages:

"We can not have too much immigration of the right kind, and we should have none at all of the wrong kind.

"The restrictionist, on the other hand, may or may not believe in selection. He generally does. But he differs from the selectionist in refusing to admit that there is no danger in numbers. He is ready to grant that a moderate immigration is innocuous, if not absolutely advantageous. But he maintains that the volume can swell too much, and the interests of the country suffer, however high the quality of the individuais. His distinctive objection to unregulated immigration is quantitative. The following quotation from Dr. Gustav Le Bon is a moderate statement of this view:

"A preponderating influence of foreigners is a sure solvent of the existence of States. It takes away from a people its most precious possession—its soul.

"Selective tests must of necessity have a slightly restrictive effect for the time being. But the ultimate effect may be to increase the numbers, by keeping the quality high, and thereby avoiding the discouragement which would arise if self-respecting aliens were forced to associate with and compete with and be classed with the dregs of foreign races.

"Historically the exclusionist principle has played no practical part, and there has been little demand for its extreme application. A dominating principle for nearly the whole of the first century of our national life was the principle of free immigration, as was natural in a sparsely settled and undeveloped country. Nevertheless, this policy was not maintained without

much protest.

"Under a laissez faire administration the character of some of the immigrants was so desperate as to arouse the consternation even of the easy-going Americans, and the years from 1830 to 1880 were marked by repeated attempts to secure some regulative measures which should raise the average of quality. Nothing of the sort, however, was adopted by the Federal Government. The individual States made ineffectual efforts to ameliorate the situation, mostly in the way of imposing a head tax or requiring a bond from those whose ability to support themselves was doubtful. But the motive of these measures was neither selection nor restriction, but indemnification against the support of indigent foreigners. The only important measures passed by the Federal Government during this period were designed to improve the means of immigration, not to control immigration itself.

"It was not until 1882 that the Federal Government undertook definitely to regulate the matter. (The law of 1875 excluding immigrant women imported for purposes of prostitution, and criminals convicted of nonpolitical offenses, was passed with the Chinese in mind and, like the entire Chinese-exclusion legislation, belongs in a special category.) The principle adopted was frankly that of selection. This was natural, as the agitation which had led up to it had rested almost entirely on the dangers and injuries from immigrants of an inferior type—particularly paupers, criminals, and diseased persons. Accordingly, this new legislation excluded certain classes. Also a small head tax was imposed, and that, of course, has incidentally a

slightly restrictive influence.

"The complicated body of immigration legislation which has grown up from this beginning has added more and more 'undesirables' to the excluded classes, more and more complicated expedients have been introduced for debarring and deporting them, and the machinery of administration has been steadily improved. Yet one might search in vain through all the laws on the subject to find a single statute which was avowedly and directly restrictive. It was not until very recent years that any avowedly restrictive measure has even been proposed and supported strongly enough to gain public prominence. The single important instance of this sort of measure is furnished by the scheme, worked out independently by Senator Dillingham and Prof. Sydney L. Gulick, of Japan, to limit the immigration of people of any race on a percentage basis, according to the number of that race already in this country. Senator Dillingham would base his percentage simply on those resident, Prof. Gulick on the number naturalized. But in either case the proposal is for a straightforward and positive restriction.

"The literacy test is evidently regulative and selective. It distinguishes a new type of undesirable. It adds an educational test to the various physical, mental, and moral tests which already exist. Its restrictive effects would be very considerable. Just how much nobody has been able to tell positively. The percentage of illiteracy of all immigrants 14 years of age or over for the years 1899 to 1900 averaged 26.7. But since any law, to have a chance of passing, must allow certain exemptions, the total number excluded would not equal the total number of

illiterates applying. On the other hand, the figures of illiteracy furnished by the Immigration Bureau are based merely on the statements of the immigrants themselves, and since the immigrant often believes that he is more likely to be admitted if he is literate than if not, there may be considerable overstatement of literacy. It seems likely that the test would exclude in the neighborhood of 25 per cent.

The semblance of introducing a new principle into our immigration legislation gives the literacy test a special value in the eyes of its friends and offers a point of attack to its enemies. Whether its restrictive features constitute an argument for or against it evidently depends on one's point of view. selectionist they tend to condemn it. This was evidently the attitude of President Wilson when he wrote in his veto message:

"The object of such provisions is restriction, not selection.

"If one has restrictionist leanings, on the other hand, this aspect simply adds to the desirability of the test as a selective measure. It is probably true that a considerable portion of the agitation for the test comes from-those who are inspired partly

by a desire to secure restriction.

"This is not the place to discuss the arguments for and against restriction. Volumes have been written on the subject and public opinion is not yet unanimous. The matter can be clearly understood only after an exhaustive examination into the various economic, political, and social bearings of the case, such as the average busy citizen can not possibly undertake. It is true that almost all of those who have taken up the question in a thorough and scientific manner have become convinced of the need of restriction. The most remarkable example of this is furnished by the Immigration Commission. As Prof. Jenks, a member of the commission, said in a public lecture:

"The commission in its report recommended with absolute unanimity the adoption of a policy of restriction, although one member differed from his colleagues as regards the method of restriction that it was most expedient to employ. It is well known that at the beginning of their investigation several members of the commission were strongly inclined not to restrict immigration further, but the results of the investigation had completely changed their views, so that all nine members—three Senators, three Members of the House of Representatives, and the three civilians—appointed by the President, Republicans and Democrats alike, agreed in their recommendation. Moreover, so far as can be ascertained, all of the field agents of the commission, perhaps a hundred, even before the final statistical results of the investigation had been fully calculated and the results made manifest—simply through their personal observations—had become convinced that a restrictive policy was needed.

"In spite of this proprimity of animics on the post of the investigation is a second of the investigation of the investigation of the control of the investigation and been fully calculated and the results made manifest—simply through their personal observations—had become convinced that a restrictive policy was needed.

"In spite of this proprimity of animics on the post of the investigation in the proprimity of animics on the proprimity of animics."

"In spite of this unanimity of opinion on the part of scientific students, the restrictionist arguments have not had much weight in shaping legislation. Lawmaking bodies are conservative; legislation tends to move in well-worn channels, and the mass of voters are strongly influenced by tradition. It is much more difficult to get passed a law which involves some new principle than one which is merely an extension of an old principle or at least looks like an old law. The principle of selection is so thoroughly established in our immigration statutes, and the people have become so thoroughly habituated to it, that there is a much better chance of securing restriction, if that is desired, through a measure which can be supported on selective grounds than by one which is solely restrictive. The likelihood of the passage of a literacy test may very possibly be enhanced by the extension of the recognition of the need for restriction, but the effective arguments for it must bear largely on its selective char-

"What, then, are these arguments?

"The positive arguments for a literacy test as a selective measure dwell on the proposition that an immigrant who can read furnishes better material, all things considered, for the building up of the American people than one who can not.

"This point is customarily argued on the grounds of individual fitness, and there is, indeed, much to recommend the literacy test from this point of view. Much effort has been expended, particularly by Mr. Prescott F. Hall, to show that the immigrant who lacks such a rudimentary education is both hampered in the struggle for success and likely to injure rather than aid the country.

"Economically, it is pointed out that illiterate immigrants furnish an unintelligent, or at least mentally untrained, labor Their intellectual processes are primitive; they can not read printed instructions; they are not able to understand our complicated modern industry. Particularly, it is shown that they are especially liable to injury in factories, mines, and foundries because of inability to read the warning placards They do not possess that mental alertness and posted about. adaptiveness which, in the minds of many, has enabled the old type of American laborer to contribute so much to the economic upbuilding of his country.

To these arguments the opponents of the literacy test reply that mental training is a very minor requirement in the work

for which the immigrant is desired. We need immigrants to furnish the unskilled-labor supply, to do the menial, dirty, laborious work, which, it is alleged, the native American will no longer undertake. In these occupations education is not needed; even natural intelligence may be of a very low order. What is called for is brawn, not brains. Too much thinking capacity and habit is a drawback, not an advantage. It is pointed out that many of those aliens who have the hardest time in this country are the ones who have had some education in the old country-the clerks, cheap musicians, bookkeepers, etc., who are either unable or unwilling to do low-grade manual labor, and who find their European education of no advantage in competition with American trained workers.

"It is seldom that this point is so frankly stated as it was in the following letter to the New York Times, printed January

23, 1915:

"I read with much interest your editorial on 'Immigrant bone and brawn'; and while I do not claim to be an authority on this matter, yet I have a fairly good knowledge of the labor situation, being an employer of not an indifferent number of common laborers every year.

"Now, without any exception, I have found that illiterate laborers make far better diggers than immigrants of higher standard, because, first, in their native land they have done nothing else, therefore are well accustomed to hard work, and, second, the laborer's mind, not being trained in other channels, lacks the nerve to branch off in other fields, and remains what it is trained to be, a common laborer, a common digger, if you wish, but the most vital part and the most perfect of the whole machine which makes the country what it should be.

"The heavens of the United States are bright enough without the need of foreign stars, but the land of this glorious Republic does need the bone and brawn of the foreigner, whether or not he can read or write.

"It may be granted that from the strictly economic point of

"It may be granted that from the strictly economic point of view the opponents of the literacy test can present the weightier arguments. If the goal of our public policy is to secure the greatest and most rapid production of wealth, regardless of the conditions which attend it and of the steadiness and continuous ness of the accumulation, then the cheaper, the more docile, and the more abundant the supply of common labor is, the more rapidly will the immediate process go on. A group of Slavic workers—who will accept any standard of living; who will be mute, if not content, in the face of intolerable working conditions; who will submit to the exhaustion of their native forces in the rounds of industry; who, in fine, do not let their minds 'branch off in other fields'; and who, when their period of with broken bodies and dulled minds, leaving their places to be filled by others like them-such a group of laborers will no doubt leave a greater mass of accumulated capital in the hands of the master producers than those whose minds are trained to think. To this argument there is no effective answer.

"But the adherents of the literacy test maintain that there are other considerations—social, in the wide sense and reaching far ahead-which outweigh the immediate economic interests. These have to do with the building up of the American people and their enduring prosperity rather than their immediate wealth.

"Prof. Commons has said, 'The true foundations of democracy are in the character of the people themselves, that is, of the individuals who constitute the democracy. These are, first, intelligence-the power to weigh evidence and draw sound conclusions, based on adequate information; second, manliness, that which the Romans called virility, and which at bottom is dig-nified self-respect, self-control, and that self-assertion and jealousy of encroachment which marks those who, knowing their rights, dare maintain them; third, and equally important, the capacity for cooperation, that willingness and ability to organize, to trust their leaders, to work together for a common interest and toward a common destiny, a capacity which we variously designate as patriotism, public spirit, or self-govern-

"It is believed by those who advocate the literacy test, that the man who can read is more likely to possess these qualities in some measure than one who can not, and is also better

equipped to acquire them to a fuller extent.

"From the political point of view the illiterate immigrant is handicapped in his efforts to become worthy of his adopted He is unable to keep posted on national affairs by even the journals published in his own language. He is forced to have constant recourse to the interpreter, the padrone, and the 'banker.' He becomes the easy prey of the ward boss, and furnishes plastic material for naturalization and election frauds. He readily yields to the machinations of unscrupulous labor leaders and anarchistic agitators. He is compelled to rely on others for all his knowledge of world events.

"The effort has been made to prove that the illiterate aliens contribute more than their due proportion to the volume of pauperism and crime. Accuracy and convincingness in investigations of this sort are rendered difficult, if not impossible, by the careless record keeping of most of our penal and relief agencies. Yet there is much general evidence in favor of this view, of which a typical example is the statement made by Mr. Frederick A. Pope, prosecuting attorney of Somerset County, N. J., to the effect that out of a group of 54 crimes, committed by foreigners that involved violence 46 were committed by illitcrates. Of course, only an overwhelming mass of testimony of this sort would constitute a positive demonstration.

To these arguments the opponents of the literacy test reply that this test will not keep out criminals and other individuals with antisocial motives. While the percentage of illiterate criminals is high among those guilty of minor crimes, yet the most dangerous criminals are those with a high grade of intelligence and education, which this test would not touch. To this the other side responds that the literacy test is not supported as a cure-all. We already have laws providing for the exclusion of all criminals and paupers who can be detected; and as for the others, the literacy test would keep out some of them, and that would be so much clear gain.

"Thus on purely individualistic grounds there is much to be said in favor of the literate immigrant as material for American citizenship. But the selective advantages of the literacy test become much clearer if the matter is considered, not from the point of view of individuals, but of groups. The argument

briefly is this:

"The final aim of our immigration policy, and the sine qua non of a good immigration situation, is assimilation. If this is not accomplished with speed, certainty, and completeness, the solidarity of progress, if not the very life, of the Nation are threatened. Even the broadest 'free immigrationist' will hardly deny this. The differences of opinion of candid students come from disagrement as to whether assimilation is actually accomplished, rather than from uncertainty as to the need of it. One of the chief reasons why restriction is favored by so many is that excessive numbers are a bar to assimilation.

"Now, evidently the groups of immigrants which are most easily assimilated, and which therefore can most readily be received into this country are those whose habits of thought, attitude toward life, conception of their relation to government, 'ideas and ideals,' to use Prof. Ellwood's expressive phrase; or 'mores,' in Prof. Sumner's still more significant term, are most similar to those of the United States. Assimilation is an intellectual process, accomplished with the greatest difficulty in the lifetime of any adult immigrant, and quite impossible in the case of an immigrant whose early environment and social traditions have been widely diverse from our own. The United States may be characterized as an industrial democracy, and the groups of immigrants who can be most readily assimilated into our life are those who come from countries whose economy is of the modern industrial type, and whose government is fundamentally democratic, by whatever name it may be called. Now, nations of this sort have long ago established and maintained efficient compulsory education systems, and their people have a very small percentage of illiteracy. The monarchical, semifeudalistic, economically backward nations, on the other hand, and those which have only recently emerged from that state, have public education systems inadequate either in plan or administration, and their people show a high percentage of illiteracy. Thus, considered groupwise, illiteracy appears less as a quality than as a symptom or indication of other qualities, and these some of the most deep-seated and tenacious from the point of view of group character. Considered in this way the literacy test reveals itself as a selective measure of the very highest importance.

There are many other advantages, incidental or of lesser importance, connected with the literacy test. First, from the point of view of administration, it meets all desirable require-It is positive, rapid, and can not be evaded. It is foreknowable; that is, the would-be immigrant can determine for himself, before he leaves his native village, whether he can meet this test. It is impartial and leaves as little as possible to the

judgment of the inspector.
"Second, it would exercise a highly stimulative influence on the public education in European countries. When, in the administration of President Taft, it appeared likely that a literacy test would be passed, schools sprang up on many a hillside in southern Italy where none had been before. When President Taft vetoed the bill the schools were deserted and were closed.

"Third, the test is a barrier which can be overcome by any intelligent and ambitious person. Any European who really wants to come to the United States need only take the pains to secure the most rudimentary education. This may be difficult for some, conceivably impossible for a few, but it could not involve any great general hardship. If the demand for simple educational facilities were strong enough, it would be supplied.

"This suggests a further consideration, which is really too vital to be included among incidental things. This is that the literacy test would put a certain premium on American residence. The very fact that it imposed a barrier which could be overcome by effort would have a most beneficial effect upon those who did overcome it. It is almost a truism that anything which is cheaply acquired is lightly valued. Participation in the 'glories of America' is now cheaply acquired.

"In early days there were natural obstacles of one sort and another, which automatically selected for emigration the hardy, ambitious, and the courageous. Very few obstacles of that sort All the great channels of emigration are now carenow exist. fully smoothed and oiled, and to emigrate is almost as easy as to stagnate. A test which could be overcome, but only by some personal effort, would be a highly desirable thing. extent to which it actually was overcome, it would, of course, neutralize the restrictive effects of the literacy test, leaving only its selective features. Experience alone could prove how far this would go.

"Turning now to the positive arguments against the literacy test, they are found to be almost all highly abstract, not to say metaphysical. They have to do with 'natural rights' and 'liberties,' with American traditions and duties, with the inherent obligation of the favored to share their blessings with the less fortunate. They all boil down to three simple propositions: The literacy test invades 'natural rights'; it is narrow and

illiberal; it is un-American.

"The proposition that it violates 'natural rights' and 'liberties' is manifestly not an argument, but an assertion, capable neither of proof nor refutation. The whole question of natural rights lies outside the field of logic and is not a matter for argurights lies outside the field of logic and is not a matter for argument. If one sees fit, as one writer on the subject has done, to include among the great natural rights of man 'the right to choose a home,' no amount of reasoning will dislodge him from that position. The best that can be done is to point to another great 'right' which may be absolutely opposed to this, viz, the right of every nation to protect its interests as against the interests of any individual.

"The charge that the literacy test is narrow and illiberal rests on the assumption that those who urge it are animated by selfish or exclusive motives, that they desire to monopolize the advantages which they are fortunate enough to possess rather than to share them with others. This charge may be true of some. But there are others who advocate the test not because of narrowness of vision but because they take a view of humanity which extends far beyond the confines of nation, group, or race.

"There is no question that the United States as a nation is highly favored by nature. All the conjunctures of climate, soil, and natural resources combine with the high character of the original population to afford every advantage in the struggle for existence to those who are fortunate enough to call America their home. But it does not follow that a broad humanitarian policy demands the indiscriminate sharing of these advantages with anyone who wishes to come. These very advantages have set apart the United States to be the leader of the world in its struggle for the achievement of the higher democracy. Here, if anywhere, the stage is most favorably set for the great drama of the destiny of the common people. If democracy fails in America, where shall we look for it to succeed? The broadminded adherent of the literacy test holds that the immigration movement, as it has manifested itself in recent years, constitutes a menace to democracy in the United States, and that our highest duty to humanity will not permit us to tolerate anything which threatens to check or hamper the progress of the common people in this country. The fact that measures like the literacy test run counter to the interests of some individuals of our own generation does not alter the case in his mind. It is simply a matter of conservation. Every conservation policy is carried out by restriction and works hardship to individuals. The policy of forest preservation is an example. call the scientific forester narrow. Laws for the protection of woman and child laborers involve restriction and injure the interests of individuals. But we do not accuse the social legislator of illiberality. Neither ought this reproach to be applied to the advocate of the literacy test, or even of more distinctly restrictive measures, who believes that such steps are necessary for the preservation of the high ideals of the United States or of the standard of living of its common citizens.

"In fact, if self-seeking is a mark of narrowness and illib-

much of it emanates from those who fancy they see in it a menace to their own private interests, economic and other.

"The assertion that the literacy test is un-American is one which has been urged against many measures of social progress, and which can be employed against any proposition which involves departing from traditional methods or policies-in other words, which recognizes that the world moves and conditions When policemen were first introduced into the cities of the United States, the innovation was bitterly opposed on the ground that it was un-American and interfered with the natural rights of the individual. The 'penalty clause' by which the cooperative farmers' elevators of the Middle West maintain themselves has been attacked as un-American by those whom it affects unfavorably. The anti-immigration agitation of the forties and fifties, which called forth such rhetorical outburst of protests as that quoted in an earlier paragraph, was due to the desire to exclude paupers, criminals, and diseased persons—and this desire was dubbed un-American.

"It would seem hardly necessary to consider arguments of this type, were they not propounded with so much frequency and earnestness and accepted with so much sobriety. Especially it seems extraordinary that a measure which asks that the foreigner should have the same training for citizenship or residence that we require of our own children should be called un-American. When we spend over half a billion dollars annually on our public schools, and then compel children born in this country to take advantage of them, is it illogical-not to say un-American-to say to the adult foreigner that he should have so much of an education as is indicated by the ability to

"But it is asserted that an educational test would be un-American, because it would exclude aliens on the basis of opportunity, not of character. Hilteracy, it is maintained, is not a test of ability but of early opportunity. But a test based on opportunity is not un-American. For our immigration law already contains a number of tests which rest, in part at least, on opportunity. Such are the tests excluding paupers, those likely to become pub-lic charges, persons with contagious diseases, etc. In fact, when the individual immigrant appears before the inspector little can be gained by trying to separate those of his characteristics which are due to native ability from those which are traceable to environment. The man must be judged as he is on the grounds of his fitness.

"In pursuance of the 'un-American' argument, however, it is further pointed out that illiteracy can not reasonably be considered a test of fitness for American life, because this Nation was founded by illiterates, and that it has nevertheless done pretty well. The trouble with this argument is that it is not true, and that if it were, it proves too much. It might be said with equal cogency that this Nation was founded by men who made their living by slave labor in the South and the slave and rum trade in the North, and that therefore these good old institutions should have been preserved. All such arguments ignore the fact that the world has progressed during the past three centuries, and that illiteracy stands for very different things now from what it did in the days of the Pilgrim Fathers or of the Revolutionary heroes.

"Another argument which proves too much is that produced so triumphantly and with so great effect in some such words as these: 'This measure would keep out a great many people who would be very useful citizens. If it had been in force in earlier years, it would have kept out the mother of Abraham Lincoln, who signed her name with a cross.' Certainly the literacy test would keep out some who would be useful. So do many, if not most, of the tests now in force. The futility of such arguments may be illustrated by another reductio ad absurdum. Booker T. Washington was one of the most useful citizens of the United States. His ancestors on one side were brought over as negro slaves. Therefore it was a mistake to abolish the

slave trade.

"Such are the arguments of the opponents of the literacy test. Aside from these, their efforts are devoted to countering the claims of the opposite side, which, as has been shown, can be done successfully only with respect to the strictly and tem-porarily economic aspects—the building up of quick fortunes by questionable and probably dangerous means. There are those who do not regard this as an argument against the literacy test,

"The matter can be rightly understood only by taking the broadest possible view of the relations, not of this generation alone but of the generations to come. The natural destiny of the United States is to be the leader of the nations into the fullest development of the common people. Our duty is to set standards, not to distribute the natural advantages we possess.

We can not render our highest service to mankind by hastily and inconsiderately yielding to the demands of a specious humanitarianism and dissipating to-day what should be the heritage of future generations."

Militarism.

EXTENSION OF REMARKS

HON. DAVID A. HOLLINGSWORTH, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 23, 1916.

Mr. HOLLINGSWORTH. Mr. Speaker-

Four score and seven years ago-

Said Abraham Lincoln on the historic field of Gettysburgour fathers brought forth on this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created

Hitherto militarism in varying degrees had ruled the world and the power and influence of the nations had been reckoned by the number and strength of their standing armies. From feudal lords to Kaiser and King the course of empire had been marked by blood and iron. The army was a distinct class and often overthrew the Government and humiliated the civic classes of the people. In early times the rank and file were quartered in private homes. It was the dominant force, a permanent military establishment, and ordinary citizenship seldom rose above the rank of serfdom. King and army were the government.

But it was different with the new Nation, thus brought forth on the American Continent. Its basic principle rested with the people. Its power and strength in peace was to depend upon the justice and fair dealing of its citizenship and those who might be temporarily selected to exercise the functions of government. In war its reliance was to be upon a volunteer army, called temporarily from the walks of civil life, and to be disbanded and again become an integral part of the citizenship on the passing of the exigencies of war.

A big standing army in peace, eating up the substance of industry, was not to be thought of. It was a reproach in the eyes

of the men of 1776.

Thus was liberty and republican government established in the New World. The new Nation, thus constituted, flourished and waxed strong. And at Yorktown, where the world's militarism received its first great shock in the surrender of British regulars and hired Hessians to the volunteer forces under Washington, its form of government and citizens soldiery were vindicated.

Again and again, in the War of 1812, and in the Mexican War, this basic principle of free government was attacked and re-

peatedly vindicated.

But the supreme test did not come until civil war shook to its foundation this new form of government, and caused President Lincoln, in this same speech at Gettysburg, to exclaim in

Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure.

It stood the test. "A new birth of freedom" came to the Nation at Appomattox. The lessons of that hour and the example of Grant and Lee, great leaders of volunteer armies, in at once disbanding their forces and retiring with them to the peaceful pursuits of civil life ought for all time to be a warning against militarism in every form.

For a half century it seemed as if such warning would be world-wide and effective. The leaven of American liberty gradually worked itself upward and outward around the world. Absolute governments became constitutional, and in some notable instances, like that of France, purely democratic in form. The Russian Duma and the Republic of China may be extreme and to some extent doubtful experiments, but they show the clear tendency of modern thought away from the militarism of

But in an evil hour, seizing upon the unhappy war conditions in Europe, a new propaganda of militarism, under the specious name of "preparedness," has made its appearance in the land of Washington and Lincoln, of Grant and Lee. shall not stop to discuss the cause. Be it hysteria or sense, it is here in such force as to dominate the executive and legislative branches of the Government; and, very naturally, the

favored few who have been retained in the military service, or at least on the pay roll, during the years of peace, assume to possess all wisdom and knowledge on this subject. The ideas and example of Grant and Lee are forgotten in the words and seerlike suggestions of Maj. Gen. Jingo and Brig. Gen. Butterfly, who see conflagrations and "spark flying" everywhere.

But details are unimportant. As Members of Congress, in the consideration of the pending bill (H. R. 12766—Hay bill) we are up against a condition. The splendid response of Con-

gress and the country to the recommendations of the President, now that actual war exists in Mexico, and the fact that Congress has already, by a practically unanimous vote, provided for a further enlistment of 20,000 volunteer citizen soldiers, and indicated its willingness by like unanimity to back the Executive to the limit with additional volunteers, now that American lives are in actual peril and "Old Glory" has been wantonly insulted, does not seem to abate or modify the zeal of these propagandists of militarism.

Their grip upon Congress and public sentiment seems to

Leaders on both sides in Congress, in this wild movement to revolutionize our form of government, change and alter the basic principles of the new Nation brought forth by the fathers in 1776, have grown excited, dictatorial, and arrogant, and even the President, on the theory of preparing for unknown possibilities, is understood to have demanded that all the business of the country in Congress be suspended until a huge Army and Navy of royal and monarchical size can be provided for as a permanent, voracious, tax-eating substitute for the volunteer citizen soldiery of the Republic, who have heretofore successfully defended our country when assailed by both foreign and domestic foes.

We are asked to abandon the beacon lights of experience. We

are asked to return to the iron age.

Nine-tenths of the present American Congress, in my judgment, are ready to stand by the President and follow any socalled preparedness plans he and his advisers may submit, even though some of them may doubt his disinterested motives. They are not disposed to be critical or stop to inquire the cause of undesirable facts. Congress is moving rapidly, and, although much time is wasted in volunteer speech making intended for use only in the districts, the time has come for every Member to take his position and do his duty as he sees it. If he acts conscientiously, without personal or political considerations, looking only to the practical welfare of his country, he may, even if mistaken, calmly face the future conscious of his own integrity and without fear of those at home who may be hoping to see him submerged politically by a U-boat or mine set for the unwary.

Under such conditions what is the duty of a patriotic citizenship, what the duty of their representatives in Congress

Answering for myself, with due deference to those who are older than I am in service in Congress and those at home who may not agree with me in sentiment, I believe it to be my duty to so vote and act as to get the best results possible for my country out of existing conditions, and keep the old ship of state, now rocked in angry seas, as far as possible away from the dangerous reefs and swift-moving currents of the present and as near as possible to the safe headlands and courses charted by the fathers.

No Member can afford to be a passive nonentity or play the rôle of an egotistical, self-opinionated, useless obstructionist.

Accordingly, I shall vote against any and all amendments to the pending bill calculated to increase its tendency toward militarism and in favor of every one calculated to modify or minimize such tendency. Some amendments, like the Kahn proposition to more than double the present authorized strength proposition to more than double the present authorized strength of our standing Army, have already been voted down by substantial majorities, thus giving hopeful promise of the future. The bill itself, as unanimously—in form, at least—recommended by the committee, is not a radical measure. It increases the peace footing of the Army by only about 40,000 above the number at present allowed by law, and this increase is to be gradual. Other details, already fully discussed, might be referred to by me, but it would only be a waste of time. Suffice it to say that the bill as now amended and ready to be voted upon is, in my judgment in the best possible form that antimilitarists can hope judgment, in the best possible form that antimilitarists can hope to have it. My fear is that, although on the floor of the House it has been repeatedly called the "President's bill" by Chairman Hay, when it goes to the Senate the extreme militarists, self-styled preparedists, may be able to induce the Executive to look upon it from a different angle and demand that radical, almost revolutionary, changes be made. No one can anticipate what a day may bring forth at the White House. I do not wish to criticize. The President has a fearful responsibility resting

upon him. In a sense he is and is to be the Government until March 4, 1917, and my conception of patriotic duty is, in for-eign controversies, in all matters not of conscience, to stand by

our country, right or wrong.

In this spirit I vote "aye" on the Hay bill. I do not, however, share in the present war scare, if ordinary diplomatic common sense be exercised. It is inconceivable to me to think of any or all of the war-wrecked nations of Europe attacking this country. It would be superlative folly. The recent words of a lone German statesman in the Reichstag may be nearer the truth than his fellow members were willing to admit:

There will be neither victory nor vanquished in this war. We can not bring our encodes to their knees any more than they can Germany, Europe is steering in the direction of utter impoverishment and bankruptcy. What sense is there in a continuation of the war?

Immigration.

EXTENSION OF REMARKS

HON. SAMUEL J. NICHOLLS,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES.

Monday, March 27, 1916.

Mr. NICHOLLS of South Carolina. Mr. Speaker, I move to strike out the last word, in order to secure a few minutes in which to express my approval of this needed immigration legislation, recommended by a congressional immigration commission, after a four years' searching investigation at home and abroad that cost the taxpayers of this country nearly a million dollars, that has been urged by the various farmers' organiza-tions, the railroad brotherhoods, trade unions, the various patriotic societies, and is unquestionably demanded by a great ma-iority of the voters and people of the country. The time for jority of the voters and people of the country. The time for general debate being limited, and the older Members of the House, and particularly the members of the Committee on Immigration being justly entitled to preference, and having requested all the general debate time, I am taking advantage of the rule allowing every member the privilege of offering an amendment, and thus securing five minutes in which to debate the proposition.

It is my opinion, as I have just stated, that the vast majority of the people of this country desire and demand the enactment of this measure into law now. It is in connection with that opinion that I take issue with the gentleman from New York [Mr. Bennet] in his statement of last Friday to the effect that in so far as the people spoke at the polls in 1912 they spoke against restriction. According to the Congressional Record,

he said:

Mr. Speaker, the gentleman from Illineis [Mr. Foster], my colleague on the Committee on Rules, said that merely a small minority of this country is opposed to this proposition. He is a Democrat; I am a Republican. His party in national convention did not put a single line in their 1912 platform about the restriction of immigration. Mine advocated the restriction of immigration. His party ran first; mine ran third. So far as there has been any evidence on the question recently, that indicates what the people of the United States want.

The gentleman is correct in saying that the Republican Party had a restriction plank in 1912, and that the Democratic Party did not. It is also true that for 20 years, a full genera-tion, both the Republican and the Democratic Parties have had tion, both the Republican and the Democratic Parties have had restriction planks in their platforms, but neither of them have had an antirestriction plank. Back in 1896 the Republican Party declared specifically for the reading and writing test, and the Democratic Party went them one better by declaring, "We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market." Likewise the platforms of 1900 and 1904 both demanded more stringent importation laws and these platform declarations compared after migration laws, and these platform declarations, campaign after campaign, whose fulfillment was delayed by investigations and the like, must be held a part of the party's faith until publicly repudiated in national convention assembled.

The gentleman from New York [Mr. Bennet] intimated that in so far as the immigration issue affected the last presidential election it caused the candidate running on a restriction platform to come in a bad third. It is true that his party's candidate, President Taft, failed to secure more than 8 out of over 500 votes in the Electoral College and carried only Utah and Vermont. But the gentleman failed to state that President Taft repeatedly during the campaign, both in public and private, in personal conferences with heads of organizations and associations, asserted his opposition to this measure and through his secretary and the chairman of the Republican national cam-paign committee completely repudiated the restriction plank in his party platform, just as the gentleman from New York has repudiated it, and refused to run or stand on it.

I have here a clipping from the New York Sun of January 12, 1912. I understand that in the gentleman's city there is an adage to the effect that "if you see it in the Sun it is so."

The news item reads as follows:

WASHINGTON, January 11.

The members of the board of directors of the American Association of Foreign-Language Newspapers called on President Taft to-day to protest against any further change in the immigration laws. They were introduced to Mr. Taft by Louis N. Hammerling, of New York, president of the association. The members of the board expressed to the President the hope that he will be renominated and reelected, and they pledged him the support of their respective newspapers. The delegates also called on Secretary of Commerce and Labor Nagel.

To be sure, the clipping does not state that President Taft assured the editors of foreign-language newspapers that he would veto the Burnett-Dillingham bill at that White House conference, but I am confident they were so assured, for they came away with a smile on their faces, and 120 of them during the campaign came out in a signed statement denouncing Woodrow Wilson and Theodore Roosevelt and espousing the reelection of President Taft. I have a news item, clipped from the New York Times, which appeared in many other big dailies July 29, 1912, and which reads as follows:

July 29, 1912, and which reads as follows:

The editors and publishers of the foreign-language newspapers in the United States have issued an address to their readers advocating the reelection of President Taft and condemaing Gov. Wilson for his so-called attacks upon foreign-born Americans. The document is signed by 120 different newspaper publishers, representing 120 different newspaper publishers in foreign languages, saying: "President Taft has shown himself to be a friend of the lumigrant, while Woodrow Wilson has publicly condemned all immigrants except the Chinese. President Taft has not only discouraged the enactment of laws for the unreasonable and unfair restriction of immigration, but on more than one occasion has conferred with representatives of the foreign-language press and with various committees. Our representatives have been welcomed at the White House, and their arguments against unreasonable and unjust restrictions upon the immigrant have always met with most favorable responses from the President. In strong contrast to President Taft's public acts and declarations is Woodrow Wilson's attitude toward our foreign-born population * * .

"Woodrow Wilson is the foe of the labover, as he is unfriendly to the immigrant. He has shown himself to possess no sympathy for the toiling masses."

The address concludes with an appeal for the support of the President.

And the newspapers contained one news item after another during the campaign of 1912, showing conclusively that the antirestrictionists supported President Taft and opposed both Wilson and Roosevelt. For instance, as late as October 18, 1912, the New York Herald contained a long account of a big delegation that went to see President Taft at Beverly, Mass., assuring him of their support, and from which I quote merely a sentence, as follows:

Seventy-five members of the Jewish organizations called on President Taft at Beverly and assured him of the support of their organizations—

On account of his stand on immigration and the abrogation of

While it is not apparent from the above that President Taft assured this delegation and the foreign-language newspaper editors that he would veto the Burnett-Dillingham bill, which had passed the House and was pending in the Senate at the time to be passed after election and sent to the White House, still there is no doubt but that he had declared himself to that specific effect, as appeared from an official statement issue by Chairman Hilles October 21, 1912, and the following extract from a letter printed in the Gazette, of Haverhill, Mass., June

To the EDITOR OF THE GAZETTE:

* • I have a copy of the Boston Polish Gazette of April 27, 1912, which contains an official advertisement of the Taft campaign committee and the most prominent feature of this advertisement is the statement that President Taft is against the Burnett bill • * •.

Furthermore, when in Chicago, March 10, 1912, President Taft personally teld Rt. Rev. Paul P. Rhodes, the Polish auxiliary bishop that he would never sign the bill • * •.

REV. A. SYSKI.

The official statement of Hon, Charles D. Hilles, as chairman of the Republican national committee and secretary to President Taft, was issued in New York City, October 21, 1912, almost a fortnight before election day, and was carried in the daily newspapers of this country October 22 from coast to coast and border to border, and I quote here a part of what appeared October 22 in the Ledger, of Tacoma, Wash.:

VITAL ISSUE IN CAMPAIGN. THE DILLINGHAM-BURNETT BILL, [By Charles D. Hilles, chairman Republican national committee.]

Burnett bill has been condemned by the German-American alliance and other associations. Its chief provisions are still indorsed by another element. Dr. Wilson is looked to, if elected, to bring these immigration restrictions into operation with the help of a Democratic Congress. Representative Henry, of Texas, an apologist for Dr. Wilson and for Bryan, has said Burnett would reintroduce the Dillingham bill in Congress. President Taft, if reelected, would positively prevent any such proposed legislation from becoming effective. He is not afraid to use the veto power, as he has shown in the instances of the Democratic popgun tariff bills. With Taft reestablished in the White House no straining for the limitation of immigration on any such lines as laid down in the Dillingham-Burnett bill and taight by Dr. Wilson will be tolerated. Reports from all parts of the United States show that President Taft will receive the active support of the army of foreign-born citizens.

It seems to me that there can be no doubt about the position of President Taft in the campaign of 1912 on the Burnett bill and his pledge to veto the illiteracy test. As far as I can find out he was the only one of the candidates that specifically and by name agreed in conferences and through authorized official statements to veto the Burnett illiteracy test bill, which he did

February 14, 1913, three months after election day.

President Woodrow Wilson, however, kept an open mind on the question. There is absolutely nothing in anything he wrote or said, so far as I have been able to find, until his veto message, indicating specifically and definitely that he was opposed to the Burnett bill or the reading test. And when he authorized the public hearing at the White House on the bill it was stated that the President's mind "was open" and that he desired to hear the opponents and proponents of the measure before mak-ing up his mind. I know some of his letters to individuals have been referred to as indicating that he might veto the bill, but not a one of those letters, so far as I can find, contain a specific, definite assertion by him that he was opposed to the reading test or that he had examined the Burnett bill and would veto it because of the test.

On the other hand, I have here what he said in his five-volume History of the American People, with which the rank and file of the country were more or less familiar and which, together with his speech in New York City September 4, 1912, on immigration, had semething to do, no doubt, with the opposition of all antirestrictionists, unharnessed by partisan loyalty. In his

history he said:

history he said:

The census of 1890 showed the population of the country increased to 62.622,250, an addition of 12.468,467 within the decade. Immigrants poured steadily in as before, but with an alteration of stock, which students of affairs marked with uneasiness. Throughout the century men of the sturdy stocks of the north of Europe had made up the main strain of foreign blood, which was every year added to the vital working force of the country, or else men of the Latin-Gaelic stocks of France and northern Italy; but now there came multifudes of men of the lowest class from the south of Italy and men of the meaner sort out of Hungary and Poland—men out of the ranks where there was neither skill nor energy nor any initiative of quick intelligence—and they came in numbers which increased from year to year, as if the countries of the south of Europe were disburdening themselves of the more sordid and hapless elements of their population, the men whose standards of life and of work were such as American workmen had never dreamed of hitherto. The people of the Pacific coast had clamored these many years against the admission of immigrants out of China, and in May, 1592 got at last what they wanted—a Federal statute which practically excluded from the United States all Chinese who had not already acquired the right of residence; and yet the Chinese were more to be desired, as workmen if not as citizens, than most of the coarse crew that came crowding in every year at the eastern ports. (History of the American People vol. 5, p. 212.)

In his one big speech on immigration during the campaign, de-

In his one big speech on immigration during the campaign, delivered in New York City September 4 and carried in all the dailies of September 5, 1912, I find the following:

dailies of September 5, 1912, I find the following:

It we can lit upon a standard which admits every voluntary immigrant and excludes those who have not come of their own motion, with their own purpose of making a home and a career here for themselves, but have been induced by steamship companies or others in order to pay the passage money, then we will have what we will all agree upon as Americans. I am speaking to you as also Americans with myself, and just as much American as myself, and if we all take the American point of view, namely, that we want American life kept to its standards, and that only the standards of American life shall be standards of restriction, then we are all upon a common ground, not of those who criticize immigration, but those who declare themselves Americans. I am not saying that I aw wise enough out of hand to frame the legislation that will meet this idea. I am only saying that it is the ideal, and that is what we ought to hold ourselves to. * * * Of course, if the immigrants are allowed to come in uninstructed hosts and to stop at the ports where they enter and there to compete in an oversupplied labor market, there is going to be unhappiness; there is going to be deterioration; there is going to be everything that will be detrimental to the immigrant.

The attitude of Col. Roosevelt on this question and in favor

The attitude of Col. Roosevelt on this question and in favor of this needed legislation is too well known to need much elaboration. As President he urged the illiteracy and other tests upon Congress in one message after another. In his message to Congress December 3, 1901, he wrote at length what I will quote in the RECORD, but have not time to read. He urged:

[By Charles D. Hilles, chairman Republican national committee.]

New York, October 2t.

The Democratic candidate has not been able to explain away his "know-nothing" ideas concerning immigrants. Fereign-horn voters the country of any laborers brought over by contract, or those who, coming freely, yet represent a standard of living so depressed that they can undersell our really have a vital issue in the campaign * * The Dillingham—

immigration laws are unsatisfactory. There should be a comprehensive law enacted with the object of working threefold improvement over our

law enacted with the object of working threefold improvement over our present system.

First. We should aim to exclude absolutely not only all persons who are known to be believers in anarchistic principles or members of anarchistic societies but also all persons who are of a low tendency or of unsavory reputation. This means that we should require a more thorough system of inspection abroad and a more rigid system of examination at our immigration ports, the former being especially necessary.

The second object of a proper immigration law ought to be to secure by a careful and not merely perfunctory educational test, some intelligent capacity to appreciate American institutions and act sanely as American citizens.

This would not keep out all anarchists, for many of them belong to the intelligent criminal classes. But it will do what is also in point; that is, tend to decrease the sum of ignorance, so potent in producing the curv, suspicion, malignant passion, and hatred of order, out of which anarchistic sentiment naturally springs.

Finally, all persons should be excluded who are below a certain standard of economic fitness to enter our industrial fields as competitors with American labor.

ard of economic fitness to enter our industrial fields as competitors with American labor.

There should be proper proof of personal capacity to earn an American living and enough money to insure a decent start under American conditions. This would stop the influx of cheap labor and the resulting competition which gives rise to so much of bitterness in American industrial life, and it would dry up the spring of the pestilential social conditions in our great cities, where anarchistic organizations have their greatest possibility of growth.

Both the educational and economic test in a wise immigration law should be designed to protect and elevate the great body politic and social. A very close supervision should be exercised over the steamship companies which mainly bring over the immigrant, and they should be held to a strict accountability for any infraction of the law.

I agree with the gentleman from New York [Mr. Bennet] in his statement that "in so far as there has been any evidence on the question recently," the fact that Taft ran third and Wilson first "indicates what the people want." That, however, is true merely of presidential candidates. Far more indicative of what the people think and want however in the feed that the people think and want, however, is the fact that each succeeding Congress, fresh from the people after this measure has been up in both branches and debated and passed by large votes, passes it by an ever-increasing majority. Like Banquo's ghost it will not down, and as sure as the sun rises and sets and rivers run, there is only one way to solve this popular question namely, make this needed legislation law.

The Late Representative Witherspoon.

MEMORIAL ADDRESS

HON. PAT HARRISON.

OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES,

Sunday, March 5, 1916.

The House had under consideration the following resolutions (H.

The House had under consideration the following resolutions (H. Res. 157):

"Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. Samuel A. Witherspoon, late a Member of this House from the State of Mississippi,

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate. "Resolved, Thost the Clerk send a copy of these resolutions to the family of the deceased."

Mr. HARRISON. Mr. Speaker, there are occasions in human experience when the heart so overflows with sadness that it is difficult to find or employ proper expression to convey our feelings or thoughts. I have listened with interest and pride to the splendid eulogies so eloquently delivered in this Chamber to-day. I rise now with embarrassment, cognizant of my inability to render an appropriate eulogium upon the life and character of our departed colleague and the friend to whom we

all were so devotedly attached.

When the news of his death flashed over the Nation I happened to be in the city of New Orleans, and it came to me so suddenly that I was inexpressibly shocked and could not believe it true. Sam Witherspoon dead! Taken from us just when opportunity for a larger usefulness than he had previously enjoyed opened with such assured promise before himthe opportunity which he had so industriously and painstakingly prepared himself for. His splendid talents were not long employed in the public service, and yet in so short a time as a representative of his people in this body he had impressed his character and ability not alone upon his colleagues here, but upon the people throughout the Nation.

His greatest reputation in this House was made in connection with his work on the Naval Affairs Committee. Like all subjects that engaged his attention, he recognized no bounds within which to confine his investigations; he knew no limit within which his labors might be restricted. I never knew any-

one who loved work more and obtained greater satisfaction and pleasure out of it than did our departed colleague. predominating qualities of the man were unsurpassed analytical powers, unyielding courage, and untiring industry. He never spoke on any question unless his heart was in it and until he had thoroughly prepared himself. And with his splendid intellect, sincerity of purpose, and thoroughness of preparation, he naturally forged himself to the front as one of the really great men in this House.

As a speaker his manner was pleasing, his voice was musical, and as a debater on the floor of this House or before courts or juries or on the hustings in his native State, by the force of his marshaled facts and through his matchless, persuasive eloquence, reenforced by the strength of his irresistible logic, he swayed his hearers, inspiring confidence in those who agreed

with him and silencing those who opposed him.

But his reputation in this House is not builded alone upon his speech relating to the Navy, for no greater ovation was ever tendered any Member on this floor than the one accorded him at the close of his speech championing the appropriation for the preservation of the torn and tattered flags of the Revolution. That speech was delivered at a most opportune time. Scintillating with pathos and patriotism, it aroused the membership of this House to the highest degree of enthusiasm and created a sentiment on this floor that found its fruition in the passage of the appropriation measure practically unanimously. I shall never forget the scene. He followed a gentleman from the South who opposed the appropriation, and with all the feeling that it is possible for a man to arouse in himself he played upon the hearts of his colleagues; and with burning words of eloquence he held them enthralled, and the whole House was lost in the seductive influence of his overpowering personality. As he pictured the old flag as only he could picture it, I saw old men and young men on both sides of that aisle lose themselves in the bewitching charm of his eloquence and sob the smothered sob of suppressed joy and shed tears of patriotic elation.

By his charming personality he made friends and held them. Few men in this House were more popular with his colleagues than was Mr. WITHERSPOON. His disposition was kindly, his manner most charming. He was independent in thought, expression, and action. He took counsel with his own conscience, and when he had once formed an opinion it was as immovable as the Rock of Gibralter. The only fault that it was possible to find with him, if that can be a fault, was that his convictions were so strong and he was so confident of the correctness of his position that in argument the combative instincts of his strong personality exerted themselves to such a degree that sometimes he manifested a touch of impatience and intolerance at the slightest opposition to his views. So strongly did he believe in his opinions he could not understand how any intellect less powerful than his could arrive at other conclusions. Yet, with this apparent defect of his splendid character, those of us who knew him recognized this only as an evidence of the sincerity of his thought and the strength of his position.

As he rose high in the estimation of his colleagues in this body, so did he rise high at the bar of his State. He was classed, and rightfully so, as one of the best lawyers in Mississippi. His practice was large and varied. He specialized in no branch of the law. It was my good fortune to have known Mr. Witherspoon a number of years before he came to Congress. I first met him in the court room in the trial of an important criminal case. I met him afterwards in other cases, and I have never seen a lawyer who was more at home in the court room and who took care of the interests of his clients with greater ability and more fidelity than he.

As a citizen his time and talents were ever used in the upbuiliding of his section and State and the uplift and betterment of society. He was modest to a fault and like the violet that grows in the lonely valley unseen by the haughty eye, shedding its perfume on the desert air, he lived a life of goodness and kindness, without bigotry and without ostentation.

Mr. Speaker, a nobler man never lived. Hospitable, gentle, and lovable, a gentleman in honor, in manners, and in innate refinement, he was everything that a man could be to be respected and loved. He revered the teachings and traditions of our fathers. He measured his actions by the organic law of this land, and the plain people of the Nation lost a consistent and ardent champion when he died. In his family relations he was a most devoted husband and loving father, whose constant delight was to do some act that would bring pleasure to his wife or his children. He loved children, and how eloquent have I seen him grow as he related to me some incident or some "tale unfold" about his little grandchild. His death was a distinct loss not only to his State but to the Nation, and while to-day we are bowed in sadness, we can console ourselves with the

thought that by his illustrious career, his incomparable honesty, and his stainless honor, he has left a heritage more enduring and more to be treasured than all the riches of the world.

It is not gold, but only man
Can make a people great and strong,
Men who for truth and honor's sake
Stand fast and suffer long.
Brave men who work while others sleep,
Who dare while others fly,
These build a nation's pillars deep
And lift them to the sky.

Such a man was SAM, WITHERSPOON, and of such is the Kingdom of Heaven.

Immigration.

EXTENSION OF REMARKS

HON. FRANK PARK. OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 27, 1916.

Mr. PARK. Mr. Speaker, under the general leave granted Members to extend their remarks on the immigration bill now before the House, I shall give my reasons for supporting the bill.

The greater portion of the substance of this bill is, and has been for years, the written law of this country. We have the Chinese exclusion law; and, as far as our treaty with Japan allows, we have a Japanese exclusion law. We have had for years a law for the exclusion for the mentally unsound, the physically defective, the immoral classes, and those who are industrially vicious. There has also been in existence for years a law preventing the admission of anarchists and all those who are opposed to organized law and good government. The present bill is but a reintroduction of the bill of last session with but few changes, as, for instance, increasing the head tax and enlarging the penalties on owners of immigrant ships. The literacy test stands practically the same with the exception of increasing the number of words submitted to the immigrant as a test of his literacy, and the admission without the payment of head tax of members of camilles who are under 16 years of age. There is practically nothing in the bill that is new law except the literacy test. Then, practically, the whole question to be decided by each Member of this House is, Are you for or against the literacy test? At the first session when the bill was on its passage I voted for the bill and every amendment; but, owing to my past environment and experience I had some serious misgivings on the literacy test. I have always felt earnestly that the poor, by reason of lack of opportunity, should have an equal chance in this world with their more fortunate brothers. Equality of opportunity is the very keystone in the arch of democracy. When the bill passed both Houses and went to the President for his signature he vetoed it and called up to my mind very forcibly some of the same reasons that had been pulsating through my brain, and having great confidence in his learning and patriotism and good judgment, I voted to sustain the veto.

Since then many changes have been taking place in those countries across the Atlantic whence most of our immigrants War has devastated the lands of Europe, decimated the population, impoverished the people, and rendered conditions in those countries horrible to contemplate. After this great war shall have ended no one can tell to what extent and in what vast hordes those who are left will seek a home in this country. Many apprehend that they will deluge this country with immigrants; some contend there will be little immigration for years.

As a rule, after such great catastrophes, the best citizens of the country remain to rehabilitate and resurrect their ruined countries. The less patriotic and weaker classes as a rule seek other countries. If, as some contend, there will be no immigra-tion on account of the great thinning out of the populations of those countries, then the enactment of this bill into law can do no harm; but if, on the other hand, vast numbers should come, throng our shores, crowd our cities, and reach out into the rural sections of the country, then the law, if properly enforced, will do much good.

The distinguished chairman of the Immigration Committee, in an unchallenged statement on the floor of this House, said last week that Italy had compulsory education, one law for all her subjects, and that these citizens along the shores of the Mediterranean contained 60 per cent of illiteracy, while those of

northern Italy have but 8 per cent of illiteracy. This fact establishes a condition and characteristic of these scuthern European people which make them undesirable for our country. who has the opportunity in his own country to educate himself at public expense and who will not do so is not likely to change if he comes to this country, and such characteristic is a mark of degeneracy of those people, and we do not want the dregs of other nations to amalgamate with our citizenship.

Another statement was made on the floor last Saturday and is still unchallenged—that there are 2,565,012 foreign born in this country 21 years of age and over who can not speak English, and only 35,614 are attending public schools presumably to learn. Less than one-seventieth of two and a half millions who can not speak English are trying to learn to speak our language. That does not coincide with the opinion I had previously formed that the great desire of immigrants who come to this land of opportunity was to educate themselves and their children and to become good and true Americans. Then, if these facts go unchallenged they must be admitted; and, if admitted, then there is little in the argument that they seek to become good American citizens, and certainly we desire no others.

Again, it has been stated and has not been challenged that during the war now in progress across the Atlantic within the past 18 months over 400,000 foreign-born citizens of America have forsaken their families, their friends, their occupations, and their property in this their adopted country, to which they have sworn allegiance, and have returned to their native lands to enlist in the armies and fight for their native lands.

This may be commendable as a mark of loyalty to blood andnative land, but it presents a query to a patriotic American citizen who seeks the welfare of this country which is trying so hard to be neutral, whether or not if a conflict is forced upon us in the future he would take arms with his adopted country or his native land. Certainly, in the event war should be de-clared between the United States and any of the countries to which these foreign-born Americans have gone to enlist, they would immediately be forced to make war against their adopted country in favor of their native country. In my opinion, such citizens are a menace to this Government.

While but 2 per cent of all the immigration to America has, up to this time, drifted south of the Mason and Dixon line, and while perhaps it will be many years before they do in large numbers, yet considering, as I have, after a careful study of the question, which up until recently I have for many reasons had little opportunity to analyze, I feel it my duty to support every section of this bill.

I can not say whether the President, on account of the changed conditions relating to immigration at this time, will veto the bill when it goes to him. And however much I may dislike to differ with him on great questions, nevertheless, if he should feel it his duty, on account of the literacy test, to veto the measure again, I shall feel it my duty to vote to over-

From letters I have received from various parts of the country, not only organized labor, but the organized farmers throughout the country are demanding this legislation. representing a district of largely agricultural industries, I would feel it my duty to support what the majority of my constituents desire, irrespective of any feeling which I might have to the contrary, but if the literacy test will keep out a quarter of a million of the thickly populated denizens of southern Europe along the shores of the Mediterranean who, it is understood, come and go as birds of passage to and from this country, then if the literacy test does no more than that, it should be adopted by this House, and every Member who has the welfare of the United States at heart should vote for it.

Immigration.

EXTENSION OF REMARKS

WILLIAM H. CARTER, HON. OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES, Tucsday, March 28, 1916.

Mr. CARTER of Massachusetts. Mr. Speaker and gentle-men, I am opposed to this immigration bill chiefly because of the literacy test, and for this reason intend to register my vote

strong, willing immigrant that this country needs. The attacks to-day against immigration are less bitter in character, but are very similar to those of the early immigrants from Germany, Sweden, Ireland, England, and Scotland.

This bill to-day is nothing more nor less than a provision to exclude from our shores the Greeks, the Poles, the Russian Jew, the Itulian, and the Frenchman. Some of the most learned citizens of this country are from Jewish parentage. In law, art, and science the Jew holds a position of preemi-

The Greeks, Polanders, Italians, and the Frenchmen need no public apologies from me. The door of opportunity should be thrown open to them all.

This literacy test will not bar out the clever criminal, whose record we are unable to obtain. The records will prove that the majority of the criminals of foreign birth are not the

I believe that the immigrant to-day is a good, patriotic citizen. Stop for a moment and glance back at the history of our own country and see what great influence and help the immigrant was. Nine signers of the Declaration of Independence were born in foreign lands. The War of the Revolution was not tought by native-born sons alone. Standing elbow to elbow with them was the immigrant boy of that day.

On the fields of Lexington, at Bunker Hill, and at Valley Forge the immigrant walked in the snow, stood in the trenches, and died as bravely as the native sons of that day. A great many of the most distinguished officers of the Revolution were foreigners, who out of pure love for liberty came here to assist us. Without their assistance the cause of the patriots might have failed. Look at Lafayette and the 437 French officers who served with the American Army. Look at Pulaski, the Polish patriot and exile, and see what he did in the Battle of Brandywine, and look at Charleston. The illustrious Paul Jones was a foreigner by birth.

In the War of 1812 the immigrant responded to the call of duty.

In the great War of the Rebellion, let me quote from Mr. Higginson's work:

Who that recalls the war for the Union does not remember how we all, from President Lincoln downward, played upon the string of "a home for all oppressed mankind"; how fearlessly we then appealed to the Germans, the Irish, the Swedes, the Scotch within our borders, and how well they responded. Even the green flag of Ireland, now forbidden to be displayed from our city halls, was then welcomed with cheers on battle fleids when it was borne to front, amid decimated regiments, under shouts of "Faugh a ballagh"—"Clear the way."

We all know what happened in the War with Spain. war the immigrant boy served just as bravely as the native-born At Vera Cruz, when one reads the names of the heroic dead, he finds the sons of immigrants among the first to give up their lives for their country.

Many of the early men of Massachusetts, my native State, were illiterates. In those days illiteracy was not the test of character. But the best test at that time was how the man at the end of the gun behaved. They learned the legend "all men are born free and equal," and for that legend they rallied, fought, and died, the literate and the illiterate side by side.

Literacy is not a test of character, but one of opportunity. believe that the desirable immigrant to-day is the law-abiding worker who is healthy and who comes to this country with but one purpose, to earn an honest living. I believe that the undesirable immigrant is the one who is a clever schemer, educated, and as soon as he arrives here begins to start trouble.

We already have sufficient laws which keep out the insane, the criminal the pauper, those mentally and morally unfit.

A short time ago I took the occasion myself to see just what the illiterate immigrants were doing in order to obtain an education in my own congressional district. I went into the night schools of the various towns and cities of the district and there saw them sitting side by side, the Russian Jew, the Italian, the German, the Pole, the Frenchman, and others, all eager to learn. Here there were little boys and girls, as well as grown-up men and women, each striving to master the first principles of reading and writing. These people, to my mind, are the ones that this country need and the ones that will make the best type of citizens.

To my mind this was conclusive proof again that literacy is but a test of opportunity and not of character.

I have received many petitions from labor organizations from all sections of the country asking me to vote in favor of this I do not believe that the individual members of these labor bodies would themselves vote for this bill containing the literacy I do not believe this portion of the bill will affect organized labor, and for that reason I intend to register my protest

against it. As you are aware, already three distinguished Presidents have vetoed this bill.

On March 2, 1897, Grover Cleveland, in his memorable message vetoing the literacy test, said:

sage vetolng the literacy test, said:

A radical departure from our national policy relating to immigration is here presented. Heretofore we have welcomed all who came to us from other lands except those whose moral or physical condition or history threatened danger to our national welfare and safety. Relying upon the zealous watchfulness of our people to prevent injury to our political and social fabric, we have encouraged those coming from foreign countries to cast their lot with us and join in the development of our vast domain, securing in return a share in the blessings of American citizenship.

A century s stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy, which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work.

A contemplation of the grand results of this policy can not fail to arouse a sentiment in its defense, for, however it might have been regarded as an original proposition and viewed as an experiment, its accomplishments are such that if it is to be uproofted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties and guarded against difficult or oppressive administration.

Ex-President Taft, vetoing the literacy test on February 14.

Ex-President Taft, vetoing the literacy test on February 14, 1913, wrote:

I can not make up my mind to sign a bill which in its chief provision violates a principle that ought, in my opinion, to be upheld in dealing with our immigration. I refer to the literacy test. For the reasons stated in Secretary Nagel's letter to me, I can not approve that test.

Ex-Secretary of Commerce and Labor Charles Nagel, in his letter of February 12, 1913, upon which President Taft based his literacy-test veto, wrote the following:

letter of February 12, 1913, upon which President Taft based his literacy-test veto, wrote the following:

I am of the opinion that this provision can not be defended upon its merits. It was originally urged as a selective test. For some time recommendations in its support upon that ground have been brought to our attention. The matter has been considered from that point of view, and I became completely satisfied that upon that ground the test could not be sustained. The older argument is now abandoned, and in the later conferences, at least, the ground is taken that the provision is to be defended as a practical measure to exclude a large proportion of undestrable immigrants from certain countries. The measure proposes to reach its result by indirection, and is defended purely upon the ground of practical policy, the final purpose being to reduce the quantity of cheap labor in this country. I can not accept this argument. No doubt the law would exclude a considerable percentage of immigration from southern Italy, among the Poles, the Mexicans, and the Greeks. This exclusion would embrace probably in large part undestrable but also a great many desirable people, and the emburrassment, expense, and distress to those who seek to enter would be out of all proportion to any good that can possibly be promised for this measure.

My observation leads me to the conclusion that, so far as the merits of the individual immigrant are concerned, the test is altogether overestimated. The people who come from the countries named are frequently illiterate because opportunities have been denied them. The oppression with which these people have to contend in modern times is not religious, but it consists of a denial of the opportunity to acquire reading and writing. Frequently the attempt to learn to read and write the language of the particular people is discouraged by the Government, and these immigrants in coming to our shores are really striving to free themselves from the conditions are concerned, I think, the question has

President Woodrow Wilson in a most forceful message, vetoing the pending legislation, said:

In two particulars of vital consequence this bill embodies a radical departure from the traditional and long-established policy of this country—a policy in which our people have conceived the very character of their Government to be expressed, the very mission and spirit of the Nation in respect of its relations to the peoples of the world outside their borders. It seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of men, and it excludes those to whom the opportunities of elementary education have been denied without regard to their character, their purposes, or their natural capacity.

Restrictions like these adopted earlier in our history as a Nation would very materially have altered the course and cooled the humane ardors of our politics. The right of political asylum has brought to this country many a man of noble character and elevated purpose who was marked as an outlaw in his own less fortunate land and who has yet become an ornament to our citizenship and to our public councils.

The children and the compatriots of these illustrious Americans must stand amazed to see the representatives of their Nation now resolved, in the fullness of our national strength, at the maturity of our great institutions, to risk turning such men back from our shores without test of quality or of purpose. It is difficult for me to believe that the full effect of this feature of the bill was realized when it was framed and adopted, and it is impossible for me to assent to it in the form in which it is here cast.

The literacy test and the tests and restrictions which accompany it constitute an even more radical change in the policy of the Nation. Hitherto we have generously kept our doors open to all who were not unfitted by reason of disease or incapacity for self-support or such personal records and antecedants as were likely to make them a menace to our peace and order or to the wholesome and essential relationships of life. In this bill it is proposed to turn away from tests of character and of quality and to impose tests which exclude and restrict, for the new tests here embodied are not tests of quality or of character or of personal fitness, but tests of opportunity. Those who come seeking opportunity are not admitted unless they already had one of the chief of the opportunities they seek, the opportunity of education. The object of such provision is restriction, not selection.

I want at this time to insert as part of my remarks an editorial from the Washington Post of to-day:

THE LITERACY TEST.

With strange persistence the House of Representatives again attempts to bar the gates of the United States to honest, able-bodied immigrants by imposing a literacy test. In the face of history and in spite of the repeated reminders of patriotic Presidents of both parties, the House clings to the notion that immigrants unable to read and write are not fit material to enter the United States.

The pressure for this legislation comes from men who were themselves immigrants not long ago, and who would now shut the door through which they entered. They would monopolize the opportunities of America under the pretext of purifying the stream of immigration. They stand directly athwart the pathway of progress, and would call a halt to the march of millions of honest and hard-working aliens who have in them the stuff of which America is made.

How can immigration be purified by a language test? Will it keep out Black Handers, and poisoners, and anarchists, and birds of prey generality? There is no pretense that book learning makes for morality or that lack of it impiles criminality. No one has had the hardhood to suggest that if an anarchist were unable to read he would be more criminal than he is. The literacy test is not set up as a moral sieve, but is intended merely to restrict immigration without regard to its moral quality. It is a device for excluding good and bad, indifferently, for the benefit of those already in. It is supposed that it will make labor scarcer and therefore raise wages.

The United States needs more labor if it is to develop and meet the needs of an increasing population. Illiterate immigrants do not remain illiterate long, and even while illiterate they are good workers. Probably the proportion of shirkers is smaller than among immigrants who have absorbed the vicious socialistic stuff dealt out to the submerged tenth in Europe. Immigrants do not make up the majority of meddlesome agitators in this country. The worst offenders, who would wreck the Constitution and introduce crazy schemes of ref

The Military Bill.

EXTENSION OF REMARKS

HON. ISAAC BACHARACH, OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 23, 1916.

Mr. BACHARACH. Mr. Speaker, I have listened with much attention and a great deal of edification to the remarks of many of my distinguished colleagues who have addressed the House on the merits of the bill under consideration, and I have given very careful thought to all that has been said on the subject of our country's state of preparedness; especially have I dwelt with much care upon the statements made by the very able and capable men who compose the Committee on Military Affairs, I felt sure, because of the extensive and exhaustive study of the question that has been made by that committee and by reason of the many and prolonged hearings held by it, at which hearings the members of that committee were given the benefit of the opinions, views, recommendations, and criticisms of those men in the military service of the Government-men who are trained to know, who are paid to know, who ought to know, and I firmly believe that they do know what are the conditions confronting this country at this time, in so far as the military aspect of it is concerned; men who are all experts in their respective lines, and I dare say that a more intelligent nor a finer body of men does not exist in the service of any country to-day than those men who go to make up the military branch of the United States—I repeat, that I felt sure the committee would be able to present a bill to the House which would have the approval of a unanimous Congress; and, with the exception of a few very good amendments which have been added to the bill on the floor of the House, that has been the result, there being but two dissenting votes recorded against the passage of the bill.

Because of the very great difference of opinion that has prevailed throughout the country, and because this difference of

opinion was markedly apparent in the second congressional district of New Jersey, which district I have the honor to represent, I realized very keenly the grave responsibility which confronted me in arriving at a conclusion which I believed to be for the best interests of our country.

Mr. Speaker, no Member of this august body has a greater abhorrence for war than I have; and I hope that I may live to see the day when wars will cease to be the method by which international disputes and questions shall be settled. Nor yet, do I wish it understood that I am a pacifist, if that word is to

be construed as a "peace-at-any-price man."

If the time shall come, which God forbid, when this country shall be called upon to defend its rights, its honor, or its integrity against the attack or encroachments of a foreign foc, if at that time I shall have the honor of being a Member of this House, no one shall be quicker to rally to the support of our House, no one shall be quicker to rally to the support of our President, either by supporting necessary legislation or by appropriating money, or both, than will I; or if that time shall come when I shall have the honor of being one of that greater body of men—just a plain, private American citizen—I shall be ever ready to give such aid to my country as it shall be within my power to give.

Mr. Speaker, this bill provides an increase in our Regular Army of 10,000 men a year, for a period of four years, or a total of 40,000; and in ordinary times of peace and contentment I believe a standing army of 140,000 men to be a sufficient mo-

I believe a standing army of 140,000 men to be a sufficient mobile force for the protection and safety of our country

But, Mr. Speaker, when we think of the terrible conflict that has been devastating the most powerful of the countries of Europe for the past two years, and we stop to reflect upon the thousands upon thousands of men that daily meet their deaths in this ferocious struggle, which, up to the 1st day of January of this year amounted to more than 13,000,000, and at a cost of thirty-nine and a half billions of dollars; when the possibilities of war in our own country are being very forcibly and vividly brought home to us each day by the critical conditions existing along our southern border, and in the words of our President— "we know not what the morrow may bring forth"—it would seem that at this particular time we would be justified in providing for an increase in our Regular Army much larger than that carried in this bill.

Mr. Speaker, I do not favor an excessively large standing army in times of peace; but these are perilous times, and conditions at home and abroad are of such an unsettled character that it behooves us to be alert and awake, so as not to be found wanting should an emergency arise. Even the most ardent pacifist must admit, when one stops to consider that at this very date, exclusive of the forces now operating in Mexico and the Coast Artillery and Staff Corps, there are only five mobile organizations available for service in the United States, numbering about 5,000 men, that this protection can not even be considered as adequate protection, and that action should be taken immediately looking to the increase of our military and naval forces to such a strength as to render this country well fortified against serious trouble. And when the disturbed conditions which now seem to be world-wide once more subside and we are again permitted to work out our destines in peace and harmony little difficulty will be had in reducing our forces to a peace

Mr. Speaker, I am absolutely opposed to any method of conscripting or drafting. I believe that a large reserve force can be created by the proper military training under Federal supervision of our young boys, and I believe that attention should be given to the Boy Scout movement and similar organizations which are having such a rapid growth in this country, for it would seem to me that with correct training of these young lads a wonderful reserve force could be brought into existence. The training of our youth in the Boy Scouts, school cadets, and similar organizations is more strikingly brought to our attention when we consider the facts contained in a letter of the Commissioner of Pensions addressed to that distinguished, venerable, and much-beloved Member of this House, the Hon. Joseph G. CANNON, and by him read on the floor here several days ago, which letter transmits a statement of the relative ages of those who enlisted during the Civil War, as follows:

Those 10 years and under	25
Those 11 years and under	38
Those 12 years and under	225
Those 13 years and under	
Those 14 years and under	
Those 15 years and under	104, 987
Those 16 years and under	231, 051
Those 17 years and under	844, 891
Those 18 years and under	1, 151, 438
Those 21 years and under (these two classes make the total	
number of enlistments)	2, 159, 798
Those 22 years and over (these two classes make the total	C. 2000
number of enlistments)	618, 511
Those 25 years and over	46, 626
THOSE NO SERIO HIS CICETALINESSEE STATES	-01 040

It will be noticed from this statement that the greatest number of enlistments were of boys 18 years and under, numbering 1,151,438, while the number of enlistments between the ages of 12 and 17 was 1,182,977. These ages correspond with the ages of the boys connected with the organizations mentioned above.

Mr. Speaker, as I view the situation to-day, as a result of the new methods of fighting that have been inaugurated in the war in Europe, it does not appear to me that we essentially require such a tremendous number of well-drilled men in the conduct of modern warfare; rather is it necessary that we should have an adequate number of officers and men who have become skilled in the art of aviation and in the handling and operation of the intricate and complex death-dealing machinery and engines of destruction that have been worked out and put into action since that war began; men who are familiar with the deadly, dangerous gases and powerful explosives, and who know how to handle them without loss to their own forces. If we could have a sufficient number of these highly skilled soldiers, together with the necessary equipment to make such a corps effective, a reserve force made up of young men who had had the military training contemplated above, and these fortified by a standing army such as is provided in this bill, I believe this country would be adequately prepared to meet any emergency; and it would not become necessary to levy extraordinary revenues and taxes upon the people to maintain such an organization.

Mr. Speaker while in my early life I have had some military training, I do not in any sense attempt to pose as an expert on military matters and I have tried to consider this question of preparedness from the standpoint of a business man, with the idea of protecting the best interests of those whom I represent and the people of this country in general. I have not been unmindful of the opinions of many of my constituents on both sides of this question. My understanding of the duties of a Representative in Congress is that he shall do what he believes is for the best interests not only of his constituents, but, in matters of this kind, for the best interests of the whole country. I have been here on the ground and have had the benefit of information and knowledge which otherwise 1 could not possess. No partisan spirit has guided my actions, nor has my vote been influenced by any other thought or desire than to do what I believe to be for the protection of this glorious country of ours.

As this bill passed the House it provides:

 A Regular Army of 140,000 men, an increase of 20,000 over present authorized strength.

2. A federalized militia of 420,000 men under the control of the Federal Government.

A system of reserves, recruited from retiring members of both the Regular Army and the militia.

 A reserve officers' corps of 50,000, recruited from graduates of military schools under Federal supervision.

5. Federal pay for officers and enlisted men of the National Guard.

6. Authority for the President and Secretary of War to make plans for the mobilization of the industrial resources of the country in time of war.

War Propaganda-Dollar Plutocracy v. Patriotic America.

EXTENSION OF REMARKS

HON. CHARLES A. LINDBERGH,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 20, 1916.

Mr. LINDBERGH. Mr. Speaker, as a result of the long-practiced commercial greed and militarism the greatest war of the ages seized Europe. But with the nations at war all dollar questions have ceased. They now struggle for national survival. Americans generally extend every possible sympathy with impartiality—wish to be makers of peace on honorable terms for all. But there were dollar Americans also, though relatively few in number; still they control the means for the distribution of news, including most of the daily press, from which a part of the other press copies. Instantly when war broke loose "dollar Americans" saw the greatest opportunity for speculation. It immediately developed into a case of "dollar Americanism" against "patriotic America," with the principal part of the press working overtime, desperately attempting to deceive the public.

AMERICAN RIGHTS.

No one can wonder that, in consequence of innumerable current false statements, many patriotic Americans fear for the maintenance of American rights. Congressmen who have supported the principles that are absolutely essential for the welfare of 100,000,000 Americans have been attacked by venal speculators through the press and by certain high officials who do not differentiate between "American dollarism" and "patriotic America," who do not distinguish between property privilege and human rights. An attempt has been made to make the people believe that Members who can not be influenced by "dollar Americanism" are sacrificing American rights and American ideals, and that those persons only who defend American dollarism are patriotic.

No country should have higher ideals than America, for ours has been the best of the world's opportunities. We came into being after the world had been striving with human affairs for thousands of years. We had notice of its mistakes. "The shoals had been marked off" for us, and we could have steered the Ship of State clear of them. We had a "brand" new continent to adjust ourselves to. It lacked nothing that God could supply. We had a chance to make the best of the best opportunity, so really we should have American ideals superior to any on earth.

WHAT ARE AMERICAN IDEALS?

What do we understand American ideals to be?

Is it that we shall live and strive for "American dollarism," merely, or shall we live to build higher and higher for human rights and independence? Instantly when Europe's "war dogs" were unleashed two great forces appeared before the President and Congress of the United States. One was a demand from Wall Street for Government aid to enable "dollar Americans" to finance speculation in stocks, bonds, and war contracts. The other was by farmers from 12 States having more than 20,000,000 people. Who of these two applicants for Government aid do you suppose received it?

Many of you were in Congress at that time. We all remember that eventful day when Wall Street threatened the President and Congress. The President submitted and Congress obediently brushed aside the rules which are ordinarily used to prevent desirable legislation and instantly gave Wall Street speculators the control of the Government credit for over a billion dollars. It all took place in 24 hours.

What about those farmers who were then also knocking at the doors of the White House and Congress? What did they get? What wonderful subtlety of mind was displayed by the White House and Congress when these two representatives of the American people answered that it would be paternalism for the Government to aid the distressed farmers, but that it was not paternalism to aid plutocratic Wall Street. So the American farmer was kicked out of the White House and out of Congress and told that he could rely on the tender mercies of Wall Street, to which ample Government aid had been given and to spare, and that if Wall Street wished it could give the "spare" aid to the farmers at a price. There you see what the treatment by this Government was of the "dollar plutocracy," on the one hand, and of the "tollers" on the other.

THE SUBSEQUENT DEVELOPMENT.

Because they were refused Government aid the farmers of 12 States were forced to sell the products of their farms for less than the cost of production. Many of them lost all they had, and millions suffered irretrievable loss. Wall Street, on the other hand, used the Government aid to manipulate the markets. It closed the stock exchange until it could get control of just such stocks as it wanted. Every sign for other nations becoming involved in the war was used to drive the price of stocks down. Soon after the stock exchange closed the money the Government had loaned exclusively to "plutocratic Wall Street" enabled the gamblers to squeeze out most of the small and weak stockholders. Then the stock exchange reopened, Ever since then stocks have boomed. Now we see in the daily press numerous headlines of which the following are samples:

Bethlehem Steel will pay 112 per cent. Annual report to show earnings of \$17,762,812.61 for 1915. * * * Peace denial braces market. American smelters up. Food is short in Norway. Russ fast two days of week.

The above are just samples of hundreds of press headlines as a result of the operations of greedy speculators. The Record could be filled to show the work of different greedy operations. Why should food be short in Norway, where they have peace? Simply because there, too, scheming speculators manipuate the markets. It is not the American people alone that are exploited. A world-wide war trust exists for the purpose of making war profitable to special privilege.

THERE IS DANGER OF WAR.

Not so as a result of natural conditions, but it is so because of the frame-up made by special privilege. The highest agencies of government are influenced. It ma, be that war can not now be avoided. We may be attacked. But if we had done as we should in the first place, and as it was apparent to any commonsense person we should have done, there would not be the slightest chance of us getting into war. It is because of our failure to do as we should have done that we may have war. False statesmanship has placed us in a false light before the world. By permitting special privilege to exploit us, it is enthroned in this country; and since we are politically sponsors for it, now that it has also exploited the rest of the world, we are hated and may be attacked. The question now arises as to what our duty is.

We can be tolerant with weak nations; patient, dignified, and firm with great nations; sensible on all occasions. One thing we must not lose sight of. Our internal difficulties are many and acute, injustice prevails, and the a tual danger is greater from within than from without. It requires greater statesman-ship to deal with our domestic than it does to deal with our foreign affairs. We must differentiate the two, however. always will have the power to deal with our domestic affairs. The basis exists on which we can proceed to correct evil practices

in our own business. But it would be quite different if we left ourselves in a helpless condition to be dominated by other nations. We should not be weak and vacillating, for, if we be so, we possibly may lose the power to deal with our own social problems.

THE SANE WAY TO PREPAREDNESS.

Do away with the causes of war as one of the most important steps. Commercialism in the manufacture of munitions of war must be stopped. Let the Government immediately build all the factories and establish every agency to make its own preparations complete. Let there be no profit in any war enterprise. If the Government manufactures all it requires, there will be no accumulation of capital on which to charge the people an annual interest.

PREPAREDNESS.

Yes; prepare. Give our boys, at the proper age, discipline with the use of arms and teach them the science of defense of themselves and of the country. Teach them the manliness of discipline, the control of themselves, and the respect due to the toilers of the world, and to understand their rights. Let the games of baseball, football, and manly sports equip the youth of our land for the use of every function of the human body and mind as a part of the plan of discipline. Preparedness that makes an independent people is what we want. That is a different kind of preparedness than the subsidized press cries for. Special privilege wants a kind of preparedness that creates billionaires, who, with their fortunes, will enslave the rest of us. That is the kind which creates disloyalty, weakness, and in the end would result in a fall of the Nation.

STANDING BY THE PRESIDENT.

Any citizen who will run back over the press files will find that the newspapers which are saying "Stand by the President," have not themselves stood by the President, except when the President did as they wanted. On other occasions they have attacked him pitilessly. Every patriotic citizen wishes to stand by the President when he can, but no thoughtful person will sacrifice his right to consider things. This is not a monarch's When a citizen has done all he can to reconcile his views with the President's action and is unable to do so he has a right to follow what he believes to be the right course, not only a right but a duty. Otherwise our form of government would be a farce.

What about the facts on which the President asked the action of Congress? The press has stated that they were facts peculiarly within the President's knowledge; that he knew more about the facts than Congress. The President undoubtedly knows more about diplomatic facts, but not necessarily basic principles. But what the President did know he failed to inform Congress when he asked its action. If it was within his province to determine, he had no reason to ask Congress to act, and if it was not within his province he should have in-

formed Congress of all that he knew.

The President sent a part of our Navy to Mexico a short time ago. It was because an unauthorized act of Mexican soldiers had taken place. A fleet was sent to make Huerta salute the United States flag. Huerta refused to fire 21 guns in salute, but only 5. The President was Commander in Chief of the American Army. He acted upon his own authority and dispatched a fleet to Vera Cruz, and subsequently asked Congress to ratify the act. A majority of us stood by the President. I was opposed to his action, but to sustain the dignity of

the President I voted with him on that occasion. Ever since then I have done all I could on every occasion to reconcile my views with those of the President when the relations of our country with foreign countries have been in question, but when I find myself believing that the President is in error I have voted my own convictions.

THE ECONOMIC SIGNIFICANCE OF THE EXISTING WORLD CHAOS.

Now is the time the plain people must look out, lest their best interests be sacrificed. The present time and the few years now first to come are more important to humanity than any within the last 1,900 years. Special privilege is seeking right now, and has been ever since the war began, to enthrone itself forever to dominate the tollers of the world. By every means possible it is seeking to excite the people so that they will forget about the great economic problems that concern their daily lives. Special privilege does not want the toilers to think of their own needs. It has already secured practically everything that it has asked. It is completely organized, not so much with the object of asking additional privilege as it is to retain what it already has. It often uses its organization to promote desirable things which do not in any way conflict with what special privilege wants. Doing that gives it a better standing with the screens its dark-room work, and makes it more influential. So, when from time to time it discovers that because of changing conditions it wishes some additional special privilege, it has some good acts to its credit and finds it comparatively easy to fool the people to give it the additional privilege.

Right now there is a concerted attempt to keep us excited with war affairs in order that all economic conditions may be lost sight of by us. In the meantime special privilege expects to secure the election of Senators and Representatives who can, when the time comes, be influenced in favor of special privilege. It is well known that when the war ends new and what may now seem to many persons strange economic plans will be proposed in the interest of the toilers, plans which will end all inducement to make war for commercial purposes. Not only will this occur with the nations at war, but with every civilized nation on the face of the globe. While this war is in progress special privilege, always anticipating the future long before the people themselves do, are preparing to head off any reform in

the existing unjust economic conditions.

Approximately \$2,000,000,000 profit has been made the last 18 months by bond and stock brokers, munition people, and contractors in war supplies. It is a harvest of gold for the subsidized press as well.

A Minneapolis man wrote me a letter, in which the following sentences occur:

Look at England—had she gone into this war prepared, as is admitted she was not, the war would have been over with long since.

* * In these modern days of trained and fittest men you would send an army of raw and inexperienced men to be slaughtered for their want of knowledge and training, as is likely to be the case in Mexico.

* * You are quoted as saying, "I am opposed to a standing army."

The writer winds up his letter with the following:

The inclosed clipping would make good reading for you and give you and your other few an idea of the feeling in this part of the country. The clippings were: "THE MINNESOTA ELEVEN.

"The Minnesota delegation in Congress consists of 11 Kaiserites and 1 American. * * Ten Minnesota Representatives in Congress, 8 Republicans 1 Democrat, 1 Progressive, and Senator * * * * voted against the President, against upholding of American rights. The German-American Alliance of Minnesota urged or builded these 11 weaklings to the course they followed. * is the only man, the sole American, Minnesota had in Congress." * * * New York Times.

-New York Times

a broken shaft, another was put out of commission because the engine wouldn't work, and something equally as cheerful happened to the third. The fourth was lost in the desert with a leaky gasoline tank. This is a four days' record of the condition of preparedness in which a single branch of the Army is found, and that the branch upon which the quick success of the expedition may depend."

It was not disclosed where this last clipping came from, but it refers to Mexico. This man knows that England has spent more for war than any nation. Still he says, "Look at Eng-* * the war land—had she gone into this war prepared * * * the war would have been over long since." He also knows that our country has spent about two billion dollars in the last few years on armament, and more than any country on the globe except England. Still he says what you see above about our mix-up in Mexico.

If, after spending so much money as we have, we are still not prepared to defend ourselves against weak, exhausted Mexico, and only against a band of outlaws at that, it is time to take an inventory of the "sole American" statesmen who have been in Washington all the time while this vast sum was spent for nothing and made no complaint until now. No wonder those

who got the rake-off for the last 20 years should have beautiful encomiums for the so-called Americans responsible for the failure of the Army, and especially, they eulogize them at this time, when they seek to get our country into war to spend perhaps \$50,000,000,000, out of which they expect to get a giant profit. No wonder that the beneficiaries speak through the New York Times, a special-privilege paper, and through a thousand other like papers, berating those who voted for 100,000,000 Americans instead of for speculators who travel on armed merchant ships. The people can, if they choose, as this man said in his letter they would, defeat Members of Congress who vote against the expenditure of billions in the manner proposed by special privilege, but the day will come very soon when the people will understand, if they do not already, why it is that special privilege demands extravagant arms ment special privilege demands extravagant armament.

special privilege demands extravagant armament.

Will these maximum-armament persons, who name themselves the only "true Americans," answer the following questions: Why has the President all this time, when it is claimed that the country is in peril, and when the law authorized him to act, kept the Army nearly 20,000 below maximum? Why do these "sole Americans" (?) object to the Government manufacturing its own war materials? Why do these "sole Americans" (?) claim that the Hay bill provides for an Army of only 120,000 when they know that if the terms of the bill were carried out it would in emergency be near 1,500,000? The truth about the whole matter is that special privilege wants a carried out it would in emergency be near 1,500,000? The truth about the whole matter is that special privilege wants a rake-off from armament contracts and does everything it possibly can to get us into war to give it billions of profit. If war comes, which is not unlikely, it will be because of the false machinations of these "sole Americans" (?). If it had not been for their greedy conduct there would never a war cloud have crossed the American Continent.

Immigration.

EXTENSION OF REMARKS

HON. SAMUEL J. NICHOLLS,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 27, 1916.

Mr. NICHOLLS of South Carolina. Mr. Speaker, on February 25 last, when the House had under consideration the legislative, executive, and judicial appropriation bill, the gentleman from New York [Mr. Bennet] undertook to inject, as a few other opponents of this bill have done, the religious issue. He intimated that the Junior Order of United American Mechanics was opposed to unrestricted immigration, and in favor of the illiteracy test and this bill for religious reasons.

When the gentleman from New York [Mr. Bennet] was a Member of this House six years ago he served on the House Committee on Immigration and Naturalization. During his service on that committee I understand a member of that committee accused the Junior Order with being the same as the old A. P. A., much as the gentleman did in this House on February That accusation resulted in the national officers of the organization appearing before the gentleman's committee on May 21, 1910, denying the charge and challenging anyone to produce competent evidence tending to prove the accusation. As my time is limited I will be unable to read the statement made on that occasion by National Vice Councilor Weitzel, but will insert his statement in the RECORD.

The statement is as follows:

HEARING ON IMMIGRATION BILLS. COMMITTEE ON IMMIGRATION AND NATURALIZATION,
HOUSE OF REPRESENTATIVES,
Saturday, May 21, 1910.

STATEMENT OF JOHN J. WEITZEL, ESQ., OF CINCINNATI, OHIO, NATIONAL VICE COUNCILOR OF THE JUNIOR ORDER OF UNITED AMERICAN MECHANICS.

Mr. Chairman and gentlemen of the committee, in the first place, as a member of the Junior Order of United American Mechanics and its national vice councilor, and chairman of the national legislative committee of the Daughters of America, I beg to correct an impression conveyed to this committee by certain persons who have not only appeared here but who have been elsewhere, quite misrepresenting the principles, objects, aims, and purposes of the Junior Order of United American Mechanics.

According to page 472 of the printed hearings a member of this

Mechanics.

According to page 472 of the printed hearings, a member of this committee states that he has been "reliably informed" that the Junior Order "is the same as the old bigoted A. P. A.," and is "merely operating under a new name." Another Congressman charges the order (p. 365) with engaging in a "particular propaganda," and I take it that he had been informed by what he considered "reliable authority" also that the Junior Order was an anti-Catholic organization. And, no doubt, his information came from some such overzealous church enthusi-

ast as, for instance, the editor of the Morning Star, a Catholic weekly, who has several articles in his issue of April 23, 1910, from which I desire to quote a few lines. In one editorial, entitled "Catholics and the duty of the hour," everlastingly criticizing President Roosevelt for the Vatican incident, there are, among others, the following sentences: "All this cry of anticlericais, Protestants, and Masonic orders of 'Down with the church,' 'Away with the Pope,' is bombast and nonsense. Knowing our strength, what have we to fear? See the strength of Free Masonry and anticlericals. Are we not more powerful than they? Cognizant that we are the heirs of al. ages in truth and doctrine, and that ours is the only church founded by Jesus Christ, why should we hide our light under a bushel?" In another column reference is made to the Junior Order and Daughters of America, whose "avowed purpose" is editorially asserted to be "nothing else than a revival of the fierce war waged by the infamous A. P. A.'s some years ago against the Catholic Church."

There is no foundation in fact for such statements, and I am sure they do not represent either in the matter of Masonry, Protestantism, Roosevelt, or the Junior Order the sentiments and attitude by which the entire church would be judged.

Just as an instance and in order to show that such criticism is not general, and that the order is nonsectarian, I desire to call the committee's attention to the friendly feeling existing between and courtesies exchanged between three conventions of Catholics, Juniors, and Daughters of America, which happened to meet in Canton, Ohio, September, 1906, partially set forth in the following newspaper account:

"CATHOLICS AND JUNIOR ORDER MINGED—CINCINNATIANS FIGURED IN

CATHOLICS AND JUNIOR ORDER MINGLED—CINCINNATIANS FIGURED IN PLEASANT INCIDENT AT CANTON—COMPLIMENTARY VISIT BY PROTEST-ANTS IS RETURNED BY CATHOLICS—PRIEST SPEAKS IN COMPLIMENTARY TERMS OF SUPPOSED HOSTILE BODY.

"CALIDITICS AND TUNIOR CHEEF MINISTED—CININATIANS FIGURED IN TELESANT INCIDENT AT CANNON—COMPLEMENTARY VISIT BY PROTEST."

TERMS OF SUPPOSED HOSTILE BOY.

"That America is the home of religious toleration and Ohlo and Cincinnati the State and city where it has reached its broadest meaning was shown in an occurrence which was a beautiful feature of the sessions of the conventions of the Junior Order of United American Mechanics and of the Catholic Mutual Benefit Association, both of which were held in Canton Wednesday. Each convention had a large body of the Mutual Benefit Association, both of which were held in Canton Wednesday. Each convention had a large body of the Junior Order as an adjunct of the 'A. P. A.,' and many of the Junior Order as an adjunct of the 'A. P. A.,' and many of the Junior Order as an adjunct of the 'A. P. A.,' and many of the Junior Order as an adjunct of the 'A. P. A.,' and many of the Junior Order as an adjunct of the 'A. P. A.,' and many of the Junior Order as an adjunct of the 'A. P. A.,' and many of the Junior Order as an adjunct of the 'A. P. A.,' and was a state of the work of the Junior Order as an adjunct of the 'A. P. A.,' and was a state of the work of the Junior Order as an adjunct of the 'A. P. A.,' and was a state of the minist of both past bitterness.

"At the meeting of the Catholic Mutual Benefit Association Wednesday afternoon a committee of the Junior Order asked admittance to the was received by a rising vofe. Innuediately the Catholic association sent a committee of both bodies then minged in the best fraternal spirit and a vertiable love feast easwed. In a serum following the committee. Delegates of both bodies then minged in the best fraternal spirit and a vertiable love feast easwed. In a serum following the committee. Delegates of both bodies then minged in the best fraternal spirit and a vertiable love feast easwed. In a serum following the committee of the Junior Order convention and returned the committee of the Junior Order is not an admittance of the cathol

making selection of our immigrants and the present artificial stimulation of immigration traffic, in which there is the most money for the foreign steamship companies. As to distribution as a remedy we would quote President Roosevelt to the effect that distribution is merely a palliative and not a cure. It is advecated chiefly by the transportation interests financially interested in the promotion of immigration and because distribution and diversion would make more room for them to unload more immigrants if successfully carried out. We do not at all favor restrictive legislation simply because southeast European and western Aslatic countries send us almost exclusively Catholics and Jews, but it is for purely patriotic and protective reasons that we advocate such additional selective restrictive measures as a \$25 to \$50 money test, such as Canada has, and such an illiteracy test as Cape Colony New Zealand, and Australia have, which, together with our being made by the foreign steamships the cheapest country to reach, we believe to a large measure accounts for our being the only country with any considerable net foreign immigration.

Our desire for better immigration laws is not founded on any religious or other prejudice, foreign or native. That there are "immigration evils" demanding drastic action is a matter of official record. The first partial report of the Immigration Commission (H. Doc. 1489, 60th Cong.) states; "Many undeniably undesirable persons are admitted every year. There is a dangerous and apparently growing criminal element in the country due to immigration." And even says. "Many women are being regularly imported under conditions which amount to absolute slavery," etc.

If was Marcus Braun, a Government inspector, who foreshadowed the commission's finding, and even discovered a secret contract between a foreign steamship company and a foreign Government that provided for the dumping practically of so many thousand annually upon the United States, and who, according to House Document 1884. Fifty

"Dear Mg. Flynt: As you know, I consider the problems furnished by crime in the United States as of the most pressing importance. We are allowing a great and powerful criminal class to be developed, and while crime is held carefully in check in most European countries, and in them is steadily decreasing, with us it is more and more flourishing. It increases from year to year and in various ways asserts its power in

"So well is this coming to be known by criminal classes of Europe, that it is perfectly well understood here that they look upon the United States as a happy hunting ground, and more and more seek it, to the detriment of our country and all that we hold most dear in it.

"Yours, faithfully, "Andrew D. White."

The detriment of our country and all that we hold most dear in it.

"Yours, faithfully,

"Anderw D. White."

In this connection I beg to say in passing that over one-fifth of all the alien felons now confined in our State and Federal jails and prisons are illiterate, everyone of whom and their offspring would have been excluded, as well as the Czojoss family, by the illiteracy test.

There are two extracts from a previous report of the present commissioner of immigration at Ellis Island, Hon, William Williams, who handles the bulk of the present alien infux of from about a million to almost a million and a haif aliens annually, that I beg to read. In his report, as practically in last year's report, he said:

"The laws do not reach a large body of immigrants, who are generally undesirable, because mintelligent, of low vitality, of poor physique, able to perform only the cheapest kind of manual labor, desirous of locating almost exclusively in the cities, by their competition tending to reduce the standard of the wageworker, and unfitted mentally or morally for good citizenship. I believe that at least 200.000—and probably more—aliens came here who, although they may be able to earn a living, yet are not wanted, will be of no benefit to the country, and will, on the contrary, be a detriment, because their presence will tend to lower our standards. Their coming has been of benefit chiefly, if not only, to the transportation companies which brought them here.

"Relying on the views generally expressed by the intelligent press throughout the country, on those expressed by nine out of ten citizens, whether native or foreign born, with whom one discusses the subject; on letters received from charitable and reformatory institutions in some Eastern States, and upon official observation at Ellis Island, I would state without hesitation that the vast majority of American citizens wish to see steps taken to prevent these undesirable elements from landing on our shores. Attempts to take such steps will be opposed by powerf

bureau helicece in a strict administration, not only because it is best calculated to protect the country against understand immigration, our because of its humanitarian advantages. A risk the country against understand to protect the country against understand in the country against t

UNGUARDED GATES.

Wide open and unguarded stand our gates, And through them press a wild, a motley throng—Men from the Voiga and the Tartar steppes, Featureless figures of the Hoang-Ho, Malayan, Scythian, Teuton, Kelt, and Slav, Flying the Old World's poverty and scorn; These bringing with them unknown gods and rites, Those tiger passions, here to stretch their claws. In street and alley what strange tongues are these, Accents of menace allen to our air, Voices that once the tower of Babel knew! O, Liberty, white goddess, is it well. To leave the gate unguarded? On thy breast Fold sorrow's children, soothe the hurts of fate, Lift the downtrodden, but with the hand of steel Stay those who to thy sacred portals come To waste the gift of freedom. Have a care Lest from thy brow the clustered stars be torn And trampled in the dust. For so of old The througing Goth and Vandal trampled Rome, And where the temples of the Cæsars stood The lean wolf unmolested made her lair.

His statement completely refutes the charges and elaborately sets forth the objects and purposes of that patriotic society, which really goes back to the Sons of Liberty and the Sons of America, which played such an important part in the American Revolution, and enumerates reasons why the membership favors legislation like that in the pending bill.

I have here a copy of a letter written by the superintendent of the Junior Order National Orphanage, located at Tiffin, Ohio, in which it is stated that the highest paid employee in that Junior Order home for orphans, under the superintendent and assistant superintendent, is a Roman Catholic by the name of Swope, who is chief engineer. I will insert the letter in the RECORD. I also have a copy of a letter which was written by Mr. Patrick F. Malone, of Brooklyn, N. Y., which is a part of greater New York City, from which the gentleman from New York hails. Mr. Malone states that he is a Roman Catholic, and a member of Red, White, and Blue Council No. 7, Junior Order United American Mechanics; that he has held all the offices in his local council, is at present treasurer, and that both the present councilor and vice councilor of the council are members of the Catholic Church. I will insert Mr. Malone's letter in the RECORD.

I also have a copy of a letter written by Mr. Dwyer, of the same city, who is secretary of the Irish-American Society, Mr. Dwyer advocates the illiteracy test and the other legislation contained in this bill, declaring that "the attempt of the foreign steamship companies, their paid attorneys, and the corrupt press to raise the cry of religious bigotry and racial animosity in order to injure the cause of immigration restriction

has failed." I will insert Mr. Dwyer's letter in the RECORD.

One word in conclusion. The gentleman from New York
[Mr. Benner] intimated that the Junior Order, as I have said, was opposed to unrestricted immigration because our present immigration comes largely from "Catholic countries," and his conclusion was that antipathy to Catholics prompted many to favor the illiteracy test because illiterates came chiefly, if not exclusively, from Catholic countries. In the same paragraph the gentleman is reported as stating that the Junior Order claimed it had been fighting unrestricted immigration for over The gentleman knows that 60 years ago we got practically and substantially no immigration from Catholic coun-

I have made these remarks in order that the record may be kept straight as to one of the greatest fraternal organizations in existence.

I am in favor of restricting immigration not on account of any political or religious reasons, not on account of the fact that a man belongs to any particular race or has any particular creed, but because I believe as the great American Federation of Labor believes, as the great Junior Order of United American Mechanics believe, and as the great body of laboring people in the country believe, that unless we do restrict labor this country will be flooded by immigrants who do not come here to make homes and to make good American citizens, but who come here for the sole purpose of competing with our laborers and reducing the scale of wages, which is certainly low enough at this time.

JUNIOR ORDER UNITED AMERICAN MECHANICS, Tiffin, Ohio, February 21, 1916.

John H. Notes,
National Vice Councilor, Plaistow, N. H.

Dear Brother Noves: Your letter of February 19 at hand, and I very gladly give you the information that you desire.
We have in our employ a man by the name of Mr. Swope, who is a Catholic. He is and has been chief engineer of the home for the past eight years, and is receiving a higher salary than any other employee in the home except the superintendent and the assistant superintendent. At various times during the past 14 years there have been other Catholics at work in the home, sometimes as regular employees and at other times simply on plecework. There has always been, as far as I know, the kindest feeling between the Catholics and our order in the city of Tiffin. It is quite a surprise to me that we are accused of being narrow or of fighting them. The strongest member of the order that we have in the city of Tiffin, Dr. H L. Wenner, is chief surgeon in the Catholic hospital in the city of Tiffin. At the time when our hospital was in operation, and the only hospital in the city of Tiffin came as freely to visit as did the other ministers, and, as far as I know, there has always been the friendliest and warmest feelings toward our work and our order.

has always been the friendliest and warmest feelings toward our work and our order.

It may be true that there have been various hot-headed ones who would go to the extreme in both the Junior Order and the Catholies, or both bodies, who have always taken the attitude that they were to be tolerated or to apologize for not representing the true sentiment.

Several years ago at the time that Mr. Sheartzer was national councilor be visited the home and saw the children playing with rag dolls. He made an appeal to the various councils, with the result that there were over 33,000 presents sent here for Christmas. The orphans' home at Tiffin was simply flooded with presents of all descriptions. In addition to this it must be remembered that the year previous we had in our attic almost a wagonload of toys which had been donated the year

before and which we had not been able to use up until the time for the new lot of Christmas presents to come in. In view of the surplus of new presents that came, the children decided it would be a shame not to let somebody have the benefit of the toys that they had been unable to use and that were stored in the attle, and they voted to offer them to the children of the Catholic home. Mother Superior was called up and accepted the same very gratefully, sending a team down after them, and they were sent to the Catholic home that Christmas—a one-horse wagon box full of toys and various things that make the children happy at Christmas. Nothing more was thought about this until the next Christmas, when the compliment was returned by the children of the Catholic home, who sent the children of the Junior home a wagon box full of apples. This they could very easily do, as they had over 800 acres of land and big orchards, and our apple supply that year was very limited. We received the apples in the same spirit in which they received our presents.

S. H. Kernan, Superintendent,

BROOKLYN, N. Y., February 21, 1916.

BROOKLYN, N. Y., February 21, 1916.

JOHN H. NOYES,
National Vice Councilor.

Dear Sir: Replying to your letter of 19th instant, asking am I a Catholic? I will say I am of the Roman Catholic faith, also a member of Red, White. and Blue Council, No. 7, of Long Island City, Junior Order United American Mechanics

In my connection with the American Mechanics I have filled the office of recording secretary, vice councilor, and councilor. I am at present holding the office of treasurer.

The present councilor and vice councilor of our council are both members of the Catholic Church, and the fact of their election to office proves that there is no religious feeling one way or the other.

Independence Council of New York City, is composed mostly of members who are of Jewish parentage.

Respectfully,

Patrick F. Malone,
No. 188 Calyer Street, Brooklyn, N. Y.

No. 188 Calyer Street, Brooklyn, N. Y.

[From the Brooklyn Daily Eagle of Dec. 12, 1912.]

NEW YORK IRISH-AMERICANS FOR THE ILLITERACY TEST AND THE WHOLE IMMIGRATION BILL.

WOULD STIFFEN SULZER ON ILLITERACY BILL-MR. DWYER FEARS CON-GRESSMAN IS AGAINST MEASURE.

Following is a copy of a letter sent to Governor-elect Sulzer by Edward Dwyer, of Bay Ridge:

Edward Dwyer, of Bay Ridge:

Dear Sir: I have been rather surprised to notice statements in the columns of the daily papers to the effect that you were opposed to the enactment into law of Senate bill No. 3175, drawn up by Mr. Dillingham, which provides an illiteracy test for immigrants desiring to land on our shores. Inasmuch as this bill was passed by the Senate ast April, and it is a well-known fact that the leaders of the Democratic House of Representatives agreed to have it considered in December, it seems odd to other members of the organization with which I am connected, as well as myself, that you should be so active in opposing a measure that is needed to protect the American workingman.

As a supporter of the Democratic Party in the Nation and State, I had imagined that there could not be any of the leaders who would take the stand the newspaper reports indicate that you have taken. During the campaign just ended you never referred to this immigration question, and if it was even hinted that you were opposed to restrictive legislation it would have cost you many votes and your stand would seriously injure your chances for reelection two years hence.

The American people, native as well as foreign born, are becoming thoroughly aroused over the lax immigration laws that permit tens of thousands of undesirables to enter this country annually, a class which does not understand nor care to learn anything concerning American institutions. They are willing to labor for a wage that no American citizen can exist on. These people are content to live on filth, can keep body and soul together on the sort of food that would soon kill off the native-born American, the Irishman, German, Englishman, or Seandinavian.

What we are entitled to in this great country is a chance to live de-

citizen can exist on. These people are content to live on fifth, can keep body and soul together on the sort of food that would soon kill off the native-born American, the Irishman, German, Englishman, or Scandinavian.

What we are entitled to in this great country is a chance to live decently, to rear our children up good Americans, and to be enabled to save a fittle money for the rainy day. How can we carry out this program when in every occupation of life we have to compete with foreigners whose only aim is to gather enough money to bring them back to their native land and to live in ease for some time?

It has been shown, as you well know, that almost 40 per cent of the immigrants arriving here annually leave the country. Speak to men who have worked for large railroads and they will tell you of the same crowd of foreigners that they have observed, working for a few months on a railroad, returning to Europe with the money earned, and repeating the thing every year. A large percentage of those who stay are not a credit to any land. In New York State the undesirable foreigners form 40 per cent of the population of our fails and insane asylums.

Think of the tax all of this means on our citizens. The attempt of the foreign steamship companies, their paid attorneys, and the corrupt press to raise the cry of religious bigotry and racial animosity in order to injure the cause of immigration restriction has failed.

This is a question that affects every American, no matter where he was born. It is a fight for existence. The clinching argument in favor of the adoption of the illiteracy test is the report of the Congressional Immigration Commission, which declared that "many andeniably undesirable persons enter every year"; "there is a growing criminal class in this country, due to foreign immigration." etc.

Organized labor has demanded restrictive legislation, resolutions have been adopted time and again by the labor unions, and the leaders like John Mitchell and Samuel Gompers have repeatedly spoken out against t

The Literacy Test.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 27, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, in extending the remarks already made by me in opposition to the literacy test in the immigration bill, I wish to say that there is a large foreignborn constituency in my district in Philadelphia to which such a test would be no barrier. There is a feeling, however, that in the case of immigrants who come from countries where oppression has begotten illiteracy, such a barrier should not be raised against hard-working and law-abiding poor people who are honestly seeking to improve their conditions in the United States. In the public schools, in the night schools, and through various associations organized to aid the immigrant the desire of the foreign-born to obtain knowledge is generally acknowl-In some iustances the aptitude for learning is more pronounced among the foreign-born children than it is among the native born, due, possibly, to the pent-up ambition of the foreign child of oppression for a chance to take advantage of its American opportunities,

The desire for naturalization is also strong in my district. Not only the local schools but the Bureau of Naturalization at Washington are cooperating in this regard. The immigrant is being given a chance to learn about citizenship, and it is important that he should be trained as our people are undertaking to train him. The Bureau of Naturalization, I am informed, has recently forwarded to the superintendent of education at Philadelphia more than 5,000 preliminary forms that have been prepared with the view special to the instruction of the foreignborn in the duties of American citizenship. All this tends to reveal much that is helpful on the part of the authorities and

much that is commendable among the foreign born.

ITALIANS ON THE FARM.

In the course of the debate much has been said about the tendency of immigrants to remain in the large cities. To a certain extent this is true, but active agencies are at work to encourage the newcomer to go upon the farm, where he is badly needed. We have heard the cry of the western farmer on this floor; he needs farm labor. This is true of the farms in New Jersey and in eastern Pennsylvania. Farm labor is scarcer now than it has been for a long time because of the higher wages paid in the powder and munition factories that have recently sprung up over night. If the European war continues the eastern farmers will be obliged to contend against the hardest conditions this spring and summer because of the migration of farm hands to the munition factories. It is not true, however, that immigrants disdain the farm. The Italians take to farming immigrants disdain the farm. The Italians take to lathing naturally. They conduct truck patches and small farms in Philadelphia and the counties adjoining, while over in New Jersey they constitute considerable of the farm life, many of the communities that are highly prosperous. The them working in communities that are highly prosperous. Italian immigrant drifts into fruit growing, berry raising, the cultivation of vineyards, and other specialties at which he is adept. This sort of labor is recognized as of value to our urban adept. This sort of labor is recognized as or value to our urban life. There are certain settlements in southern New Jersey where the Italian immigrants have not only succeeded on their farms, but have shown their confidence and interest in American institutions by building attractive homes and laying by their savings in banks and trust companies that cheerfully attest their industry and business capacity.

THE VIEWS OF A RABBI.

The Jews are also going into farming more extensively than is generally understood. The National Farm School, at Doylestown, is not a sectarian institution, although it is chiefly supported by Jews. Its scholars come up largely from the Jewish persuasion, and the reports that have come in from farmers, horticulturists, and others who have given employment to the graduates of the institution are highly gratifying. The president of this institution is the Rev. Dr. Joseph Krauskopf, who has given careful study to the land problem, both in Europe and the United States. Having recently completed a six months' tour of the stricken countries of Europe, Dr. Krauskopf's views upon the immigration question, as well as upon the farming problem, will be of interest. At the Temple Keneseth Israel recently this distinguished rabbi, among other things, said:

"Large as our immigration has been in recent years, so vast is our country, and so sparse is our population that, were many times that number admitted every year for the next two centuries, the density of our population per square mile would even

then not be as large as that of England, France, or Germany.

"Were the density of the population of the United States anything like that of European lands it could hold and support a population equal to that of Europe, Asia, Africa, and Australia combined. Texas alone is larger than the whole of Austria and Germany, and while Germany is obliged to support a population of more than 60,000,000 people, Texas, with its more than 250,000 square miles, has to provide for but 3,000,000 souls. Were all the arable land of Texas to be cultivated, its harvests would equal the principal crops raised in all the rest of the United States. Were all the 250,000,000 acres of idle farm lands in the United States to be cultivated, they would feed and clothe and shelter

the population of all the earth.

"Alas for the day on which the oppressed of humanity shall no longer find an asylum on these shores! We have the room, we have the food and work and shelter, and we have heart and brain enough to give of it as freely to others as was given to us. A thousand times rather one red-blooded immigrant in a tenement house than a lordly avenue full of degenerate blue bloods who could not make their living if it depended on their own brain and brawn. A thousand times rather one poor, even illiterate, immigrant, making money for himself and us by hard work and honest means in this country, than the scores of American blue blood dudes and title seekers, wasting American money in foreign capitals, finding our country no longer good enough for them.

"In the red-blooded immigrant lies our country's hope and promise; in the degenerate blue blood lies the possibility of our decline. Let us take care of our immigrants; in due time they will take care of us, and of those after us. As said the Rev. John Haynes Holmes, so say we: 'Ellis Island is only a twentieth century Plymouth Rock, and the trans-Atlantic liner only an

up-to-date Mayflower.'

AN EXPRESSION FROM PITTSBURGH.

That the inclination of the immigrant, once he is admitted to the United States, is to attend the public school or otherwise improve himself for naturalization and citizenship, is generally conceded by those who are familiar with the work that is being done in the great cities. Thus far, I have spoken of what is taking place in Philadelphia. The Pittsburgh Post, a leading Democratic paper, in an editorial on March 27, gives an interesting summary of the educational work that is going on in the western Pennsylvania metropolis. I append this article for the light it throws upon the subject:

IMMIGRANTS EAGER TO LEARN.

article for the light it throws upon the subject:

IMMIGRANTS EAGER TO LEARN.

News in the cosmopolitan department of The Post and reports from the school authorities of the city are of particular interest in connection with the coming vote in the lower branch of Congress this week on the proposed "literacy test" for immigrants. They show eagerness on the part of the immigrants in this busy district to learn English and prepare for American citizenship. What any of them lack is requisites of a common education when they arrive is being made up with encouraging rapidity. This shows the unfairness and the short-sightedness, from the standpoint of a land of opportunity and one greatly in need of labor, of a literacy test that would deny opportunity to the individual trying to better his condition and which would at the same time interfere with the progress of the country. If the immigrants performing work in our industries that calls for brawn rather than literacy were suddenly withdrawn from the mills the plants would be obliged to close for a time, throwing many thousands of other workers out of employment. But the schools established for the education of the immigrants in American ways show that there is no selfishness that would hold the allens down to illiteracy. The record shows that as soon as they have capacity for advancement they are advanced, their old places going to the new-comer; the rate of industrial expansion in this country guarantees employment for the able-bodied immigrants about as rapidly as they arrive. This holds throughout the land; but, owing to the great industries here that are constantly attracting allen labor, Pittsburgh is a conspicuous example in Americanization work.

In addition to classes in citizenship conducted in connection with the public-school system, there are classes in English for the beginners, and the resort, to them, as pointed out, shows the keenest appreciation of the opportunities. The social-center work also appeals strongly to the allens, many of the women receiv

WOMEN OPPOSE THE LITERACY TEST.

While the Members of the House have been flooded with petitions favoring the passage of the bill with the literacy test included, I recall very little that anyone has said about the interest of American women in this proposition. The humane side of a question usually appeals first to womankind. They are a little more sympathetic than the men. It is possible the serious problem of household help may also bear upon their point of view; but no matter what the actuating cause, a very large preportion of the women of the United States have taken a decided stand upon this bill. An organization which represents 2,000,000 women, if it had votes, would be as strong approximately as some of the patriotic societies or some of the labor organizations which, wisely or unwisely, are insisting upon the passage of the literacy test. That the voice of this large body of women may be represented in this contest I include herewith, as a part of my remarks, a letter from Mrs. Iams, chairman of the legislation department of the General Federation of Women's Clubs:

Women's Clubs: General Federation of Women's Clubs, 1914-1916, March 27, 1916.

(President: Mrs. Percy V. Pennybacker, 2606 Whitis Avenue, Austin, Tex. Legislation department: Mrs. Franklin P. Iams, chairman, 521 Bakewell Building, Pittsburgh, Pa.; Miss Mary Wood, vice chairman, 556 West One hundred and eighty-fifth Street, New York, N. Y.; Miss Flora Dunlap, Des Moines, Iowa; Mrs. George F. French, 99 High Street, Portland Me.; Miss Jean Gordon, 1800 Prytania Street, New Orienns, La.; Mrs. Bertha Stull Green, Mountain Home, Idaho; Mrs. Frank E. Jennings, 1807 Oak Street, Jacksonville, Fla.; Miss Mary Honora McCabe, Little Rock, Ark. Board member: Mrs. Grace Julian Clarke, 115 South Audubon Road, Irvington, Indianapolis, Ind.)

Hon J. Hampton Moore

apolis, Ind.)

Hon J. Hampton Moore,

House of Representatives, Washington, D. C.

My Dear Mr. Moore: The General Federation of Women's Clubs, which is one of the largest organized bodies of women in the world, having a membership of more than 2,000,000 women, has authorized me, as the chairman of its department of legislation, to oppose the literacy test in the Burnett immigration bill.

I have made this statement to Mr. Burnert by letter some time since, but I desire to remake it, and make it to one who will publicly state this opposition to the House and have it noted in the Recond.

I wish also to add that the General Federation is not an organization that indiscriminately approves or disapproves of any particular plece of legislation, as many associations do, simply because they are requested so to do. On the contrary, we exercise the greatest care in our indorsement of or opposition to bills. But we have steadfastly opposed this literacy test because we believe it to be both unjust and unwise.

Very respectfully, yours,

Lucy D. Iams.

National Defense.

EXTENSION OF REMARKS

HON. LOUIS C. CRAMTON, OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, March 29, 1916.

Mr. CRAMTON. Mr. Speaker, availing myself of the privilege given me to extend my remarks on the question of national defense, I present herewith certain correspondence between the Perry branch of the Navy League of the United States, located at Port Huron, Mich., and myself.

TELEGRAM.

PORT HURON, MICH., January 21, 1916.

Hon. Louis Cramton, M. C., Washington, D. C .:

The Port Huron Branch of the Navy League at its meeting this evening, by unanimous vote, directed the undersigned com-mittee to request you to communicate to it at your earliest convenience your views on national preparedness, so the same may be known to the members of the league.

LINCOLN AVERY, HARVEY TAPPAN, Ross Mahon, Committee.

THIEGRAM.

WASHINGTON, D. C., January 22, 1916.

Mr. LINCOLN AVERY, Chairman Committee, Port Huron, Mich .:

Am opposed to radical increase in Army or Navy. favor of more economical and effective expenditure of huge appropriations now devoted to Army and Navy. My request to Navy League, November 4, for definite statement of what they would consider adequate preparedness and what it would cost has not been compiled with, and my request for recommenda-

tions from them "in behalf of reforms in our present naval organization or equipment that would secure greater efficiency or greater economy" has been absolutely ignored. I trust, if your branch organization honor me with your views on preparedness, you will advise me whether you deem the administration program adequate preparedness or whether you consider sary a Navy large enough to fight Germany, or whether you join Henry A. Wisewood, of the Navy League, in his declaration for a Navy equal to those of England and Japan combined. In any event, I will appreciate your suggestions as to the best way to raise the money, increase in tariff duties being out of question under this administration.

LOUIS C. CRAMTON.

RESOLUTION ADOPTED BY THE PORT HURSON BRANCH OF THE NAVY LEAGUE

In answer to your message of recent date, the Port Huron Branch of the Navy League submit the following for your consideration:

The Port Huron association is in favor of the United States Navy being brought to that degree of efficiency within the shortest interval of time that will insure the following results to the Nation:

We believe the money used for naval purposes should be appropriated by Congress in the form of a budget and expended under the direction of a board consisting of naval experts for such purposes as such a board shall deem for the best interests of securing our country from any foreign invasion. We do not know the amount of money that may be necessary to accomplish this purpose; but we favor its accomplishment and know that it is within the reasonable means of a people who are citizens of a country whose wealth is \$200,000,000,000 and constantly increasing.

We are in favor of maintaining the Monroe doctrine, but are not unmindful that this doctrine can be no stronger than the

Navy which may be called upon to enforce it.

Under the Monroe doctrine our country is pledged to protect the interests of foreign States in this hemisphere, and we can not see how this obligation can be honorably and faithfully performed without a Navy adequate in all its branches in equipment and men to insure its defense and enforcement.

We do not consider the question of preparedness a political one. We believe patriotic Americans of all parties feel we are rich enough to maintain an adequate Navy without the same being a burden upon our people. We do not believe the ques-tion of cost should prevent or make a Congressman hesitate about incurring the expense when a national necessity confronts

We are opposed to a policy that will permit Congress to so reduce proposed and needed Navy appropriations as to render it impossible to sufficiently man the ships of the United States Navy with able seamen.

As we understand it, there is now a shortage of 18,000 men needed to properly man the ships of the Navy, due solely to the

needed to properly man the ships of the Navy, due solely to the policy pursued by Congress in refusing to appropriate the necessary money to hire and pay for the services of these men.

We favor a change in the method of selecting students for the Naval Academy at Annapolis. We believe that students desiring to enter the Naval Academy should be selected after an academic and physical examination, open to all young men without regard to their station in life, and that such a method of selection would result in having the academy filled to cannot be successful.

pacity.

We believe that money wisely expended on our Navy is similar to the money spent for an insurance policy upon our property, and that the more valuable the property, the greater is the

necessity for increased reliable insurance.

We understand that for the 15 years prior to the breaking out of the European war the United States had expended upon its Navy 50 per cent more money than Germany had expended on hers and 60 per cent more than France had spent on hers, with the astounding result that each of these foreign countries have more effective and superior navies than the United States. We believe the budget system to provide the funds and a board of experts to expend them will largely eliminate this incompetency and waste.

The Port Huron Branch of the Navy League will not assume to advise as to the sufficiency of the administration's program to establish adequate preparedness to prevent the landing of hostile forces on American soil. Any opinion, as we see it, to be of service or value to you must be based upon expert knowledge; and if the opinion of experts such as compose the General Navy Board is in accord with the administration's requirements, it would seem that partisanship should give way to patriotism to secure the desired and necessary protection that a well-bal-anced and efficient navy insures.

In your telegram you ask the following question:

Do you consider it necessary to have a navy large enough to fight termany or whether you join Henry A. Wise Wood, of the Navy League, in his declaration for a navy equal to those of England and Japan combined?

We have not and do not now request a navy for the purpose of fighting Germany or any other nation or nations. This branch of the Navy League is made up of Democrats, Republicans, and Progressives, and are descended from ancestors representing many of the nationalities engaged in the contest being waged in Europe. Every member, however, is an American citizen, and as such believes in "locking the stable door before the horse is stolen."

To secure this end we request you as a Congressman to think and act for the whole Nation by cooperating with the public demand, supported by the best opinion of our leading and greatest statesmen, business men, and educators, and by supporting such measures as will create and maintain a wellbalanced and efficient navy in all its branches without regard to the political effect of such action. We do not want a navy that will be used for conquest in any part of the globe, but we desire a navy as a guaranty that foreign powers, east or west, will recognize that America is now and shall forever remain the home of government established on and maintained by the consent of the governed. REPLY OF MR. CRAMTON. FEBRUARY 12, 1916.

The PERRY BRANCH, THE NAVY LEAGUE,

Port Huron, Mich.

GENTLEMEN: Have recently received resolutions of your organization addressed to me with reference to national defense, and have noted with care your views, so far as they are therein

I am inclined to think that I would favor a Navy budget such as you suggest. I certainly would if it would tend to wipe out the unconscionable waste that now characterizes our military and naval expenditures in useless navy yards, needless Army posts, extortionate prices for contract-made armor and munitions, and thereby give greater real preparedness without increase in appropriations. That it would have this effect I am by no means certain, by reason of the lack of encouragement given those needed reforms heretofore by the Navy experts. But the question of a Navy budget is, as you gentlemen no doubt are aware, of but theoretical importance, as nothing of this kind is to be brought before this Congress.

I regret that on the question of more practical importancethat as to the size of a Navy necessary to our needs-you are not more helpful to me. I understand from your resolutions that you desire me to support the recommendations of the General Board of Navy experts, whatever they may be. you deem the administration program, which is the particular phase of the question now at issue, is in accord with the views of such Navy experts is not made clear, your appeal to me being to support such program " if the opinion of experts, such as compose the General Navy Board, is in accord with the administration requirements."

You urge me to put patriotism before partisanship. The program urged by the President in his address at the opening of this Congress contemplated "the construction within five years of 10 battleships, 6 battle cruisers, etc." In his St. Louis speech the President declared for the "greatest Navy in the world." you not think he thereby condemns in his public address the program he himself recommended to Congress in person-a program which would have us at the end of five years about a score short of what England already has in battleships and battle cruisers? And if the President condemns his own program, am I to be accused of partisanship if I do not blindly accept every program the administration places before this Congress

As a matter of fact, the question is not a partisan question. and I have no intention of treating it so. It has been my custom here to vote according to the merits of questions proposed rather than to be governed by political considerations, and I shall do so in this case.

As to the shortage of men and officers to properly man and command the units of our Navy referred to by you, I am willing to vote for the money required if such shortage is shown to exist and to be due to lack of money rather than lack of enlistments.

Eleferring to your comment on vacancies in the Naval Academy, I have promptly filled all vacancies from my district at the Naval and Military Academies, so that I have no responsibility for any vacancies there. My last appointee to the Naval Academy stood at his mental entrance examination fifth among the several hundred who wrote at that time from all parts of the United States, so that the quality of the selection is not open to criticism.

You compare money spent for national defense to money spent by an individual for insurance upon property. Permit me to call to your attention that the rates of insurance upon property against loss by fire are based not only upon the value of the property but the likelihood of fire, and it is not the undertaking of the insurance company to prevent fire, but to make good the loss,

In the matter of national defense it is urged that our insurance rates shall be based not at all upon the value of the thing insured. nor upon the likelihood of war, but solely that we shall prove our patriotism by carrying a bigger policy than anybody else, no matter whether our isolated position lessens our danger of war or not; and, further, while a fire insurance policy protects against loss, radical preparedness expenditure not only does not reimburse for loss from the disaster of war, but it increases the danger of the thing happening against which it is alleged to insure

I think I will not be deemed partisan if I quote with approval the following from the address of the President before the Railway Business Association banquet at New York, January 27, the first, and hence the most conservative, of his speeches on his preparedness circuit:

But militarism consists in this, gentlemen. It consists in preparing a great machine whose only use is for war, and giving it no use to which to apply itself. Men who are in charge of edged tools and bidden to prepare them for exact and scientific use grow very impatient if they are not permitted to use them, and I do not believe that the creation of such an instrument is an insurance of peace. I believe that it involves the danger of all the temptations that skillful persons have to use the things that they know how to use."

He was in that speech discussing the Army, and the danger of militarism so aptly defined by him in the above language was the wisest passage in that address, a warning to us of the dangers from militarism and navalism alike. It is not for me to account for advocacy of the "greatest navy in the world" by the man who but a few days before so clearly defined the dangers from so terrible an idle weapon. It is only for me to take the pearl of wisdom and leave the pebbles.

How such absolute preparedness endangers peace should be realized by our people most of all when they are almost daily viewing newspaper declarations of war, goading an administration to wars for which they urge our absolute unpreparedness. Our comparative unpreparedness has no doubt been a tremendous influence toward temperate and peaceful handling of unusual and delicate problems, and who can say that through diplomacy we have not won in peace more victories of late than European nations are winning in war?

Perhaps in his statement the President has in mind an experience of his own administration. Admiral Fletcher, in command of the great American Fleet was able to and did bring on a national crisis by demanding an apology and a salute of guns from Huerta—the actual but not recognized master of one little gunboat—and his handling of "edged tools" got us into trouble that cost the lives of a score of American boys, 200 Mexicans, and millions of money, and would have brought war had Mexico been less distracted internally, and we did not get even the

I am seeking to deal with this question as a patriot rather than as a partisan, and absolutely "without regard to the political effect of my action," as you suggest I should do. I recognize that quiet compliance with the demands of the preparedness propaganda would have spared me political opposition, but I have never truckled to public opinion to gain political

A patriot is defined as "one who loves his country and zeal-ously supports its authority and interests." Such I hope I am. Such I strive to be. As such I hope we may avoid the evils of militarism and navalism, of war and sun-spot chasing; as such I want to do my little part to make this Nation really great within, helpful to its people to the utmost. As such I believe that our present expenditures-70 per cent of all our expenditures—is large enough a proportion for war, preparation for war, and the effects of war, and should not be increased, and I shall not vote to so increase them. To give us the "greatest Navy in the world" would mean immediate expenditure of over a billion dollars, and untold millions in the future, to maintain our supremacy, would arouse the suspicions of the whole world. would be a permanent menace to peace, and forever burden our people. I am not for any such program, and I yield to none in my love for my country.

recognize that our present is filled with unusual dangers, but the preparedness propaganda is not aimed to prepare us to meet present dangers but to meet the needs of the future, as from three to five years elapse between the authorization of a battleship and its commission. The European war must be ended before that time, and then will come a period of unusual safety from war. No matter who is technically the winner of that war, all the great nations of Europe will then be exhausted and overwhelmed with debt, and their war-harrassed and stricken people will seek rather the almost-forgotten joys of peace rather than new war with a people whose ways are the ways of peace.

You refer to the Monroe doctrine. You will no doubt recall the blunt but successful defense of it in the Venezuela case by Grover Cleveland when President, and that at a time when we were spending about an eighth of what we are now spending for

It is not the present that is at stake, it is the great future. oppose most of all any program that announces to the world that year in and year out this Nation is to be, not upon a peace footing in days of peace as in the past, but on a war footing in days of peace. That is the great issue of the present.

Richelieu, in his Testament Politique, said:

You are free to choose at the start, but the choice once made, there is no more choosing.

In our present choice should be all our patriotism and whatever wisdom we may have. I concede to you gentlemen, many of whom I know well and all of whom I esteem highly, motives grounded upon love of country. I can not agree with you in

your conclusions nevertheless.

I note the film "The Battle Cry of Peace," a commercial venture trading upon the present agitation, was recently shown in Port Huron, and no doubt many of you have witnessed it, as it is a magnificent thing-as a moving-picture show. You will agree with me, I trust, that it is but an extravaganza, which is a travesty upon truth as great as it is upon American patriotism, American courage, and American genius. The picturing of the possible ruin of this country by foreign foc without loss of a life by such foe. The absurdity of it all, as more than a figment of the imagination, is apparent. As an antidote to its poison, I wish you might with me have seen Madam Nazimova present the appeal of womanhood for peace, in the sketch "War Brides," a nobler expression of real patriotism, the real advancement of human rights, which should be the great purpose of all government.

It is easy for your organization to say "We do not know the amount of money," and make no response to my request for suggestions as to where it may most fairly be raised. If this program for "the greatest Navy in the world" goes through, I will be called on to vote for new taxation, and I can not so easily

sidestep the question of finance.

I have not discussed in this statement some features of the question which I alluded to in a letter recently to Mr. Rosa Mahon, a member of the committee appointed to inquire my views. This letter Mr. Mahon is at liberty to place before you in so far as he may deem it of interest to you.

Thanking you for the expression of your views, and regretting my own judgment does not permit me to entirely meet your

wishes, I remain,

Yours, very truly, LOUIS C. CRAMTON. PORTIONS OF LETTER TO MR. MAHON, ABOVE REFERRED TO.

JANUARY 26, 1916.

Mr. Ross L. Mahon, Port Huron, Mich.

MY DEAR MR. MAHON: * * * As a representative of more than 200,000 people, I am guided always by two considerations: First, the sentiment of the people that I represent; and, second, my own best judgment as to what is for the best, both for my disrict and the Nation. On this particular question I am satisfied that I am faithfully representing the sentiment of my district. During the recess of Congress I made a score or more of speeches on this subject before gatherings in various parts of the district. I talked with many people in all walks of life. Since my return to Washington, I have had a large amount of correspondence on the subject. While I have heard from a number who are favoring the policy of more or less extreme preparedness, the preponderance of sentiment, as expressed to me, indorses my position.

Furthermore, my own best judgment, reached after very conscientious and careful study of this great question, had led me to a very positive opinion that danger rather than safety lies in any radical program of preparedness. Therefore, such being my opinion and such being my judgment as to the sentiment of the district, I can only continue, as I have heretofore, firm in my opposition to any radical program of preparedness.

At the same time I am not what is termed a pacifist, namely, a person opposed to all measures of defense or opposed to war no matter what the provocation. My father served for four years in the Cavalry during the Civil War, being present at Gettysburg and other historic battle fields, and I take pride in my descent from one who performed his duty in that historic struggle.

Further, I believe in a reasonable amount of preparedness, such as our situation and the apparent need of the future may make necessary. I believe that such appropriations as have been made of late for this purpose are ample for such situation and such need. We have been increasing appropriations along this line at a tremendous rate. One might think, judging from the articles predominating in the press upon this subject, that this Nation not only is absolutely defenseless, but that we have not been spending anything for defense. Both of these impressions are absolutely wrong. I believe that very substantial measures of defense have been taken. I know that very substantial appropriations have been made for some time to secure such measures of defense.

Since 1885 we have increased our appropriations for purposes of defense 900 per cent. That is to say we are spending each year nine times as much as was spent in the year 1885. At the present time the expenditures for war and preparedness war and the results of war are about 70 per cent of the total expenditures of our Government, not taking into account the appropriations for the Post Office Department, which are practically replaced by the receipts in that department. I believe that this percentage is high enough. I took this position in my primary campaign in 1910 and again in 1912, urging that a nation should spend as much for interior development and upbuilding and the welfare of its people as it spends for defense. In particular I recall that I urged that a nation should spend as much for good roads as it did for battleships. I still hold to that opinion. In the first session of Congress of which I was a Member I voted for one battleship instead of two, and again a year ago I voted for the smallest number of battleships offered. Hence my record on this question is well established.

The present European situation is causing great distress to many minds, and is urged as a reason for radical action upon this subject. The two most prominent leaders in this cam-paign for preparedness are Col. Roosevelt and Congressman Gardner, of Massachusetts. Careful consideration of the writings and speeches of both of these men make it apparent that both of them look to Germany as our most likely opponent. It is also apparent that both of them feel that we should be active participants in the present war, instead of peaceful on-lookers. Therefore I can not accept either of them as a trust-worthy leader in this emergency, however high may be my opinion of each of them.

A more satisfactory presentation of that side of the question was that made by Mr. Mann, the Republican leader in Congress, yesterday, a presentation which I listened to with the greatest of interest and the manner of which presentation I admire as highly patriotic and effective. I agree with Mr. Mann that if the future holds for us war with any nation it is more likely to be with England than with Germany. I go further, however, and believe that war with England would inevitably mean war against an alliance between England and Japan. I do not, however, agree with him that such a war is a probability or even a reasonable possibility. I believe that there is much less danger of such a war now than there was before the great

European war broke out.

In my judgment all the great European powers were looking forward to that conflict and anticipating it. I visited Ellis Island in August, 1914, just after the outbreak of the war, and I was told there that for many months prior no able-bodied men practically were coming in. Our only immigration through that port had been consisting of old men, women, and children. From this it is apparent that the European countries had for many months recognized the conflict as inevitable and all had been making ready for it. At the same time, I am satisfied that there is not one of the countries now at war but what would be mighty glad to be out of it. Not one of them but what recognizes that the losses they sustain in the war are going to be far greater than any gain will compensate. trouble with them now is that they do not know how to let go. This is certainly true of the people of those countries, and I believe it has also come to be true of the ruling governments.

I am absolutely satisfied in my own mind that when the end of this present terrible struggle does come not one of those nations will contemplate further war for a generation. One war leads to another, is the lesson of history. The present European war is the product of former European wars. Other European wars may come in the future as the result of this But there are no such wars in our past to cause fear of such a war in the future. However ambitious may have been the designs of either Germany or England before this war broke out, I am satisfied that when it is over each of them will only ask to be let alone and we are safer from aggression from

either source than we were prior to 1914.

Furthermore, the time has gone by when individual nations will carry on great struggles. Future great conflicts will be as this one, a conflict between alliances. This is the only great Nation that is free from alliances. I note that while the preparedness advocates are freely quoting the words of Washington in behalf of preparedness, words uttered under conditions immensely different from those existing to-day, they are not repeating the warning which he gave in his farewell address against untimely alliances, a warning which has more meaning to-day than it ever had before.

It is apparent now that the result of the European war will be, in effect, a draw. Neither side is going to absolutely demolish the other or win by any such margin as will leave it in its full strength with the opponent entirely done away with. This being the case, it seems a certainty in my mind that if, following this war, one of the contending forces should attack us, sending its navy and its troops across the sea to engage us, that the opportunity thus given its present opponent to reap its revenge would be welcomed and promptly seized upon. I believe that the thirst for revenge which will live in Europe following this war, just as it has persevered in Europe following the Franco-Prussian War, is one of our elements of safety.

You have already noticed that this letter has reached length greater than you have perhaps desired or than is consistent with orderly correspondence. There are, however, many features of this question as to the particular items of preparedness that I would be glad to discuss with you or with any of your associates, but I do not feel justified in taking these up in this letter. Such questions include the relative value of battle-ships, submarines, aeroplanes, and so forth, importance of coast defenses, the various suggestions for the increase of the

Army, and so forth.

In order that you may not feel as do some of my critics that I am opposed to all items of preparedness, I will say that I anticipate that I will support as large an appropriation for aeroplanes or submarines as is likely to be offered to this Congress. I am also in favor of giving the inventors' board all the money they can use in studying the newest questions of warfare and keeping us absolutely up to the minute in methods of preparedness. I am willing to support measures tending to the enlargement of our Military and Naval Academies in order to secure us an increased number of trained men as leaders in case of emergency. I also favor more economical expenditure of our present appropriations, and I believe that if the useless navy yards are closed up and private extortion in the manufacture of armor plate and munitions is done away with, the present appropriations are ample enough to take care of our needs. It is significant, however, that such organizations as the Navy League and the National Security League and others absolutely ignore these matters and seem to seek wholly and exclusively increased appropriations.

Assuring you that if I have not in this letter exhausted your

Assuring you that if I have not in this letter exhausted your patience and your time, I will be glad to discuss further with you any phase of this highly important subject, realizing that your attitude is one of absolute good faith, inspired by only a

patriotic desire to safeguard our country, I remain, Yours, very truly,

LOUIS C. CRAMTON.

Restricted Immigration and the Economic Pressure Which Lies Back of It.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 28, 1916.

Mr. BAILEY. Mr. Speaker, while I am not greatly in sympathy with the idea of exclusion which is embodied in this measure, and while the application of the literacy test appears to me to be peculiarly obnoxious, there is still a clear recognition on my part of the growing sentiment in favor of exclusion, not alone among natives of the United States but among those of alien birth as well, for I have been surprised to find among

those who have petitioned me to vote for this measure the names of many having no familiar English sound. Not only do I recognize this growing sentiment but I fancy, Mr. Speaker, that more clearly than some who have spoken in support of the pending bill I am able to recognize its real inspiration. And I do not believe that this springs from race or religious prejudice nearly so much as from the increasing sense of pressure which is felt in this Republic. It was not so long ago that a song rang across this land and was echoed throughout the reaches of the Old World—

Come along, come along, wake not delay, Come from every nation, come from every way, The country it is broad enough, and don't you feel alarm, Uncle Sam is rich enough to give you all a farm.

As the years run, that was but a little while ago, yet to-day we are feeling the economic pressure. To-day we begin to hear of overcrowding, of lack of room, of failing opportunity, of land scarcity. In some sections farm-land values have increased almost beyond imagination, and in our cities and towns actual overcrowding is the most striking phenomena of our urban life,

While various and perhaps conflicting motives actuate many of the supporters of this plan of exclusion and others even more drastic, I believe that back of all other notives, and perhaps acting unconsciously upon those so influenced, lies this motive of self-protection, protection from the squeezing-out process, protection against a pressure which increase of population under existing conditions inevitably brings, protection against a force which left to operate unchecked would tend to impoverish the

masses and fabulously to enrich the classes.

I do not believe, Mr. Speaker, that many of the advocates of exclusion consciously entertain this view of the problem. Most of them content themselves with explaining their attitude by declaring that immigration tends to beat down wages and to lower the American standard of living. But it is to be noted that immigration had no such effect in the earlier day, of the Republic. On the very contrary, every immigrant who came was regarded as an actual gain and proved to be. He added to the sum of wealth produced. He assisted in reducing the wilderness. He proved a tremendous factor in developing our natural resources. In a hundred ways he curiched the land by his labor and his industry. No one then thought seriously to assert that his coming was a detriment to the wage earner of a threat against the American standard of living.

What has brought about the change? I think this has been

What has brought about the change? I think this has been made clearer by Mr. Louis F. Post, Assistant Secretary of Labor, than by anyone else; and I shall incorporate in these remarks portions of an address delivered by that gifted gentleman before the annual meeting of the Hebrew Sheltering and Immigrant Aid Society of America at New York, February 27, 1916.

Mr. Post told the members of the societ; that they realized that it was his duty to enforce the law without regard to person or race, adding that he intended to administer the law, so far as he was concerned, according to its purpose. Continuing, he said:

"ADDRESS OF HON. LOUIS F. POST, ASSISTANT SECRETARY UNITED STATES DEPARTMENT OF LABOR, AT ANNUAL MEETING OF HEBREW SHELTERING AND IMMIGRANT AID SOCIETY OF AMERICA, FEBRUARY 27, 1916.

"With its spirit I personally have no sympathy whatever, and I am speaking personally here—as a citizen, not as an official. As a Democrat I can not have sympathy with the principle of exclusion from our country; but as an official I will enforce that law as the lawmakers intended it to be enforced.

"It is a pathetic duty. Many of you can realize this better than I can. A family comes across that great wilderness of ocean to get away from economic pressure, industrial pressure, political persecution. They see that Goddess of Liberty loom up as they approach New York. They are full of hope. The promised land is before them, but they find they can not come ashore. They pass the Goddess of Liberty again, but on their way to Ellis Island. Then they pass immigration officials in a line to be examined. They answer questions. Possibly some one of the family comes within the provisions of the exclusion law. That one is excluded. The case is appealed to the Secretary of Labor, who has very little discretion. And then it may be that the excluded one must go back to a homeless land instead of entering this land of promise.

"Now, my friends, some of the things I am going to say to you, you may not like; but, standing on that most exalted plane of human association, the brotherhood of man, I am going to

assume a brother's privilege to say what I think.

"One of these unpleasant things is the fact that exclusion of aliens is necessary. It is going to become more and more drastic. Not because I want it so. I tell you I don't. But it is going to be so just the same. And more than that, the same

thing that has made it necessary, and will make it more and more necessary, is going to sweep you yourselves or your children into the stream of exclusionists. I do not mean that the exclusion of aliens is essentially necessary. Let me emphasize that. I mean that it is necessary under existing conditions.

"We did not always have exclusion laws. I am not as old as Mr. Wolf, but I can remember when we had no exclusion laws. I can remember when it would have been political death to any political leader in almost any part of this country to have advocated exclusion laws for aliens. But the exclusion

laws came. Why?

"We are told by Senator REED, and I do not doubt the Senator's assurances, that the principal reason for making the exclusion laws more drastic is to keep Jews out of this country. I can take you to other men who will tell you the same thing. But it is also true that the exclusion laws are urged from other Some say they are urged for the purpose of keeping another kind of religionists out of the country. Some have still other motives. Plenty of reasons are urged, openly or not openly, for making the exclusion laws more drastic. But the original laws for exclusion were not for the purpose of keeping out particular religionists or races.

"I will tell you what started exclusion legislation; and it is

still the great leverage, whatever other motives there may be.

"The reason we did not have exclusion laws when I was young is because there was then an abundance of cheap land in this country. There was no pressure of population; yet the population was half or more than half what it is now. to sing in those days a song inviting the oppressed of all nations to come to our ports. Part of the refrain of that song was 'Uncle Sam is rich enough to give us all a farm.' It was true. There was an enormous amount of cheap or free land.

"But Congress soon after those days got a scare on-a wonderful scare. They were afraid that this cheap land would get up on its hind legs and run over to the Pacific Ocean and dump itself in. So, in order to keep the land here, in order to prevent its running away, Congress passed laws which made land grants galore. They gave the land to greedy owners to hold it in its place. They gave to States lands for schools; and the States also were so afraid the lands would run away that they sold them for a song. To keep the lands from running away, don't

you see?

"Congress gave 80,000,000 acres to corporations for building continental railroads. For the Government; for the people? No; for themselves. Now wasn't that a fine scheme! They gave these lands away in order to pay railroad financiers for building railroads—for themselves. I figure that those railroad grants alone would make a path 5 miles wide all around See, that land was given to railroad companies for building railroads for themselves. Of course, they were to see that the lands didn't leave the country; and in that respect they have been faithful, for the lands are still here. But they are monopolized. That sort of thing went on until Uncle Sam hadn't any farms to give. And with the rest went mineral deposits-coal and iron that were here before the children of Israel went upon that long pilgrimage out of Egypt. We gave them all away. And now we are short of land-not of vacant land but of cheap land.

"It is so the whole country over. We are short of cheap land, although there is an abundance of good land that is not in use. although there is an abundance of good land that is not Look at the city of New York. Is there a spot that is more congested with people? Yet New York is not so very much than half built mon even on Manhattan Island. It has plenty of vacant spaces and insufficiently used spaces, but they are held out of full use by enormous prices. This is indicative of the process which led to the alien exclusion laws. It is the kind of thing that will make exclusion laws necessary as long as we maintain the institution, which for short I will call land

"You tell me that foreigners should have the right to come into this country. I say so, too. They are our brethren and should have the right to come here as brethren. But when they come here, what then? Is it enough that foreigners shall be allowed to pass Ellis Island? Is it enough that foreigners shall be allowed to cross the boundary line into this country? Haven't they the same right to a spot of earth when they get here? But there is little room in this country, not only for the foreigners who cross the ocean, but for the foreigners that come down from heaven, and there are a good many of them. We haven't got any exclusion laws for them yet. But they come, and they are filling up the country—a country which is crowded. I do not mean that this country is crowded literally. I mean that so much of it has been passed over into the ownership of a few that there is no room left for the great mass.

"Now for the effect, which has caused alien exclusion laws. In the early sixties the wage working class of this country began to see their jobs slipping away from them. If they had stopped to think, they might have suspected the true cause. They might have said, 'The land of our country is monopolized so that there isn't enough land to go around.' But they didn't stop to think. All they knew was that immigrants were taking their jobs away, by working for less than they were getting. Then we had the foreigner question. It wasn't a religious or a race question. Do not imagine that. Do not imagine that it was national. It was a bread-and-butter question.

"I want to illustrate this. Once I had occasion to talk to a man in Texas, an old-time slave owner, and in our conversation I asked him to tell me about the race question down there. He answered, 'I will tell you about the race question in a few words. When the white man owned the "nigger" there was no race question; if the "nigger" owned the white man there would be no race question; but when the "nigger white man both want the same job at the same time, then there is a race question.' Something like that is what happened back in the sixties. The American wageworkers found foreigners getting their jobs, and then there was a race question, a

religious question, an alien-exclusion question.

When all our cheap land had been taken away from the people, when the people who worked for wages began to find out that jobs were getting scarce, then we began to pass exclusion laws. And that condition of scarcity of jobs is what is maintaining those laws to-day. It is what will make them more drastic. It is what will make you and your children favor exclusion laws against belated foreigners. Until we alter these land-monopoly conditions exclusion laws will keep out your

"The message I want to leave with you is this: If you are opposed to exclusion laws you must strike at their cause. You have got to make this country free, really free; and no country is free where the mass of the people have no right to a place on the land without paying higher and higher prices to land

monopolists for the opportunity.

"If you abolish land monopoly-I shall not take the time to indicate how it may be done—but if you do it, you will remove the cause of alien exclusion. Give us cheap land in this country once more, get rid of land monopoly, and there will be no necessity to organize to fight any exclusion law. Cheap land means dear men and dear land means cheap men. We have dear land now, secondly we have got cheap men. Consequently those who are at work are in conflict with foreigners coming into the labor market at lower wages. It is because dear land means cheap men and because we now have dear land that ex-clusion laws must be. They are necessary in order to keep out men that will work cheaper.

"I may be wrong. I may not. Think it over. That is all that any Democrat has a right to ask of any other Democrat. Think it over. And if when you think it over you agree with me, come out and do what you can to abolish land monopoly. Do more if you can, but at least do that.'

Mr. Speaker, it would be impossible for me by anything I could add to what Mr. Post has said better to explain my own attitude and my own general view of this perplexing and increasingly vexatious problem. But may I not on my own account suggest that, exclusion an accomplished fact, those who have lent their energies to bring it about, should now turn to the deeper phases of the problem? For the exclusion of immigration will not alone stop the pressure; it will not permanently arrest the tendency of which exclusion is a dim recognition. Men and women will continue to assume the holy bonds of wedlock and to bring children into the world. And if we relieve pressure from without through the exclusion of aliens, we shall infallibly encourage it from within by promoting marriage and the raising of larger families. Do not doubt this. It is just as certain as any fact in life. As good wheat crops tend to raise the birth rate, so any other factor which has a similar effect in reducing the economic pressure will bring about the same result. And if exclusion shall have the effect of relaxing the pressure which it is aimed to do, we take it as a foregone conclusion that the pressure will quickly reappear, not from immigrant sources, but from within; from the homes of America, where baby voices will be heard more often, where love will find its way with fewer restraints.

So it is my hope that the friends of exclusion will not permit themselves to fancy that their task is ended. It is only begun. The duty rests upon them now to find the true causes of the economic pressure. Is there no way to relieve it save by race suicide? Is it indeed true that increase of population necessarily means what it seems to mean to-day? May it not indeed be a blessing rather than the curse it now appears to be? Can we be sure without searching inquiry that the trouble does not lie in the forestalling of opportunity, in the monopolization of natural resources, in shutting the great mass of mankind out of God's storehouse by means of laws that are in utter contravention of those of the Almighty? Mr. Chairman, this thought is left with those who believe this legislation to be necessary, in the hope that they may pursue it further than most of them have ever undertaken to go. For, just as sure as fate, this problem in another form will be confronting us at no distant day unless we shall go to the roots of the question and offer a solution that shall be final by adapting human law and conventions to the laws of God. We can do this by the simple process of making land monopoly unprofitable through a single tax upon its value exclusive of improvements.

The Military Establishment.

EXTENSION OF REMARKS HON. OSCAR L. GRAY. OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES, Thursday, March 23, 1916.

Mr. GRAY of Alabama. Mr. Speaker, we have reached a period in the life of this great Republic when it seems that all men who love their country, cherish its institutions, honor its glorious traditions, and take pride in its magnificent achievements, must stand together on common ground, and it is welcome proof of the patriotic unity of our land that to-day men from every State and of varying partisan beliefs are united in the face of a common danger.

We do not want war. The genius of America is for peace and development of all the bountiful resources of nature and the progress of an enlightened spirit of liberty, equality, and fraternity among the children of men, but if war should be forced upon us, we should be ready to preserve at all hazards the liberty and security of American life and American property.

When it comes to protecting our rights and defending our liberties, there can be no party creed to divide us. The patriotism that glows and burns in the breast of every true American wipes out every dividing line and unites us as with bands of steel to join in a common cause.

That man who stands out against this sentiment misconceives what his real duty is toward his people, misreads the history of his country, and misunderstands the signs that point to a glorious destiny of the United States.

This country has never been unduly hasty in going to war. We have been a long-suffering and a patient people. The leaders of the country, foremost among them our President, have shrunk from saying or doing anything that would tend to involve us in a war with any country. Probably some have misjudged the real motive, and have been impressed with the thought that, may be, the United States Government and its people were timid and really afraid to assert their inalienable and sacred rights. But the thoughtful man knows that no such motive impels our people, or the brave and patient man who leads the people of this Nation to-day. The awful scourge of war that is devastating the manhood of Europe to-day, the widows and orphans that are being made as each dreadful week of slaughter rolls around, may well give us pause before we summon the manhood of our country, it may be, to "tread the paths of glory that lead but to the grave."

But when the limit of endurance has been reached it will be discovered that, no matter what the cost, the manhood of our country and the womanhood of our country can and will revolt against any further encroachment upon our rights, either on land

An arrogant and brutal enemy, whether it be an outlawed horde of bandits or the picked flower of a civilized army, that attempts an assault on American life, liberty, or property will find themselves immediately and bitterly opposed by a sturdy Army of the best fighting men that ever trod the earth.

I know from long personal contact that every city, town, and hamlet, and every isolated farmhouse of the Southland will send their stalwart sons to battle for their flag and country if necessary. And well do I know that the southern boys of to-day will prove themselves worthy scions of the sires and grandsires who bequeathed them a heritage of courage, and of the noble woman-hood who gave them life and taught them the lessons of pu-

triotism and fidelity that each is ready to prove by a sacrifice of that life, if need be. And it is therefore with solemn pride and a high sense of duty that I cast my vote to-day in favor of this necessary and patriotic measure. I am no believer in militarism. The pomp and glare of soldiery does not appeal to me, nor to the people I represent. I do not believe that it is necessary to-day, nor will it be necessary for generations to come, that this country should be burdened with a large standing Army. The swashbuckling professional soldier will never be a popular figure in the United States, and this bill does not in any way open the door for such an evil.

Advanced civilization, with its wonderful inventions, has changed every phase of human life. Even war is now a thing largely of armament and skilled mechanism, and if the trumpet call to arms is sounded I want to see our soldiers provided with the best arms that skilled inventors can devise. to drill and teach them the details of modern fighting methods quickly and expeditiously. And we need an organization to which they can rally and add the knowledge of military science to the bravery they inherit. Then, Mr. Speaker, I am assured that we will have an army that the world could not conquer, and a ready reserve that would make the boldest nation hesitate, before they attempted to cross swords with the country that would furnish a million of the sturdlest fighters that ever entered battle, armed and equipped with the best weapons that human skill could devise.

I do not fear for the future of this country, either in peace or in war. While the men of America stay as they are to-day-industrious, temperate, and progressive in peacethey will be ready to do their part when the hour of battle nears. While the women of this country remain as they are virtuous, intelligent, and devoted to duty, training their youth in honor and sobriety-they will never want for defenders. While this great Republic continues to offer to its people manifold blessings, there will never be a lack of men to fight its

battles in behalf of justice and the right.

Unholy conquest-wars of rapine and plunder-make no appeal to the true American spirit. Wars for greed or commercial rivalry will never call forth an army of American volun-Wars involving religious faith are impossible in this land of freedom, where each can worship God according to the dictates of his own conscience. But let the foe once step across the border line of our country, to disturb without cause the peace, happiness, and security of our people, and the old spirit that was once aroused by the famous phrase "Millions for defense but not one cent for tribute" will again stir the patriotism of our people. Inspired by no ignoble lust of battle, but stimulated by the principle that created civilization—the protection of home and fireside—we will stand ready to defend—

Your fing and our fing,
And how it floats to-day,
O'er your land and my land
And half the world away.
Blood red and rose red,
Its stripes forever gleam;
Snow white and sout white,
The good forefathers' dream. Sky blue and true blue,
With stars that beam aright,
A gloried guidon of the day,
A shelter through the night. Your flag and my flag, Oh, how much it holds Your heart and my heart Secure within its folds. Your heart and my heart
Beat quicker at the sight,
Sun kissed and wind tossed,
The red and blue and white. The one flag, the great flag,
The flag for me and you,
Glorified, all else beside,
The red, the white, and blue.

Military Establishment.

EXTENSION OF REMARKS

HON. JOHN R. K. SCOTT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES, Saturday, March 18, 1916.

Mr. SCOTT of Pennsylvania. Mr. Speaker, during the present session of Congress Members of this House have been figuratively bombarded with speeches, essays, pamphlets, and arguments by a number of people—forming, fortunately, but a small pro-

portionate part of the total citizenship of this country-who insist that the present Military Establishment of the United States is ample for the present needs of the country and that it requires no additional increase. The main and apparently universal argument of these so-called pacificists is summed up with the alleged unanswerable questions "Who is going to attack "For whom do we need prepare?"

As is to be expected, these questions can not be answered with any degree of certainty. However, the best answer which I have heard given to these questions-the one which impressed me the most-was that given by Maj. Gen. Leonard Wood in his testimony before the House Military Affairs Committee, and while I appreciate the fact that the Members of the House are probably fairly well acquainted with that testimony, yet I feel that the answer of Maj. Gen. Wood was so apt, so appropriate, and so much to the point, that it is well worth repeating. A lady had asked the general this stereotyped question, "For whom do we need to prepare?" while he was standing at the wharf of one of our Atlantic sea ports, where a Cunarder had just come in from a stormy passage. The answer which Maj. Gen. Wood gave to the lady was, "Madame, if you will ask the captain of this Cunarder for what particular storm he carries his lifeboats and life-saving apparatus and he tells you, I will tell you who we are getting ready to fight."

At the present time the country at large feels that it is extremely important that this Congress take steps to place the country immediately in a proper condition of military preparedness and to provide means that will give us an adequate defense for any and all eventualities. To accomplish this it is necessary that we adopt some definite military policy to guide us in the future and one which will enable the United States to so develop and expand its military resources as to keep pace with the new conditions and necessities of the future. The acquirement of a definite military policy is one of the most important phases of the program which confronts this Congress.

In the past the policy of this Nation has been, and in the future in all probability the policy of the country will be, to maintain as small a standing army as conditions and circumstances require and to depend in times of emergency upon citizen soldiery. This policy, to my mind, is right and proper and is in keeping with out American and democratic ideals. Of course there is a wide variance of opinion as to how large our standing army should be in order to give adequate protection to the country.

If we are to depend upon citizen soldiery, it appears to me to be essential that a large body of our citizens be trained to the use of arms, experienced in the duties of a soldier, and acquainted to some practical extent with the requirements of a soldier's life in the field. The history of this Nation and the history of all other countries have amply demonstrated that, if a citizen soldiery is to be effective and is to be such that can in times of emer gency be relied upon, some basic fundamental training must be given to it in times of peace, so that when the occasion arises it can be taken and turned into a well-drilled army in the shortest possible time.

Time is an extremely important factor in conditions of modern warfare, and is one of the phases of military operations of which the United States has not as yet realized the importance. Thus it took us practically five whole days to start a small punitive expedition across the borders of Mexico, although for years previous we had anticipated possible and probable trouble in that quarter and had stationed a large force of our Regular Army on the border to meet just such an emergency as actually oc-curred, and yet when it did occur it took us five whole days to get started.

While I do not desire to contrast European military policies with our own, yet I can not help but recall with much bitter ness that in the same length of time from the outbreak of the present European war Germany with an immense army was hammering almost at the gates of Paris. The contrast is not pleasant to an American citizen who has the Nation's welfare at heart.

Our committees and individual Members of the House have carefully considered and have given much time and thought to the present needs and requirements of two important branches of our land military resources-our regular standing army and our Organized Militia. However, comparatively very little at-tention has been directed to the third branch of our land forces, the unorganized or reserved militia, which comprises practically all abled-bodied citizens of the country. There can be no question of doubt but that if this country ever becomes involved in war with any one of a dozen nations of the world we would have to look to our unorganized militia to aid us in placing

and Organized Militia combined would not be of sufficient size to cope with the conditions of modern warfare.

Numerous deep-thinking people in the country and a number of men well versed in military affairs are at the present time advocating compulsory military service in the United States. It is alleged that the very foundation on which this country should stand is equality of service to the Nation, and that such equality of service can only be obtained through some system of universal military training. It is claimed that compulsory service of all citizens is in keeping with our ideas of democracy. Without a question of doubt this proposition of compulsory ser ice is gaining favor very rapidly. I do not believe that this country is as yet ready to accept this idea or to put it into effect, at least not until all other means to attain the desired end have failed.

However, there appears to be a means of fostering this idea of general military training, which embodies many of the virtues of compulsory service and avoids most of its objections; that is, by the introduction of military training in the higher grades of the schools and in the colleges and universities. enabling the youth to acquire such instruction at the time he is attending school we avoid the objection that such training would impede his industrial development and would compel him to undergo such training at a time when all of his energies and thoughts should be centered upon making a start in life. By taking the boy at a time when he is still at school we have a means of instilling in him the basic principles of military training without interfering with any part of his industrial life. It is not to be imagined that any such training as can be given to a youth in his school days would be sufficient to develop him into a well drilled or finished soldier, but the thought is that we could at least give him sufficient practical knowledge and training as would enable us thereafter, if the necessity arose, to take hold of him in a fairly well-advanced stage of development and teach him the active duties of a soldier in a comparatively short

The proposition of introducing military training in the higher grades of our schools has many advocates at the present time throughout the United States. It is thought that by the introduction of a properly modified form of military instruction in the higher grades of our schools, the military preparedness of this Nation would be greatly enhanced, and at the same time the instruction so given could be utilized to develop in the youth of the country those qualities most useful to him in all walks of

There is no question of doubt but that many advantages and benefits could be derived from a course of military training. The characteristics of self-reliance and self-restraint derived from such training are foundations for success in all pursuits of life. The calisthenics involved are invaluable in a proper physical development. A military drill inculcates a conception of authority and respect for authority which can not be equaled by anything else and the habit of obedience which comes from the knowledge of power and authority is invaluable at the time of life when boys are attending higher schools. Of all things that the American youth of to-day needs, and needs most, is the advantage resulting from an experience of rigorous self-imposed discipline. Among young men there are especially two classes to whom such a thing would be most valuable-those coming from well-to-do indulgent parents, and those who, lacking parental control, have developed an independence of action not consistent in all respects with the proper conventions of society and life. One of the fundamental principles of military discipline is self-control.

A knowledge of military hygiene, a knowledge of military science and tactics and military discipline is of undoubted advantage to the boy, even though he never engages in war. It will in itself add to the economic value of the individual. Such knowledge and training will be as useful to the average student in his after life as will a knowledge of geometry or of chemistry, and yet we insist in practically all of our high schools that these branches of studies be placed in the curriculum.

If a form of military training were introduced into the higher grades of our schools the problem of obtaining sufficient enlistments for our standing army would in all probability be solved at once as a result of the true conception of a citizen's duty

and the patriotism which would be taught to boys.

No fair-minded man would advocate that a technical or advanced course of military instruction should be given to our schoolboys. But many educators and men engaged in that profession maintain, and I am constrained to agree with them, that a course or form of training could be worked out, such as is in use with the Boy Scouts at the present time, which will a proper and sufficient army in the field, as our Regular Army not only be of great use to the Nation at large but will be of

incalculable benefit to the boys themselves. It is important for us to determine whether a course of instruction in military science and tactics can be arranged in such a form and added to the curriculum of the higher grades of the public schools, that the instruction so given, even though never called into use for military purposes, will be of advantage to the individuals in other pursuits of life.

Certainly no one would claim that the boy-scout movement of to-day has a tendency to promote "militarism." Yet it has been stated by men of wide experience, by men who are acknowledged military experts, that a body of well-trained Boy Scouts could at the present time be turned into efficient relatives in one helf the time it would take a bedy of ordinary soldiers in one-half the time it would take a body of ordinary

I realize that this Congress has no direct control over the public schools of the United States, but the Congress can un-doubtedly take steps that will encourage the State authorities to make provision for the introduction of instruction in military

science and tactics in the schools.

For the past few weeks I have been endeavoring to ascertain the sentiment among Pennsylvania school authorities on the question of instituting military training in the schools of that State. With that purpose in view, I addressed a circular letter, requesting an expression of sentiment, to the various county superintendents of public schools in Pennsylvania. Replies have been received from about 75 school authorities residing in practically every portion of the State. A large number of the practically every portion of the State. A large number of the heads of our schools are absolutely opposed to the introduction of any kind of military training whatever. This opposition is to be expected, as the introduction of such training in the public schools would be a radical step, and as a general rule any schools movement relating to the contraction of such training in the public schools would be a radical step, and as a general rule any radical movement relating to our school system receives much opposition.

The reasons assigned by the school authorities in Pennsylvania opposed to the introduction of military instruction may be

summed up as follows:

It is not within the province of the public schools to concern themselves with a matter that does not and ought not to belong to the adolescent period of a young man's life, and that it is unwise to permit the mind of a young man of 18 years or under to dwell upon the possibilities of a military life.

The boys of public-school age, most of whom are under 18 years, are not sufficiently developed to take up military training and are too immature physically, mentally, and morally to undergo the rigid discipline which would probably be required.

The ideals called forth and developed under military training are not of a kind which should be sought to be developed in school life.

Military training would add very materially to the work of the public schools, in the curriculum of which there is now more work than can be thoroughly done.

These quotations from the replies of the opponents of military training practically summarize all the arguments which were given as to the reason why military instruction should not be

introduced into the public schools.

When we recall that the records of the office of The Adjutant General of the United States Army show that in the War of the Rebellion, out of a total enlistment of 2,778,304, covering the four years of the war, there were 1,151,438 enlistments of boys of 18 years and under and 2,778,304 enlistments of boys of 21 years and under, we can realize how unconvincing are the statements that the boys in the higher grades of the public schools are not sufficiently developed and are too immature to take up military training. The boys of to-day are no weaker and are no more undeveloped and immature than were the boys of 50 years It was Gen. Sherman who said that the boys of 21 years and under fought for us and won for us the battles of our Civil War. Over 1,000,000 boys of 18 years and under went forth on the battle fields of that war that the Nation might live. Is it too much to ask our boys of to-day of a like age to assume the duties of training and drill that the Nation might be made secure?

If this country to-day became involved in a war, the percentage of enlistments of the youth of our land would in all probability bear comparison with the records of our Civil War. We have been told time and time again that in the bloody struggle now being conducted across the ocean the trenches for the most part are being manned by boys who have not as yet reached their majority. And yet some of our school authorities believe that our boys of 17 and 18 years of age are too undeveloped and are too immature to be instructed in military science and tactics.

No one will gainsay that it is one of the most fundamental duties and purposes of the schools to teach a proper regard for the duties and responsibilities of citizenship; and a proper conception of the duties of citizenship should include a willingness to prepare for the defense of our flag. If the dreaded occasion should arise—if this Nation should ever become involved in a war of any consequence—the probability is that thousands

of boys of minor ages would go forth on the battle fields of this country. Must we again send them forth untrained, undrilled, and unprepared, or are we willing to sacrifice a little knowledge of chemistry and a little knowledge of geometry or some other branch that they may be trained and prepared for the unforeseen? The duties of citizenship require the youth of this country not only to acquire an intellectual and moral equipment to fit them for good citizenship, but also to acquire the means that will enable them to defend the institutions and homes of this Nation under all circumstances.

As I stated before, there was much opposition among the school authorities of Pennsylvania to the introduction of any kind of military training in the schools. It was a source of great satisfaction to me that the replies from a large number of these school authorities showed a keen appreciation of the necessities and possibilities of military training. A few of the letters received by me demonstrate the trend of opinion among some of the teachers themselves.

Dr. George H. Wilson, superintendent of the Radnor Public Schools, of Wayne, Pa., wrote:

I would say that if there is any medium through which respect for righteous authority and an adequate sense of responsibility for civic duty can be inoculated in our people, I believe that almost any means would justify the end sought. I am opposed to militarism as the term is generally applied, as we do not want to duplicate in our country the condition that now encompasses one of the European nations, but I can see no reason why some phase of this work could not be adapted to our schools with profit both to the individual and to the Nation.

Dr. E. L. Kemp, principal of the State Normal School at East Stroudsburg, Pa., wrote:

Dr. E. L. Kemp, principal of the State Normal School at East Stroudsburg, Pa., wrote:

I have received your letter asking my opinion on the subject of military training in our schools. I am very glad that you have both the patriotism and good sense to do what you are doing in the matter. The time has come when we must recognize the fact that our schools exist not only in the interest of the boys and girls individually, but also in the interest of the community, the State, and the Nation, and that the business of the school is to educate the boys and girls for useful citizenship.

No man has the right to enjoy the privileges of citizenship who is not at the same time willing to meet all the obligations of citizenship. Therefore no man is properly educated to accept his obligations and fulfill them as efficiently as possible. The belief that we are approaching the time when there will be no further danger of great wars is abased on beautiful and attractive sentiment, but on very poor judgment. If our country and its institutions are precious to us, we ought to think it one of the first obligations of citizenship to preserve and develop them, even if it is necessary to fight in order to do so. Inasmuch as it is not one man's duty more than another's to risk his life for his country, every boy who is to be a citizen ought to be thoroughly prepared for military service within the limits of possibility. The beauty of such preparation is that it cultivates the sense of citizenship and its obligations in boys as nothing else can do, and also the appreciation of a fine physique, which the training helps to develop. Both fit the boy for other than military service. If it were possible for the United States to pass a law requiring military training in all the schools above the proper grade, I would advocate that strenuously, but I know that it is impossible for the country to do that now. The proper thing therefore is to work up to the desired result by wise graduations.

In the first place, it strikes me that our War Dep

Many of the graduates from these colleges and normal schools naturally go into the public schools, and they would help to introduce the system of physical and military training there. They would also help cultivate in the different States the spirit which would gradually prepare the States to accept a law for universal military preparation in

The letter received from Dr. William R. Straughn, of the State Normal School of Pennsylvania, stated:

State Normal School of Pennsylvania, stated:

I received your letter inquiring about my opinion as regards a certain form of military training in our normal school. Personally I am very much in favor of this for the good which may come to the young men who participate in this kind of exercise, as well as for the fact that I am entirely in accord with something that will aid in training young men in case of an absolute emergency, such as war, or some similar catastrophe (for in general war is a catastrophe).

Before answering your letter, however, I laid this matter before our faculty, consisting of about 40 members, and the opinion of all of them who expressed themselves, and most of them joined in the discussion, is that they would like to see a modified form of military training instituted at our school, but not to such an extent as to create a military spirit.

I find that the sentiments expressed by R. M. Steele, superintendent of the Latrobe public schools, Latrobe, Pa., are as

I am not in favor of military training in the grades below the high school. I do believe, however, that under proper conditions military training when carried on in conjunction with physical culture work would be advisable in the high school. In schools where provision is made for physical culture, military instruction, which would include marching tactics, manual of arms, and where possible target practice, would not only aid in giving the Nation a trained citizen army but would also produce good results in the schools where this training is given.

Personally I see no menace of militarism in the introduction of such training into the high schools, and I firmly believe that every boy would be benefited by having had this military training. It may be of interest in this connection to state that I have sufficient faith in military training in connection with physical culture that I have planned such a course and expect its introduction in our own high school.

Dr. Albert Montgomery, superintendent of the German township schools, McClellandtown, Pa., writes:

ship schools, McClellandtown, Pa., writes:

1 believe in military training in the public schools because it will be the cheapest and most direct method of equipping a body of citizen soldiery; because of the fine physical training that it will afford our boys, because of the teamwork and mental discipline that will be developed by such training; because it will arouse a spirit of patriotism and love of country that seems sometimes to be rather in a state of apathy; because it will serve a definite purpose in that it will assist in the uniting of a heterogeneous mixture of all nationalities represented in our public schools into a homogeneous unit that will act to the honor and credit of the country.

War is terrible, but there are conditions that may be brought about in the affairs of nations that are more deplorable than war. These conditions may be forced upon us at any moment. The world seems to be war crazy. What assuance have we that we may not be plunged into this conflict now waging in Europe? If we are not prepared, what is to stand in the way of armed invasion of this country by any of the strong powers of Europe? I am a believer in the old adage, "Put your trust in the Lord, but seep your powder dry." Therefore I believe in military training in the public schools, for that seems to me to be the logical solution of military training in this country if we have not put it off too ions. We may be sadly in need of trained soldiers long before we can develop them in our public schools.

Dr. S. H. Dean, superintendent of the public schools at Mount Carmel, Pa., wrote:

My investigation and experience have led me to the conclusion that military drill and training develops a wholesome respect for authority, strengthens the moral instincts, makes manly boys, gives our youth a chance to work off some of their surplus energy, and at the same time they are developing a robust body. It is a good thing for children to learn to obey orders with implicit obedience.

From the pen of Dr. E. M. Balsbaugh, superintendent of the public schools at Lebanon, Pa., I received the following:

We have accompanied undergoing military discipline and training in the high schools, organized entirely by volunteers. I believe that in the third and fourth years of the public high schools military instruction might be required of all able-bodied boys, but for the first and second years it should be largely voluntary.

I am satisfied that there is sufficient evidence that military training does lend itself to the moiding of manly men, the development of moral instincts, instills respect for authority, develops a willingness to obey, a proper regard for civic duties and responsibilities, as well as resulting in an excellent physical development and carriage.

In this city there has been little or no opposition to the military training already instituted. The local papers indorse the move entirely.

Dr. Robert Ellis Thompson, president of the Central High School of Philadelphia, the oldest and largest high school in that city, wrote to me as follows:

city, wrote to me us follows:

In response to your inquiry of February 28, which did not reach me until yesterday, I wish to say that I favor the introduction of military training into the public high schools to a limited extent, and under the conditions created by the proper work of these schools.

I should deprecate the devotion of much of the time now taken for classroom work to "military science and tactics," as the demands of the universities for their preparation leave but little time for that purpose. In fact, I think that most of what your phrase covers should devolve upon the colleges and universities, whose students are better fitted to undertake it. But i do think that military drill and rile practice might well be given in the high schools, without any loss to the academic work.

I should especially welcome the drill as adding the development of both the physique and the morals of the student. My experience with my own son's attendance at a military academy leads me to believe that it is the best possible corrective of a tendency to hollowness of chest and roundness of shoulders, which often result in lung diseases. Also the drill helps to correct a bad tendency in the American boy to look around after getting an order, to see if it is meant scriously.

I received a letter from Gen. Edward de V. Morrell, of Phila-

I received a letter from Gen. Edward de V. Morrell, of Philadelphia, in which he stated:

delphia, in which he stated:

For the past 25 years I have been interested in military work connected with the State, and had military drills, and "setting up" exercises included in the curriculum of our two industrial and vocational schools, where we have between four and five hundred students, I have found that the drills and exercises have maintained largely to respect for authority; for self-government among the students and individual development.

The board of education of Philadelphia, of which I have the honor of being a member, recently appointed me as chairman of a special committee to consider the advisability of introducing military training in the high schools of this city, and it is the intention of the committee to consider the subject in the near future,

The Military Establishment.

EXTENSION OF REMARKS

HON. CARL HAYDEN. OF ARIZONA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 23, 1916.

Mr. HAYDEN. Mr. Speaker, under the leave beretofore granted, I desire to extend my remarks by printing in the RECORD a letter that I have written to the editors of a number of newspapers in Arizona, the substance of which is as follows:

The Hay bill to increase the efficiency of the Military Establishment of the United States passed the House by a vote of 402 to 2, which is a good indication that this measure is satisfactory to the great majority of the American people. The bill provides for a Regular Army of 140,000 men, which can be expanded to 207,000 by calling the reserves to the colors when war is declared. I voted to increase the standing Army by 40,000 men because I have believed for a long time that more men were needed to properly discharge the functions of an army in time of peace. The conditions in Mexico for the past five years have been argument enough for a reasonable military increase. As matters stand to-day, with our troops in pursuit of Villa, there are not enough soldiers available to properly protect the lives and property of our citizens who reside along the southern border.

THE NATIONAL GUARD.

In addition to this increase in the Regular Army the Hay bill places the militia under Federal control and authorizes the expansion of the National Guard to a peace strength of 425,000 men. Enlistments in the National Guard will be for six years, three with the colors and three in the reserve, so that on a war footing the National Guard will consist of over 800,000 men. When the plan provided in the Hay bill is in full operation by combining the Regular Army and the National Guard the United States will be able to mobilize 1,000,000 men for national defense. The military experts say that we need at least 600,000 men for our first line of defense. At a conservative estimate the Hny bill will certainly provide the United States with that number of trained soldiers, which ought to be ample, because not a shot would be fired against an invader from across the ocean by any one of them until after our Navy has lost control of the sea.

CONTINENTAL ARMY ABANDONED.

The federalization of the National Guard takes the place of the continental-army plan proposed by the General Staff and advocated by ex-Secretary Garrison. This scheme never was anything but a makeshift. The Army officers admit that they advanced this idea, knowing that it was impractical, to demonstrate the continuous con strate that ultimately the American people must agree to universal military service if we are to be adequately prepared for war. Neither Congress nor the country is ready for conscription in time of peace, and consequently any plan looking to this end was discarded.

FEDERAL CONTROL OF MILITIA.

After careful consideration the Committee on Military Affairs unanimously agreed that Congress has ample authority under the Constitution to control and develop the Organized Militia so as to make it a first-class fighting force. The founders of this Republic, with the experience of the Revolution fresh in their minds, knew exactly what they were doing when they drafted the article of the Constitution relating to the militia. Washington, Madison, Monroe, and Patrick Henry can be quoted to show that they all understood that Congress has power to make the militia a national force capable of meeting every military exigency of the United States. Because Congress has not heretofore exercised its full authority, is no reason why it can not do so at this time.

AMENDMENTS.

The Hay bill was amended in several particulars when it was under consideration in the House. Of course, I supported my own amendment, which provides for reserves by the organization of a fourth battalion when any regiment of the National Guard is in the service of the United States in time of war. Such depot battalions will train recruits and forward them to the front as casualties occur, thus keeping the regiments in the field at full war strength. By the adoption of this amendment there will always be a force in each State for use in case of an emergency.

RESERVE OFFICERS.

I voted for the Gard amendment which was adopted, and which provides that graduates of educational institutions who have completed a prescribed course of military instruction under an Army officer may be appointed as temporary second lieutenants in the Regular Army for at least six months. After this period of training they will be transferred to the reserve officers' corps, and will be subject to call for active service for 10 years. The great majority of the officers who are now serving in the French and German Armies were called from the ing in the French and German Armies were called from the reserve lists, and it is estimated that in time under this plan the United States will have a reserve of 50,000 officers.

SPORT-TERM ENLISTMENTS

I favored the Gardner amendment which was adopted by a vote of 204 to 198. This amendment provides that after one year's active service an enlisted man may be transferred to the reserve provided his commanding officer certifies that he is a proficient soldier. As a member of the reserve he will be subject to call for six years. The Regular Army should be used as a training school for officers and men, and it was for this reason that I supported both the Gard and the Gardner amendments.

LARGE STANDING ARMY.

I helped to defeat the Kahn amendment because I am convinced that, without compulsory military service, it is useless to authorize a standing army of 240,000 men. The Adjutant General reports that not more than 50,000 voluntary enlistments can be obtained during the ordinary year. With a three-year enlistment period this means that we may have a standing Army of about 150,000 men. The only way to get any more soldiers is by conscription, and the great majority of the American people are opposed to drafting men into the Regular Army in time of peace.

PAYING FOR PREPAREDNESS.

The increases that are going to be made in the Army and Navy will cost money and the question is, "Who is going to pay the bills?" Personally, I believe that when the common people, the workingmen and women of this Nation, give the lives of their sons to the country in time of war, that they have made the greatest of all sacrifices and they should not be asked to do more. For this reason I am opposed to levying any tax for war purposes the burden of which falls upon the people generally. There is an abundance of wealth in this country that can be taxed to support a greater Army and Navy, and I shall vote to see that this wealth which cries so loud for protection from a foreign attack pays the bills for preparedness. Most of the Democratic Congressmen favor this policy so that you can look for an increase in the taxes on incomes, a tax on large inheritances, and we will also try to find a way to tax the profits of the munition makers.

Woman Suffrage.

EXTENSION OF REMARKS

HON. CARL HAYDEN. OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 29, 1916.

Mr. HAYDEN. Mr. Speaker, I was sincerely disappointed vesterday to learn that the Committee on the Judiciary had determined by a vote of 10 to 9 to indefinitely postpone the consideration of all proposed constitutional amendments. This action by the Judiciary Committee means that none of the joint resolutions proposing an amendment to the Constitution extending the right of suffrage to women, which have heretofore been introduced and referred to that committee, can be again voted upon during this Congress. In order, therefore, that the committee may have an equal-suffrage resolution before it in case a majority of its members should change their opinion on this question, I have to-day reintroduced the original Susan B. Anthony amendment, which is as follows:

Joint resolution proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Resolved, etc., That the following article be proposed to the legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of the said legislatures, shall be valid as part of said Constitution, namely:

"ARTICLE -.

"Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

"Sec. 2. Congress shall have power, by appropriate legislation. to enforce the provisions of this article."

That the adoption of the Susan B. Anthony amendment is favored by the great majority of the people whom I have the honor to represent is conclusively shown by the following resolution which was transmitted to me by the chairman and secretary of the Democratic State central committee of Arizona:

Resolved, That we, the Democratic State committee of Arizona, assembled in Phoenix this 4th day of March, 1916, in response to the desires of the women voters of our State, urge Congress to pass forthwith on to the legislatures of the several States, for ratification, the Susan B Anthony amendment, known in this Congress as the Sutherland-Mondell resolution. We recommend this action in no spirit of party advantage but solely with the desire that the women of America may be placed on the same political plane as the men of the Nation and because we recognize that it is unwise to delay longer the establishment of equality between the women of the East and West.

All of the political parties in my State indorsed woman suffrage prior to its adoption in Arizona, and that this issue is still considered to be strictly nonpartisan was further demonstrated by the approval of a resolution at a recent meeting of the Arizona Republican State central committee, which is as

Resolved, That we, the Republican State committee of Arizona, meeting this 18th day of March, 1916, in Phoenix, in response to the desires of the women voters of all political parties of our State, urge Congress to pass forthwith the Sutherland-Mondell woman suffrage amendment on to the several States for ratification. We urge this action in a spirit of fair play in order that the women of America may enjoy the same rights under the United States Constitution as do the men and in order that the unjust and harassing condition of political disability for the women of the East may end in enfranchisement for all citizens under our flag without distinction of race, color, or sex.

I have also received the following resolution, which indicates

I have also received the following resolution, which indicates that the people of Arizona are earnestly in favor of extending the right to vote to all the women of the United States:

Resolved, That this mass meeting, composed of men and women voters of Arizona, assembled in Tucson this 20th day of March, 1916, calls upon Congress to pass forthwith on to the States, for ratification, the Susan B. Anthony amendment enfranchising all the women of the country.

To Survey Chattahoochee to Make River Navigable from Atlanta to Gulf.

EXTENSION OF REMARKS

HON. WILLIAM C. ADAMSON, OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 29, 1916.

Mr. ADAMSON. Mr. Speaker, under leave to extend my remarks in the Record, already granted, I submit an article from the Carroll County Times descriptive of conditions on the Chat-tahoochee River in the district I represent. The situation presented by that river at and below Franklin, Ga., presents the most inviting prospect for generating hydroelectricity to manufacture cyanamid and other commodities necessary for the War Department and for the farmers of the country to use in agriculture. The passage of the general dam bill as reported by the Committee on Interstate and Foreign Commerce will insure enough dams on that river, without a cent of cost to the Government, to manufacture from the air all the lime nitrates that we now import from Chile at a cost of \$22,000,000 a year. At the same time slack-water navigation would be promoted without cost to the Government to furnish transportation for manufactured and agricultural products along the river. All of this could be done at a cost of one-third the cost of the Keokuk project, and that fact makes it inviting to private capital. The War Department, having thoroughly surveyed the river, is fully informed as to the conditions. In case it is determined that the Government shall itself erect a plant, the most economical and advantageous location for it can be found at the several shoals between Franklin and Goat Rock.

The article is as follows:

TO SURVEY CHATTAHOOCHEE TO MAKE RIVER NAVIGABLE FROM ATLANTA TO GULF.

William Garrard, writing in the Sunday Atlanta Journal, has the following to say with regard to making the Chattahoochee River navigable to Atlanta:

"Atlanta port by 1920 is rapidly changing from a dream to an actuality

ality.

"Thirty Government engineers have advanced down the Chattahoochee from a point 8 miles above Bolton to Protector Creek, near the Chattahoochee brick yards. These engineers will go as far as Franklin,

Ga., by next winter. They are making a survey of the river to determine the location, size, and character of dams and locks necessary to make the Chattahoochee navigable from the Gulf of Mexico to

Ga., by next winter. They are making a survey of the river to determine the location, size, and character of dams and locks necessary to make the Chattahoocheen navigable from the Gulf of Mexico to Make the Chattahoocheen arvigable from the Gulf of Mexico to Linking the Chattahoocheen and the Gulf of Government Engineers, set aside \$27,000 for the preliminary work on the Chattahoochee. This money is now being spent on the survey from a point near Atlanta to Franklin.

"The Government's plans, already mapped out for making Chattahoochee navigable, are:

"To decrease the Government's plans, already mapped out for making Chattahoocheen and the Gulf of the Higher than the present water level, at Franklin, Ga., 67 miles from Atlanta. This will flood about 48,000 acres of land and will back the river up to navigable depth as far as Camp Creek, a point near Camp Creek, a Bulles from Atlanta.

"To build at Camp Creek ad dam 40 feet above water level. This will back up water in the river as far as Howell Mill Bridge, near Atlanta."

"To build a series of low dams between Franklin and West Point. The river between these points runs through a very flat section comparatively easy to worp. Were dams between West Point and Columbration of the many power dams were planned near Gainesville on the Soquee River, one of the main tributaries of the Chattahoochee, These dams would be used to hold water for emergency purposes in case the Chattahoochee, near Atlanta, became too low for navigation.

"The Government is making the survey to present these plans in tangible form. Then the Government is expected to stop and turn the Interests, or any other interests which wish to undertake the actual development.

"A. A. Slimonton, Government engineer in charge, says the Government journal of the company of the river was a series of the continuous proposed to the common horsepower development is said to be the one at Niagara Falls; yet it is an accepted fact that interests, or any other interests which wish to undertake the one at Sull Rin

The McLemore Resolution.

EXTENSION OF REMARKS

HON. EDWARD W. POU. OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. POU. Mr. Speaker, having obtained permission to extend in the Record remarks submitted on the 7th day of March, I shall print the letter of the President asking that the McLemore resolution be considered by the House and action taken

THE WHITE HOUSE,
Washington, February 29, 1916.

My Dear Mr. Pou: Inasmuch as I learn that Mr. Henry, the chairman of the Committee on Rules, is absent in Texas, I take the liberty of calling your attention, as ranking member of the committee, to a matter of grave concern to the country which can, I believe, be handled, under the rules of the House, only by that committee.

The report that there are divided counsels in Congress in regard to the foreign policy of the Government is being made industrious use of in foreign capitals. I believe that report to be false, but so long as it is anywhere credited it can not fail to do the greatest harm and ex-

pose the country to the most serious risks. I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantnem which have recently been so much talked about, in order that there may be afforded an immediate opportunity for full public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging mismederstandings.

The matter is of so grave importance and lies so clearly within the field of Executive initiative that I venture to hope that your committee will not think that I am taking an unwarranted liberty in making this suggestion as to the business of the House; and I very earnestly commend it to their immediate consideration.

Cordially and sincerely, yours,

Hon. Edward W. Pou,

Hon. EDWARD W. Pou, House of Representatives.

The Committee on Rules reported the following resolution:

Resolved, That immediately upon the adoption of this resolution the House shall proceed to consideration of House resolution 147; that there shall be four hours of general debate, one-half to be controlled by the gentleman from Virginia [Mr. Flood] and one-half by the gentleman from Wisconsin [Mr. Cooper]; that at the conclusion of said general debate the said resolution shall be considered under the general rules of the House.

It will be seen that the President urged an early vote upon the resolution, which he hoped would be taken after opportunity for full public discussion. I have received inquiries asking if the President requested that the McLemore resolution be laid on the table. His letter addressed to the Committee on Rules will answer that question. Let it speak for itself. It is so clear that comment is not necessary. The House of Representatives must legislate in accordance with its rules. A very common way of defeating a bill or resolution is to lay it on the table. The resolution reported by the Committee on Rules afforded opportunity for full public discussion. The action of the House in laying any bill or resolution on the table is exactly the same as a vote taken resulting in the defeat of such bill or resolution.

National Defense.

EXTENSION OF REMARKS

HON. FREDERICK C. HICKS,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. HICKS. Mr. Speaker, a nation's honor, the protection of its citizens, and the perpetuation of its institutions are not party questions or the foibles of personal ambition. Motives such as these should not actuate our judgment or sway our

opinion on the subject now before us.

"Government means authority, and in the last analysis all government rests upon force." The true purpose of a democratic government is best expressed in the preamble to the Constitution of the United States "to establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity." With that admonition of the fathers selves and our posterity. With that administration of the fathers before us, with the history of other nations as a chart for our guidance, it is our duty to determine whether or not adequate provision has been made for the "common defense" and if the Nation is prepared to defend itself should trouble arise during

or after the present conflict in Europe.

During the past half century our increase in wealth and popu-During the past hair century our increase in weathr and population has been so marvelous and our success in surmouting every crisis so easily attained that many of our people are obsessed with the belief that we can continue on our course unmindful of every precaution, heedless to every warning, indifferent to all the danger signals which the experience of other countries flash across our path. The long interval of peace enjoyed by the Republic since the close of the Civil War—intervanted only by the relatively unimportant War with Spain—led rupted only by the relatively unimportant War with Spain-led many to believe that war was a thing of the past, or at least so remotely improbable that it was useless to make any preparation against the possibility of trouble. Many have maintained that peace or war was a matter for us alone to decide; while others argued that the surrounding oceans gave us adequate protection. The conflict in Europe has dispelled the delusion regarding universal peace—wars are neither impossible or improbable; steam, electricity, and the skill of the shipbuilder has all but destroyed the protection which the Atlantic and Pacific formerly afforded; and no sane man can harbor the belief that when the hour emission for some man can harbor the belief that when the hour arrives for some nation to strike, either because of some grievance, real or fancied, or in defiance of the Monroe doctrine, that such nation will give us time to prepare. Another reason for our lethargy is due to the enermous

size and wealth of our country which has led us to confuse and mistake military resources for military strength.

From all sections of the country comes a demand for a larger and more efficient national defense, and it is our duty as trustees of the interests of the people to adopt measures of real preparedness-preparedness that will protect. Our citizens will

preparedness—preparedness that will protect. Our citizens was be satisfied with nothing short of it and they demand it now. Preparation will be costly; no one denies that. It can not be otherwise, but I prefer to spend millions for defense rather than billions for tribute. This country is great enough and rich enough to provide it. Fire departments, police forces, lifeboats, and quarantine stations are necessary, but the funds expended in their upkeep is money well spent. The premium we pended in their upkeep is money well spent. The premium we pay on our fire-insurance policy may seem like money wasted, but it is protection—a safeguard for the future. In my judg-ment a more efficient and effectual marshaling of the forces of defense for this country is also necessary. We trust they will never be called into action, and that the great insurance policy thus created may never be collected. It is protection, and we can consider the premium we pay each year as part of a huge guaranty fund.

My vote in favor of preparedness will be recorded in the firm conviction that it is the surest guarantee of peace. Some maintain that military and naval strength may be the cause of provoking war. I challenge that statement. Do quarantine stations spread disease? Do lifeboats hanging at a ship's davits make storms more liable? Do safety devices on rail-road trains increase the number of accidents? No; and proper defense of this country will not make war more imminent. Were we a Nation seeking additional territory or world power, military and naval strength might be a means of provoking hostilities, but while we remain true to the spirit and the letter of our institutions and our ideals and continue as the standard bearer of liberty and justice we need have no fear that we are paving the way for a cataclysm of blood. As the Hon. Oscar Strauss has so eloquently said:

Oscar Strauss has so eloquently said:

I deny emphatically that preparedness leads to war. I assert with deep conviction that thorough preparedness on the part of America will be the best guarantee that the world can have that there will be no more wars. If it's possible for this country to be threatened by war—and who can say that it is not possible—can such a calamity be better averted by weakness or by strength? If it is possible for this world to be delivered from the fearfulness of war—and who can say that it is not possible—can such a universal benediction be pronounced by any other nation than America? And can America enforce such a world peace by weakness or by strength?

Surmounting the great dome above us, standing as a beacon on the highway of civilization, rises the majestic figure of Liberty. It is the masterpiece of an inspired genius. One hand of that noble statue supports a shield while the other grasps a sword. It is liberty—liberty armed and prepared. Could those eyes of bronze have vision, they would behold on the banks of the Potomac Mount Vernon, beautiful and peaceful; and could those eyes penetrate the hallowed light of those rooms they would see two swords hanging upon the walls above which is this inscription, taken from the last will and testament of George Washington:

To each of my nephews I give one of the swords of which I may die possessed. These swords are accompanied with an injunction not to unsheath them for the purpose of shedding blood except it be for self-defense, or in defense of their country and its rights, and in the latter case to keep them unsheathed and prefer falling with them in their hands to the relinquishment thereof.

To those who may rely on the past for guidance in the future let me quote from Washington's second inaugural address, when

The United States ought not to indulge a persuasion that contrary to the order of human events they will forever keep at a distance those painful appeals to arms with which every other nation abounds. There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness.

I would be unmindful of the faith of my fathers and forgetful of the environment in which I was born and reared were I not to utter a fervent prayer that peace, peace and good will to men, would forever be the blessing of this Nation. I would be untrue to myself were I to hope for less. But we are living in times not of our own making, surrounded by conditions not of our own choosing, and so long as hate and jealousy and envy play on the heartstrings of mankind we owe a duty to ourselves and to unborn generations to protect and defend our heritage of democracy. We are no longer an isolated Nation, and whether we will it or not we must play our part in the progress of civilization and be willing to meet its probelms. With our vast foreign trade now receiving a mighty impetus from South America; with our citizens scattered over the whole earth; with our interests interwoven with the interests of all the nations on the globe; with the whole economic structure of Europe being swept away in the conflict now raging, we must not think that the lits location and choose its time of fighting. I am in favor of a seas will shield us from the issues which confront us and which large fleet of submarines and destroyers, vessels of light draft

with increasing force will demand our attention. We can not shirk; we must not fail in the duties imposed upon us by our position in the family of nations.

We hear much these days of what the Government is doing for the people and little as to what the people are doing for the Government. I approve of Government aid and assistance in the various fields of our activities, but in the mad rush of our prosperity we are apt to forget our obligations to the State. A nation's greatest asset, whether in peace or in war, is the patriotism of her people and the willingness with which they assume and carry forward the responsibilities of citizenship. this connection let me quote an editorial from the Philadelphia Ledger of March 13:

Hedger of March 13:

What the Nation needs is a new birth of patriotism in order that citizens may understand and appreciate the obligations of their citizenship. There are men who say that the right to vote and the obligation of military service should be inseparable; that if a man is not willing to train himself to take up arms to defend the Nation he should have no share in its government. As a general proposition this is sound, but it can never be applied in the United States. Some way must be found, however, to impress upon the men of military age and upon their employers the duty of assisting in the formation of a large reserve force of trained men. The Regular Army is the proper first line of defense. A second line, composed of trained reserves ready for instant service on the call of the President, will find us ready for quick action when any action is needed. Then the State troops would very well form a third line of defense, which could have ample time for preparation after the first alarm. And the fourth reserve body would be the great mass of untrained citizens who would be called upon to volunteer after the other reserves had taken the field.

Peace-ves, peace-with honor to our institutions and honor to ourselves on land and sea; but national weakness does not make for peace; treaty stipulations do not guarantee it; precepts of international law do not assure it; 3,000 miles of ocean will not make it absolute. Let the dream of universal arbitration and disarmament remain the goal of our aspirations, the hope of a coming day; but while conditions are as they are and while men are actuated by greed and avarice, we must be willing and ready to meet with force, if need be, the aggressor and the trespasser upon our rights. Might that is wrong must be met by might that is right. General disarmament must be the desire of every thoughtful man, but for a rich and prosperous nation to disarm alone and remain unprotected in the midst of an armed world would invite trouble and disaster. As Senator Lodge has said:

Unarmed, unready, undefended, we offer a standing invitation to aggression and attack and the idea that we can meet all dangers by springing to arms when the moment comes is a dream so wild that it would be grotesque if it were not tragic.

It may be asked, What danger threatens? I do not know; I trust there is none. We expect no war; we anticipate no trouble; but good judgment dictates that we prepare the country for any emergency which might arise.

Let us approach this question calmly as courageous, patriotic citizens. We should not be led astray by the jingo, clamoring for a great standing army and the most powerful navy on earth, neither should we be lulled to sleep by the memories of the glorious deeds of seventy-six, thinking that in the modern method of warfare we can spring to arms at a moment's notice and stand up against rapid-fire guns and long-range artillery. Molly Pitcher ramming last year's almanacs down the mouth of a smooth-bore gun will not win any battles in the twentieth century. Patriotism is as virile and as deeply impregnated in the hearts of our people to-day as it has ever been in our history, but patriotism must be tempered with judgment and supported by organization which will make effective the enthusiasm and devotion of our citizens. There is a middle course, which avoids the evil of one extreme and lessens the danger of the other—efficient preparedness for defense. This is not militarism. If it was, I would oppose it. Preparedness is no more militarism than an efficient police force is autocracy. It does not mean war against any nation nor war for any nation; it is simply protection for the homes and hearthstones of our people.

Our military arm should be strengthened by providing for a larger army both in actual service and in reserve, by the estab-lishment of military courses in our colleges and institutions of learning, and by providing training camps for drills and maneuvers.

But, above all, we should enlarge our Navy and increase the means of defending our coasts and harbors. We need more battleships, more cruisers, more submarines, more destroyers, more men, and we want them now. We should have ships of great speed, mounting heavy long-range guns. A few years ago an indicated horsepower of 25,000 on a battleship was considered enormous. To-day England is building ships with a horsepower of 60,000. Speed and range of guntire are all-essential features in naval warfare, for it enables the ship possessing them to pick its location and choose its time of fighting. I am in favor of a

and small cost, in comparison to the dreadnaughts, which can be quickly mobilized at points along the coast and at the harbor entrances. We should also increase our Coast Artillery and have on hand both for the Army and Navy an adequate supply of ammunition and arms.

The great need is and will be for properly trained officers. We have already increased the facilities at Annapolis and to a smaller extent at West Point, I doubt if these will be sufficient. I can not divorce myself of the idea that instead of greatly augmenting the quarters at West Point, it would be better to establish other training academies, located in various parts of the country. What better institution could be selected than the Virginia Military Institution at Lexington, provided the Government could arrange with the State of Virginia for the transfer of this splendid college? Here is an institution possessed of traditions second only to West Point; here lie buried in state two great leaders of the South, Gen. Lee and Gen. Jackson; here is an institution with a course of training equal to that of the National Military Academy. By acquiring this college and incorporating it into the Federal training system we would accomplish two things-the increase of our facilities without loss of time necessary to erect buildings and complete an organization, and the closer cementing of the ties between the North and South. Later it might be found feasible to establish a "West Point" in the Mississippi Valley and another on the Pacific coast, so that all sections of the country could feel they were represented in the plan of protection.

That our Atlantic seaboard is not now adequately protected is evidenced by the following letter from Admiral Dewey:

OFFICE OF THE ADMIRAL OF THE NAYY,
Washington, January 5, 1916.

Dear Mr. Hicks: I beg to acknowledge receipt of your letter of
January 2, asking if, in my opinion, the shores of Long Island are
not easily accessible for the landing of troops from an enemy's ship,
and also how can we best protect those shores.

In my opinion the whole south coast of Long Island would present
an easy landing place for an enemy, and the Navy alone can prevent
landings, and that Navy must be strong enough to defeat the enemy.
The Navy, therefore, must ever remain our first and best line of
defense. This defense, unless adequate, is impotent; and adequacy
is not reached until the Navy is strong enough to meet on equal
terms the navy of the strongest probable adversary.

Very truly, yours,

We on Long Island, with our exposed and unprotected coasts, our rich farm lands and prosperous communities, and our proximity to New York City, the objective point of any invading force, can especially appreciate the urgent necessity of adequate de-

America is a Nation of many creeds and many races. To those from lands across the sea we have extended a hand of welcome: we have inspired these pioneers with hope; we have offered them the opportunity of sharing our prosperity. They have been potent factors in developing and carrying forward our ever-advancing civilization, and are part of the bone and sinew of America itself. They have adopted our traditions and stand with us, guardians of the destinies of America. I can not think, will not believe, that these sturdy sons from other shores, whose patriotism has never been doubted in the past, will ever be untrue to the spirit of America or disloyal to the flag under which they live.

This question of preparedness is a national one. It is a call to duty—a call that comes to us from every sculptured stone or lettered tablet that has been reared to the memory of those who made sacrifices for their country and their country's honor.

We pray for peace and raise our voices to the God of Hosts in earnest supplication that our children and our children's children may be forever free from the horrors of war, but we stand for the rights and the honor of our Republic, and the man whose heart does not beat a little faster when he hears the strains of the Star-Spangled Banner or is not animated with sincere patriotism and undying love for country when Old Glory is raised to its "place in the sun" is unworthy of being an American citizen.

Bring me men to match my mountains;
Bring me men to match my plains—
Men with empires in their purpose
And new eras in their brains.
Ploneers to clear thought's marshland
And to cleanse old errors few.
Bring me men to match my mountains;
Bring me men to ring me men Bring me men; bring me men.

NAVAL AND MILITARY STATISTICS. The Navy. STRENGTH.

The following data were taken from a document entitled "Information Concerning Some of the Principal Navies of the

World," an official publication of the United States Navy Department:

Relative standing at outbreak of European war.

Present order (tonnage completed).		As would be the case if vessels now building were completed.

SOME REQUIREMENTS OF THE ATLANTIC FLEET.

[Extract from the report of Admiral F. F. Fletcher, commander in chief of the Atlantic Fleet, Aug. 15, 1916.]

RESUMÉ.

In brief, the principal (1)
follows:

(a) Shortage of officers.
(b) Shortage of men.
(c) Lack of fast armored ships and fast light cruisers.
(d) Limitations of mobility and seagoing qualities of submarines.
(e) Lack of aircraft.
(f) Lack of radio direction finder.
(g) Too frequent overhaul of battleships.
(h) Necessity of maintaining complements in active ships of the fleet. In brief, the principal weaknesses and requirements of the fleet are as

(i) Need of additional mining and sweeping vessels.
(j) Desirability of mobilizing ships in reserve annually with the active fleet.
(k) Need of battle target practice at long ranges.
(l) Necessity for increased facilities at fleet rendezvous.
(m) Provision for division commanders for mining division and auxiliary division.
(n) Provision for more speed in design of fighting craft intended to operate with the fleet.
(o) Need of antiaircraft guns.

Naval expenditures of the principal naval powers of the world.

COAST FORTIFICATIONS.

AMMUNITION SHORTAGE (SEACOAST GUNS).

[Extract from the report of the Chief of Staff, United States Army, 1914.]

There is a serious deficiency, however, in ammunition for these coast defenses, the supply which the department has been attempting to maintain being on the basis of approximately an hour's full and active operation of the guns in the United States proper and a two hours' full and active operation of the guns in oversea fortifications. According to the report of the Chief of Coast Artillery, the amount of ammunition now available and provided for by appropriations is equal to about 73 per cent of this requirement for the guns and 50 per cent for the mortars.

mortars.

[Extract from the report of the Chief of Staff, United States Army, Oct. 15, 1915.]

The full effectiveness of the existing seasonst armament can not be attained under present conditions, because of the shortages in the supply of the essential accessories, such as ammunition, searchlights, and fire control. Of the latter deficiencies, that of ammunition is the most serious, as the total supply on hand is only about three-fourths, of the so-called one hour's allowance. That allowance is deemed

wholly inadequate, and no material measure of relief will be afforded unless future appropriations for ammunition are greatly in excess of the annual appropriations for that purpose that have been made

of the annual appropriations of the submarine-mine matériel required for the mine defenses is another urgent need. This matériel should be maintained at all times in a state of preparedness for immediate service, as naval attacks upon our seacoast cities may occur coincidently with or even may precede a formal declaration of war.

EXPOSURE OF OUR SEACOAST CITIES.

EXPOSURE OF OUR SEACOAST CITIES.

[Extracts from the testimony of Brig. Gen. E. M. Weaver, United States Army, Chief of Coast Artillery, before the Committee on Military Affairs of the House of Representatives, Jan. 19, 1916.]

Gen. Weaver, I am going this afternoon before the fortifications committee to urge additional fortifications, the necessity of which has been brought about by the evolution of naval attack. These new fortifications include those at Cape Henry, Rockaway Beach, San Francisco, and one or two other places.

Gen. Weaver. When we mounted guns at Fort Hamilton and Fort Wadsworth and at Sandy Hook it was not thought that ships could stand outside of Rockaway Beach and fire over the whole width of Long Island and Brooklyn and reach New York City. There were no guns mounted that could do that at that time. Now there are, A ship could do that and be beyond the range of any gun we have mounted.

SHORTAGE OF MEN FOR SEACOAST GUNS.

SHORTAGE OF MEN FOR SEACOAST GUNS.

[Extracts from the report of the Chief of Coast Artillery, United States Army, Oct. 2, 1915.]

As the defenses outside of continental United States have been completed and made ready for their garrisons, it has been necessary to transfer to these a considerable number of Coast Artillery troops from the home fortifications are complete, 291 officers and 6,800 men will be required for duty outside of the United States. This will leave in the United States only 410 officers and 12,219 men, which is approximately 44 per cent of the officers and 53 per cent of the enlisted men necessary for providing a minhuma manning body for all mines and for that one-half of the guns and mortars which it is contemplated shall be manned by Regular troops.

Apart from this, the action of the coast States has been most discouraging in their failure to provide Coast Artillery personnel from the State forces for the manning body of the other half of the gun and mortar batteries in the United States. Of the 711 officers and 17,329 enlisted men, which it was hoped and expected the States would furnish for this purpose, there were, at the 1915 annual inspection, only 440 officers and 7,438 enlisted men organized and available (p. 4).

At the present time many of the coast fortifications have been so stripped of the personnel that they have been placed in the hands of caretakers, who can only keep the material in serviceable condition. The garrisons for the coast defenses of Portsmouth, the Delaware, the Potomac, the Cape Fear, Charleston, Key West, Tampa, Mobile, Galveston, and the Columbia are greatly below what they should be under the policy which contemplates that one-half of the guns and mortars be manned by Regular troops.

Jewish Immigration.

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON.

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 30, 1916.

Mr. HUDDLESTON. Mr. Speaker, the city of Birmingham, in which I reside, has a Jewish population of between three and four thousand. Quite a number of these are French, German, Bohemian, and Austrian Jews and their descendants, and have been in America for 20 years or more. The remainder of our Jewish population is Russian in origin, with a few from the Balkan countries.

While residing in that city for 25 years and being actively engaged in practice as a lawyer, it has been my good fortune to associate intimately with its Jewish population. Prior to my retiring from practice I had a large clientage among these people; in fact, most of them were my clients. In representing Jewish clients I necessarily became intimately acquainted with them, with their racial characteristics, with their families, and their domestic affairs. I formed many warm and lasting friendships with Jews.

During the latter years of my practice I had associated with me as a junior partner one of the brightest of the younger lawyers of my city. He was a Jew. of German extraction, and was in every respect a splendid type of the American Jew; refined, honest, courageous, brainy, and kind.

The warm friendships which I have among the Jewish people have brought me into close relations with them. I flatter my-self that I know the Jews. I think I know their good qualities; I am also conscious of their weaknesses, for, of course, like all humanity, they have their weaknesses.

I have visited many Jewish homes as a guest. I have partaken of their generous hospitality, have sat with them at the family table, have eaten the wholesome kosher food, as well as

the splendid fare found on the tables of those who are not so strict in the orthodox faith. To be honest, I believe I like the kosher victuals best.

From my own knowledge of the Jewish race, which, as I have stated, has been most intimate both as to the reformed and orthodox faiths, I assert that the Jews constitute a most important element of our citizenship and one which America could illy afford to be without. There are many who admire the financial instinct of the Jews, and those who are ignorant of the real soul of the Jew imagine that money is the big thing in their lives. But I know the Jews well enough to know that this is not true. The big thing in the life of a Jew is his family life—his wife, his children, and his home. I assert that there is no element of our people in America who have such tender and devoted domestic relations as our Jewish population. Strife and discord never enter the true Jewish home.

Also, I would pay tribute to the Jew's benevolence, to his fraternal instinct, and to his love for mankind; and there is the poetry of the Jewish soul, its music, its art, its inspiration.

In November, 1914, after I had been elected to Congress and just before I was to leave my city for Washington to take up the study of my official duties, I was the guest at a dinner given by my good friend Himon Abromson. The pleasure of the occasion was very great. I was well acquainted in the home of my friend, who is a Jew. The other guests were Jews, and all were of the orthodox faith and all my intimate personal friends.

Mr. Abromson was born in Russia of poor parents and came to America alone, and practically destitute, when little more than a boy. By industry and honest and fair dealing he has made a success in our country, has amassed a competence, and now, in his middle manhood, is a substantial property owner and has a prosperous business, but still continues to reside in the modes home in my city which he has occupied for a number of years. I look upon him not merely as my warm personal friend, but as a splendid citizen, a man of exemplary habits and character, and a solid and substantial man in every respect, whose word is as good as his bond.

As we sat at the table and partook of the palatable kosher food at the November dinner our host related to his guests some of his experiences as a boy in far-away Russia and told us of his early struggles and of the hard life of Jews in that land of oppression. After discoursing upon this subject for some time Mr. Abromson arose to his feet and, addressing his remarks to me said:

We have elected our friend to represent us in Congress at Washington, and in a few days he is to go away to take up his duties. He is known to every Jew in this city as the friend of the Jews, and they are his friends. We have one appeal to make to him—that is, that in his public life he will not forget the sufferings of our kinsfolk in Russia.

Naturally I was much touched by the incident. I could not have done less than to make an appreciative response. I then stated to my friends who were present, for I understood the full significance of what had been said:

I will never vote to keep the poor persecuted Russian Jews out of America.

The pledge which I gave on that occasion was given deliberately and is a sacred one in my eyes. I shall not violate it.

When the Burnett immigration bill was presented to Congress

I was anxious to observe its provisions as applicable to the Russian Jews. I had heard much of the literacy test and read this with some apprehension. This test provides that no immi-grant over 16 years of age shall be admitted who can not read in English, Hebrew, Yiddish, or some other language or dialect as much as 30 ordinary words in plain type. This provision, while not harsh, is modified by the provision that any immigrant now in the United States or who may hereafter be admitted may bring in or send for his ancestors whether they can read or not. However, the provision of the bill upon which I set most store is that which provides that all immigrants shall be admitted when they come to this country to avoid religious persecution, whether such persecution be by overt acts or by laws or governmental regulations. I was glad when I found this provision in the Burnett bill, for I realized that under it all Jews could come in and that only the ignorant of other races would be excluded. Nearly all Jews, even those who have had the poorest opportunities, can read a little Yiddish. There are very few of them who would be excluded as unable to read. However, the provision as to religious persecution opens wide the door to Jewish immigrants, and all Jews who wish may come to America.

It is the source of great pleasure to me that I am able to keep my pledge to my friends among the Jews and at the same time to perform my duty toward the working classes of the country, and because of the provisions of the Burnett bill, which are so liberal toward the Jews, I will support that measure.

There can be no doubt that as a general proposition immigration to our country should be restricted. I do not look upon the literacy test as being fair in all respects. I do not look upon it as being effective, because it will not keep out those who will come into competition with skilled labor. It will keep out only the common laborer, and I very strongly believe that the common laborer needs protection as well as anyone else. Still the restriction will help some.

The first duty of a Member of Congress is toward those who are already in America, and their welfare should be his first concern. I am willing for the foreigner to come when he is honest and respectable, but no criminals should be admitted. I do not think that we should admit foreigners in such floods as would drown out American ideals and institutions. I think we should admit them in such numbers only as we are able to digest and to assimilate into American citizenship.

The interest of the immigrant who is already here and who has identified himself with our country demands that immigrants shall not be admitted in such numbers as to reduce him to destitution by competition in labor and to destroy his opportunity to make a living for himself and to have a future in our great new country.

Immigration.

EXTENSION OF REMARKS

HON. WILLIAM SCHLEY HOWARD,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 30, 1916.

Mr. HOWARD. Mr. Speaker, this is a great day for the fulfillment of campaign pledges, both parties being able to vote almost as a unit upon this bill for the restriction of immigration in conformity with those pledges.

It is a source of much gratification to me that the President of the United States will have another opportunity to pass upon a measure that has been directly before the American people in the last election, and they have again approved the course of those of us who voted for this measure in the last Congress.

The guiding influence that controlled the President in his veto message was his fear that the American people had not demanded so restrictive a measure as the Burnett bill. He need have no such fear to-day. The people have spoken from one end of the country to the other, and they have said that they need and want this legislation.

The farmers in all of their organizations have said they want it. The labor organizations have said they want and need it to protect their dinner pail and the American workingmen's standard of living. The railroad organizations have said they want it. The patriotic organizations from one end of the country to the other say they want it.

The people as a great mass have said they want it by returning to this body practically every man who voted for the Burnett bill in the last Congress, and the places of those who voted for it and failed to return have been taken by men who will unhesitatingly cast their vote for this bill to-day.

No man can tell what the effect of the European war will be upon the influx of immigration to our shores, whether when the war is ended it will be increased or decreased. Those in favor of the bill will tell you that thousands upon thousands will seek our peaceful shores to escape the awful burden of taxation and the almost insurmountable task of rehabilitation of their devastated countries, while those who oppose the bill will argue that such a drastic bill is not now needed to protect our workingman and our society against the undesirable foreigner, as every man will be needed at home, and the life of the man in Europe will be more remunerative after the war than ever before.

My opinion is that restrictive legislation is imperative at this time. It is human for those who return from the battle fields of Europe to be impelled to fiee from the devastation and ruin, from a burden of taxation that now appalls the world, and seek the advantages to be derived in a prosperous and peaceful land. While it is true that there is a sentimental side to this question, and gentlemen have pictured the poor, ignorant immigrant knocking at our gates of opportunity, only to be refused admission, it is also true that experience is oftentimes a cruel teacher, and we know what a tax upon this country was imposed by the millions who sought our opportunities and our

wages, but who had no interest other than to benefit themselves, and when satisfied returned to their native land with Americanearned dollars to expend in the upbuilding of their own

country.

Gentlemen on the Republican side of the isle are always harping about protection for American industries from the paupermade goods of Europe, yet these very gentlemen are standing here to-day fighting for free immigration that they may bring those very paupers they so malign in the tariff arguments to America to take the place of the native workingman, thereby reducing his wage scale and his standard of living. You have been most selfish in your desire to protect your dividends and your industries, but most ungenerous in your treatment of the American workingman. You want a prohibitive tariff on your manufactured product, but free trade on your labor. Let me say to you gentlemen who are opposing this measure—and I am glad there are so few of you—the red-blooded American laborers are watching your capers upon this bill. The people who have labored to build this great Nation and who have shed their blood that its institutions might be perpetuated will remember your vote on the day of reckoning. They know the motive prompting everyone of you, and they know those motives are selfish and not patriotic.

Some of you gentlemen appear to be outraged at the literacytest provision requiring, among the other qualifications of the
immigrant, that he be able to read 30 words in any one language
on the face of the earth. This is only a selective test after all.
To provide that all immigrants that were red-nosed or snaggletoothed or black-haired should be excluded would have raised
just as many objections as the literacy test. We just feel that
the immigrant who can add only additional ignorance to the
country is undesirable until we wipe out our own illiteracy. To
use a homely illustration: If I am going to make a friend a
present of a watermelon I should at least take the precaution
to "thump" it. That is the test to put to the melon to determine
its fitness for consumption. So we want to "thump" the immigrant's head to see whether he is fit to assimilate with our people and learn our forms of government and become a patriotic,
law-abiding citizen. Certainly gentlemen will not contend that
this is asking too much of a foreigner when we are taxing our
own people to the limit to stamp out illiteracy, so that every
boy and girl in America will at least have a fair start in the

race of life.

Let us in our program of preparedness protect our shores from the ignorant and the lawless. Let us preserve the American standard of living for the native American workingman; let us forever stamp out the "bread line" of idle men, brought about by this horde of surplus labor from Europe. Let us be charitable and broad-minded people, but let our liberality be first showered upon our own people in our own land, and when they have gathered fully unto themselves the blessings our country has afforded, we will be glad to extend the hand of welcome to him who seeks our shores to become one of us and join with us in heart and with hand in loyalty and love of the Stars and Stripes.

Immigration.

EXTENSION OF REMARKS

HON. JOHN JACOB ROGERS,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 30, 1916.

Mr. ROGERS. Mr. Speaker, an immigration bill somewhat similar to the one now before the House was considered by the Sixty-third Congress. It came to a vote on February 4, 1914. On that day (Congressional Record, 63d Cong., 2d sess., p. 2910) I am recorded in favor of a motion the effect of which was to strike out of the bill the so-called literacy test. That same day (Record, p. 2911) I am recorded as voting against the bill itself when it was upon final passage. My primary reason for these votes was because I was definitely opposed to the inclusion of a provision which debarred from our shores foreigners on the sole ground that they were unable to read. Such a test then seemed to me, and still seems, an illogical one, because I could not, and can not, perceive that there is any necessary connection between the usefulness to us in America of a given individual and his ability to read.

The immigration bill is again before the House for consideral after full debate. The Senate measure is now pend tion. I propose to vote as before, against the so-called literacy | the House, and discussion of the subject is germane.

test; even if, however, the literacy test is by vote of the House retained in the bill, I propose to vote in favor of the bill as a whole.

I have come to this conclusion for two reasons:

First. The literacy test comprises three lines of section 3 of the bill and excludes "all aliens over 16 years of age, physically capable of reading, who can not read the English language or some other language or dialect, including Hebrew or Yiddish." The bill further states that such test shall consist of "not less than 30 nor more than 40 words." The bill as a whole includes some 1,550 lines, in practically every one of which, with the exception of the 3 above noted, I heartily concur. I have concluded that the many desirable provisions should outweigh the single one, even though to me that single one is highly objectionable.

Second. My controlling reason, however, is this: Ir February, 1914, when the question was previously before the House, the world was at peace, with not even a single cloud to warn of the impending struggle. Already as we debate this measure the devastating conflict has continued a year and eight months, with no immediate prospect of its conclusion. When the war at length does come to an end, what will be the effect upon the immigration problem? No one can say with absolute confidence. But it is clear, at least, that after the war taxes in Europe will be cruelly high, the cost of foodstuffs and necessaries of life greatly advanced over normal peace prices, and wages by no means commensurate with the needs of the wage earner. Under these circumstances, is it not highly probable that the United States will, more than ever before, appear a "promised land" to myriads of war-tossed individuals, who will throng by hundreds of thousands, and perhaps by millions, to our shores? It is, and I trust it always will be, a source of pride to the American people, that our country is regarded as a haven and an asylum to the oppressed of Europe. But it is not kindness, either to those who are already here and whose interests we must cherish first of all or to those who may come to our shores at the close of the war, to permit a flood of immigration larger than the country can readily assimilate. In 6 out of the 10 years ending 1914 our immigration exceeded a million persons per year. It has been, I think, increasingly clear that this number certainly equals, and perhaps exceeds, the number which we can care for. As I said a moment ago, it seems to me that the balance of probability is heavily that the end of the war will be succeeded closely by a flood tide of immigration far exceeding any which we have previously known. Under these circumstances, I believe it to be the duty of Congress, in order wisely to promote the test and ultimate interests of our people, present and future, to take a step now, while there is yet time, which will result in a reasonable restriction of immigration. The literacy test, even though unscientific and illogical, will undoubtedly restrict. Aside from the literacy test, the bill as a whole will undoubtedly add to our laws many provisions which are skillfully designed to improve our general scheme of immigration control. For this reason, weighing the good and the bad, I am willing to cast my vote in favor of the bill, ir. spite of my serious objection to the literacy clause thereof. We can not always, in the world or in Congress, have a question presented as we would wish. We must decide yes or no on the proposition before us, not on the proposition we would like to have before us. This immigration bill, not some other better bill, is before us for rejection or acceptance. I prefer, with conditions in the world as they are to-day, to have the Burnett bill the law of the land rather than to have the present law retained, perhaps indefinitely.

Government Manufacture of Armor.

EXTENSION OF REMARKS

OF HIBRITI

HON. GEORGE HUDDLESTON.

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 1, 1916.

Mr. HUDDLESTON. Mr. Speaker, at the beginning of the present session of Congress on December 14, 1915, I introduced a bill providing for the erection of a Government plant for the manufacture of armor, at Birmingham, Ala., and this bill is now pending before the House Committee on Naval Affairs. The erection of a Government plant has also been under consideration in the Senate. A bill offered by Senator TILLMAN to construct an armor plant has recently been passed by the Senate after full debate. The Senate measure is now pending before the House, and discussion of the subject is germane.

Whether the Government shall enter into the manufacture of armor for its war vessels is a matter which involves questions of public policy and of saving the taxpayers money. Is it for the public welfare that the Government should manufacture armor for its warships? Can the Government manufacture armor cheaper than it can be bought from private concerns? My conclusions are in the affirmative on both these points.

MONEY CAN BE SAVED.

There is no real competition between the armor-plate makers. The law requires that all armor used on our war vessels shall be manufactured in the United States. There are only three firms engaged in this business in the entire country. They are the Bethlehem Steel Co., the Carnegie Steel Co., and the Midvale Steel Co. All these plants are located near Philadelphia, Pa.

The Government is restricted by law to purchases from these companies. This gives the three firms a monopoly, and in itself would destroy all competition between them. But it is evident that the firms have agreed among themselves as to the prices

which they will charge the Government.

The Bethlehem Co. went into the business in 1887, and down to 1915, inclusive, has sold the Government 95,007 tons of armor, at an average price of \$445.70 per ton, receiving therefor \$42,344,937. The lowest price which it has ever charged was \$345.84 per ton in 1906. The Carnegie Co. began furnishing \$345.84 per ton in 1906. armor in 1891, and to 1915 we had purchased of them 89.933 tons of armor, at an average of \$442.36 per ton, or a total of \$39,783,497. The Midvale Steel Co. entered the business in 1903, and to 1915 had sold the Government 48,399 tons of armor, at an average price of \$420.99 per ton, receiving \$20,375,858 of the public money. A total cf \$102,504,292 has been paid out of the Treasury for armor plate.

The Carnegie Co. and the Bethlehem Co. agreed between themselves on the price from the very beginning. The Midvale Co. made its first bid for armor in 1900 at \$438 per ton. This company had no plant at the time it made the bid, but expected to construct a plant if its bid were accepted. The naval authorities declined to consider the bid and awarded the contract to the Carnegie and Bethlehem companies at \$490 per ton. Midvale Co. thereupon proceeded to build a plant, and in 1903 made a bid of \$398 per ton. The result was an award of one-third of a 16,000-ton contract to Midvale on its bid and onethird of the contract each to the Carnegie and Bethlehem firms at \$453.60 per ton. In 1905 and in subsequent years Midvale was the lowest bidder, but the contracts were always divided among the three firms, with usually some discrimination against the Midvale Co., apparently as a punishment for coming into the business and offering competitive prices.

Naturally the Midvale Co. soon ceased trying to underbid, and sought only its share of the contracts at the prevailing price. In 1913 the three companies put in bids identical to a cent. This was evidently not a coincidence, but was the result of an agreement which any court would have held to be fraudu-

lent.

The Government must have armor. It must buy it from these three concerns. They are the only firms which can manufacture it. The Carnegie Co. and the Bethlehem Co. have always been in harmony as to price, and the course of the naval authorities has forced the Midvale Co., which showed a disposition to compete honestly, to come to an understanding with the two other companies. An Armor Trust, secure in a monopoly of armor is the result. No intelligent man can believe that there is any competition in the business.

The situation surrounding armor making makes economy in cost impossible. The three plants have a total capacity of 30,000 tons per annum—Bethlehem, 12,500 tons; Carnegie, 10,000 tons; Midvale, 7,500 tons. The total value of the plants is estimated at from fourteen to eighteen million dollars. not making armor the plants are forced to remain in idleness, as they are not suited to other kinds of work. Nothing but armor can be manufactured at an armor plant. The cost of making armor is shown to be from \$60 to \$100 per ton greater when the plant is working at from one-third to one-half full capacity. In other words, if a 10,000-ton plant has a 10,000ton contract, it can manufacture armor about \$100 per ton cheaper than if it had a contract of 3,000 tons.

When an armor plant has no contracts it must be shut down. Its highly skilled force of employees are scattered unless the company has other steel works in which they may be employed. The necessary result is that to retain the force of labor, great expense is incurred. There is also constant and rapid depreciation in an idle plant and the interest upon the investment, with

taxes and other charges, run very high.

For these reasons an armor maker must make his contracts upon a basis which allows a profit, not merely for the work

done, but for the risk and hazard of an idle plant, a scattered force, and overhead charges. He must not only allow for a profit while he is at work, but must secure a profit for the time when he is idle. This forces the armor maker to charge an unusual profit on his contracts. The business can scarcely be said to be on a legitimate, orderly basis.

He has only one customer, the Government. The customer has, practically speaking, only one source from which he can buy. Our orders for armor have averaged during the last 10 years not exceeding 16,000 tons per annum, so that on an average the plants have been only about one-half fully occupied. In effect the Government might as well have been paying interest, up-keep, and charges upon a 14-000-ton plant costing eight to ten million dollars, which has been kept idle and It can not be doubted that this fact has greatly increased the cost of armor, an increased cost which in this particular is honest from the manufacturer's standpoint.

Not only have the conditions surrounding armor-making prevented economical operations, and not only has there been no honest competition, but the armor makers have been most avaricious in their dealings with the Government. Unjust and unreasonable prices and profits on armor have been charged. For many years the belief has widely prevailed that the armor makers are overcharging the Government. There has been great dissatisfaction in Congress and over the country on account of this belief. From time to time bills have been introduced authorizing the construction of a Government armor plant. In 1900 an appropriation of \$4,000,000 was made by Congress, and the Secretary was authorized, if he could not obtain armor at a fair price, to erect a plant; but the armor makers found a way to dissuade him from action and new contracts continued to be entered into at the old extortionate prices. A number of investigations have been held under authority of Congress to investigate the subject and to ascertain the reasonable cost of armor. The Niles board, in 1905, found the cost of manufacture to be \$244 per ton.

The most recent investigation of this subject was made in 1915 by a congressional commission composed of Senator B. R. TILLMAN, Representative L. P. PADGETT, and Rear Admiral Joseph Strauss. This commission was directed to investigate the cost of an armor plant, and its report is found in Docu-

ment 1620, of Sixty-third Congress, third session.

The commission held hearings at the plants of the Bethlehem, Carnegie, and Midvale companies, and had before it the officials of the armor makers. These officials, without exception, refused to give any information as to the cost of making armor. Making the excuse that they did not wish to betray their trade secrets to their competitors, they insisted upon the privilege of refusing to answer the questions asked them. These officials knew the purpose of the investigation. They knew that Congress wished to know whether they were making unreasonable profits, and whether it would be cheaper for the Government to manufacture its own armor than to buy it from private concerns. They knew that they had no competitors except each other. Their trade secrets were not asked for, for if they had any such secrets they were fully known to the naval officers who were detailed for the inspection of the armor and the details of its manufacture. All armor is made under close Government inspection and under naval specifications. Besides, the commission asked no questions as to methods of manufacture nor as to any matter which might fairly be considered a trade secret. The questions asked related wholly to items of cost, and this in only a general way. It is evident that the refusal of the officers to answer the questions was not in good faith, and that their real purpose in refusing was to withhold the disclosure that the prices charged were unreasonably high.

During recent hearings before the Senate committee upon the armor-plate bill the officials of the Bethlehem and Midvale firms came forward with an anxious show of being willing to give the information which they had refused only a year before. But when pinned down they insisted on taking as a basis the figures on the cost of armor reported by the 1915 commission and declined to give the facts as to what the actual cost of armor

making was.

These officials made the bold offer to allow an expert accountant to go through their books and report the cost in a confidential way, but made a condition that the cost should not be made public and should not be shown in a public document. This was an impossible condition, for neither Congress nor any governmental department had the right to withhold such in-formation from the public. It happens that the people of the United States are the rulers of this country, and they are entitled to know everything that any Government official knows. Necessarily the offer which involved this impossible condition was declined, as no doubt the officials had intended it should be.

The Tillman commission of 1915 reported that a 20,000-ton armor plant would cost \$10,331,906, and that at such a plant armor could be manufactured for \$230.11 per ton when operated at full capacity; that a 10,000-ton plant could be built for \$6,635,107 and could be operated at a cost of \$262.79 per ton.

The figures of the commission were based upon estimates. This was necessary, because the armor makers had withheld all the facts. A close study and analysis of the items which go to make up the estimate of cost forces the conclusion that the estimate is a liberal one; that it is amply large; that perhaps the estimate of cost of making armor might well be reduced from 10 to 25 per cent. This conclusion is further fortified by the fact that in the recent Senate hearings the armor makers offered to accept the commission's estimates as correct, though they declined to give the public their own actual facts and figures. The estimate must be accepted as amply large, and in all probability 10 to 25 per cent excessive.

Another evidence that the Government has been charged an excessive price is the fact that in 1894 the Bethlehem Co. sold armor to Russia for \$249 per ton, while at the same time, under the contract of March, 1893, it charged the United States \$616.14 per ton for armor. In 1897 Secretary of the Navy Herbert, under authority of Congress, made an investigation as to the cost of armor manufactured, and reported that all labor and materials cost only \$217.78 per ton, and that up to that time the Bethlehem Co. had made sufficient profits out of the Government to pay for

the cost of its entire plant with 22 per cent thereon.

Secretary Daniels in his 1915 report states:
Since the passage of the naval act of June 7, 1900, the Navy Department has spent \$76,195,960 for armor for its ships. It is believed that if the intent of Congress to order the erection of a factory had been carried out at that time the Government would have saved enough money on armor plate to own a plant as large as that owned by all three of the private companies, and in the meantime to have supplied the armor plate for its own ships at a less price than it has been compelied to pay.

It is only fair to say further that when the passage of the bill for Government manufacture of armor was imminent in the Senate the armor makers offered to reduce their price from \$425 per ton, which we are now paying, to \$395 per ton. Subsequently, as an evident bid for public opinion to defeat the bill, they offered to allow their cost sheets to be examined by experts and to accept contracts for a small per cent of profit, to be agreed on. From the course that these gentlemen had previously pursued, however, Congress is warranted in declining to stay action on the bill, for if the opportunity to pass the bill escapes it may be found convenient to withdraw the armor makers' generous offer of cooperation. This view is supported by the fact that officials of at least one of the armor makers threatened, if the bill was passed, that pending the crection of the plant the armor makers would require the Government to pay an increase of \$200 per ton on armor, so that when the Government plant was ready for operation the armor makers would have been paid the full value of their plants from this excessive profit.

In view of the foregoing considerations it seems impossible to escape the conclusion that money for the Public Treasury could be saved by Government manufacture of armor. In this connection attention is called to the great saving which has resulted from Government manufacture of munitions. A few years ago the Government paid \$1 per pound for powder. It is now producing just as good powder at the Indian Head works for 34 cents per pound, including all overhead charges and interest on the plant. Even the private powder makers are now selling powder for as low as 53 cents per pound. In 1913 the War Department purchased 7,000 4.7-inch shrapnel at \$25,26 each. At the same time the same shrapnel was being manufactured at the Government works for \$15.45 each. For 3.8-inch shrapnel \$17.50 was paid, compared to the cost of Government manufacture, \$7.94. Caissons for gun carriages are manufactured at Rock Island for \$1,128.67. Private concerns charge \$1.744.10 for these caissons. Many other similar comparisons might be made. For instance, 14-inch guns are made at Government works for something less than \$60,000 each. Some months ago Midvale and Bethlehem asked \$79,000 each for these guns.

Government manufacture gives better wages and conditions for labor. It gives honest manufacture, no shams and frauds. It cuts out the big items of profit, of waste, of interest on watered stock and fraudulent bonds. It eliminates all the evils inherent in big business.

The specifications under which armor is made are as difficult as human ingenuity can devise. It is safe to assert that the cost of armor is greatly increased by specifications which add little, if anything, to the value of the armor. The naval authorities do not concern themselves with cost. They are concerned with quality alone. A specification or test, which adds very slightly to the strength of the armor, is imposed, although

it may tremendously increase the difficulty and cost of manufacture. The specifications are too theoretical and not sufficiently practical. If the Government were making its own armor at its own plant, it is safe to say that the tests would be practical in every instance. Fancy tests and extreme specifications would be moderated. Even if private manufacture is to be continued, changes in these respects are much to be desired.

THE PUBLIC WELFARE DEMANDS GOVERNMENT ARMOR MAKING.

I have called attention to the fact that the enormous sum of over one hundred millions has been spent by the Government upon armor for its ships. The chief part of this has been spent within the last 10 years, during the development of our Navy. The profits upon these contracts for armor have been many millions, and have been a great temptation to the firms engaged in the business. These firms have always been in close touch with our Navy Department. In numerous instances naval officers have resigned their commissions in order to take employment with the armor makers. The relations between our naval authorities and the armor makers have been most intimate. The armor makers have had their champions in Congress. They have never lacked for a spokesman and a defender. Without any intimation that there has been corruption, it may be asserted with the utmost confidence that the big interests engaged in this business have exerted a tremendous influence upon Congress and Government officials.

The men who make armor are human like the rest of us. The influence which they have exerted upon the Government has been a selfish influence and for the advancement of their own interests. The armor makers are not less selfish than other men who are in business not for pleasure or patriotism but for

what they can get out of it.

A close study of the development of our Navy discloses the influence of the armor maker. I refer to the Congressional. RECORD of March 20, 1916, and to the article of one who is said to be the foremost British expert, Arthur H. Pollen, upon the needs of our Navy. This article calls attention in the most emphatic way to the fact that our Navy is lop-sided in heavy We have ample armored ships for our defense, but there is a deficiency in fast cruisers and other unarmored vessels. In the British Navy there are four cruisers and seven destroyers to each capital ship. The United States at present has no battle cruisers and its few armored cruisers are comparatively slow and out of date. It is also woefully deficient in destroyers. According to the new preparedness program, in 1925 we are to have 27 battleships, 41 cruising craft, and 108 destroyers. This will give us 1½ cruisers and 3½ destroyers to each capital ship. To put our fleet on the British basis, which, it must be admitted, is as near perfection as human ingenuity and experience can devise, our program when completed will leave us 120 cruisers and 100 destroyers short of the number we should have for our capital ships, so that our Navy still will be unbalanced in the proportion of armored to unarmored ships.

What significance attaches to the foregoing comparison between our Navy and the British Navy? It is this: The armor makers need business, and they have had enough influence with those influential and in control of increases in our Navy to cause such ships to be built as suited the interests of the armor makers instead of the Navy. The fact as drawn from the experience of other nations is that we already have too many battleships for the number of cruisers that we have. The addition to our Navy should first be made in the way of unarmored cruising vessels. It seems reasonable that at least three-fourths of the proposed entire increase in our Navy should be made in unarmored

vessels.

It is urged that we shall spend \$500,000,000 in an increased naval building program. This is a big stake to be won, and those who play for it will exert their powers to the utmost. With the armor maker eliminated as a selfish interest, it must be admitted by all that there is a better chance that the money will be spent with an eye single to the public welfare.

There has been a great disposition recently to belittle our Army and Navy, to decry the efficiency of our means of defense. It is asserted that we are practically defenseless. A systematic campaign has been carried on to alarm the American people, to inspire them with fear. Our dangers have been grossly magnified and our national perils exaggerated in a shameless manner. Topping this, we have had a dishonest and unpatriotic criticism of our means of defense. We have had "The Battle Cry of Peace," syndicated articles in the newspapers, dishonest editorials, paid lecturers upon the platform, and by every means the ears of the people have been assailed in the effort to make them afraid for the safety of our country.

I do not mean to intimate by this that all the agitation for a larger Army and Navy has been based upon selfish motives.

Many honest arguments have been advanced and many thoughtful and intelligent men, inspired by love of country and the purest principles of patriotism, have insisted that our means of national defense should be strengthened. But to those who have gone below the surface it is very clear that much militaristic clamor, insistence on conscription in time of peace for unnecessary military service, and exaggeration of fears for the public safety has been inspired by selfish motives. There have been a number of selfish organizations, masquerading under patriotic titles, engaged in this work. Some of these selfish organizations have succeeded in bringing into their membership many well-meaning people, whose fears they have played upon and whom they are using to give respectability to the work in which they are engaged. I refer to the Navy League as one of the worst of these organizations.

The moving picture called "The Battle Cry of Peace" is

financed by the Navy League. It is a good picture from the "movie" standpoint, but from the standpoint of honesty, patriotism, and good public morals it is a most shameless ex hibition. Persons not well informed, viewing this terror-inspiring production, tremble at the peril which hangs over our country and are made afraid for our liberties and American institutions. In the skill with which it is designed to rouse the fears of the people in the furtherance of its vicious purpose,

it is hellish in its ingenuity.

The Navy League, which finances this false "Battle Cry of Peace," is an organization which was thoroughly exposed upon the floor of the House by Hon. CLYDE H. TAVENNER, of Illinois, in a speech which he made on December 15, 1915. It was then shown that practically all of the 19 founders of the Navy League were closely allied with the munition makers, Conspicuous among them we find the late J. Pierpont Morgan, chief owner of the Carnegie Co.; the Midvale Steel Co., which appeared in its capacity as corporation and not by any officer; and Charles M. Schwab, the inspiring genius of the Bethlehem Co. Robert M. Thompson, who was one of the founders of the Navy League and is now its president, is also head of the Nickel Trust-nickel being the chief metal used in making armor. Practically all of the leading spirits of this organization were in some way connected with munition making and with the reaping of rich profits from dealing in war materiel.

I insist that the public welfare demands that profits be taken out of the making of war materiel. The temptation is too great for the men who are engaged in that business. They do not want war, perhaps, but they want this Nation for a customer for their products. They want a customer and want the customer to buy. They want big armies and big navies, not wholly for national protection but also to create a demand for their wares. Taken as a whole, the interest which powerful aggregations of wealth have in supplying the Government with munitions makes them dangerous to the public peace. If these gentlemen were taxpayers merely and did not eat from the Public Treasury far more than they contribute to it, they would be conservative, sober influences, tending to restrain national passions and prejudices. As it is, they and their minions and their newspapers and their echoes all over the land become factors of danger.

I would restore these gentlemen to their equilibrium as honest I would place them back in the position of the great mass of the people of this country, which loves peace and finds its greatest profit and welfare in peace with all the world.

Another point which we should have in mind is that so long

we look wholly to private sources for our supply of armor plate, we are not secure that it will be furnished. It would be easy for the ownership of the armor-making companies to pass to foreigners who might belong to nations hostile to our country. It would be a singular predicament if, when war should be imminent, we should find that our enemies had bought up our armor plants and had quietly dismantled them or rendered them ineffective. The public defense, with which many patriotic persons are now so much concerned, is scarcely safe so long as the chief element of it is under the sole control of private parties.

Again, it takes from two to three years to build an armor plant. What would our country do with war declared and the necessity for armored ships apparent if the armor makers should calmly demand \$500 or \$1,000 per ton, or any other extravagant price, for their armor? The ready answer will be "confiscation," this is no answer when you consider that the armor plants are connected with other steel works and are not operated separately, and that after all it is the men who make the armor and who run the business successfully that we would need rather than the mere kaked machines and furnaces. the force that runs the plant scattered and gone, it would take months to make satisfactory armor. Besides, confiscation by

the Government of an armor plant without the consent of the State in which it is located presents almost insuperable legal difficulties.

WHERE THE ARMOR PLANT SHOULD BE LOCATED.

It is my purpose in a brief way to show the advantages of the vicinity of Birmingham, Ala., as the site for a Government armor factory. I am firmly convinced that this section of the country is better suited as the location for a plant of this kind than any other part of the United States. It has every advantage of climate, accessibility, raw materials, labor, transportation, security, and healthfulness.

Birmingham is located in the north-central section of Alabama, in the Appalachian foothills. It is now a rapidly growing city of about 165,000 inhabitants, and is in a rapidly developing industrial section, with ample supply of coal, iron, and other raw materials. This city, founded in 1871, had a growth during the decade prior to 1910 of 245 per cent, which is a fair indication

of the industrial advantages which it affords.

Security from attack should be the first consideration in locating a Government plant. It should not be possible for any sudden raid of an invader to capture the works and to destroy their usefulness. The armor plants now in the United States are all located near Philadelphia. In fact, within a radius of 200 miles of that city are found practically all the works which might be used to supply materials for war. Should an invader overrun this small territory, the balance of the wide expanse of our country would be practically paralyzed for inability to obtain weapons, and so forth, wherewith to fight. Birmingham is about 275 miles from Mobile, which is the nearest seaport, and is some 400 miles from the Atlantic seaboard. The country is of a nature easy for defense. No enemy's raid short of the substantial occupation of the country could ever endanger the plant. It would be far more secure than it could possibly be if located upon the Lakes or in the coast region.

The transportation facilities enjoyed by the Birmingham district are excellent. These facilities consist of nine trunk lines of railroad, giving ready access to every part of the country. Since the completion of Lock 17 on Warrior River we have slackwater navigation to within a few miles of the city. Armor plate manufactured at that point could be barged on slack water to

Mobile at a minimum cost.

It has often been said that Birmingham makes the price of iron for the world. We have immense deposits of red iron ore lying alongside of the Warrior coal field, which affords an unlimited supply of fine coking coal. In places the coal and iron measures are only 2 to 3 miles apart, and intervening is found excellent limestone for fluxing. Large deposits of brown iron ore are also found in the vicinity. The nature of these raw materials and their close proximity has made the situation an ideal one for the manufacture of pig iron. It is claimed that pig iron has been manufactured in the Birmingham district for as low as \$6 per ton, and it is said that under present conditions, with increased labor cost and other increases of a similar nature, our pig-iron cost is about \$8 per ton.

The pig iron used in the Birmingham district is excellent for steel making. In a suburb of the city is located the works of the Tennessee Coal, Iron & Railroad Co., where steel rails are manufactured in large quantities. The coal found in the district yields a fine quality of gas necessary in steel making. There is also an ample water supply and timber, fire clays, and

other raw materials necessary for manufacturing.

In choosing a site for an industry the matter of climate should The healthfulness of Birmingham is well known. be considered. A report for February, 1916, shows the white death rate to be only 10.08 per 1,000 per annum. The summers are not excessively hot. The temperature rarely goes above 87 degrees, and the summer humidity is not nearly so great as in the Ohio Valley. No days in summer are too hot for work. Sunstrokes are unknown. The altitude of the district ranges from 500 to 1,000 feet, and the nights are always comfortably cool. The winters are mild with temperatures rarely below 25 degrees. Farmers frequently plow in January, and all kinds of work may be done in the open air when it is not actually raining.

The growing season of the Birmingham district is long. Gardens are planted in early March and killing frosts rarely occur before the middle of November. Live stock may be kept on pasture during the entire winter. The cost of living as applied to housing, clothing, fuel, and other similar items, is fully 25 per cent less than in the region of the lakes. With the development of the trucking indu try, for which the soil and climate are admirably adapted, fruits, vegetables, poultry, and dairy products should be as cheap as anywhere in the country.

The exceedingly agreeable climate of the Birmingham dis-

trict should make employment in industry in that vicinity highly

attractive to labor. Employment in a manufactory located there would likely be sought by the very best class of native white labor. There are at present in the district many mines, furnaces, pipe works, rolling mills, steel works, railroad shops, and so forth, which have already brought together large numbers of high-class working men, many of whom would no doubt be glad to be employed in a Government plant. There could, under no circumstances, be any shortage of labor.

The community of Birmingham is noted for the progressive qualities of its citizens, and especially for the intelligence and good character of its laboring population. It is provided with ample churches, schools, and other similar institutions. Its people are patriotic and well informed upon public questions. While it retains in a very large measure the old spirit of hospitality for which the South is famous, there is nothing bourbon, reactionary, narrowminded, or exclusive about it. The social life is upon a high moral plane with little of the pretense, affectation, and display usually characteristic of big cities.

If the Government is to go into the business of manufacturing armor plate, and this I am firmly convinced it should do without delay, much will depend upon the selection of a proper site for the plant. Such location should be made solely upon the merits of the site. I believe that a fair consideration of the merits of the section for which I have spoken will cause it to be chosen.

Protection.

EXTENSION OF REMARKS

OI

HON. THOMAS D. SCHALL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 1, 1916.

Mr. SCHALL. Mr. Speaker-

Truth crushed to earth shall rise again— The eternal years of God are hers; But Error, wounded, writhes with pain, And dies among his worshippers.

I wish to add my little in assistance of the burial by asking unanimous consent to extend my remarks in the Record upon the well-worn subject of protection.

The SPEAKER. The gentleman from Minnesota asks unanimous consent to extend his remarks in the Record. Is there objection,

There was no objection.

CEASE PRODUCING AND INDUSTRIAL DEPRESSION FOLLOWS.

Mr. SCHALL. Mr. Speaker, when the war stops a commercial danger threatens American investors, merchants, and workers. The demand for war materials will cease. The resultant shrinkage of our exports will not be made up by a corresponding increase in domestic trade. Within our own borders we shall have to face a titanic struggle for markets, a great inrush of goods produced by foreign labor. The trade streams flowing so naturally from our shores will be choked and obstructed and swept back upon us by the incoming fleets of foreign merchant ships. Labor will be underpaid in Europe, for the employers will have less to pay with. All the products of the women and children, trained in time of war to take the men's places, together with the product of the men when released from battle line, will be dumped upon us at forced-sale prices, by forced production under longer hours. Desperation will attempt to rehabilitate the frightful ravages made by the war and its taxes through stimulated commerce. Every effort will be made to undersell us. The cheaper goods so made and dumped upon us will replace the goods made by American labor and capital. Our money will sweep into foreign coffers. Their factory wheels will buzz and whir, while our own will lie silent. The inevitable results will be disaster from top to bottom of our Nation unless the party in power speedily reverses itself and places a protective duty on imports. We must maintain this duty to protect our merchants, manufacturers, farmers, and laborers from ruin. We must provide the revenue needed by the Government. Let the foreigner pay the increased cost of our preparedness.

The country is crying for such a duty. Instead of a well-filled and seemingly inexhaustible Treasury, the bequest to the Democrats from their Republican predecessors, we are faced with an appalling and ever-increasing deficit. Had not the war intervened to save the country with its artificially stimulated trade eurrents, who knows what brink of commercial destruction might confront us. We are to-day forced to bolster up a depleted reverage.

nue by a "war tax," so called. We are not at war. Why should we, with the money of the world flowing into our coffers, with every condition present for an unparalleled prosperity, be called upon to pay a war tax? Perhaps the present administration, among its other classic reversals of policy, will turn and adopt the good old principle of protection. Call it tariff for revenue only, if you want to. "A rose by any name will smell as sweet," but give us protection. Protect our farmers, protect our laborers, protect our industries.

This would prove a far more popular move than the proposed high-handed and piratical method of extending the burdensome and vexatious "war tax" to bank checks or to gasoline, already soaring out of the ken of moderate incomes, or the outrageous proposition to put a consumption tax on sugar. Gentlemen wax eloquent on the subject of the poor man's breakfast and then proceed to consider the means of removing his chance to obtain his breakfast. Protection means flourishing industries, good times, busy shops, stendy employment, and higher Free trade means unprotected industries and the unfair competition of cheap foreign labor, the resultant closing of shops, hence lack of employment and low wages, a setback to every factor in the development of the entire Nation. Under the protective system the greatest measure of freedom is se cured for the workingman. The American workingman is the best paid in the world. In 1912 for the same grade of skill American workers received double, sometimes treble, what workers in free-trade England received. Free-trade England is to-day considering the abandonment of her ancient policy; and an illustration of the overwhelming sentiment in favor of protection, which is vying in interest with war talk, is shown in a vote recently taken in the chamber of commerce in Manchester, which stood 928 to 527 for protection. Every man should be for that system which holds within it the greatest benefits for the greatest number. Germany owes her remarkable trade growth to her policy of protection, which her statesmen adopted from the United States, because they considered it the reason for our growth and prosperity, our speedy payment of war debts, and the means of our liberation from the trade bondage of the mother country; and she has carried the protection system adopted from us to such efficiency that she has built up all her industries, and the stress of war has demon-strated that she is absolutely independent, due entirely to the foresight of her protection policy. Even a war in another country demonstrates our deplorable condition in the production of dyestuffs. Our textile industries are on the verge of ruin. In order to insure investment in this industry, we must place an adequate protection on dye, for capital is willing to invest if they can be guaranteed protection. To develop dye is to develop preparedness, because the dye industry and making of high explosives go hand in hand. The war of loom and shuttle and factory will be no less bitter and cruel and relentless than the war of shrapnel and gas bombs. Let us prepare. Protection is the first line of trenches in the industrial war to

Republicans and Democrats alike should embrace the opportunities to repeal the tax on sugar. It will partly remedy a mistake. The press of the country, regardless of party leanings, approves the position of the administration in moving to repeal the free-sugar clause of the Underwood tariff law, for which there is no possible defense. It is better to abandon a disastrous policy than to hold on stubbornly, in defiance of wisdom and judgment. The present law is a failure.

The theory that the repeal of duty on sugar would result in cheaper sugar has not been borne out by the facts, any more than their theory that free trade would generally reduce the high cost of living. Sugar is higher to-day than it has ever been in spite of the removal of the tariff upon it, with the exception of the nine weeks after the law went into effect. In other words, in the time it would require to unload the imported sugar that had piled up in bonded warehouses in New York, waiting to take advantage of the tariff change, the price of sugar has mounted. When the war broke out, the shortening of the supply was reflected in a rise of the prices of sugar. With the report that the new law had had the effect of limiting the acreage planted in the United States, the price soared once more and has remained there,

Had the war not broken out the Louisiana cane-sugar industry would have been ruined. Eleven beet-sugar factories were shut down in the year that followed the passage of the law. That 7 of the 11 are again opened is the result of the high prices resulting from the war. The beet-sugar industry bids fair to be one of the best wealth producers for the farmer, in its sturdy resistance to unfavorable conditions, its benefits to the soil, its great proportionate yield per acre, and the fact that the money return comes in during the winter when taxes and cold weather

expenses come due. Minnesota soil is well adapted to its pro-Thirteen million pounds of sugar was the output of Minnesota last year. If we adopt a permanent policy of protection for the beet-sugar industry factories will spring up all over the State. In Colorado the farmers received last year \$20,000,000 from their beets. The estimated value of the incoming crop, if the present level of prices keeps up, will be \$90,000,000. This domestic crop must be protected, this industry must not be allowed to go down after the war swamped by the inrush from foreign markets.

The placing of a protective tariff will increase the domestic production of cane and beet sugar; there will be a keen competition between the refiners of imported sugar and of domestic product with a resultant decrease of price to the consumer.

The approximately \$50,000,000 revenue will be saved to the United States in a form that is least burdensome of all the proposed taxes. It has none of the objectionable features of the war-revenue taxes, the irksome telephone tax, or the irritating taxes on deeds. There may be some pinching of the profits of the big sugar refineries of imported sugar, but there is a widespread demand for this change as the quickest means of reducing the deficit in the Treasury.

As a sop to the farmer, the Democrats gave him free tools, they said. Under free trade, since iron and steel were to come in free, the farmer was to be so much better off. But tools cost more than ever and, besides, the Government is losing the revenue. The farmer of Minnesota and Montana and North Dakota now has to compete with 340,000,000 bushels of Canadian wheat, to say nothing of other grains. The total wheat-producing area of Canada has not yet been developed and opened to its full limit. The vast acreage is capable of pouring yet more wheat into our markets. Right now Minneapolis, St. Paul, and Duluth elevators have been increasing at the rate of 1,500,000 to 1,750,000 bushels weekly. When harbors and terminals are glutted owing to our lack of facilities for handling our own When harbors and terminals are grain, it is suicidal to keep open our doors.

If true and lasting prosperity is to come to this country we must foster a cry for "Made in America goods," the product of American investment and American labor; both of them permanently protected.

We should look to it that the laws are framed to serve the people. And we should not lose sight of the fact that in protecting our industries we are protecting all the people. In concentrating upon preparedness this must be held in mind. Battleships, brave warriors, fighting craft in air or under the sea can not avail, unless a nation conserve and foster her commercial resources. The foundation of preparedness rests far behind the battle line, in the organization of the industrial resources of a nation.

Resolutions Passed by Washington Camp, No. 14, Patriotic Order Sons of America.

EXTENSION OF REMARKS

HON. CHARLES R. CRISP,

OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES. Friday, March 31, 1916.

Mr. CRISP. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include the following resolutions passed by Washington Camp, No. 14, Patriotic Order Sons of America, of Americus, Ga.:

Sons of America, of Americus, Ga.;
Whereas the world is to-day witnessing in the great struggle in European countries a war that is the greatest tragedy of history; and Whereas it appears that in the assassination of Franz Ferdinand, heir apparent to the throne of Austria, by a Serbian subject, and the resultant refusal of the Serbian Government to surrender its judicial powers and prerogatives to Austria to try a Serbian subject, lies the spark that has kindled the same of war and has plunged nations into the business of the destruction of each other; and Whereas we recognize the right of the Serbian Government to try its subjects for crimes committed against the law within its own borders, and our sense of justice as between nations and people could do no less than applaud her stand for the inherent rights that belong to all nations; and

less than appland her stand for the inherent rights that belong to all nations; and Whereas the tragedy of the Serbian people should be a solemn warning to the Government of the United States in that it points out in thunder tones what the weak and unprepared may expect from the strong and unscrupulous; and Whereas it may appear that the reason or causes for this struggle are trivial, yet it constitutes one of the fundamentals of freedom and liberty, and while there may be a grave question as to Austria's and Gernany's other motives that to them might have been the greater, nevertheless we can see plainly in their action regarding Serbia and Belgium two great wrongs, viz, the overriding of the weaker peoples and an utter disregard for treaties between nations; and

Whereas this great world tragedy has come upon us after and in spite of great efforts upon the part of some of the greatest statesmen and thinkers of modern times to bring about a universal peace, thus pointing out that selfish and unscrupulous nations, for reasons that may not appear, but sufficient unto themselves, will regard treaties as mere "scraps of paper," and the rights of other nations not able to protect and defend their rights not at all, this being amply proven by events that have been and are transpiring upon land and sea in which the rights and lives of American citizens have been utterly disregarded, as well as the flagrant violation of international law and the freedom of neutral nations on the high seas: Now, therefore, be it

therefore, be it

Resolved by Washington Camp, No. 11, Patriotic Order Sons of America, this day in mass meeting assembled at Americus, Ga., That, realizing the great principles of freedom, liberty, and justice for which the Government of the United States stands, and for which she is now at great hazard to her own peace contending, and realizing the duty she has assumed regarding the Western Hemisphere, as well as the duty she owes to the people within her own borders, it has become imperative that measures be taken at the earliest possible moment to protect our own shores and people and to spare no effort looking to the preparedness of this Nation to enforce the principles for which she stands.

preparedness of this Nation to enforce the principles for which she stands.

Resolved further, That, looking to the accomplishment of this end, we most heartily indorse the efforts now being put forth by the leaders of the Democratic Party to bring about the proper state of preparedness; and we most earnestly urge upon these leaders the necessity for leaving no stone unturned to place the Nation's means of defense at that high pinnacle that will insure peace to this Nation and to be hoped to all mankind.

Resolved further, That copies of these resolutions be furnished to the Speaker of the House of Representatives, the President of the Senate, Congressman CHARLES R. CRISP, and the press.

Unanimously passed this the 27th day of March, 1916.

E. F. Wilder, President.

th day of March, 1910.

G. L. Williams,
Committee on Resolutions.

The Coast and Geodetic Survey.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 3, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, the Coast and Geodetic Survey is this week rounding out a full 100 years of existence and the event will be duly celebrated on Wednesday and Thursday, April 5 and 6, the President of the United States being one of those who will participate in the exercises. The Congress of the United States has been invited to take part and I trust it will, since no branch of the Government service is more useful to the American people than this important auxiliary of the Department of Commerce. The river and harbor bill being under discussion, I obtained leave to extend my remarks in order that I might introduce a brief statement which I asked the Coast Survey to prepare for me by way of explanation and description of the little-understood work intrusted to its care. I wish these facts to be known while the river and harbor bill is under consideration, since they have so important a bearing upon port and channel improvements, the continuance of which is so often questioned by unsympathetic economists.

The statement referred to deserves the most careful reading by those who are legislating for the common welfare. It is as follows:

WATER AND LAND AREA COMPARED,

"One of the first and most important geographic truths is the fact that the surface of the globe consists of three times as much water as land. While the rotundity of the earth is of more than passing interest, the comparative insignificance of the land masses relative to the wide expanse of ocean and the sense of isolation thereby conveyed, in its realization, doubtless, more deeply impresses the human mind than any other of geography's teachings.

"Just so far as isolation is fatal to development along any of the lines of human endeavor, to that extent is it necessary to overcome the divorcement of peoples and their purposes, the insularity of lands and their products. The ocean has ever been a primary natural cause in producing and maintaining such isolation, and to a great extent man's most notable advances have been those due, in great measure, to his subjugation of the sea, to his successful efforts which have converted a most formidable barrier into an unrestricted avenue of trade and travel. To render travel upon the waters more secure against the dangers that lay heavy toll upon the lives and property exposed to its hazards is the constant effort of the nations of the earth.

"To all nations whose territories touch the sea or who have any interests in the commerce of the sea a full and complete knowledge of the coast, its nature and form, the character of the sea bottom near it, the locations of reefs, shoals, and other dangers to navigation, the rise and fall of the tides, the direction and strength of currents, and the character and amount of magnetic disturbance are of the greatest practical value,

OUR EXTENSIVE COAST LINES.

"To supply this knowledge the Governments of the principal maritime nations have in modern times made surveys of their coasts by the most exact methods, and it was for this purpose that the United States Coast Survey was organized a hundred years ago on the recommendation of President Thomas Jefferson.

"Some idea of the importance to this country of such operations may be formed when it is remembered that the coast line of the United States and Alaska, measured along its general trend, exceeds 10,000 miles in length. To represent the actual shore line, which includes all the islands, bays, sounds, and rivers in the littoral or tidal belt, these figures would have to be increased to 91,000 miles; and to the foregoing must be added the shore line of Porto Rico, Guam, Tutuila, and the Hawalian and Philippine Islands. The length of the general shore line of these islands exceeds 6,300 miles, and their detailed coast line is in excess of 13,000 statute miles.

"In the early days of the survey the circumstances of limited means and the immediate need of charts of the more important harbors and approaches necessarily confined the work to selected localities; and while the original program was ambitious and of wide scope, the growth of the survey has scarcely kept pace with the expansion of our territory or the rapid development of

our resources.

"The work is not productive of spectacular results; the benefits it confers are rather of the homely, substantial sort, by which trade is stimulated and travel made more secure. It is more comparable to the labored effort of the pioneer than the explorer's glorious hazard. Its spirit is that of enterprise, not fame.

"Before the survey was, commerce made liberal contributions to man's welfare, but in a restricted fashion and subject to

many handicaps.

DANGERS OF EARLY NAVIGATION.

"The early navigators were dependent largely upon an intimate personal acquaintance with the locality visited, and their movements were correspondingly circumscribed, and the safety of craft, cargoes, and company committed to their care was subject to all the uncertainties of their limited knowledge of the region.

region.

"The systematic collection and publication of nautical information, in the form of charts or otherwise, renders available the combined results of the efforts of all, whether nations or individuals, and as far as it is humanly possibly, presents those results complete, free from error, and in a form most

readily used by the mariner.

"Surveys and the resulting charts have added few to the number of harbors; rather have they increased the accessibility of all harbors and diminished the dangers which attended navigation within them and in their approaches. In the early days of what may be designated emperical navigation, movement in certain harbors and entrances was limited to a simple sailing line or, in better-known localities, to restricted areas, largely from the fact that a vessel of a certain draft had previously done so without disaster. The general situation then, and in some regions it is still the case, was that practically all waters were forbidden ground, with only a few of the more-traveled ways supposed to be in a measure free from danger.

"Under such circumstances the resulting difficulty attending the development of regions dependent upon water transportation, either long delays that development or greatly retards it by prohibitive rates, even if vessels can, by any means, be

induced to enter the trade.

VALUE OF SURVEYED HARBORS.

"The surveyed harbor at once develops the capacity of its maximum natural possibilities. Every foot of depth is rendered safely available for vessels of the greatest draft, through the entering channel and over the anchorages. Smaller craft have almost unlimited freedom of movement, and congestion is relieved at all points, Entrance surveys are especially valuable to sailing craft, which require considerable sea room, without which they must delay their movements for a favoring wind or resort to use of tug. Dangers are clearly indicated and means provided for avoiding them; changes in conditions are promptly noted and announced.

"The surveys of estuaries and their approaches are of great value in harbor-improvement studies; and when surveys of different dates are compared the magnitude, direction, and rate of change of the features, with which the work of harbor improvement has to do, are often clearly indicated, and the best solutions of the problems involved are suggested. Current surveys, conducted primarily for the navigator, contribute indirectly to commercial interests in connection with sewage-disposal problems, which are at times of vital importance to the port.

"Along shore between ports and off shore at considerable distances the work is of primary importance. In clear weather, with well-determined positions of the vessel, a knowledge of the location of all dangers warrants the use of a distance saving track and a speed which otherwise ordinary prudence would forbid. In thick weather the charted relief of the bottom and the indicated character of the material composing it enable the mariner to hold his course outside, and even approach and enter

harbors in safety.

KNOWLEDGE OF CURRENTS IMPORTANT.

"While most of the surveys' operations are evidently eminently practical, the utilitarian character of other lines of research are not so apparent. An example of the latter may be found in the current studies along the Atlantic coast and at very considerable distance off shore—in fact, general oceanic circulations, particularly between Hatteras and Key West. However, whatever of academic interest attaches to such inquires, their greatest value by far lies in their importance to the mariner, bound south and uncertain of his position, in his efforts to make Matanilla Shoal, at the northwest corner of the Bahama Bank, or in his rua along the Florida Reefs; also to a mariner bound north and trying to sight Diamond Shoal light vessel. In fact, there is generally a time in every locality when a knowledge of the currents is indispensable.

"One element—draft—in the marked development of vessels in recent years has in itself exposed the shipping to additional hazard. The great increase in draft has in many localities had the effect of rendering obsoletely the entire adequate surveys

of earlier days.

"Many of our surveys were based upon a maximum draft of 18 feet for ocean-going vessels and coasters of 12 feet. To have extended our detailed examinations much below the requirements for that draft would have entailed an expenditure for which there could have been offered no justifiable excuse at that time; but since that time the draft of ocean-going vessels has attained a present maximum of 38 feet, and the port that can not accommodate coastwise vessels of more than 22 feet draft must pay the penalty of a full cargo charge for only a partial lading.

"These demands have been met by resurveys, which have been coextensive with the original surveys in the area covered and in much greater detail than ever attempted before. In fact, in many localities the requirements have been so exacting that new methods and devices have become necessary. Detailed development in depths heretofore regarded as excessive has become an ordinary operation, and its further extension to depths several times the present limit should, if possible, anticipate the

imperative needs of the submarine.

MENACE TO VESSELS OF GREAT DRAFT.

"In consequence of the present great draft of vessels, high speed, steel hulls, great cost, considerable value of cargoes, and enormous passenger lists and the unreliability or inadequacy of the lead line as a means of revealing all submarine dangers in certain localities, the wire drag has been developed for the purpose of determining with absolute certainty the presence of all dangers within a given area, whatever their character may be—bowlder, ledge, pinnacle, coral head, bank, or other obstruction. In addition to its thoroughness, the drag gives satisfactory results at very great depths. It has been operated at a depth of 80 feet below the surface, and the limit will doubtless prove to be considerably below that.

"Many harbors and entrances are subject to frequent and considerable changes, and unless these changes are determined promptly and announcement of the new conditions made immediately vessels are discouraged from attempting such entrances, and the port and tributary territory suffer in consequence.

"With the exception of the most important Atlantic and Gulf ports south of New York, practically all the entrances directly on the ocean or Gulf are of this class; and where they suffer in addition from compulsory pilotage at excessive rates, the prospect is not encouraging.

SMALL INLETS-MILITARY NECESSITY.

"Scarcely less important in this region are those small inlets or openings affording entrance to the inside protected waters along the coast. In many localities they are the refuge of many small pleasure and fishing craft which venture out on promise of favorable weather conditions, and often with disastrous results on account of their distance from any safe entrance to protected waters. All entrances affording shelter, under such circumstances, should be under constant observation, and examinations made so frequently that their condition will be known at all times. It is necessary only to collect such data in order to give it the widest publicity, because by means of our weekly notices to mariners and cooperation by other Governments it is almost immediately brought to the attention of mariners throughout the world. In fact, it is possible under the present system of disseminating such information for a stranger from the Antipodes to approach our shores with comparatively complete knowledge of local conditions, including even recent changes in aids. As far as possible changes are announced considerable in advance of the date on which they are made.

In addition to the work of the systematic survey of the coast, much time and effort are required to meet special demands for surveys in localities where such needs could not be anticipated. In 1898 surveys were made in the main approach to Key West under the stress of military necessity. The work had for its object the development of a 30-foot anchorage area for battleships inside the Florida reefs. This work was soon carried to successful completion, and charts showing the buoyed anchorage were promptly issued to the fleet.

THE PORTO RICO CAMPAIGN.

"In 1899 military and commercial surveys of the waters of Porto Rico were commenced before the troops were withdrawn and subsequently pushed to an early completion. Charts carrying reliable aids soon became the rule in those waters, whereas prior to our occupancy in those waters there were ne charts worthy of the name and often the aids to navigation were designedly misleading. It may be noted in connection with our first season's work in Porto Rico that in several important localities not only were the surveys completed in every detail, but finished charts were prepared on board ship and issued to naval and commercial vessels for immediate use.

The survey of Porto Rico was completed in 1909; the work involved 80 large field hydrographic sheets and 42 topographic sheets, which material is now published in the form of 20 charts. These charts are supplemented by a coast pilot volume, which contains comprehensive sailing directions for those waters and much general information relating to the island. In 1900 the survey of the Philippines was organized, and notwithstanding the increased demands upon the service in home waters, particularly Alaska, the work has been pushed with such viger that the little known and extremely dangerous waters of the archipelago have been in a great measure completely surveyed and charted, as is evidenced by the publication by the Coast Survey of 131 different charts of that region.

HAWAITAN ISLANDS-PANAMA-ALASKA.

"Incidentally the work in the Hawaiian Islands has not been neglected; in fact, it has been prosecuted to such good purpose that 52 original topographic and 39 hydrographic field sheets have been finished and the material collected published in the form of 12 charts. For the Philippines and Hawaii complete sailing directions have been prepared and issued, and, as in the case of all the survey's publications, are corrected for all changes affecting the subject matter and extended as additional data become available.

"The survey has contributed in full measure to the completion and successful operation of the Panama Canal project by exhaustive examinations in the approaches and entrances to the canal.

"The work revealed important unknown dangers in the Pacific approach and established the absence of such features in practicable lines of approach to the canal.

"An area 13 by 23 miles, and covering 175 square miles, has been thoroughly explored by the wire drag, developing 52 shoal spots, of which 37 are actual menaces to navigation. Seventeen original field sheets have been made by the Coast Survey, which, together with information from other authentic sources, as the basis for four charts now published by the Coast Survey covering the entire canal and both approaches

"These charts were in the hands of navigators at the time

the canal was opened to traffic.

"In Alaskan waters our contributions have been noteworthy, and important and substantial additions to the final chart of that extensive and most difficult coast line are made with each season's work. Along with the general survey in that region in-sistent and even imperative demands for charts of particular localities have to be supplied, as development and its resulting water-borne traffic are constantly finding new and little-known fields for their activities.

"The importance of this class of work is strikingly illustrated in several well-known instances.

CHARTING THE KUSKOKWIM.

"The Kuskokwim entrance, the gateway to an empire, was one of the most difficult to navigate on account of the very irregular broken line and restricted areas of deepest water it was necessary to follow from the sea to the river, the absence of aids, the remoteness from land and landmarks, and the almost perpetual fog and rain. It has been stated that vessels have made the passage into the river by blundering in through a fog and consumed much less time in doing so than was often required to accomplish the same feat in clear weather and under the most favorable conditions.

The survey of this entrance was completed in 1915, and in addition to locating and charting the intricacies of the shoals and channels there were also determined a sufficient number of mountain peaks to supply all necessary natural aids to naviga-tion. Supplementary to the charts, and issued with them in time for use at the beginning of the 1915 season of navigation, pamphlets giving detailed sailing directions and predicted tides were prepared.

Marble Bay, a tributary of Davidson Inlet, developed on its shores in 1912 an important marble quarry; but by reason of a total lack of surveys in Marble Bay the steamships declined to enter, and did not do so until the survey in prempt response to request did the necessary work in the fall of 1912 at the close

of the regular season.

"The development of the rich gold deposits in Klag Bay, a tributary of Khaz Bay, would scarcely have been possible without the chart which was furnished immediately upon demand

" SURVEY WORK IN ICY WATERS.

"The chart of Nushagak Bay and approaches covers waters which were frequently the scene of disaster to the vessels operated in connection with the important canning industry leeated there. The chart has greatly diminished the difficulties of navigation in this very dangerous area and disasters have hecome almost unknown.

'Similar surveys in response to urgent local requirements, and often in anticipation of such needs, have been made wher-

ever the occasion has arisen. Among such are:

Survey of the lower Yukon, including the difficult approaches to and through the delta in 1898 in connection with the Klondike strike.

"Surveys in Norton Sound in 1899 and 1900 for benefit of shipping to Nome and vicinity.

"Surveys of Port Clarence and tributaries required for development of gold and coal in the central Seward Peninsula

Various parts of Prince William Sound and neighboring waters were covered under similar circumstances.

The survey's contributions to the solution of the problems involved in a choice of terminals for the Government railway now building from Anchorage northward have been material.

"The general bearing of the work upon the development of Alaska and the importance of the final, completed survey is clearly indicated by the results of the wire-drag work in 1914 and 1915.

NO CHART, NO CHARTER.

"Another example of the application of the underwriter's settled policy of no chart, no charter, and of the absolute dependence of an important industry upon the work of the survey is found in the situation that confronted the phosphate shippers along the Withlacoochee River. The open roadstead off the entrance and its approaches were of such a character and so little known that vessels could not be induced to enter the trade. A survey was made, and, in addition to developing the dangers within the area, an important anchorage basin was found and aids established for the safe use of the roadstead, which now enjoys considerable international trade.

'The magnitude of the work required to meet the needs of the shipping, which is a measure of its importance to commerce, is indicated by the number of different charts published and the

total number of copies issued and sold.

"We now issue for all waters, exclusive of the Philippines, 522 different charts, which are constantly undergoing more or less extensive revision in our effort to keep them strictly up to date; and of these charts the annual sales to the public amount to about 50,000 copies, each of which is subjected to the closest scrutiny and corrected to date of issue, by hand if necessary.

MOTOR BOATING AND INSIDE COAST CHARTS.

"An interest of great importance and comparatively recent development is that of motor boating of all sorts, those operated for pleasure, by fishermen, and in freight or passenger service being the most numerous classes. The rapidly increasing numbers of such craft affect our work, more particularly as it applies to the shallow, protected, and heretofore little used inside waters and their generally shoal connections with outside water creas to which they are tributary. To meet their needs the issue of a series of special publications has been commenced, and their popularity, as evidenced by the number sold, has fully justified the venture.

"The Inside Pilot from New York to Key West has had an

average annual sale of over 1,000 copies.

"The first year's sales of the volume covering the route from Key West to New Orleans was 800 copies. "The volume covering the New Jersey coast has had a sale of over 1,000 copies in 10 months."

National Defense and Preparedness.

EXTENSION OF REMARKS

HON. CYRUS CLINE. OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 29, 1916.

Mr. CLINE. Mr. Speaker, there seems to be no doubt in the general opinion as to the need of national defense and pre-paredness. The extent to which the Federal Government should go in making preparation constitutes the debatable grounds. It is admitted that the reserve forces of the United States ought to contain all the elements that would be necessary under actual hostilities. The force should be so organized and equipped that the mobilization to some central point could be made quickly effective. This, of course, can not be done unless there is, to a certain extent, organization in the reserve. The departments of this force held in reserve for emergency should be actual, and not visionary or paper forces. The one lesson that has been taught us by the European war is that the time to prepare is not after hostilities have commenced. I desire to say, first, that I am strongly opposed to the so-called continental-army plan. I am in favor of promoting the efficiency of the National Guard, which has been and is now maintained jointly by the Federal Government and each of the several States. It is said by those who favor the continental scheme that the Constitution intervenes and places restriction upon the use of the National Guard as a military defense for the Federal Government. This objection is being made use of not by the friends of the National Guard but by its enemies.

I am somewhat familiar with a number of National Guard officers and I know that when a National Guardsman enlists it is his idea that he does so to serve the Federal Government at any place and at any time that be may be called upon. I know the sentiment of the National Guard is that it desires such legislation as shall make it first, last, and all the time a dependable auxiliary to the military arm of the Government.
The National Guard as now organized in the several States has adopted the Regular Army as the model of its organization. It depends upon each State largely how far the organization has been carried. I mean by that its regimental formation. From that, the strength varies to brigades and divisions. In nearly all the States the staff department is well organized and

effective.

The National Guard is the force that should receive the attention of the Federal Government as a reserve power, to the exclusion of all other forces at this time. That is true for the following reasons: First, it has an organization patterned after the Regular Army; second, it has representatives in every State of the Union; third, it has a large number of officers who have given serious thought and time to the development of the organization, who are sincere in their patriotism, and who have, at a sacrifice to themselves, improved opportunities that have been given them for military training.

The development and efficiency that the guard has made in the last five or six years is of great value and to a certain extent would be lost if it was supplanted by any other organiza-tion. One reason why the National Guard is not more efficient than it is is that it has not received adequate support either from the State or the Federal Government. Under proper encouragement the National Guard can be recruited so that each element will contain the same enlisted strength that it would have under actual hostilities. In all the States the National Guard has a continuous existence. It is subject to the call of the

governor at any time. There are many instances where it has

shown its ability to rapidly concentrate.

The National Guard has had pretty thorough training in the administration of affairs of an army. Every company commander has prepared pay rolls, muster rolls, made requisitions for clothing and other supplies, has rendered vouchers for the same as he would be required to do if he were in the Regular Army. The regimental quartermaster and commissary department have had the experience and understand the forms that are used in the Regular Establishment to-day. With these improvements and advantages over any other adjunct organization the guard would come to greater efficiency in a shorter time than

any body of quickly enlisted men.

A pay bill for the National Guard is essential and seems to be the most feasible plan whereby the Government can secure a force adequate for defense. This pay bill should include pay for monthly drills, camps of instruction, and rifle practice, and the pay should be adequate to accomplish the objects we seek through this organization. Heretofore the country had expected too much sacrifice on the part of the National Guard. In the present condition of prosperity throughout the country the National Guardsmen, who, by the way, are the most active and brightest young men of the country, will not give all the necessary time required by them for efficiency. These are some of the advantages of the National Guard as a reserve force.

The objections to the continental army plan, to my mind, are so strong as to make the scheme an untenable one. The chief

objections that occur to me are as follows:

The six weeks or two months' volunteer camping expense in the midst of the productive season of the year will not command sufficient volunteers

The officering of this force must be drawn from the Regular

Army, because no civilian can afford to give his time.

The storing and shipping each year of equipment to different camps, then repacking, shipping, and storing again, having no regular headquarters, is impracticable.

There would be no continuance of the organization from week

to week and month to month.

No continuance of staff department.

No experience from making out and filling forms except during these annual camp periods.

No intimate or systematic knowledge of the administration of

the Army.

No opportunity to show rapid concentration, which is a vital and essential feature.

The continental scheme involves no State or local pride in its

organization.

The more this question is studied the more certain becomes the conviction to me that the National Guard possesses the primary and fundamental qualifications that a reserve defense must possess.

National Preparedness.

EXTENSION OF REMARKS

HON. JAMES R. MANN, OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 1, 1916.

Mr. MANN. Mr. Speaker, under leave to print granted to me I insert the following letter from the committee of the Illinois Bankers' Association:

ILLINOIS BANKERS' ASSOCIATION, Chicago, March 31, 1916.

Hon. James R. Mann, House of Representatives, Washington, D. C.

DEAR SIE: As indicative of the intelligent, sober judgment of the Central West we call your attention to what we believe to be the first poll with respect to the subject of national preparedness, which has been fairly taken by a representative organization covering a wide

been fairly taken by a representation of the members area.

The poll is particularly significant, as the majority of the members of the association are small institutions, owned and controlled by local farmers and business men, intimately in touch with the sentiment of the public they serve, and for the further reason that the poll was taken without making any reference to the present international situation, the urgent need for better defense, or an appeal to patriotism.

The referendum was ordered by President Woodruff in the current number of the Association Bulletin as a guide for the action of this committee.

number of the Association Bulletin as a guide for the action of this committee.

The results are so overwhelmingly in favor of a larger Army and Navy and the adoption by Congress of the recommendations of the Army and Navy officers that this committee feels obligated to bring the matter to the attention of the Members of Congress from Illinois.

The nonpartisan character of the inquiry and the intimate relationship between the men in the small banks and the public justifies the assertion that the expression is that of public opinion in the agricultural, industrial, and other communities in which the banks are located. The details of the poll are shown in the following tabulation: Question No. 1. Do you believe our Navy should be enlarged and strengthened?

Five hundred and seventy-two vote "yes," 23 vote "no."

Question No. 2. Do you believe our Army should be enlarged and strengthened?

Five hundred and sixty-nine vote "yes," 28 vote "no."

Strengthened?

Five hundred and sixty-nine vote "yes," 28 vote "no."

Question No. 3. In adopting any plan for Army and Navy enlargement do you believe that Congress should be guided by the recommendations of our Army and Navy efficers, who are experts on the subject of Army and Navy matters?

Five hundred and fifty-eight vote "yes," 24 vote "no" (16 qualify their answers by saying "to a certain extent").

It will be seen that to question No. 1,96 per cent voted in the affirmative; to question No. 3, 96 per cent voted in the affirmative; and to question No. 3, 96 per cent voted in the affirmative, and to question No. 3, 96 per cent voted in the affirmative, and to question No. 3, 96 per cent voted in the affirmative, 3 per cent qualifying their vote.

question No. 3, 96 per cent voted in the ammative; and to question No. 3, 96 per cent voted in the affirmative, 3 per cent qualifying their vote

To further justify your confidence in the cosmopolitan character of the replies, attention is called to the fact that over 90 per cent of the votes cast are from the smaller communities in the State, where the relation sustained between bank men and depositors is that of the confidential advisor, thus making the returns a reflection of public opinion. It should also be borne in mind that the vote was given by a conservative element and in a secret hallot.

Without urging upon you the very positive convictions of this committee, and that the rank and file of the people in the Central West are emphatically in favor of adequate measures of defense commensurate with the wealth and exposed position of the Nation, we leave you to draw your own conclusions from the very significant poll which we have pleasure in reporting.

Emphatic comment as to the urgent need for action appears on numerous ballots, while opposed to this are several explanations of the votes against an increase. In only one case is reference made to international disarmament. The "peace-at-any-price" propaganda seems to have few, if any, adherents.

Yours, very truly,

COMMITTEE ON PREPAREDNESS, OMAR H. WRIGHT, Chairman, N. M. HARRIS. JOHN W. THOMAS,

River and Harbor Appropriation Bill.

EXTENSION OF REMARKS

HON. JAMES A. FREAR,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES, Saturday, April 1, 1916.

Mr. FREAR. Mr. Speaker, the gentleman from North Carolina [Mr. SMALL] on Saturday last delivered a carefully prepared statement before the committee on the subject of commerce carried on rivers and canals, wherein he challenged the accuracy of statistics presented on page 15 of the minority report against the rivers and harbers bill. He attempted to confuse the issue with a mass of misleading statistics, which, however, he has so far withheld from the Record.

Apart from the question of veracity raised by his statement, one of the most important questions pertaining to waterway improvements is based on actual commerce floated on extrava-

gantly financed rivers and canals.

Generally speaking, that commerce averaged from 10 to 50 per cent lower in 1914 than in 1913, but statistics found on page 15, with two or three exceptions, were taken from 1914 engineers' report of 1913 commerce, for remarks appearing in Record of January 13 last. The statistics found on page 15 of the report were taken from those remarks and based on the analyses made at that time. The exceptions for 1914 were afterwards ascertained, and will be here noted. That question is not material in view of the wide difference alleged to have been discovered by the gentleman from North Carolina. The statement criticized is found on page 15, and is as follows:

Over \$250,000.000 has been spent on the 12 river and canal projects by the Government in an effort to resuscitate a lost commerce. Deducting floatable timber and sand that floated a half century ago in larger quantities than to-day and do not require expensive waterways, several of these projects are reported to have floated in 1913 approximately as

	Tons.
Upper Mississippi	170, 000
Lower Mississippi	200, 000
Onio (3D per cent coal) under	2,000,000
Tennessee	200, 000
Tombigbee and Warrier, average	56, 000
Beautort Canal	65, 000
Cumberland	53, 000
Missouri	24, 000
Hennepin Canal	11, 850
Muscle Sheals Canal	5, 887
Red River	1, 694

Aside from soft coal, as near as can be estimated, the average haul was from 30 to 100 miles on the various rivers.

That statement refers to a dozen projects discussed in another connection, and of which 10 furnished commerce as stated. The pages and brief tabulations are given herewith.

Because the statement of the gentleman from North Carolina has been withheld from the committee I am obliged to depend upon memoranda taken when Mr. SMALL addressed the com-

Without reference to any specific reports, so far as noted, he claims the foregoing statement was absurd, and presented his own understanding, as follows:

	Tons.
Upper Mississippi	1, 400, 000
Tennessee	1, 343, 709
Missouri	340,000
Beaufort Waterway	603, 000
Ohlo	9, 530, 000

If any error occurs in quoting his figures, it arises from the unexplainable delay in withholding his remarks at a time when the truth and not idle assertion is of value to the committee.

The gentleman from North Carolina stated there could be no innnocent mistake. I agree with him there could be no innocent mistake on his part, because he was endeavoring to find error in my own computations. There can be no excusable mistake on my own part if error occurs, because the committee is entitled to facts so far as can be ascertained, and I ought to know them.

Volume, page, and computation is here offered to prove the truth of my statements and the inexcusable misstatements of

the critic.

UPPER MISSISSIPPI COMMERCE.

Actual commerce, deducting floatable timber and sand, appears on page 15 of the report as 170,000 tens. Mr. SMALL's statement, 1,400,000 tons.

Keeping in mind that actual commerce on the river has probably decreased 95 per cent during the past few years, during which time \$20,000,000 of Government funds has been dumped into this 600-mile stretch during that period, let us examine the statement of commerce, taken from page 2437 of the Chief Engineer's report for 1914. It will not be found easily in the index.

The report says the quantity of freight carried by all boats, including the rock and brush used in Government work, and also including logs and lumber floated down the stream, is as follows, and then follows a table, of which 772,392 tons hauled 9,445,576 ton-miles, valued at \$781,897, is for material used by the Government in improving the river.

Upper Mississippi River freight statement for 1913.

ENGINEER'S STATISTICS OF COMMERCE (?).

"Commerce" reached 2,145,315 tons in 1913, so the Chief of Engineers reports. Tons of what? Let us see:

	Tons.
Brush for river construction work	82, 450
Gravel dredged from river	398, 178
Rock for river work	708, 000
Sand dredged from river	562, 000
Logs that have floated for 50 years	98, 268
Lumber and wood barged	64, 408
Animals ferried across river	55, 322
Automobiles ferried across river	6, 034
	THE PARTY OF THE P

All could be floated in 2 or 3 feet of water, leaving 170,335 tons of questionable commerce remaining, which was hauled on an average of 26 miles or thereabouts.

What a legislative travesty when eleven-twelfths of the commerce for which \$1,000,000 was allotted by the Chief of Engineers is of that character. Who weighed the brush? Who weighed the logs? Who weighed the rocks, gravel, sand, and so forth, used in the river work? Where was it carried and for what purpose? Was it floated 1 mile or 10 miles? Who knows? Why measure Government material for river work, anyway?

A WONDERFUL SYSTEM IN VALUING "COMMERCE."

The Chief of Engineers says that 26,609 tons of horses were carried a mile and a half across the river, and their value was \$6,540,900, or one-fifth of the total. Other live stock carried across the river, he says, was valued at \$5,218,730; and then, to cap the climax, this report adds that 6,034 tons of automobiles ferried across the river were valued at \$9,545,950.

Nearly two-thirds of all the glowing commerce valuations on the upper Mississippi, including Government sand, rock, and gravel, turns out to be animals and automobiles ferried across the river.

Again, how much of the remaining 170,000 tons was repair material or Government supplies out of a total 772,000 tons reported? How much was dupilcated before it could boost a million-dollar allotment for the upper river?

QUADRUPLICATIONS OF SAME FREIGHT STATISTICS.

Last session Chairman Sparkman was asked by Mr. Callaway in debate if river tonnage passing different places was not often included in the Chief of Engineers' reports, and if it was not duplicated, to which the chairman frankly responded: "Oh, yes; it is duplicated, triplicated, and quadruplicated in some cases." This bill asks \$1,200,000 for that commerce, or \$2,000 a mile for 1916.

So much for the 1913 commerce which the gentleman from North Carolina declares to be 1,400,000 tons, and which with

fair deductions reached 170,000 tons as stated.

The "commerce" was floated about 50 miles on the average. and included 37,000 tons of shells and coal floated from 13 miles to 42 miles. And this commerce statement is disputed by the gentleman from North Carolina, who seeks to bewilder the committee with a mass of senseless "commerce" statistics. After spending some \$20.000,000 in the upper Mississippi we are about to give \$1,200,000 this year for that small traffic,

with its insignificant haul, or at the rate of \$2,000 per mile.

The gentleman from North Carolina then revels in Tennessee

TENNESSEE RIVER.

Take the Tennessee River where a clean-cut comparison may take the Tennessee River where a clean-cut comparison may be made. The report says, deducting sand and floatable timber the actual traffic was about 200,000 tons. This statement he disputes and claims the "commerce," according to official reports, is 1,343,000 tons. Some one again is guilty of deceit or is badly mistaken. As he made his examination for the purpose of correcting my statements no excuse lies at his door for innocent mistake. I quote from the Engineers' Report, 1915, pages 2870 to 2872:

25	Carlos Control of the			
	Commerce	071	Tennessee	River.

	Tons.	Tons.
Above Chattanooga Logs, ties, and timber Sand	57, 873 145, 832	305, 616
Chattanooga to Florence Logs and ties Sand	30, 477 54, 708	124, 872
Florence to Paducah Logs, ties, and timber	408, 783	449, 956
Logs, ties, timber, and sand	697, 673	880, 444 697, 673

My statement was about 200,000 tons. Of the 182,000 tons, 28,418 tons of marble was hauled 5 miles and 50,000 tons of iron ore, valued at a dollar a ton, was hauled 15 miles, or 78,000 tons of cheap freight with an insignificant haul. For that com-

Actual net_

merce, so reported, we have appropriated \$11,000,000 in round numbers on the Tennessee and \$944,000 more is carried in this bill. Again the gentleman from North Carolina has blundered without any apparent excuse.

MISSOURI COMMERCE.

On the lower Missouri he is equally at sea or else has improperly sought to mislead.

My own statement, on page 15 of the report, is 24,000 tons of commerce, excluding sand and floatable timber. Mr. SMALL'S statement, as I have it on the memoranda, is 340,000 tons. Again some one owes an apology to the committee.

A NAVIGATION COMEDY IN THE LOWER MISSOURI.

Here is a remarkable illustration of advanced mathematics found on the Missouri River, which Col. Deakyne condemns and which Col. Townsend, of the Army engineers, asks to have left in statu quo. While passing this deserted waterway we are permitted to revel in "commerce" delusions. Attention is given this project, because after spending \$20,000,000 of Government money during 50 years, on the recommendation of Army engineers, on the different sections of the Missouri River down to the mouth, they have launched us into an additional \$20,000,000 expenditure, or over thirty millions, in a game that has no limit on the Missouri. Let us see what we are to get for \$75,000 per mile for 400 miles. I quote from the Chief of Engineer's 1914 report, page 2513:

COMMERCIAL STATISTICS-LOWER MISSOURI RIVER (MOUTH TO KANSAS CITY).

1 Owner.

Total ton-miles, 5,173,170.

Of this imposing commerce over 312,000 tons of "sand" was hauled about 1 mile in 1913. Nine-tenths of the "traffic" was barged 1 mile. Study the table in order to get a fair understanding of humbug statistics handed Congress by Army engineers and of a vanished river traffic.

Instead of a 6-foot channel being required, a 2-foot channel will float the insignificant commerce, according to experienced river men, and for that river's commerce \$2,050,000 was allotted by Chief Kingman out of the \$50,000,000 turned over to him by

Deducting from the above table sand and 11,159 tons of ties and wood barged about 14 miles, leaves 24,000 tons of questionable commerce for which the Chief of Engineers gives \$1,000,000 in 1915, or over \$40 per ton 1913 expense for the waterway, including maintenance and interest on prior expenditures. Speaking of this Missouri River project on March 2, 1915, one month before the allotment was made, Senator Burton said:

You may spend \$20,000,000—yes, \$30,000,000—on this project, and in spite of that enormous amount the traffic will diminish, because you are lacing a condition that no policy of river improvement can reverse—the loss of that class of river traffic and the utilization of other agencies for the carrying of freight. I wish it were not so, * * * but I am tired of "rainbow chasing," and that is what this is. It is much worse than "rainbow chasing"; it is pure, bald, unmitigated waste.

Again my statement is correct. What a commentary on a stream that gets \$1,500,000 under this bill and carries such insignificant commerce, a stream which the gentleman from North Carolina must defend in order to get \$1,000,000 for his

own equally indefensible project.

I am prepared to sustain every item set forth on page 15 of the report and would do so in detail but desire to get the facts before the committee without delay, therefore will only take one or two more projects, including that which the gentleman from North Carolina has pushed incessantly upon the attention of Congress. Originally repudiated by Army engineers and stony members of the committee, persistence gained it a place in the bill where to-day it demands \$1,000,000. Why and

NORFOLK AND BEAUFORT CANAL.

On the Norfolk and Beaufort waterway the gentleman from North Carolina says my statement of 65,000 tons, deducting floatable timber, is incorrect, and according to my memorandum he informs the committee that 603,000 tons is right. Again we find a question of veracity. My statement can not be misunder-stood and the data on which facts were given in the minority report appears on page 1949 of the Engineers Report for 1914.

Waterway, Norfolk to Beaufort.

Commerce in short tons		258, 441
Logs	Tons. 64, 225 39, 840 59, 384 27, 218 3, 502	194, 169

Net reported tons_____

The 64,272 tons of commerce is not of such character as to call for a 12-foot, \$5,400,000 project, and when we find the only focal cooperation is a "wharf and warehouse," cost unknown, built at Coinjock, N. C., we are prone to wonder just what we are getting for our \$5,400,000 and why we are giving \$1,000,000 in the 1916 bill to benefit a few private dredgers who charge 80 per cent more than Government rates for the \$800,000 to be turned into their coffers by the 1916 bill. The project has been repeatedly denounced by waterway experts as "a fraud." Can there be any doubt of it?

But the important question to determine is who has sought to deceive the committee, the gentleman who has \$1,000,000 at stake now nestling in the Beaufort item, or those who wish to avoid squandering millions of dollars in wasteful waterway expenditures.

THE OHIO RIVER COMMERCE.

One of the worst cases of duplication and misstatement of actual conditions of traffic exists with reports of the Ohio River.

Ferriage across the river is counted in the absurd calculations and that ferriage furnishes about one-half of the Ohio's total valuation statistics. Open river traffic and duplications and quadruplications of the same traffic are used to make a fairly

valuation statistics. Open river traffic and duplications and quadruplications of the same traffic are used to make a fairly presentable case to justify a total expenditure reaching possibly \$100,000,000 by the Government on this river by the time the present project is completed.

On pages 809 and 810 of the Record for January 10 of this session appears an analysis of the Ohio River freight, showing how unreliable and misleading the engineers' reports have become. From data furnished by the engineers reports have become. From data furnished by the engineers reports have become. From data furnished by the engineers reports that an average of less than 2,000,000 tons of coal floated along the Ohio in 1913 and left the river at Cairo to float down the Mississippi at nearer 1,000,000 tons.

Excluding coal, sand, gravel, logs, and ties that do not require extravagant river improvements, the remaining commerce reached 25,000 tons at Lock 1 and 16,651 tons at Lock 8. Other locks were in similar proportion. The statement given on pages 809 and 810 of the Record, taken from official reports, shows the untrustworthy character of statements made by the gentleman from North Carolina, who assumes to throw light on the commerce carried by this and other rivers. Coal counted at different locks and at Cairo, Memphis, Vicksburg, and New Orleans, like other freight, has a fashion of being duplicated and in the first of the commerce residual propers. The commerce carried by this and other rivers. Coal counted at different locks and at Cairo, Memphis, Vicksburg, and New Orleans, like other freight, has a fashion of being duplicated and the commerce residual propers and at Cairo, Memphis, Vicksburg, and New Orleans, like other freight, has a fashion of being duplicated and the commerce residual propers and at Cairo, Memphis, Vicksburg, and New Orleans, like other freight, has a fashion of being duplicated and the commerce residual propers and residual propers and the first propers and the first propers and the first propers and th

quadrupled, with the same barge load figuring from Pittsburgh to New Orleans.

I do not assume to give the exact commerce on this river. No man can approximate the facts, excepting by unofficial reports furnished to the Army engineers. From those reports, accepted at their face, I have made the deductions found on page 15 of the minority report, and they are substantially correct wherever definite information is available. I have no further comment to make upon the remarks of the gentleman from North Carolina [Mr. SMALL], excepting to say that where he has put up a straw man to knock down or assumes to defend the committee against charges never made, he is engaged in an antiquated practice that ought to be, and I am sure will be, discredited by those seeking the truth.

To use the words of a distinguished North Carolina Member, quoted from the Holy Writ, "Where thy treasure is, there will thy heart be also." With \$1,000,000 hanging on the passage of this bill, it may unconsciously warp the judgment of the gentleman who unjustly and unwisely endeavored to discredit statements of commerce appearing in minority report, part 2.

Removal of Diamond Reef in New York Harbor.

EXTENSION OF REMARKS

HON. FREDERICK C. HICKS,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 4, 1916.

Mr. HICKS. Mr. Speaker, before mentioning the subject under consideration, I desire to congratulate my colleague from New York, Mr. Benner, upon his seamanship and the able way in which he has taken us past the dangerous reefs of which we have heard so much. The Brooklyn Navy Yard is located on the East River, a little over 2 miles to the northward of Governors Island. The main channel leading to it from the upper bay passes between this island and the Battery. The strong tidal currents which sweep through this channel, together with the enormous amount of traffic it bears, makes it difficult and dangerous to navigation at all times. Setting off from the north side of Governors Island is a shoal known as Diamond Reef, submerged 25 feet below the surface of the river. Less than 500 feet to the northward is another dangerous ledge-Coenties Reef-having about the same depth of water over it. Both these reefs lie about 250 yards from the end of the New York piers, and, while they are separated from each other by 165 yards, owing to the curve in the river and the peculiar way in which they are located, a vessel of large draft standing on her true range must pass between them at such an angle as to afford little sea room. As a matter of fact, such a ship at low water would have but 75 feet on one side and 150 feet on the other side of the exact course, and when the beam of the vessel—in our largest ships over 90 feet—is taken into consideration, it leaves practically no margin for the navigation of the ship.

[Extracts from testimony of Rear Admiral Benson and Capt. Knapp, of the United States Navy, before the Committee on Rivers and Harbors February 12, 1916:]

steer at an angle, and it leaves the available space between them very small, not certainly over 100 yards, and I do not think it is that much I never felt I had that much leeway when I went up there.

Capt. Knapp. I have very little to add, except that I do not think admiral Benson, perhaps, made plain all the difficulties that we have in getting through this present channel between Governors Island and the Battery. In the first place, this range over here ipointing to range of channel just mentioned is a miserable affair, owing to the formation of the land. There is a low front range mark on the wharf and a high back range mark on the Hotel Margaret, and very frequently a mist will cut out the lower range. In the second place the deep-water channel is very narrow, and in the third place there is a large amount of traffic around there i pointing to channel]. I have myself been in a ship in this channel when we had to stop and back to avoid a tow that was being swept down the tide across our bow; and to stop a large vessel in a narrow channel with cross currents is a dangerous thing to do. Finally, to avoid Coenties Reef in entering it is necessary to go over quite close to the Brooklyn shore, and then make a considerable turn in order to go under the bridge and approach the navy yard.

That these reefs should be removed, it seems to me, is not a

That these reefs should be removed, it seems to me, is not a debatable question. There evidently exists some confusion as to the nature of the subject under consideration. Partisanship has been injected into the discussion. Let me say that Diamond Reef is a rock and not a political issue. I hope no one will use that as a reason for voting against this appropriation or will oppose the project because of their fallure to recognize its importance to the Navy of the United States. We from New York are not favoring this project because we hope it will increase the commercial importance of our harbor. While the removal of every danger to navigation naturally operates as an incentive to shipping, it is not for this reason that we ask for the appropriation. Were we, however, Mr. Speaker, to urge it in the interests of commerce, I submit that the ever-increasing trade of our port would justify us in the demand, and that no criticism could be leveled against us for seeking Federal funds for so meritorious a project.

The commerce of the East River, in which these reefs are located, does not attract vessels of the deepest draft. Obstructions which lie submerged 25 feet below the surface are not dangerous to most of the shipping seeking the docks at Williamsburg, Long Island City, and on the New York side of the river.

Those great leviathans of the deep, the Cunarders, the American, the French, the German, and the Dutch liners, steaming through the Narrows and the upper bay to their piers on either side of the Hudson, do not pass even closely to these dangerous reefs. Their huge hulls are not endangered by these shoals.

Why is it that we from New York ask Congress to appropriate money for the removal of these rocks? Why is it that we, irrespective of district or party affiliations, stand united for this project? It is not primarily because of any commercial advantage which may accrue to the city of New York or the State we represent. Her greatness and her supremacy as the commercial center of the world is assured. The sum of \$500,000 will neither mar nor embellish her record of achievement.

We ask for this appropriation not for any profit to our city, but for the safety and the protection of the warships of our

Nation.

Lay aside the claims of commerce if you will, ignore the needs of trade if you must, but above all, rising supreme to party and to sectionalism, is the necessity to give the greatest degree of protection to the ships of the Navy, which are and must ever be the first line of defense for our country.

Letter from Hon. Steven B. Ayres.

EXTENSION OF REMARKS

HON. WILLIAM BENNET, S.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 4, 1916.

Mr. BENNET. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following letter from Hon. Steven B. Ayres, which represents the sentiments of many good citizens of New York City:

THE BRONX, April 3, 1916.

Hon. WILLIAM S. BENNET,

House of Representatives, Washington, D. C.

DEAR SIR: Four mouths have now passed since Congress assembled on the first Monday of last December. No measure for national defense has been made into law. Not an additional ship has been authorized yet for the Navy. No needed for the city of New York or where urgently demanded on the Atlantic coest.

coast.

The citizens of the New York City expect more prompt results. We are becoming dissatisfied at the delay. We look to you to protect our interests in this most critical time in the history of the Nation. You are urged, therefore, to use every means in your power to hurry

along the measures for national defense. The sentiment of the city of New York is almost unanimous in this direction. You can not afford to delay or palter with the manifest duty which confronts us. The time of danger is the time for unity of purpose and concert of action. May we suggest that the Representatives in Congress from the City of New York hold a meeting and throw their united influence in behalf of prompt measures for the defense and honor of America. Yours, very truly,

STEVEN B. AVEES.

Adequate Preparedness.

EXTENSION OF REMARKS

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 5, 1916.

Mr. MURRAY. Mr. Speaker, at the outset I desire to reply to some of the sophistry presented as arguments upon this ques-tion. It is stated here by the reactionaries that the Socialist Party is opposed to preparedness; therefore we ought to favor it; and by the ultraradical that the munition plants favor preparedness, and therefore we ought to oppose it. Such arguments are fallacious, and are not reasons for opposing it in the one instance or favoring it in the other.

It is but natural that munition plants should seek to benefit themselves, just as every class, irrespective of wealth, through class selfishness, seek through governmental agencies to benefit themselves at the expense of the general public. I know no exception to this rule, whether it involves the control of the great corporations or the advocacy of beneficial legislation by labor

organizations.

In dealing with international problems there is neither room for the partisan nor the demagogue, nor should the honest legis-lator be driven from his position, if correct, because great captains of industry might be benefited. Nor should he study inter-national relations involving the weal and woe of this Republic with a view of making an argument to sustain his beliefs, which may have been founded on ignorance, environment, or popular sentiment. The one object in the study of these questions should be to learn the truth, without reference to partisan advantage or to "What will people say?

I do not fear either the loss of votes or defeat, but I do fear

for my country and posterity to be wrong.

On this question no man has a right to assume a negative policy if he agree that preparedness at all for a nation is wise and justifiable. If he can not agree with the program submitted, it then becomes his duty to submit such a program as will in his judgment serve the best interest of the Republic.

"The origin of every right is in a duty fulfilled," says Guiseppi

Mazanni, one of the liberators of modern Italy.

INJUNCTION TO PREPARE FOR ALL THINGS.

The early settlers of the West upon going into that new country, surrounded by hostile savages, were careful to be "pre-pared." The intelligent farmer, after the harvest is over and he is rewarded with plenty, constructs a wheat bin or a corn crib, hangs a door to it, and places a lock upon it, and is thus prepared against the weather and the thief. When petty thieves are known to exist in the community he is always prepared with a lock upon the door. When the crib or bin is empty he does

It is a puzzle to me why there should be any opposition to a reasonable national preparedness, or why the pacifist should exist at all, for they reverse the training all about them and of a lifetime. All men living will recall that their fathers enof a friedmen. An inear that the friedmen of their childhood the necessity of going to school, for learning a trade, for being industrious and diligent, to be "prepared" for life; every sensible man remembers that when he thought of entering upon family relations he first considered and strived to reach such "preparedness" that he, jointly with his spouse, could justify the step. All good men having children have constant care and regard to impress upon them the importance of being "prepared" for to impress upon them the importance of being "prepared" for life. For this most men spend restless days, weeks, and years, exhausting their effort to feed and clothe their children, educate and supply them with textbooks, and whenever everything else is over the pious preacher admonishes us all to be "prepared" for heaven. Wherever you go, on every hand, the wise exhortation has ever been "Prepare, prepare!" No one questions or criticizes this philosophy until preparedness is proposed for national self-defense. Such a position is illogical and dangerous. To be logical and methodical, we should admonish pre-paredness in everything. There can be but one explanation of

such a sentiment-either men have become too bookish, and thereby impractical, or else they are ignorant about the things concerning our past military establishments and experience, for we do know that too often beliefs begin where information ends.

The thirteenth century was one of greatest constructive forces following the Middle Ages; but it had a war every five Perhaps you say we have progressed in the past 700 Let us see about that. The present or twentieth vears. century has now run 15 years, and we have had one war every one and a half years among the civilized nations. Since July 4, 1776, the United States has been engaged in war one day out of every four. When you count the campaigns against the Creeks, Seminoles, Black Hawk, and Tecumseh, and the Indian wars of the West in the seventies and early eighties you can calculate a period of nearly 20 years. Add to these the Revolution, the War with the Barbary States, of 1812, with Mexico, the Civil War, with Spain, and the Philippines, and you have nearly 20 years more, or nearly 40 years of war during the life of the Republic of 140 years.

To take the position of the pacifist I would not need the reading of the past ages. I could take their position and throw the Congressional Library—the greatest magazine of learning in the world-into the Potomac River; but it is an unsafe position; it is a dangerous position, and in the end the most expensive. Among certain citizens, I am aware, in my own State this position is not one of practical politics, but it is

statesmanship, and means public safety.

In the framing of policies for the government of man we must ofttimes reverse the idealistic theories of government. The practical man must realize that government can not be made from a book or framed from any philosophy or theory. Government must be a very practical thing, because it must be made for men, and must, in its organic form, be founded upon the character and intelligence of its citizens. It must take into consideration their hopes and ambitions, fashions, customs, and sentiments; their races and religions; even their appetites and passions. Therefore I have little care for academic theories or idealistic principles when they interfere with the prosperity or safety of the citizen. I'do not agree with the President in all the matters of his international policy, but I am glad that because of the European war he has found it expedient to reverse the policies of the State Department and to enter upon a constructive international policy. No party can remain in power that has not a constructive program—a program sensible, wholesome, and practical. The President has doubtless realized this, and through the necessity of the European war he has entered upon a consideration of such policy and has arrived in part at the only conclusion to which any student of history can arrive; and although we may disagree, yet the fact remains that these disagreements are matters of detail, and not matters of fundamental principle or purpose; therefore I am with him.

I am opposed to militarism. I dread and regret war, but war is not altogether the worst of evils.

CHINA'S PEACE AND PREPAREDNESS.

China, one of the two exceptions in the history of nations, without a war every generation, under her wise Monarch, Chi-ho-ang-ti, two centuries before Christ, began a program of preparedness in an effort to secure perpetual peace by building the Chinese Wall, 1,728 miles in length, to hold back the Tartars, Kalmucks, and other tribes of the north, and in his hurry to complete it, to prevent the invasion of China by these tribes, it is said he caused the death of no less than 10,000 laborers by overwork on that wall-a very expensive preparedness in both men and money. While this did for some generations prevent such foreign invasion, nevertheless China had continual insurrection and turmoil, as illustrated in the Tae-ping rebellion at Nanking as late as 1853, wherein not only the men but a half million women were armed and took possession of the capi-This rebellion lasted for more than 11 years, or until 1864, when finally suppressed by the aid of English, French, and American officers at the cost of an indemnity and a corresponding economic and commercial advantage to foreign powers. ask what is the difference between a foreign war and such internal anarchy and insurrection? As between the two alternatives, in my opinion, a foreign war is more preferable.

To those who say we need no military establishments whatever, we might ask the question, Should we introduce bills to sell or burn or destroy the Navy, to disband and send home the soldiers we now have, and abolish the Military and Naval Academies? Should we cease to train and equip officers to lead our armies in case of war? Should we not provide in time of peace for Army supplies to be used quickly in case of emergency? they answer no to any of these questions, then they must confess

they are in favor of preparedness. If they subscribe to the doctrine of preparedness at all, the question will then arise, How much? To know how much requires information of our present military establishments and our experience with them in the past, as well as their comparative strength with other nations. That information can not be found in the ordinary school histories, which, for the most part, were written to make the schoolboy's heart throb; nor can that information be found in the press of the country. Much of this information can be had only by searching the private records of the Government or those in the Congressional Library. Nearly all school histories will leave the student to conclude that we were victors on land as well as on the sea in the War of 1812, when the reverse is

Five thousand of the British regulars landed at Chesapeake and marched across the border toward Washington City. had 6,000 slightly trained militia and volunteers to defend the Capital. The Secretary of War was warned that we were not prepared to meet the British regulars. He refused the warning and was supported by the greater part of the press of the country as well as by Congress, but these 5,000 British regulars came to our fortifications around Washington and upon firing the first volley our 6,000 untrained men turned and fled, running so confoundedly fast that the British could kill but 19 of them. The British marched into the Capitol, the commanding officer took the Speaker's stand and put the question: "Shall this harbor of democracy be destroyed?" The question was adopted with a shout, the British soldiers burned the Capitol, the White House, and many other public buildings. This self-sufficient Secretary of War fled that night to Baltimore, resigned, and Monroe was appointed in his place. This was the War of 1812.

JEFFERSON AND CALHOUN.

After this war was over Jefferson and nearly all the great men of the Republic urged our statesmen to enter upon a plan of preparedness. This continued until 1820. At that time John C. Calhoun was Secretary of War. Congress, in order to evade the question, adopted a resolution calling upon him to prepare a plan and submit it to the next Congress. Calhoun studied the question and submitted a plan to Congress, and it may be new to many to know that the plan Calhoun then adopted was the very plan upon which every great nation has at this time founded its basic principles of preparedness and is very much like the recent plan of the very able ex-Secretary Garrison. His principle was the formation of skeleton regiments to be swelled to full strength when war began, with definite plans down to the last detail worked out in time of

John C. Calhoun declared:

At the commencement of hostilities there should be nothing either to new model or to create.

The conflict of 1812 has for the most part characterized all of our wars. In all of them, because we lacked preparedness, we were compelled to call out untrained men and have them slaughtered by the thousands while we were training an army capable of meeting the enemy's regulars. We made breastworks and fortifications of men. This invariably resulted in longdrawn-out wars, just as the European war will probably mean a long one, because the allies combined did not have their preparation sufficient to meet that of Germany. If the allies set their determination to crush and disarm Germany, they have yet to train an army capable of doing it, and it may mean three years and it may mean more. So from this standpoint lack of preparedness means long-drawn-out wars, heavy expense, exorbitant prices for materials, heavy pension rolls, more dead and wounded, more widows and orphans, and therefore lack of preparedness is the most expensive, as it is the most dangerous, thing for a nation?

Compare the difference in other periods of our history with our preparedness following the Civil War. Although the United States had buried many of her citizens, many more were wounded, yet at the close of that war she had 1,500,000 armed and efficient men, with a good Navy fully equipped with trained They were Regulars in every sense of the word, with a morale far greater than Regulars; and, although a foreign army was on the soil of Mexico, led by Emperor Maximilian, we sent one little note requesting the withdrawal of these troops, and they were withdrawn so quickly that Maximilian was left unsupported, solely because of such preparation. If a like foreign army should now be on our continent, does anyone imagine that one little note would remove them?

HOW TO PRESERVE PEACE.

A nation, like an individual, starting out to hunt a figl t will be regarded as a bully and have its hand quickly called. When any nation, like any man, taking the other extreme, prates about its love of peace, boasting that it has no arms, and that under no circumstances will it fight, will be despised, and in the end kicked and cuffed by all nations of the world. It is manifest, therefore, that neither of these methods will insure peace for any great length of time. A nation, like an individual, can best maintain peace with its fellows by never parading either its prowess or weakness, but by assuming at all times its readiness and capability of meeting any emergency, while pursuing a course of fairness and justice.

Preparedness ought to mean a demeanor toward other nations impressing them with the belief that so long as they treat us justly and will not tread upon our toes no disagreement will arise, and that if they jump on us peace will be restored as soon as they restore our rights and let us alone.

Nations are never made outwardly weak by war, and at the end of the present lamentable struggle in Europe they will all be better prepared than ever before in their history; and this includes the defeated nation, which will prove a menace if she threatens us.

It is also a truth, disclosed by the philosophy of history that nations are more prone to fight during the first few years following a military conflict than during a long period of peace. During long periods of peace citizens of all nations dread to be discussed as the conflict of the disturbed—some in their ease or luxury and others in their money-making. A concrete example of this can be illustrated by the War of 1812, showing that neither the British nor the Americans were satisfied until they had the second war after the Revolution.

FUTURE WARS WITHOUT WARNING.

This being true, we must also remember that, although we can never wage war against any nation, due to our form of government and a written Constitution, until we have made public declaration of such intent, nevertheless no notice will ever again precede war upon us by any of the great nations of the earth. We are irresistibly driven to this conclusion because on September 2-5, 1807, England, without notice to the world, and like a thunderbolt from a clear sky, shelied Copenhagen and carried off the Danish fleet, burned 400 houses, damaged 2,000 other buildings, and 3,000 peaceful inhabitants and innocent women and children were killed; and this same nation pursued a like course on July 11-12, 1882, toward Alexputring Feyret. The Jampage began their war on Puggie by andria, Egypt. The Japanese began their war on Russia by shelling the Russian fortifications in Korea without notice or warning; likewise did Italy begin her conflict some few years ago with Turkey; and in the present struggle Germany had marched her armies across into Belgium before the world knew that they had even mobilized. If we ever have another war it will be with one or more of these nations. They will not follow the "rules of honor" of the knights in the Middle Ages, with cthics of dueling, approaching us, hat in hand and bowing, say, "Uncle Sam, you will please do us the honor to fire." On the other hand, each and all of them will begin hostilities when we are least aware of it. They will attempt, under the plea of a naval maneuver, to take circuitous sea routes and land on some unprotected shore of our coast their armed battalions before we even remotely expect a conflict, and either England or Germany could by this ruse, but for our Navy, land 400,000 regulars upon our shore without our knowing it, finding us, as present, with but 36,000 mobile troops, without our possibility of removing the remaining troops, although we have a total of 100,000, from the fortifications on the coast. What would be the result in a conflict between our 36,000 and their 400,000? The answer to this is found in the War of 1812, when our public men and many citizens everywhere boasted that should another war with Great Britain arise we could with one company take Canada, but when war actually broke out we called into action more than one-half million men in a vain effort to drive back 67,000 British regulars who had already landed on our shore, and they whipped us in every battle on land except the Battle of New Orleans, and it was fought after the war had ended, and except the little skirmish in Canada between 3,000 of the American troops under Gen. Harrison against about 800 under Gen. Proctor, and that made possible only by Perry's victory on Lake Erie, while on the sea we whipped them practically in every battle, because our Navy, as it nearly always has been, was prepared.

How like the braggarts of 1861 and the pacifists of to-day

It was a favorite notion with a large class of northern politicians—and the people, too—that nothing but an imposing display of force was necessary to crush the rebellion—

Said Gen. Barnard, In his "Battle of Bull Run." And Robert Toombs said to the people of the South:

We can whip the Yankees with cornstalks,

Possibly they could if the Yankees had fought with cornstalks, which disclosed to us that the nations will always fight us by their own method, not by our unprepared standard. Doubtless in the Japanese-Chinese War the Chinese could have whipped the Japs if they had fought by the Chinese method, with "stink pots" and dragon-shaped mobilized army, but this method made China's Army an easy mark for Japanese artillery.

Had we better not heed the wisdom expressed by Frederick the Great in a letter to Pitt, July 3, 1761:

No man, if he has a grain of sense, will leave his enemies leisure to make a preparation in order to destroy him; he will rather take advantage of his start to put himself in a favorable position.

I agree there is one way by which we could avoid war on the high seas and the expense of a Navy, and that is by pursuing the same course that China pursued, abandon all attempt to establish foreign markets or foreign trade, abandon all merchant ships or merchant shipping, cut off the cotton farmers' foreign market, live within our own borders, and use our own citizens in a self-competition, but this in turn, because of lack of work for the laborer, would bring internal turmoil, strife, and insurrection, just as it did in China, necessitating a stronger central government-government strong enough to suppress any popular uprising or even criticism of the ruling power.

It is a popular notion that armies and armament destroy liberty, but this is, as a rule, not borne out by history. How true the statement of Maj. Gen. Emory Upton, who was sent around the world to review and study the military powers of the earth, and whose recommendations have been acknowledged to be wise for the future military safety of the Republic, who many years ago pointed out that-

China, the most despotic of Governments, has no military strength; numbering 400,000,000 people, she has been twice conquered by a few desplaed Tartars, and only a few years ago 20,000 English and French dictated peace at the walls of the capital. In Persla the Shah can lop off the heads of his subjects or wall them up alive at his pleasure, and yet it has been said that a single foreign battation could overthrow his throne, while a brigade would starve in his dominions.

It is true that the Anglo-Saxon race has never been prepared like the others. The Teutonic, or German, is the only branch of the white race ever prepared for such conflicts. The Anglo-Saxons have all through history looked upon military establishments as dangerous to their peace and liberty, while at no time has militarism ever oppressed them.

WAR NOT WHOLLY EVIL.

Wars are not altogether evil, particularly when we must needs choose between evils. Foreign war is infinitely more preferable to internal strife and turmoil, sedition and anarchy, insurrection and rebellion.

And I here now announce as a sound principle of statecraft that whenever the ruling statesmen of any nation upon whose shoulders rests its responsibility for weal or woe should be confronted by these two alternatives, rather than bring such upon the Nation, resulting in industrial depression, impoverishment of the weak, and degradation of labor, it becomes the duty of such statesmen deliberately to steep that country late. such statesmen deliberately to steer that country into a foreign war. Otherwise, liberty would be lost, internal government proportionately made stronger; lockouts and strikes, bloodshed and murder would weaken civilization, ushering in internal turmoil and fratricidal strife.

WAR SAVED CHRISTIANITY.

Many people do not know, because few read the history of the Middle Ages, that the existence of Christianity was made secure only through war, and but for the wars of Charles Martel (or Carl the Hammer) and Charlemagne, Europe to-day would be controlled by the Mohammedans, with their despotic military power suppressing all religion except the followers of Mahomet. The Saracens, the name given to Mohammedans, after getting control of eastern Europe, all of western Asia, the whole of Africa, and of the Mediterranean Sea, all of southern Italy and of Spain, began their steady march across the Pyrences Mountains to conquer central Europe. They were met upon the historic battlefield of Tours in the year 732 and defeated by the Christian German prince Charles Martel, the first effectual check to the steady and onward trend of the Saracen armies toward the conquest of the world. Of this battle, Gibbon has so truthfully said that but for the victory of this Christian prince the Koran, instead of the Bible, would be taught in Oxford to-day. Yes; there are worse things than war.

After all, is not Frederick the Great right in saying:

The life of the individual citizen is valuable only when it is consciously and actively employed for the attainment of great ends. The same holds good of nations and states.

No one will dispute that the verdict of history would condemn the statesman who was unable to take the responsibility of a bold decision but sacrificed the hopes of the future for political expediency to his own need of peace.

PROPLE DIVIDED ON PREPAREDNESS.

In all of this question of preparedness the people are primarily divided into two classes. First, those who do not believe in any preparedness whatsoever, even in what we now possess, believing that universal peace is at hand. The second class are those who believe in judging the future by the past. They have observed also that civilization is always moving and never stands still. However, this last class disagree on the kind and the amount, and there is logical reason to support each. Some believe that our present preparedness is sufficient, others believe in an increase of the Navy only; others in the Army and Navy; and yet others favor these and increase in coast fortifications, coast artillery, and harbor defense, and these in turn disagree upon the amount for these several purposes.

sagree upon the amount for these several purposes.

I believe in that line of preparedness which ultimately will believe in that line of preparedness which ultimately will be wight and dury of self-defense. With enable us to exercise the right and duty of self-defense. this end in view I would build up a large Navy, the greatest on the Pacific Ocean-I would not say the largest on the Atlantic-greater harbor and coast defenses, with guns placed on these coast and harbor fortifications that will shoot as far and with as great force as any guns on any battleship of the world. So far, to such preparedness no objection can arise theoretically or otherwise from the old Anglo-Saxon fear of militarism. Naval and coast defenses are peculiarly the fortifications of Republics. In addition thereto I would provide for a reserve of naval and military stores and supplies for the Ordnance Department, the Medical and Dental Corps, Field Artillery, with small arms of the latest pattern held in reserve in case of emergency for all probable needs and to supply such an increase in our Army should a war arise, with smokeless powder, shot, and shell sufficient to conduct such war for six months. would not, however, adopt compulsory service, the continentalarmy plan, nor provide for a large standing army. I would give additional aid to the National Guard of the several States, paying them based upon their training and efficiency.

MILITARY TRAINING IN SCHOOLS.

I would provide enough trained men to man all the fortifications and leave us an army of about 50,000 soldiers that could be mobilized at one time, and for the purpose of other and as a second-line land defense I would provide for education in military hygiene, discipline, and tactics in the schools, academies, and colleges of the country—not wholly from the standpoint of war or of defense, but in order to give the citizen that training which will make of him a better citizen and give to him a greater earning capacity, that will teach him how to protect himself against disease, to make his body stronger, and to nusband his own individuality and strength. In other words, if we had the German military training without the German compulsory militarism, it would be wholesome from every consideration. Such training in our public schools would be worth all it would cost, even agreeing to the belief of the pacifist that there will never be another war. It would give them proper discipline, which they do not now get either at home or in the public schools; it would teach them to control their passions and appetites. If there is one thing above another that the schoolboy of to-day should be taught, it is to throw a brake upon his passions.

The average German is the master of himself. He can have a half-day's fun on a little bottle of beer, while an American would want a keg, and I am not sure but what this self-control and these temperate habits grow out of his long training in military schools. Quintillian, the old Roman rhetorician, in his work entitled "The Institutions of Oratory," stated that no man can be a great orator unless he is also a "trained soldier and dancer," basing this statement upon the fact that mannerism and graceful poise of the public speaker has much to do with the attractiveness of his oration. At the time this was stated by Quintillian Rome was a republic, and it was the doctrine of that old republic, as well as of Greece, that every citizen should be a trained soldier, which is quite a different doctrine from every citizen being a member of the army. The citizen was trained, sent home, and became a part of the multitude, enjoying the daily routine of civil life, and his viewpoint, although trained for self-defense or for war, was quite different

from a member of the army in the barracks.

This is the same principle announced by Jefferson in 1814 after he had retired from the Presidency and had witnessed the

after he had retired from the Fresidency and had witnessed the failure of the early policy of his administration, acting upon the belief that by use of embargoes, commercial retaliation, and diplomacy, no preparedness was necessary, and after he had had an opportunity to witness our disgraceful defeat on land in the War of 1812 and at a time when he had no other political

ambitions and could possibly have no other motive or desire than to give the best advice to his country. At this time he wrote to James Monroe that—

It proves more forcibly the necessity of obliging every citizen to be a soldier. This was the case with the Greeks and Romans and must be that of every free State. Where there is no oppression there will be no pauper hirelings. We must train and classify the whole of our male citizens and make military instruction a regular part of college education. We can never be safe until this is done.

Switzerland and Australia have already settled upon this policy, and in case of war Switzerland could put into the field immediately an army of 220,000. She would have in reserve in case of necessity an additional 270,000, and in less than six months she could call into action 1,500,000 armed and efficient men, although she is no larger than the State of Massachusetts. and yet the cost of this system of military defense is, in round numbers, \$92,000,000, in comparison with our cost of \$96,000,000 for our pygmy Army of less than 100,000. If we would adopt the Swiss system at the end of another generation we would be enabled, with our great population, to put into the field 18,000,000 well-trained, equipped, and efficient men in case of necessity easier, quicker, and at less cost than we could to-day 225,000 efficient men. These millions of trained men, however, would be no part of a standing army; they would be civilians living in peace, having no desire to rush the country into war or themselves to be disturbed by it. They would be the voters of the country, and whatever policy was formed would be formed at their will, not as militarists, not as a standing army, but as trained citizens. This plan I conceive to be the real military training of a Republic.

NECESSITY FOR TRAINED OFFICERS.

Above everything else there should be a sufficient number of trained generals, well equipped and level headed, with all of the training that our rich Nation could give them, to lead our armies in the event of war. In the past we have always relied upon a declaration of war before we attempted adequate preparedness. Then, in a hurry to get ready, we paid fabulous prices for all kinds of materials and war supplies, attempted to mobilize large, untrained Volunteer forces, ignorant of all discipline and military hygiene, causing them to be exposed to typhoid fever and other diseases and epidemics so fatal to untrained armies, so conclusively shown in the military records of the Civil War, when 42 per cent of the Regulars were attacked by disease, while among the Volunteers 59 per cent, or one-third more, were subjected to diseases of the camp and with more fatalities, and as illustrated in the Volunteer camps of the Spanish-American War of men mobilized in malarial districts, ignorant of the most rudimentary principles of military hygiene.

Then in the past we commissioned right and left politicians and men in civil life to lead our gigantic armies of untrained Volunteers, notwithstanding our experience in the past that such Volunteers, until they became trained, never achieved marked success on the field of battle except at Bunker Hill and the Battle of New Orleans, and these two exceptions were due to the fact that they were commanded by well-trained generals. We never learned from experience until the Spanish-American War the hazardous policy of permitting the governors of the States to appoint the commanding officers. Then we reversed the rule and appointed them by the President; and then out of some 1,200 appointed only about 400 of them were thus trained.

STATE SYSTEM OF ARMIES.

The State system is wise in time of peace to preserve a military balance between the States and central power, but both unwise and hazardous in time of war; then all officers should be selected by the Federal authority.

In time of war there must be only one army, for unity of command is the first necessity—

Says Napoleon.

It is not a question now any more than it has been in the past of getting men to enlist. Mr. Bryan was right when he said that a million men would enlist in 24 hours, but it is the effect of such enlistment. Such spontaneous enlistment without training constitutes little more than a mob; and their efforts against even a smaller trained number to maintain their position would be scarcely better than a mob of 1,000 men who could be routed by 100 city police.

BRYAN'S MILLION MEN IN ARMS.

Bryan assures us that in case of war a million men would rush to arms. That a million men without training, without a knowledge of military hygienics, without discipline, without a knowledge of self-defense in formation by mass, would but increase the slaughter, no sensible man will deny. Virgil has so truthfully said: "It never troubled a wolf how many the sheep be," A million men thrown together without training, without

sufficient arms and military supplies, and without trained generals, would be as helpless as sheep, because the greater the mass the less the personnel of the general and the greater the training of the individual soldier must be to enable him to coperate with his fellows in one organized unit and at the same time rely upon his individual resources in such mass. Their very numbers would constitute a weakness in itself. They could not, like the old Roman armies, live off of the land they conquered; they would be compelled to be fed from the rear—the base; disease would be more likely and more deadly in its results.

Assuming that Mr. Bryan is correct, and that in the future we should continue that policy, then in the event of war we would, as he says, call into the field a million men, but among the officers commissioned we may imagine Billy Bryan, and from those in Oklahoma there would be Bill Murray, Senator Roddie, Moman Pruitt, with the Socialist regiments under Stanley Clark and Pat Nagle, the Republicans under McGraw and Jim Harris, the Prohibitionists under Mr. Sweet and Dr. Dinwiddie, and to make it complete and most modern Jane Addams would command a regiment of suffragettes. When we all got down to the seat of war, if there would be anything greater than the stupendous ignorance of military affairs of all of us, it might be the bravery of some of us. Knowing nothing else to do, but in order to show military prowess, these brave officers would rush our battalions into critical gaps, having them mowed down by the thousands just to read in the headlines of the following day the magnificent eulogies, "What a brave general made such a glorious charge on yesterday's battle field." When, as a matter of truth, it would be, as it has been in the past, little short of murder. Gen. Henry Lee, the greatest military chieftain of the Revolution, said that any nation which attempted to go to war "with untrained troops was but the murderer of its citizens." Gen. Washingon said that to rely on "untrained militia was but to rely upon a broken reed."

I can not fathom why a laboring man, a farmer, or an average citizen who has no hope of competing for an officer's commission, but in every great war, as in the War of the Revolution, the War of 1812, and the Civil War, was subject to conscription would not want to have preparedness sufficient to be led by leved-headed, well-trained generals, equipped with all the efficiency which this rich Nation could give them, because such officer could protect many of them from the loss of life or from wounds in battle and would know when and where to attack with safety.

DOUBLE THE MEN OF THE ENEMY.

This policy in the past is the explanation of the necessity of our having called into action double the number of troops or volunteers of that of the enemy. We have never had a war until the Spanish-American War that our troops did not double the enemy, and that includes the wars against the Indians. In the American Revolution we called into action upward of 395,000 men against 150,000 British, and yet there never was a year from the first to the last of those seven years of the Revolution when the fate of the Republic hung in the balance but what Washington could have driven the British off of this continent if he had had 50,000 well-trained and efficient men. Notwithstanding these numbers, he never had at any one time more than 17,000 trained and efficient troops. At Princeton and Trenton they sank as low as 4,000 efficient men. What were we doing with them? We were holding them in camps, over 50 per cent of them diseased, due to their ignorance of military hygiene, with unnecessary expense of feeding and clothing them, while others were used as breastworks, shot down by the thousands, holding in check the enemy until we could train a force sufficient to meet him on a successful field of battle. After all this, the success and independence of the Colonies could not have been made secure but for the French regulars under Rochambeau and Lafayette, the Polish patriots Pulaski and Kosciuszko, and Von Steuben, together with the great achievements of another foreigner, the Scotchman, John Paul Jones, who made the name of the Bon Homme Richard the symbol of American naval glory so long as the American Republic shall

BULL RUN AND THE CONFEDERACY.

Why did the United States troops flee at the Battle of Bull Run? It was largely because of the difference in the military organizations of the United States and the Confederacy. The United States adopted the old plan of organizing and officering based upon State troops of as many systems as there were States, enlisting men from sections of the country not accustomed to wars and without military training, while the South adopted the centralized system, the very same plan of organization used in the Spanish-American War. In addition to this

the southerner was a cavalier and the South had been in the saddle since the beginning of the Government; its leading men had been given the chief military posts; its armies were made up of the very men who fought against Mexico and who had but a few years prior thereto been engaged in the many years' war against the Creek, Seminole, and other Indians, so that its armies were lead by trained generals, and were composed of a greater per cent of trained soldlers and men inured to camp life and to the battle field. The North, on the other hand, called out 75,000 volunteers for three months, began to train them—and they could not be trained in that length of time—the time of some of them began to expire and notwithstanding they were not yet ready to risk a battle, politicians, the press, and Members of Congress, with the same degree of intelligence now characterizing the pacifist, began to demand that they fight one battle before their time of enlistment expired. Against their better judgment their officers were compelled to risk a battle at Bull Run, and you know the result. They fled precipitately, nor did they stop until they had reached the fortifications around Washington, for the second time exposing the Capital to capture and pillage.

INDIAN AND MEXICAN WARS.

It may be surprising also to call attention to the fact that in the Creek and Seminole campaigns there were called out a portion of the Regulars and 48,000 volunteers to whip less than 3.000 Indians. And thus I could enumerate all the wars we have ever had, which policy but increases the wounded and the dead, swells the pension rolls, increases the number of widows and orphans, and in the end proves more expensive than reasonable preparedness in time of peace. This is why we have double the number of pensioners of any nation in Europe. Shall we continue it or shall we reverse that policy and thus save us from danger in future conflicts?

It may be noticed the difference between the War of 1812, when we lost every battle on land, and the Mexican War. In the last named we had the greatest number of trained troops proportional to the total number of any war in the history of the Government. Zachary Taylor trained his new recruits, many of them old Texas rangers, and many fresh from experience of fighting in the Indian wars, but before he risked them he spent eight months of six hours a day training them before he formed a union with the forces under Gen. Scott and began that uninterrupted march toward Mexico City, and, although their force was one-fourth the size of the Mexican armies, when they met and encountered them they won every battle because their troops were trained and efficient.

Then the glory of those achievements came very nearly being lost by our volunteer system which enlisted for but "one year," and in sight almost—three days' travel—of Mexico City. Those whose enlistment had expired immediately quitted the Army and returned to the United States, compelling Gen. Scott to sit down for three months at the gate of the Montezumas, maintaining his communication with Vera Cruz with extreme difficulty, until reinforcements could arrive, incurring the risk of having his Army annihilated, requiring additional volunteers, and new recruits and time to train them in order to become successful in the conflict, due to the faulty system of enlisting for a few months or for a year.

ENLISTMENT " FOR THE WAR."

This calls attention to another bad policy of the past needing correction, and that is that hereafter in all wars the volunteer should be enlisted "for the war," and I am proud to state that in the last Congress we for the first time in time of peace adopted this wholesome policy and began a wise, sensible system of preparedness in time of peace.

Armaments of the present day must be prepared in peace time, down to the smallest detail, if they are to be effective in time of need.

A nation's standing army is never a menace in time of war. It exists only in time of peace, and that by a possibility of the supremacy of military over civil power. Hence enlistment of all militia and volunteers "for the war" is both wise from a military standpoint and safest by automatic disbanding upon the return of peace, thus making certain a return of the supremacy of civil power.

REORGANIZATION OF MILITARY ESTABLISHMENT.

In truth all our organizations in military affairs should be reorganized, since by reorganization and adopting military principles, our present force, without increase, could be made more efficient and that at \$5,000,000 less cost. How is this so? It is due to the fact that we have established some 57 military posts, scattered throughout the country, for the most part in the mountains west of the Mississippi River, and maintain them because

of political or local influence, which such post gives to the nearest city or town. In other words, our Military Establishments and posts are founded upon the same system we adopted 70 years ago to fight Indians. This is the reason why the cost of maintaining an Army in the United States is greater than that of foreign countries and greater than maintaining the police force of our great cities per head. Yet I realize that Congress will probably never abolish these military posts for political reasons and political expediency. What Member of Congress could afford to vote to abolish a military post in his own State? Did he dare do it he would be met with defeat.

There is only one way out of this difficulty, and that is to adopt a "commission of defense," giving them plenary power to reorganize the entire Military Establishment of the Government, so that the Congressman's constituency may curse the commission for such removal and not the Congressman. In other words, here is a case where "practical politics" interferes with a Congressman's doing his whole duty just as it interferes to-day with adopting a sensible, wholesome plan of national defense.

REVENUE TO SUPPORT PREPAREDNESS.

The question bobs up everywhere, How will we get the money to create this preparedness? I answer by calling attention to the fact again, that an empty corn crib needs no protection; nor does a poor nation. It is the wealthy nation, and particularly a nation with surplus wealth. I therefore regard it sound in principle that this surplus wealth should pay for its surplus protection. I would therefore follow the advice laid down by Dr. Frederick von Bernhardi, the German philosopher, of paying for all material increase of preparedness from a tax on inheritance and increased tax on incomes, and at this time we could collect one-half of it from the output of munitions plants.

GOVERNMENT NAVY YARDS AND MUNITION PLANTS.

I would also provide for building all battleships, submarines, and like naval craft particularly requiring care in workmanship and secrecy in construction from other nations in a Government-owned navy yard. The supplies and ammunition authorized for war emergency I would have made, whenever secrecy is necessary to be maintained, in Government owned and operated munitions plants.

I would not, however, require this in case of ordinary supplies, for the reason that it will be essential in case of war for the Government to have the entire output of private munitions plants as well as its own, and they must be encouraged to some extent to continue their operation. It may be noted that England, France, Russia, and Japan, as well as Germany, had munitions plants of their own established long prior to the present war, and yet they were compelled to call on the private plants of the United States.

In the matter of medical supplies alone, which require six months to furnish enough to last an ordinary war, we have never acquired a sufficient amount of supplies held in reserve for emergency in this department, although its province is that of aiding the sick and wounded and wholly in the interest of humanity and And yet we have gone along unprepared in this field as in all the rest, although these supplies cost four times as much in the midst of war as they do in time of peace. Just as to-day, although we are out of the war, because of the European war this Congress will be compelled to appropriate \$200,000 for medical supplies for the United States Army, whereas \$100,000 was sufficient prior to the war. This is due to the fact that articles like quinine, which cost 30 cents before, now costs \$4 an ounce. Of course not all the medical supplies can be kept for such reserve, but the appliances and articles for the field hospital and Dental Corps and many medicines could be kept indefinitely, and such as these should be provided for in time of peace sufficient to carry on any ordinary war for 12 months. It will be less expensive to do so than to wait until the war begins.

Our Coast Artillery, so important to protect our cities and to obviate the necessity of a large standing army, is about as well equipped as any other branch of our military arm, and yet every shot held in reserve could be fired in two days.

WHERE OUR MONEY WENT:

It is sometimes urged that we have spent many millions, and that because our fortifications are not now sufficient this money has been "fooled" away. There are explanations for this, and I give you one of them. When we built our fortifications they were equal to the emergency; they were of sufficient strength and the guns of sufficient range to meet the requirement in comparison with other nations; but these things, like the water gap of a farm fence, must undergo constant upkeep. When you understand that of all our coast fortifications we have but 24 guns of more than 12-inch caliber—only 4 on the continental coast, the remaining 20 being on insular possessions—with but

one 17-inch gun, and that one installed at the Panama Canal in the last 12 months, requiring almost a year in its construction; and these 12-inch guns have a range 4 miles short of the range of the German guns and those of the Queen Elizabeth type of the British Navy. We thought ours were sufficient until this war began. We find them now inadequate. It was not a foolish expenditure. They simply cease to serve the purpose, so that the British Navy, learning the range of our coast guns, could sail up within one-quarter of a mile of our range, fire their shots over the heads of our fortifications into our cities and markets to a distance of 3½ miles, completely smashing them and killing thousands of our citizens, and then in turn laugh at us, as they witness our shots falling in the water one-quarter of a mile ahead of them. Now, these 12-inch guns, by raising the muzzle and changing the carriage, may have the range extended that 4 miles, of course at the loss of the power of the shot, but who is it that would argue for a moment that this expense should not be incurred? It will cost many millions of dollars, and, in my opinion, every third or fourth gun should be taken out and one of the largest type immediately made and placed there in its stead.

It is essential to encourage these private munitions plants because it would hardly be profitable for the Government to maintain and operate a sufficient number to supply the Army in case of war unless the Government would undertake completely the monopoly of powder and shot both for Government use and private sale. Thus the encouragement of the privately owned plants would relieve the Government's necessity of owning a sufficient amount in the event of war.

It will be remembered that the American Volunteers in the Spanish-American War mobilized at Tampa, Fla., and that when President McKinley ordered their embarkation for Cuba Gen. Miles made a hurried trip to Washington City to call the attention of the President to the fact that all the munitions in all the plants of the United States had been bought for use in the Philippines, and that there was not sufficient ammunition either in the hands of the Government or in the United States to carry on a campaign in Cuba, and that it could not be made in less than eight weeks time, while the soldiers themselves had in camp sufficient ammunition for 70,000 men to fight only one battle. Upon this showing the President countermanded the order for embarkation, losing the importance of time in the beginning of the war, the most important element in all military conflicts. This fact was expressed in the statement attributed to Napoleon when he sent Col. Colbert on a trip to Russia, he said:

Go quickly. Remember the world was made in six days. Ask me for anything in the world you need except time. I have none of that to furnish.

IMPORTANCE OF MILITARY RESERVE.

We must have a reserve, because 50 per cent of the strength in modern warfare is exhausted the first six months of fighting. There are three ways of creating this reserve—one by service with the colors and then pass to the reserve; second, the continental-army plan; and, third, by training all able-bodied boys in the schools and colleges of the country. This simply could be accomplished by extending the law now governing military training in agricultural and mechanical colleges to all schools in the country having the necessary number of 100 boys of the proper age. The Hay bill provides for this by furnishing West Point graduates free to each school; who become instructors in mathematics.

Is it desirable to have a reserve of either a standing army sufficient to serve with the colors, which will then pass to the reserve to constitute a second line of land defense, or one on the continental-army plan? I do not think so, because to make either method a success would essentially require compulsory service, which should never be resorted to except in case of actual war and that as a last resort.

The Civil War records show that out of all the enlistments for the Union armies 2,159,000 were boys under 21 years of age, leaving some 600,000 only of enlistments over that age. This proportionate number of young men fairly represents all armies. We therefore may expect in the future, as in the past, our armies to consist of young men, and in view of this and the further fact that the American people will never stand for compulsory military service nor for a large standing army, it is therefore clear to my mind that a second line of land defense must be made by training the boys in the schools and colleges of the country, based upon the Australian or Swiss system of training a citizenship who would be available in case of necessity.

I would fear any other plan, because it would require a United States Army of a million men, and since the States of the North, East, and West for the most part permit soldiers to vote, this body of men would be the deciding factor in every election and would largely determine our policies. They would support candidates and parties because of the personal interest through Army appropriations to themselves, and since we could not disfranchise a member of the Army, because this is a State question, it would render it extremely dangerous to the Government to pursue this ment to pursue this course. A standing army of a million men would thus prove politically as dangerous as to leave ourselves

exposed to foreign attack.

In the early history of the Republic nearly all the States disqualified from voting any person in the Army or Navy of the United States, but as a result of the Civil War, in order to enable the old volunteer to vote in the States of the North, East, and West this policy was changed, but in making the change they were erroneously extended to time of peace; while during the dark days of reconstruction the Southern States, finding themselves with soldiers stationed in their midst, returned, and have adhered since, to the old principle followed in the formation of the Republic and denied the right of suffrage to all members of the Army and Navy.

I have never believed in permitting a member of the Army to vote. This question in the Oklahoma constitutional convention was most stubbornly fought. We made a compromise which prevented the evil by providing that soldiers who may be stationed in the State should never thereby acquire residence qualifying them to vote. This left only such persons with the ballot who were citizens of the State at the time of enlistment

in the Army.

Aside, however, from all these considerations it would be worth the money, even though we never had another war, to train all the citizens of the country in military hygiene, tactics, Their earning capacity would be greater, their and discipline. knowledge of health laws enabling them to correct the habits of themselves and their families would save them much expense in the cost for medicine and physicians' bills, and give us a race of stronger men and at the same time remove the need of a standing army. Moreover, the trained citizen would hesitate long to vote for a war that would take him from his family and from peaceful pursuits. His viewpoint would be quite different from the viewpoint of the man in the barracks.

Dr. Edmond J. James, president of the University of Illinois,

has so aptly said:

Military drill is the most democratizing element at work in our student body. It crosses all lines of college, church, fraternity, or social organization. It is susceptible to no pull of favoritism. It measures all classes, rich and poor, idle and industrious, social and misanthropic, by the same standard and insists on efficiency or elimination. Its principle is "do" or "get out"—a most desirable antidote for the enervating policy of indulgence pursued by so many American parents and college faculties which develops a race of mollycoddles and inefficients. parents and co and inefficients.

SCHOOL OF DIPLOMACY.

Another important element in our national preparedness is in the matter of our diplomatic establishment. Heretofore, because we have failed to build embassies in foreign nations, and compelled the diplomats to the larger nations like England, France, and Germany to pay more for rent upon an embassy than the salary amounts to, it has resulted in our diplomatic posts being berths for some very rich men who have worn out their brains making money and who accept the posts merely as a means of getting their wives and daughters into society; and these old dolt heads have traded off the best rights of the

American Republic.

Again, we observe that, with but few exceptions, the only persons whose diplomacy have been worth while are naval or military officers. To my thinking we should build an emmilitary officers. bassy in these nations and establish a national university I have introduced a bill creating one-having, among other things, a school of diplomacy and international law, men for this service could be specially trained. England, by reason of her school of diplomacy, has used this more than war to build up her empire and to add to her public domain. Such a university should also have a chair on "foreign trade and commerce," to train men suitable for consular service in aid of our growing commerce and in the establishment of foreign markets.

Remember the principle laid down by Frederick the Great:

There is no alliance or agreement in the world that can be regarded as effective if it is not fastened by the bond of common and reciprocal interests; if in any treaty the advantage is all on one side and the other gets nothing the disproportion destroys the obligation.

Therefore we may expect treaties illogically drawn between us and other nations, if not reciprocally beneficial or if time evolves them all to one side, the other nation will naturally regard itself as relieved from all compact wherein all the favor is on one side; and therefore the treaty-making power of the Government as represented by its diplomats should be wise and fully equipped in the practices of nations and the principles governing inter-

national law. However broad our good intentions be, we must never lose sight of the fact that the political maneuvers of other States are governed only by their own interests, and that the different great powers of the world will be grouped together and must be judged by this standard. This standard may best be stated by Frederick the Great in these terms:

The great art of policy is not to swim against the stream, but to turn all events to one's own profit. It consists rather in deriving advantage from tavorable conjunctures than in preparing such conjunctures. Wisdom is well qualified to keep what one possesses, but boldness alone can acquire.

And this constantly brings before the mind the proper course of our future diplomacy; when we have the advantage are we to use it or leave it to the generosity of some selfish power? Since we have failed by reliance upon their generosity in the past, let us be prepared here also for the future.

In every walk of American life the value of trained men is recognized save in the matter of holding public office, the

diplomatic service, and our land forces.

MASSED ARMIES REQUIRE GREATER ORGANIZATION.

There is another consideration we can not escape in the wars of the future. The armies will be larger, and the larger the army the less the personality of the general, the more left to the subaltern commanders. This requires every officer, commissioned and noncommissioned, to be thoroughly trained, levelheaded, and equipped. In turn, each individual soldier must have a wider range of his duties to be performed and of the objects to be undertaken. He must move with a steady step, having a complete understanding of his relation to his comrade to the right and to the left, and the duty of each to the whole of the organization up through the subalterns to the commander in chief.

In addition to all this the greater the massed unit the greater the field for executive ability and organization. Small armies may live off the country they conquer, large armies must be fed from the rear. And think of the tremendous task of feeding an army equal to all the population of an average that the companion and Hose American State—in every department, the Ordnance and Hospital Corps, and even the smaller branches, down to the one man who would furnish the bread. A million men can not be led like Gen. Lee led his men, for when he surrendered at Appa-

mattox it was found that he had but 26,000 men.

Without such training not only of the individual soldier in these armies, as well as the equipment, executive ability, and knowledge of organization of all the officers as well as the commander in chief, they would be little more than a mob.

It might be well to remember, although we are unable to fathom it, it is nevertheless true in fact, that the hardy Scotchman was developed in the midst of warfare, and the greatest learning of the Greeks in science, art, literature, and sculpture was during the period of the half century of strife known as the Punic wars. The reason for this we may not understand unless it is that man is a fighter, and that all nature is a constant, never-ending contest for the survival of the fittest. We must therefore agree with high authority:

Among all political sins, the sin of feebleness is the most contemptible; it is the political sin against the Holy Ghost.

ONLY RICH NATIONS REQUIRE PROTECTION.

Plutarch tells us that when Sparta's soldier-philosopher, King Lycurgus, was asked how they could best guard against foreign

invasion, replied, "By remaining poor."

The thief never visits an empty corncrib, nor does a nation seeking economic advantage war upon a nation without natural resources and whose inhabitants are poor. Therefore a poor nation needs little protection. But we find the United States to-day, in addition to its great resources, with the greatest wealth in its history. Owing to our tremendous amount of exports over imports, we have at this hour the greatest amount of gold, or the world's money, of any nation ever recorded in his-This amount of the world's money is said to be upward of \$2,200,000,000. When this war is over both sides of the belligerents will want some of this gold with which to pay off their tremendous war debts. They might be satisfied if we should lie down and let them control the world's trade, undermining our resources, and thus gradually but surely regaining financial control, but that would mean hardships and starvation for the people of the United States. I for one would like for us to be prepared so as to take advantage of the war and get the larger portion of the world's trade, and thus be prepared for the world's market for our products, particularly those of the farm. This involves, as before stated, a great merchant marine and a return to the old doctrine prior to the Civil War of a complete policy of differentiating duty and "free ships, free seas, and sailors' rights." BANCROFT'S FOREBODING OF JAPAN.

Herbert H. Bancroft, the historian, has given us a very pertinent warning in a recent production in this: He calls attention to the fact that Japan and Germany keep secret the subtleties of their strength; America opens her doors and gives them to the world. Then he says:

Japan has her Bernhardi and book for the capture of the United States, together with a disposition of the spoils.

He calls attention to our delivering the Japs from the depths of ignorance, and they charge us with having sent to them the "rough barbarian Perry." Notwithstanding we have given them the knowledge of free schools, free universities, free hospitals, and free court service, yet they denounce us as a "nation of thieves, with hearts of rabbits," and then they united with the rallying cry, "Let us take our arms, both by sea and land, and punish these devils." This great historian and philosopher further says:

Either Japan, with Germany, must abolish militarism or the United States must adopt more drastic methods, not for aggression but for defense. There is no other way, unless we would become as Belgium is, or as China.

Encouraged by success in conflicts with weaker powers, Japan regards herself invincible and bides her time to strike; when she does strike, it will be the beginning of the end either with Japan or with us.

Neither you nor I know when another war will occur, how soon, nor how long the duration, any more than I know when my house may catch fire; but I take the precaution, as does every sensible business man, to insure against total loss. Why is it not wise for the old Republic to take out such policies of insurance by preparing?
President John Adams was wise when he said:

Safety of the Nation is the first duty of the statesman.

For the perpetuity of our institutions, the preservation of our national honor, the supremacy of the flag, all our mind, energy, and intelligence should be devoted and dedicated. For these blessings we should call upon the music of the stars ever to chant a martial refrain and let muffled drums eternally beat their everlasting reveille.

SIMPOSIUM OF FACTS.

[From experts, naval and war records, and recognized naval and military authorities, for use of college and political debaters and other persons seeking information upon which to form an opinion as to the necessity of preparedness.]

the necessity of preparedness.)
(Compiled by Hon. William H. Murray, M. C., fourth district of Oklahoma.)

Christ said:

I come not on earth to bring peace, but a sword. (Matthew x, 34.) When a strong man armed keepeth his palace, his goods are in peace: But when a stronger than he shall come upon him, and overcome him, he taketh from him all his armour wherein he trusted, and divideth his spoils. (Luke xi, 21 and 22.)

Then said he unto them, But now, he that hath a purse, let him take it, and likewise his scrip: and he that hath no sword, let him sell his garment, and buy one. (Luke xxii, 36.)

Again the word of the Lord came unto me, saying,
Son of man, speak to the children of thy people, and say unto them, when I bring the sword upon a land, if the people of the land take a man of their coasts, and set him for their watchman:

If when he seeth the sword come upon the land, he blow the trumpet, and warn the people;
Then whosoever heareth the sound of the trumpet, and taketh not warning; if the sword come, and take him away, his blood shall be upon his own head.

He heard the sound of the trumpet, and took not warning; his blood shall be upon him. But he that taketh warning shall deliver his soul.

But if the watchman see the sword come, and blow not the trumpet, and the people be not warned; if the sword come, and take any person from among them, he is taken away in his iniquity; but his blood will I require at the watchman's hand. (Ezekiel xxxiii, 1-6.)

OPINIONS OF LEADING STATESMEN.

For a people who are free and mean to remain so, a well organized and armed militia is their best security. (Richardson, I, p. 455, Works of Thomas Jefferson.)

None but an armed mation can dispense with a standing army. To keep ours armed and disciplined is, therefore, at all times important. (Jefferson, letter Feb. 25, 1803.)

Trust in the Lord, but keep your powder dry. (Oliver Cromwell and the Covenanters.)

John Adams, in his second message, said:

An efficient preparation for war can alone secure peace.

Lord Roberts, of England:

Strive to stir up, to foster, and develop the manly and patriotic spirit in the nation—the spirit which will induce our youth to realize that they must be not only ready but prepared to guard the heritage handed down to them.

Gen, Leonard Wood:

Our people must remember that there is nothing in the experience of the past or in the conditions of to-day which in any way justifies the assumption that wars are past. While we should strive for world peace and endeavor to settle our international difficulties by arbitration, we can not, unless we are unworthy of the trust handed down to us, fail to make adequate preparedness to defend our heritage. We must not forget that there is many a peace which is worse than war.

Gen. Washington, on January 16, 1776, to General Court of Massachusetts:

Massachusetts:

To bring men to be well acquainted with the duties of a soldier requires time. * * * To expect, then, the same service from raw and undisciplined recruits as from veteran soldiers is to expect what never did and perhaps never will happen. * * * Nor would the expense which is incident to the support of such body as would be competent to almost every emergency far exceed that which is daily incurred by calling in new enlistments, which, when effected, are not attended with good consequences.

To place any dependence upon militia is assuredly resting upon a broken staff.

The jealousy of a standing army and the evils to be apprehended from one are remote, and, in my judgment, situated as we are, not at all to be dreaded; but the consequences of wanting one, according to my idea formed from the present view of things, is certain and inevitable ruin.

Washington to John Bannister, April 21, 1778:

Men may speculate as they will; they may talk of patriotism; they may draw a few examples from ancient story of great achievements performed by its influence; but whoever builds upon them, as a sufficient basis for conducting a long and bloody war, will find himself deceived in the end. I do not mean to exclude altogether the idea of patriotism. I know it exists. But I will venture to assert that a great and lasting war can never be supported on this principle alone. It must be aided by a prospect of interest, or some reward. For a time it may, of itself, push men to action, to bear much, to encounter difficulties, but it will not endure unassisted by interest.

Gen. Knox, September 5, 1776:

It is misfortune that must raise us to the character of a great people. We must have a Standing Army. The militia get sick, or think themselves so, and run home.

Gen. Henry Lee, of the Revolution:

A government is the murderer of its citizens which sends them to the field uninformed and untaught where they are to meet men of the same age and strength mechanized by education and discipline for battle.

Washington foresaw the strife of nations, the innumerable appeals to arms that were yet to be, and in his fifth annual address warned his countrymen that-

The United States ought not to indulge a persuasion that, contrary to the order of human events, they will forever keep at a distance those painful appeals to arms with which the history of every other nation abounds. There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness. If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war.

In recounting the comparative Field and Coast Artillery strength of the United States and the ammunition for them in reserve, remember what Napoleon said:

Victory is on the side of the heaviest artillery.

Theodore Roosevelt says:

Arbitration treaties, neutrality treaties, treaties for the selection of independent tribunals, treaties of all kinds can do nothing to save a nation unless that nation is able to defend its own honor, its own vital interest.

A. W. von Slegel says:

War is as necessary as the struggle of the elements in nature, for man is a fighter.

And Frederick the Great has said:

War opens up the most fruitful field to all the virtues, for at every moment constancy, pity, magninimity, and mercy shine forth in it; every moment offers an opportunity to exercise one of these virtues; and the moment the state cries out its very life is at stake, social selfishness must cease, the individual must forget his egotism and feel that he is a member of the whole body. * * * What a perversion of morality to wish to abolish heroism among men.

THE NAVY. STRENGTH.

The following tables are taken from a document entitled "Information Concerning Some of the Principal Navies of the World," an official publication of the Office of Naval Intelligence, United States Navy Department:

RELATIVE STANDING AT OUTBREAK OF EUROPEAN WAR.

[Extract from Table I.] Relative order of warship tonnage. [July 1, 1914.]

RELATIVE STANDING OF OUR NAVY TO-DAY.

[Extract from speech of President Wilson as reported in the press.] [Kansas City, Mo., Feb. 2, 1916.]

Do you know the sweep of the coast from the canal to Alaska? It is nearly one-fourth the circumference of the earth. And the coast from the St. Lawrence to the Gulf? Do you think a Navy that ranks fourth is sufficient?

FIFTEEN TROUBLES OF THE ATLANTIC FLEET.

[Extract from the report of Admiral F. F. Fletcher, commander in chief of the Atlantic Fleet, Aug. 15, 1916. (S. Doc. 251, 64th Cong., 1st sess., p. 19.)] RÉSUMÉ.

In brief, the principal weaknesses and requirements of the fleet are as follows:

(a) Shortage of officers.
(b) Shortage of men.
(c) Lack of fast armored ships and fast light cruisers.
(d) Limitations of mobility and seagoing qualities of submarines.
(e) Lack of radio direction finder.
(f) Lack of radio direction finder.
(g) Too frequent overhaul of battleships.
(h) Necessity of maintaining full complements in active ships of the fleet.

(h) Necessity of maintaining full complements.

(l) Need of additional mining and sweeping vessels.
(l) Destrability of mobilizing ships in reserve annually with the active fleet.
(k) Need of battle target practice at long ranges.
(l) Necessity for increased facilities at fleet rendezvous.
(m) Provision for division commanders for mining division and auxiliary division.
(n) Provision for more speed in design of fighting craft intended to operate with the fleet.
(o) Need of antiaircraft guns.

Building program for Navy recommended for fiscal year ending June 30,

	Secretary Daniels's plan.		General Board of Navy's second plan.
Dreadnaughts. Battle cruisers Submarines Destroyers Sundries	2 2 30 15 7	4 4 37 28 24	4 3 22 10 10

Appropriation necessary for coming year to carry out al	ove plans:
Secretary Daniels's plan	\$57, 003, 000
General Board's plan No. 1	113, 020, 587
General Board's plan No. 2	82, 792, 500

General Board's plan No. 2. 82, 792, 500

The figures for Secretary Daniels's plan and for General Board's plan No. 2 were taken from the Report of the Secretary of the Navy, December 1, 1915, page 7 and page 85. The figures for General Board's plan No. 1 were taken from a letter dated January 22, 1916, from Secretary Daniels to Hon. E. W. Roberts, of the Naval Committee of the House of Representatives.

In addition to the foregoing building program, Secretary Daniels recommended for the ensuing year an appropriation of \$2,000,000 for aviation and \$8,000,000 for aviation and \$8,000,000 for aviation and \$11,000,000 for ammunition. The General Board plan No. 1 recommended \$5,000,000 for aviation, but made no mention of ammunition.

[Extract from the testimony of Coat Mark Bristol United States

for aviation, but made no mention of ammunition.

[Extract from the testimony of Capt. Mark Bristol, United States Navy, commanding the Aviation Service of the United States Navy, before the Committee on Naval Affairs of the House of Representatives, Dec. 3, 1914 (Hearings. p. 299).]

Representative Browning. Captain, I wish you would tell us how the aircraft equipment of the various nations compare.

Capt. Bristol. At the beginning of this war our best information gave, approximately, France, 22 dirigibles and 1,400 aeroplanes; Russia. 18 dirigibles and 800 aeroplanes; Great Britain. 9 dirigibles and 400 neroplanes; Belgium, 2 dirigibles and 100 neroplanes; Servia, 60 aeroplanes; Germany, 40 dirigibles and 1,000 neroplanes; Austria, 8 dirigibles and 400 neroplanes; and the United States, 23 neroplanes.

[Extract from the report of the Secretary of the Navy, Dec. 1, 1915.] There are now in the service 15 aeroplanes and 15 aeronautic motors. By the first of the next year at least 15 new aeroplanes and a number of new motors will be delivered, etc.

AIRCRAFT.

[Extracts from the report of the General Board of the Navy, Nov. 17, 1914.]

The general Board in its indersement No. 449 of August 30, 1913, and accompanying memorandum brought to the attention of the departmen the dangerous situation of the country in the lack of aircraft and airmen in both the naval and military services.

At the present time, more than a year later, the total number of aircraft of any kind owned by the Navy consists of 12 aeroplanes, not more than two of which are of the same type, and all reported to have too little speed and carrying capacity for service work.

In view of the advance that has been made in aeronautics during the past year and the demonstration new being made of the vital importance of a proper service to both land and sea warfare, our present situation can be described as nothing less than deplorable. As now developed aircraft are the eyes of both armies and navies, and it is difficult to place any limit to their offensive possibilities.

In our present condition of uppreparedness, in contact with any foe possessing a proper air service, our scouting would be blind.

[Extract from the testimony of Capt. Mark Bristol, United States Navy, commanding the Aviation Service of the United States Navy, before the Committee on Naval Affairs of the House of Representatives, Dec. 3, 1914 (Hearings, p. 229).]

Representative Browning, p. 229).]

Representative Browning. Captain, I wish you would tell us how the aircraft equipment of the various nations compare.

Capt. Bristol. At the beginning of this war our best information gave, approximately, France, 22 dirigibles and 1.400 aeroplanes; Russia, 18 dirigibles and 800 aeroplanes; Great Britain, 9 dirigibles and 400 aeroplanes; Belgium, 2 dirigibles and 100 aeroplanes; Servia, 60 aeroplanes; Germany, 40 dirigibles and 1,000 aeroplanes; Austria, 8 dirigibles and 400 aeroplanes; and the United States, 23 aeroplanes.

[Extract from the report of the Secretary of the Navy, Dec. 1, 1915.] There are now in the service 15 aeroplanes and 15 aeronautic motors. By the first of the next year at least 15 new aeroplanes and a number of new motors will be delivered, etc.

Brig. Gen. Scriven, the Chief Signal Officer of the Army, and his lieutenant, Col. Reber, testified before the Committee on Military Affairs of the House of Representatives December 8, 1914, that the United States possessed then only 119 aviators, 21 aero-planes; that an aeroplane costs from \$2,000 to \$2,400; that it requires fully a year to construct one; that European nations possess and carried in their budget for 1914 for aircraft as follows:

	Aero-	Dirigi-	Expendi-
	planes.	bles.	tures.
France. Russia Great Britain Austria Germany Italy	500	11	12, 800, 600
	500	4	22, 500, 000
	250	8	1, 080, 000
	100	3	3, 000, 000
	500	20	45, 000, 000
	150	2	800, 000

The United States has 21 aeroplanes, no dirigibles, and spent \$250,000.

LAND ALMOST ANY PLACE.

[Extract from the testimony of Rear Admiral Frank F. Fletcher, United States Navy, commanding Atlantic Fleet, before the Committee on Naval Affairs of the House of Representatives, Dec. 9, 1914. (Hearings, p. 536.)]

Representative Witherspoon. How many unharbored places are there on the coast where they (the enemy) could land?

Admiral Fletcher. In smooth water and fine weather, they could land almost any place, as we did from the open sea at Santiago.

[Extract from the testimony of Brig. Gen. William Crozier, Chief of Ordnance, United States Army, before the Committee on Military Affairs, House of Representatives, Jan. 25, 1916. Hearings, p. 73.] Representative McKenzie. Do you think any power on earth can

land 600,000 or 700,000 men on our shores in less than eight or nine months?

Gen. CROZIER, I think if there were a power which had no entanglements near home, and which was free to do it, it could be done right now, as far as anything we could do to prevent it was concerned, within the time you mentioned.

Preparedness of the great powers for over-sea expeditions.

[Extract from statement of War College Division, General Staff Corps, United States Army, Sept. 11, 1915.]

		Tonnage available of ships with capacity over—		using 50 per cent using 75]			xpedition 5 per cent age given.	cent Time needed to		numb		Total number each

Such landing is on the assumption that such expedition would not be opposed by our Navy—that is, in the event of the defeat of our Navy. In the event of such landing by France, Germany, or Great Britain the result is made known by our experience in the War of 1812.

Moral: The United States needs a large navy, complete in all

its parts. (MURRAY.)

THE ENEMY COULD LAND.

A LETTER FROM ADMIRAL GEORGE DEWEY, UNITED STATES NAVY.

OFFICE OF THE ADMIRAL OF THE NAVY, Washington, December 10, 1915.

Hon. A. P. Gardner, House of Representatives, Washington, D. C.

Hon. A. P. Gardner: I beg to acknowledge the receipt of your letter of December 9 asking me to write you setting forth my views on the question of the possibility of large hostile forces landing on our coast, and inviting my attention to an article by Eric Fisher Wood, which appeared in the Century last month.

The part of the Atlantic coast mentioned in Mr. Wood's article extends from Eastport, Me., to Cape Henry, Va., and in this area we have permanent defenses on the Penobscot and Kennebec Rivers at Portland, Portsmouth, Boston, and New Bedford Harbors; at Narragansett Bay; at the eastern entrance to Long Island Sound; at the entrance to New York Harbor; on the Delaware River; at Baltimore; on the upper Potomac River, and at Hampton Roads. Of these defenses only those at Portland, Narragansett Bay, entrance to Long Island Sound, and the entrance to New York protect the coast, the others are solely harbor defenses.

It is true that a large hostile force can land on the open coast wherever the transports can get within reasonable distance of the shore, and especially so where their landing is covered by the gunfire of the naval escort, even though the landing be opposed by troops; the most recent example of this is the landing of the allied troops on the Gallipoli Peninsula. We have similar examples in our own history, as the landing of Scott's army near Vera Cruz, the landings near Fort Fisher, and the landing of Shafter's army on the south coast of Cuba.

From Eastport, Me., to Cape Henry, Va., there are but very few

as the landing of Scott's army near Vera Cruz, the landings near Fort Fisher, and the landing of Shafter's army on the south coast of Cuba.

From Eastport, Me., to Cape Henry, Va., there are but very few places where large ships can not approach with safety to within 2 miles of the coast, and the extent of this shore line that is too precipitous or too ragged to make a landing impracticable is small. The only force that can prevent such a landing is a Navy of our own strong enough to prevent such an expedition from reaching our coast.

In saying that a hostile expedition can land upon our coast at will, outside the range of our coast-defense guns, I mean that it is physically possible, and with no very great difficulty. I do not mean that such a force could accomplish its object by landing anywhere on our coast. No commander would desire to have his force isolated on the peninsulas of Malne nor on the sand dunes of New Jersey, Delaware, Maryland, or Virginia, with inland waters between them and the mainland. They will prefer to land where there are railroads and good roads leading to their objective, which would probably be one of our large cities. Such places are numerous along the coast of Massachusetts, both shores of Massachusetts Bay, the eastern end and south shore of Long Island, and in the Delaware and Chesapeake Bays.

A landing place sheltered from the force of the sea would greatly facilitate the disembarkation of a hostile force, but is not a vital necessity; such sheltered places are too numerous to name, but among them are Frenchmans Bay, Penobscot Bay, Blue Hill Bay, Sheepscott River, Casco Bay, in Malne; Rockport, Gloucester, Salem, Plymouth, Provinceton, Vineyard Sound, and Buzzards Bay, in Massachusetts; Fort Pond Bay, and then to the southward Delaware and Chesapeake Bays. Only the Navy can prevent landings at those places, and that Navy must be strong enough to defeat the enemy; and should we have such a Navy the enemy would not attempt an invasion must therefore always rest with the Navy, w

before stated, adequacy is not reached until the Navy is strong enough to meet on equal terms the navy of the strongest probable adversary. Sincerely, yours,

GEORGE DEWEY.

THE ARMY. [Extract from the Report of the Secretary of War, Nov. 15, 1914.] For the purpose of information the following table is presented, showing the area, population, and military resources on a peace and war footing of other nations in comparison with ours:

	Land	ries.		
	Area (square miles).	Popula- tion.	Peace strength.	Total trained war strength.
Germany France Russia Great Britain and colonies Italy Austria-Hungary Japan Turkey Spain Switzerland Sweden Belgium United States (including Philippine Scouts)	208, 830 207, 054 8, 647, 657 11, 467, 294 110, 550 261, 035 147, 655 1, 186, 874 194, 783 15, 976 172, 876 11, 373	64, 903, 423 38, 961, 945 160, 095, 200 396, 294, 752 32, 475, 253 49, 418, 596 35, 875, 390 35, 764, 876 19, 503, 908 3, 741, 971 3, 476, 441 7, 074, 910	620,000 560,000 1,200,000 275,000 360,000 230,000 420,000 115,000 140,000 42,000 97,760	4,000,000 3,000,000 4,500,000 1,500,000 1,200,000 1,200,000 1,200,000 1,200,000 275,000 400,000 180,000

Thomas Jefferson conducted the first years of his administration on the principle that it was possible to avoid military conflict by use of embargoes and commercial warfare, but after an experience similar to that now confronting the United States with the allies with reference to shipping agricultural and food products of the United States to neutral countries, Jefferson reversed his policy, the only one he ever lived to regret, and in the closing years of his administration increased the Army so that at the end of the decade, or in 1810, we had the greatest mobile army in proportion to population that ever existed in the history of the Government. We then had for every 1,000 people 1.378 soldiers, while the greatest we ever had at any other decade was in 1870, which was 0.963. In 1910 it was

Jefferson so fully reversed himself in the matter of policy that he submitted to Congress practically the present plan of preparedness. After he retired from the Presidency and had no other desire, political or otherwise, except to give the best advice to his country, having witnessed the defeat on land of more than one-half million volunteers by 67,000 British regulars, he advocated universal military training in the schools as the safest and surest preparedness, and he thus expressed himself to James Monroe:

It proves more forcibly the necessity of obliging every citizen to be a soldier. This was the case with the Greeks and Romans, and must be

that of every free State. We must train and classify the whole of our male citizens and make military instruction a regular part of collegiate education. We can never be safe until this is done.

CITIZEN SOLDIERY.

The greatest proof of the expense attending a lack of preparedness is shown in the following table, explaining our heavy pension roll, due to our making breastworks of raw recruits until we could train an army. The following table will show the number of troops on both sides, the cost to us, and the pensions in all our wars, beginning with the Revolution:

War.	Regulars.	Militia, Volun- teers, etc.	Opponents.	Cost.	Pensions.

AMMUNITION SHORTAGE, MOVABLE GUNS.

[Extract from the testimony of Brig. Gen. William Crozier before Committee on Military Affairs of House of Representatives, Jan. 25, 1916. Hearings, p. 76.]

"The total number of rounds of such [field artillery] ammunition on hand and under manufacture is 967,500, of which 481,000 have been completed."

NOTE.—European reports have mentioned that as many as 1,000 rounds of field-artillery ammunition are sometimes fired in a single day by a single gun. The Chief of Staff, United States Army, in his annual report, November 15, 1914, stated that as an accumulation in anticipation of war we need 11,790,850 rounds of field-artillery ammunition.

A. P. G.

SHORTAGE OF FIELD ARTILLERY.

[Extract from table presented by Brig. Gen. William Crozier, Chief of Ordnance, United States Army, before Committee on Military Affairs, House of Representatives, Jan. 25, 1916. Hearings, p. 76.]

"Total batteries field artillery completed, 176."

Note.—As each battery consists of 4 guns, this means that we have only 704 field guns completed. The Chief of Staff, United States Army, in his annual report, November 15, 1914, stated that as an accumulation in anticipation of war we need 2,834 field guns (exclusive of giant

COAST FORTIFICATIONS.

AMMUNITION SHORTAGE (SEACOAST GUNS).

[Extract from the report of the Chief of Staff, United States Army, 1914.]

There is a serious deficiency, however, in ammunition for these coast defenses, the supply which the department has been attempting to maintain being on the basis of approximately an hour's full and active operation of the guns in the United States proper and a two hours' full and active operation of the guns in over-sea fortifications. According to the report of the Chief of Coast Artillery, the amount of ammunition now available and provided for by appropriations is equal to about 73 per cent of this requirement for the guns and 50 per cent for the mortars.

[Extract from the report of the Chief of Staff, United States Army, Oct. 15, 1915, p. 23.]

The full effectiveness of the existing seacoast armament can not be attained under present conditions because of the shortages in the supply of the essential accessories, such as ammunition, searchlights, and fire control. Of the latter deficiencies that of ammunition is the most serious, and the total supply on hand is only about three-fourths of the so-called one hour's allowance. That allowance is deemed wholly inadequate, and no material measure of relief will be afforded unless future appropriations for ammunition are greatly in excess of the annual appropriations for that purpose that have been made heretofore.

The completion of the submarine-mine matériel required for the mine defenses is another urgent need. This matériel should be maintained at all times in a state of preparedness for immediate service, as naval attacks upon our seacoast cities may occur coincidently with, or even may precede, a formal declaration of war.

EXPOSURE OF OUR SEACOAST CITIES.

[Extracts from the testimony of Brig. Gen. E. M. Weaver, United States Army, Chief of Coast Artillery, before the Committee on Military Affairs of the House of Representatives, Jan. 19, 1916 (Hearings, pp. 42 and 68).]

pp. 42 and 68).]

Gen. Weaver. I am going this afternoon before the Fortifications Committee to urge additional fortifications, the necessity of which has been brought about by the evolution of naval attack. These new fortifications include those at Cape Henry, Rockaway Beach, San Francisco, and one or two other places.

Gen. Weaver. When we mounted guns at Fort Hamilton and Fort Wadsworth and at Sandy Hook it was not thought that ships could stand outside of Rockaway Beach and fire over the whole width of Long' Island and Erooklyn and reach New York City. There were no guns mounted that could do that at that time. Now there are. A ship could do that and be beyond the range of any gun we have mounted.

[Extract from the testimony of Lieut. Col. William G. Haan, Coast Artillery, United States Army, before Senate Committee on Military Affairs, Jan. 28, 1916.]

Lieut. Col. Haan. I reported officially that there are points in Boston Harbor where an enemy's ship can lie now and destroy the Boston Navy Yard, the statehouse, the Fore River Shipyards, and the business part of Boston without our being able to reach him with our short-range guns.

CHESAPEAKE BAY UNFORTIFIED.

[Extract from the report of the National Coast Defense Board, Feb. 1, 1906.]

Commercially and strategically, Chesapeake Bay is to-day, as it always has been, of the very first importance. With the entrance, as it is now, unfortified, a hostile fleet, should it gain control of the sea, can establish, without coming under the fire of a single gun, a base on its shores, pass in and out at pleasure, have access to large quantities of valuable supplies of all kinds, and paralyze the great trunk railway lines crossing the head of the bay. (The above was written 11 years ago The entrance to Chesapeake Bay is still unfortified. A. P. G.)

Guns now mounted or being mounted, after eliminating batteries declared obsolete by the War Department Board of Review (Report of Chief of Coast Artillery, p. 5).

Total	1,078	192	1,270

The above table, as well as the table following, is given on the authority of Assistant Secretary of War Breckinridge. It will be observed that on the continent of the United States, with the exception of four guns, all the other guns at our fortifications are 12 inches and less. These 12-inch guns have a range just 4 miles short of the larger type of the German guns and of the Queen Elizabeth type of the British Navy. Therefore these two nations could learn the range of these guns, draw up to within one-fourth mile, and fire over the head of our fortifications into our cities and markets to a distance of 3½ miles and watch our shot fall one-fourth mile in front of them. The carriages of these guns may be changed and by raising the muzzle so that the range will extend this 4 miles, at a loss, of course, of the striking power of the shot; and many believe this should be done to make our coast fortifications worth anything, and in addition every third or fourth gun replaced with a 16 or 17 inch gun, which requires 12 months in making.

The next table will show the conditions at the various coast fortifications and the shortage of Regulars and militia to be 52 per cent of the necessary number, there being 39 coast fortifications unmanned, with no command about the fortifications or other control except their caretakers. Thus they are exposed to capture by a foreign enemy and our own guns turned upon us:

Coast Artillery companies sent from United States, those to be sent in the near future, those required in United States, and shortage of Regulars.

	Companies sent from—	Companies to be sent from—	Companies remaining.	Companies required for mines and one-half guns.	Shortage in United States.	Per cent of short- age to number required under 50 per cent plan.

Contract surgeons	15
man has been been been been been been been bee	1 859

He also stated that there were only 19 motor ambulances; that in time of war it would take "perhaps six or eight months to accumulate the medical supplies needed; and that, owing to their being in units, as well as prepared and specially adapted for field service, they can not be bought in open market, "but must of necessity be manufactured."

FIELD ARTILLERY.

According to the latest authoritative statistics obtainable, in 1913 Russia had 6,000 field guns, Germany about 5,000, and France 4,800, and in nearly all the European armies the number of guns per 1,000 infantrymen is at least 5, and often 6 or more. On December 8, 1914, according to the testimony of Brig. Gen. Crozier, the Chief of Ordnance, the United States possessed only 658 three-inch fieldpieces. The minimum estimate of what would be needed has been placed at 323 batteries of 4 guns each, a total of 1,292 guns, while the maximum estimate, made by the late Chief of Staff, was 2,834, which is undoubtedly what would be required in a war against a great power. December 23, 1914, the Secretary of War acknowledged that we had only 634 completed modern field guns and howltzers alto-The United States has nothing larger in caliber than the 6-inch howitzer, and only 40 of those either in existence or appropriated for.

PIELD ARTILLERY AMMUNITION.

Disregarding the other fieldpieces possessed by the American Army and assuming that the five hundred and sixty-eight 3-inch guns were alone supplied with 1,856 rounds each, the number required would be no less than 1,054,208; yet the Chief of Ordnance confessed on December 8, 1914, that all the United States then had "was about 580,000 rounds for the Field Artillery, for the guns of all different calibers." He also acknowledged that he had received trustworthy information of one battery in the present European war which had fired "2,400 rounds for each gun in four days.'

If the 634 field guns of all calibers which the United States possessed in 1914 fired only 915 times each, they would more than exhaust the present reserve supply of Field Artillery ammunition, amounting to 580,000 rounds, and it is a conservative estimate that two days of such firing as is a common occurrence in the battles of the present time would suffice to consume the entire amount now on hand.

THE MANUFACTURE OF CERTAIN WAR MATERIEL.

We Americans are prone to be boasting that, regardless of what might happen in the shape of a coalition against us, the United States could not be materially affected. It may, therefore, afford something of a shock to our pride to discover that

the manufacture of war materiel and powder would be decidedly hampered if it should become impossible to import certain ingredients, such as ferromanganese, ferronickel, the opti-cal glass for field glasses and telescopes, nickel, nitrate of sodium, tungsten, and wolfram ore—the bulk, if not the total supply, of which is imported from abroad.

In the making of steel the alloy upon which our steel manufacturers are most dependent is ferromanganese, which has heretofore been largely imported from India. At the present time this source of supply has been supplanted from Brazil, but the mines of this latter country are as yet comparatively undeveloped. Should this source be shut off, our manufacturers would be reduced to making ferromanganese out of American ore, with the result that the manganese content would be lower than in the case of Indian and Brazilian ore, and the steel could only be produced with distinct trouble and inconvenience,

to say nothing of the increased cost.

In the matter of powder the situation would be much more serious. From Chile is derived almost all our supply of sodium nitrate, from which nitric acid is made, and the latter is essenital in the manufacture of guncotton, which in turn is the principal ingredient of smokeless powder. The extraction of nitrates from the atmosphere is not only scientifically but commercially practicable and is in general operation in Germany. In the United States not more than one such plant exists. From abroad has hitherto come the bulk of our carbolic acid, out of which is made picric acid, one of our most powerful explosives. (Hulde-koper, Military Unpreparedness of the United States, pp. 520-

A fair instance of the deficiencies in the matter of war mate-A fair instance of the denciencies in the matter of war materiel is to be found in a tabulated statement prepared by the Chief of Ordnance on January 20, 1915, and transmitted to the President six days later by the Secretary of War. It is based upon the conservative estimate of the Greble Board, which was appointed on February 20, 1911, "to consider questions concerning the types of field guns and ammunition supply therefor," and summarized as follows:

	To be on hand at the outbreak of war, as estimated by the Tables of Organization and by the Greble Board.	Actually on hand or under manufac- ture, January 1, 1915.	Shortage.
Rounds of rifle ball cartridges, Model 1906	513, 130, 640	231, 186, 596	282, 244, 044
Number of Field Artillery guns and howitzers.	1, 292	743	549
Rounds of Field Artillery ammunition	1, 713, 240	224, 097	1, 489, 143
Sets of Artillery harness.	21, 104	9, 808	11, 296

In addition to the shortage of horse equipment for Field Artillery troops, there is a complete deficiency of horse equipment required for other branches of the Volunteer service in case of emergency, such as staff departments, mounted detachments, mounted Engineers, mounted Signal Corps troops, and Hospital Corps troops accompanying mounted detachments

On December 4, 1914, the Quartermaster General stated to the House Committee on Military Affairs that in the principal Army depots, located at Philadelphia, St. Louis, and San Francisco, there existed a sufficient supply of clothing and shoes to "equip more than 100,000 men and maintain this equipment for from four to six months"; that, on the assumption that the clothing, shoes, etc., were of the correct sizes, 150,000 to 175,000 men could be fitted out; that the plant at Philadelphia was capable of manufacturing a thousand garments per diem.

SWALL-ARMS AMMUNITION.

The reserve supply of small-arms ammunition in December, 1914, was only 195,000,000 rounds. Our Field Service Regulations prescribe 1,360 rounds for each infantryman—that Is, 100 in his belt, 120 in the combat train which goes with the troops, 120 in the ammunition train which follows behind the supply trains, 340 rounds in the advance depot from which it supply trains, 540 rounds in the advance depot from which it can be sent forward to the troops, and 680 in the depot at the base of supplies. In other words, 195,000,000 would not be sufficient to supply an army of 145,522 infantrymen with 1,360 rounds each. The 1,360 rounds prescribed for American infantrymen would, in all probability, be exhausted in four days' fighting.—(Huidekoper, Military Preparedness of the United States, pp. 478-9.)

The number of remount depots now possessed by the United States is limited to three, which are situated at Front Royal, Va.; Fort Reno, Okla.; and Fort Keogh, Mont., and the number of animals received through them during the fiscal year ending June 30, 1914, was 1,838 horses and 231 mules.

PROGRAM RECOMMENDED BY THE SECRETARY OF THE NAVY.

The following is the program recommended, and I hope Congress will indorse it by so large a vote of its Members as to make certain its continuance by Congresses to come:

	1917	1918	1919	1920	1921
Dreadnaughts Battle cruisers Seout cruisers Destroyers Destroyers Pleet submarines Coast submarines Gunboats Hospital ships Ammunition ships Fuel-oil ships Repair ship	(2) 11, 158, 000 (3) 6, 900, 000 (15) 10, 500, 000 (5) 4, 425, 000 (25) 5, 750, 000 (2) 760, 000 (1) 1, 250, 000	(2) \$26,580,000 11,921,000 (1) 6,350,000 (10) 18,900,000 (4) 5,577,500 (15) 13,950,000 (1) 1,140,000 1,200,000	(2) \$37,600,000 (1) 17,500,000 (2) 10,000,000 (5) 10,000,000 (2) 5,437,500 (15) 9,750,000 380,000	(2) \$37,600,000 (2) 17,118,500 (2) 8,650,000 (10) 10,300,000 (2) 4,215,000 (15) 9,750,000 (1) 799,587 (1) 700,000	(2) \$87,600,000 (1) 23,460,500 (2) 10,000,000 (10) 13,600,000 (2) 3,400,000 (15) 9,750,000 (1) 389,000 (1) 1,766,000 (1) 1,776,000 (1) 1,175,000
Total	57,003,000 28,369,127	84, 273, 750 20, 149, 000	90, 767, 500	89, 133, 087	101, 786, 750

APPENDIX D.

INCREASE OF NAVY SINCE 1903. Statement of the totals of the appropriations carried by the naval acts from 1903 to 1915, showing separately the amounts for "Increase of the Navy," and showing the number and types of vessels authorized by those acts.

Year.	Appropriation.	Amount for increase Navy.	Building program.
1904	897, 503, 140. 94	\$32,176,860.00	1 first-class battleship. 2 armored cruisers. 3 scout cruisers. 2 colliers. 2 tugs.
1905 1906	100, 836, 679, 94 102, 091, 670, 27	42, 255, 833. 00 33, 475, 829. 00	4 submarines. 2 first-class battleships. 1 first-class battleship. 3 torpedo-boat destroyers.
1907	98, 958, 507. 50	23, 713, 915. 00	8 submarines. 1 first-class battleship.
1908	122, 663, 885. 47	30, 307, 962. 00	2 torpedo-boat destroyers. 2 first-class battleships. 5 colliers.
1909	136, 935, 199, 05	38, 819, 595. 00	10 torpedo-boat destroyers. 8 submarines. 2 first-class battleships. 1 collier. 8 destroyers (3 subsurface). 4 submarines.

Year.	Appropriation.	Amount for increase Navy.	Building program.
1910	\$131, 350, 854. 38	\$33, 770, 346. 00	2 first-class battleships. 2 colliers. 6 torpedo-boat destroyers.
1911	126, 478, 338. 24	26, 005, 547. 67	4 submarines. 2 first-class battleships. 2 colliers. 1 river gunboat. 1 gunboat. 2 tugs.
1912	123, 225, 007. 76	20, 569, 373. 48	4 submarines. 1 submarine tender. 8 torpedo-boat destroyers. 1 battleship, first line. 2 fuel ships. 6 destroyers. 1 destroyer tender. 8 submarines.
1913	140, 800, 643. 52	35, 325, 695, 00	1 submarine tender. 1 battleship. 1 transport. 1 supply ship. 6 destroyers.
1914	144, 868, 716. 61	41,091,734.00	4 submarines. 3 battleships. 6 destroyers.
1915	149, 661, 864. 88	1 46, 853, 801. 00	8 (or more) submarines. 2 battleships. 6 destroyers. 2 seagoing submarines, 16 coast-defense submarines 1 oil fuel ship.

1 Includes reappropriation of \$800,000.

Stations.	Date of estab- lish- ment.	Expenditures.

Military Preparedness.

EXTENSION OF REMARKS

OF

HON. MICHAEL E. BURKE,

IN THE HOUSE OF REPRESENTATIVES.

Friday, March 24, 1916.

Mr. BURKE. Mr. Speaker, a new and important national question affecting the life and perpetuation of our Government and its institutions has arisen within the last 9 or 10 months and is now confronting the people of America. Its importance is such as to require and demand the most serious attention.

The people of the Nation are seriously considering and weighing this new question with which they are confronted. The columns of the press of the country are, and have been for months, filled with serious thoughts pro and con upon the question of national defense and national preparedness. In the Halls of Congress the voices of Representatives and Senators have been heard upon this question pro and con. It has attracted the attention and consideration of the people in all lines and in all vocations of life; naval and Army commanders of the past and present have given voice to their opinions upon this subject; the columns of the press of all kinds and classes have contained the ideas of able writers and students relating to the same; even the pulpit and the school has given consideration and voiced its opinion upon this all-important question; the pages of history have been ransacked and examples with which to compare the situation which confronts the country to-day with that existing in nations in generations gone by; deep and serious thought has been devoted to the same by profound thinkers in all avenues of life.

Upon this bill to increase the efficiency of the Military Establishment of the United States the Representatives of the people are now called for consideration and action. We find that many noted statesmen are honestly and sincerely divided upon this question. We also find that many of our constituents are divided and give us advice and instructions pro and con. In this complicated situation it is necessary that we should consider the question in the light of history and in the light of surrounding circumstances and be guided not so much by what each of us would prefer, but by the light of the stubborn facts of history. If future wars could be prohibited and their prospects banished, the question would be easy and one-sided, but all human history carries upon its every page the lessons of war. In scanning the pages of history from time immemorial to the present it will be impossible for readers or students to find a single generation in any nation which was free from war. While wars among civilized nations may not be as frequent as in the more remote ages, yet what modern wars lack in fre-

quency they make up in intensity, devastation, destruction, and cruelty, both in property and life.

It is true that as compared with other civilized nations our beloved country has been comparatively free and unmolested by wars. Previous to the commencement of the present European war we Americans in this generation were prone to look upon the peace of our and other nations as the regular order of nations. We were looking forward to an unbroken continuance of peace. This country had considered itself the champion of peace. At the time of the breaking out of the European war this country, through the present administration, had entered into some 28 different freaties of arbitration with various nations of the world to prevent war and promote peace. We began to think, and the apostles of peace prophesied that the days of war for nations were over, and that peace had come to reign undisturbed among civilized nations. Twenty-six of those

Senate either before or early during the present war.

Many of the apostles of peace have been so far overcome with the idea of permanent national and international peace that they actually introduced and passed in this House of Representatives a resolution instructing our Government to invite the nations of the world to a holiday of a year, in which the construction of war vessels should cease among all nations. So serious and widespread was this idea that peace had come to stay that even in this House of Representatives only 28 months ago such an impractical and unreasonable resolution was passed, with only 11 votes out of 328 cast on the resolution against the same, of which negative votes I am proud of the fact that I cast one yote

28 treaties of arbitration were ratified by the United States

With the outbreak of the present war and conflagration in Europe the prospects of permanent peace among the nations of the world went a glimmering. When Americans beheld how the little nations of Europe, and also the nations of Europe which were unprepared for war when war broke out, were meeting with defeat and defeat, day after day, they woke up to the undeniable fact, established beyond repetition by the history of the present war, that the unprepared nations were the ones which were unable to defend themselves and were suffering most the ravages and destruction of war. It then became apparent to all thinking Americans, who realized the smallness and weakness of our Army and the incompleteness of our Navy, that it was time that consideration be given to the question of national preparedness in America. Our people realized that the causes of the present war in Europe are due to racial prejudices and to commercial greed. From racial prejudice this country is fortunate in being comparatively free, but, unfortunately, this country is not free from commercial greed, but is tared with a commercial greed that is as great and strong and as enduring as that of any other nation on earth. Racial prejudices and commercial greed are causes of all wars, excepting those deliberately brought on by kings, czars, and kaisers.

Our people witnessed how suddenly and with what little cause or reason the present European war began. It broke out of the clear skies of Europe like a thunderbolt out of a clear sky, and has continued with a hatred, ferocity, and a destruction of life and property never before witnessed in the history of the world.

The present European war has caused thinking and reading people of this country and of every country in war to review and study the war lessons of history. From studying its pages thinking and observing men and women have discovered that wars are certain in the life of every generation of every nation. The only thing uncertain about it is the time when it may break out and the immediate cause of its ignity.

and the immediate cause of its ignity.

As the European war has progressed during the last 20 months we have discovered a jealousy existing on both sides of the European conflict over the attitude of America. We have discovered that America is hated and detested by both the central powers and the allies, and for the same reason both sides have been trying to entrap and engulf America in the war as its ally, and, failing in so doing, the press and the people in the central nations, as well as in the ally nations, refer to and speak of us in terms of hatred and contempt. The personal experience of each of us shows that this is what may be expected by every person who assumes an attitude of neutrality between his neighbors and friends when quarreling. History shows that neutral nations of importance have always by their neutrality incurred the hatred, condemnation, and prejudice of both sides of a war.

With the lessons of the great war before us, the press and the leaders of thought throughout the country began an agitation for preparedness and national defense of this country. This preparedness at all times has been intended not for war, but to resist war. On the other hand, the people who believe in

"peace at any price" have opposed and attacked the movement for national preparedness on the ground that it was unneces-sary and contrary to the history and traditions of this country. They have veciferously and loudly pointed to the fact that upon all occasions we have had in this country in times of peace but a comparatively small standing Army during all of its history, and with the same vigor and assertions they claim that it is the militarism of European countries that is the cause of the present European war. With trembling voices, shaking hands, and tears in their eyes they proclaim that the result of this agitation for reasonable and sane preparedness will be the establishment of militarism in this country and the overthrow of our laws and free institutions and the removal of the guaranties of peace.

Upon this question of national preparedness or national de-fense, unfortunately, there have been two extremes in opinion, fense, unfortunately, there have been two extremes in opinion, one class desiring a Navy and Army of overwhelming numbers and another class desiring no increase in preparedness at all, and, in fact, favoring the abolition of the present preparedness for the defense of this country. The great rank and file of this country, who keep in mind the lessons of history and have the welfare of their country at heart, must settle the question of adequate preparedness by fighting both extremes.

extremes.

It is not un-Christian, it is no crime for a nation to make preparedness to defend itself for the day when, according to all history, it is sure to be assaulted by an invading foreign foe. It is not a departure from the traditions of our country to undertake that preparedness which will adequately defend our liberty and our institutions. One would think that the idea of adequate preparedness in this country is due to a vast change in opinion of our people. It is said that we are absorbing the military notions and measures of European nations. Such, however, is not the case. The fathers of our country have preached preparedness.

President Wilson said in his admirable and patriotic speech

at Milwankee:

I want the people to know something of military life if the question should come. That is the reason I am urging on the Congress of the United States that at least a large part of the people be trained. • • • We have got down not to the sentiment of national defense, but to the business of national defense. • • Even that arch-Democrat, Thomas Jefferson, believed in compulsory military education.

To catch the full meaning of the President's utterances with reference to Jefferson's belief in compulsory military educareference to Jefferson's belief in compulsory military educa-tion, we should remember that under the Federal militia law of 1792 every free able-bodied white male citizen between the ages of 18 and 45 was enrolled. That was the law when Jeffer-son was President. That is the law to-day, with an amend-ment of 1867, which permits the enrollment of negroes. Able-bodied male citizens between the ages of 18 and 45 are nominally and legally in the militia service and may be called for service at any time. Only those who volunteer, however, are in the active militia.

JEFFERSON WANTED TRAINING FOR THE YOUNG MEN

JEPPERSON WANTED TRAINING FOR THE YOUNG MEN.

When Jefferson speaks of the militia he means the whole body of able-bodied American citizens. "In the meantme," says his fifth annual message, of December 3, "you will consider whether it would not be expedient, for a state of peace as well as of war, so to organize or class the militia as would enable us on any sudden emergency to call for the services of the younger portions, unincumbered with the old and those having families. Upward of 300,000 able-bodied men between the ages of 18 and 26 years, which the last census shows we may now count within our limits, will furnish a competent number for offense or defense in any point where they may be wanted, and will give time for raising regular forces after the necessity for them shall become certain; and the reducing to the early period of life all its active service can not but be desirable to our younger citizens of the present as well as future times, inasmuch as it engages to them in more advanced age a quiet and undisturbed repose in the bosom of their families.

"I can not, then, but earnestly recommend to your early consideration the expediency of so modifying our militia system as, by a separation of the more active part from that which is less so, we may draw from it when necessary an efficient corps, fit for real and active service and to be called to it in regular rotation."

WAR THEN WAS NOT THE WAR OF OUR TIME.

WAR THEN WAS NOT THE WAR OF OUR TIME.

WAR THEN WAS NOT THE WAR OF OUR TIME.

The fact is further to be considered, for it is vital, that warfare has grown stupendously since the days of Jefferson. European armies in his day were not a tenth their present numbers. On the famous field of Waterloo Napoleon had in action 72,000 men and only 242 guns. In the recent German drive across Serbia the central powers captured from the Serbians three times as many guns as Napoleon had at Waterloo.

The possibilities of invasion were inconsiderable in the times of Jefferson, as compared with the present times. It was a day of small sailing ships, and the difficulties of moving forces across the Atlantic were all but insuperable.

Unless our Navy could beat off the invaders, the United States now would need a great defending army to save itself from invasion. The hope lies deep in all our breasts that this Nation may never have another war with Great Britain, yet the possibility of warfare with that great sea power is not to be ignored. In case of war with England, Britain would endeavor to dispose or our Navy as it has disposed of the greater German Navy in the existing war—that is,

destroy a part of it and drive the remainder to shelter. Once that were accomplished, England could easily land millions of men in Canada and from that safe base direct the invasion of this country.

WASHINGTON SAW THE FUTURE WITH PROPHETIC VISION.

Twice in our national existence we have been at war with England, and at one time or another in the century just past Great Britain has been at war with every great power on earth—with France, with Russia, with Spain, with Turkey, with Germany, with Austria, with United States.

Looking down the century with prophetic vision, Washington foresaw the strife of nations—the innumerable appeals to arms that were yet to be—and in his fifth annual address warned his countrymen

saw the strife of nations—the innumerable appearance to be—and in his fifth annual address warned his countrymen that—

"The United States ought not to indulge a persuasion that, contrary to the order of human events, they will forever keep at a distance those painful appeals to arms with which the history of every other nation abounds. There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness. If we desire to avoid insult we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war."

The counsel of Washington has been the counsel of every other great American in the White House. These are voices of wisdom, of prudence, of patriotism speaking solemnly from the tomb, and they will not be scorned by the American people of this generation who are

The greater portion of the people of this generation who are unfamiliar with the early history of this country, would be surprised to learn of the opinion of the early fathers of our country upon the question of preparedness. This question occountry upon the question of preparedness. This question oc-cupied the attention of such statesmen, not only like Jefferson, but of Washington, Adams, Madison, Monroe, and Jackson and others. If those of our citizens who are bewailing adequate national preparedness as an infallable sign of the establishment of militarism in this country would familiarize themselves with the thoughts of some of the early Presidents and statesmen of this country, their alarm would not be so great. I take the liberty at this point of submitting for consideration some of the ideas of the early Presidents and statesmen of this country, as shown with extracts from presidential messages, that Washington, Jefferson, Adams, Monroe, and Jackson advocated universal military training of the country's youth:

versal military training of the country's youth:

Compulsory training was the clear intent of the founders of our Government. Washington urged it in 1790, and Congress passed a law in 1792 to provide for the national defense by establishing a uniform militia throughout the United States by the enrollment of every free able-bodied white male between the ages of 18 and 45.

That act was passed under the provision of the Constitution which gives Congress power—

"To provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress."

That substantially is the law to-day. Theoretically we have now, and have had continuously since 1792, the principle of universal liability to training and service. But it is the shadow and not the substance of what Washington proposed and Jefferson urged.

PRESIDENT ADAMS WAS FOR COMPULSORY TRAINING.

PRESIDENT ADAMS WAS FOR COMPULSORY TRAINING.

bility to training and service. But it is the shadow and not the substance of what Washington proposed and Jefferson urged.

PRESIDENT ADAMS WAS FOR COMPULSORY TRAINING.

John Adams, second President, followed Washington's example and urged that Congress strengthen the country's defense. In a special session message of May 16, 1797, Adams said: "As our country is vulnerable in other interests besides those of its commerce, you will seriously deliberate whether the means of general defense ought not to be increased by an addition to the Regular Artillery and Cavalry and by arrangements for forming a provisional army. With the same view, and as a measure, which, even in a time of universal peace, ought not to be neglected, I recommend to your consideration a revision of the laws for organizing, arming, and disciplining the militia, to render that natural and safe defense of the country efficacious."

President Adams here was referring to the whole militia of the Union—all able-bodied men between the ages of 18 and 45. He wanted them to be organized, drilled, and disciplined, and to that end called on Congress to pass additional legislation.

But unhappily Congress falled to beed the advice of Washington, Adams, and Jefferson, and the country drifted unprepared into the second war with Great Britain, the War of 1812.

MADISON HAD NO DELUSIONS ABOUT PREPAREDNESS.

A belief has long been extant, fostered by false representations in school histories and the flamboyant oratory of Fourth of July speakers, that the militia forces of the United States drove the British armies before them as the November blasts scatter the frosted leaves of autumn. The painful truth is that our poorly drilled and imperfectly disciplined militia did a lot of running from inferior forces of the enemy, and were whipped in nearly every engagement of that war. Only the good fortune that England was at war with France, and that Madison's administration, thoroughly humiliated by our military reverses, was taking steps to organize and train much

"The present organization of our militia is universally regarded as less efficient than it ought to be made, and no organization can be better calculated to give to it its due force than a classification which

will assign the foremost place in the defense of the country to that portion of its citizens whose activity and animation best enable them to rally to its standard. Besides the consideration that a time of peace is the time when the change can be made with most convenience and equity, it will now be aided by the experience of a recent war in which the militia bore so interesting a part."

Note Madison's studied use of the word "interesting." With the sorry record of the war immediately behind him he could not, in honesty of speech, say the militia had borne a "gallant," an "honorable," or even a "distinguished" part.

But Congress was again supine and nothing was done to heed the wise counsels of Madison and his predecessors. The old defective militia law of 1792 was allowed to stand, and stands to-day.

TO BOUNTIES AND ALL SORTS OF SHAMEFUL THINGS.

"Have we not now in the statutes some provision for universal training and even compulsory service?" was asked by Senator Fletcher of Col. Glenn of the General Army Staff, who was testifying recently before the Senate committee.

before the Senate committee.

"Col. GLENN. I do not know of any. We have this provision, which I think has been on the statute books since 1792, that every man is available, and can be made to serve, between 18 and 45.

"Senator DU PONT. All are liable?

"Col. GLENN. Yes, sir; they are all liable; and in every war where we have accomplished anything we have gone to the draft or, failing in that, we have gone to what we did in the Civil War, to the draft and to bounties, and all sorts of shameful things, as the result of which the rich man bought the poor man to do his fighting and to stop the bullets. I do not know anything that will degrade a people worse than that."

DISTINGUISHED LIST OF ADVOCATES OF NATIONAL PREPAREDNESS.

It is unnecessary for us to quote the words of wisdom uttered by our early Presidents upon the importance of national pre-We have a long and distinguished list of the ablest American citizens in all lines of thought and action who bear disinterested witness to the wisdem of passing, as soon as due consideration can be had, of laws which, when enforced, will give to us an adequate preparedness. In this list will be found our ablest and most experienced military and naval officers, noted and distinguished educators of the country, statesmen of all parties, and pious and respected members of the clergy. It may not be amiss to at this time and place quote a few of our distinguished citizens as witnesses upon this subject:

QUOTATIONS FROM NOTED EDUCATORS ON BEHALF OF PREPAREDNESS TO RESIST AGGRESSION AGAINST AMERICA—URGE THAT AMERICANS ARM FOR PRESERVATION OF PEACE.

The advocate of peace who believes in international arbitration must be prepared to compel assent to the decrees of his court, otherwise his peace talk will provoke either ridicule or attack.—President Hadley,

The advocate of peace who believes in international arbitration must be prepared to compel assent to the decrees of his court, otherwise his peace talk will provoke either ridicule or attack.—President Hadley, of Yale.

In order that this country may be protected against aggression, it should not only be prepared to resist aggression but it should be prepared to forestall aggression.—Chancellor Brown, of New York University.

Preparedness in every department of civic and social life is our present need.—President Garfield, of Williams College.

The conscience of the country demands such measure of preparedness as will defend us against aggression. * * Less is folly; more is crime.—President Hyde, of Bowdoin College.

I believe in peace. * * But I do believe that as a practical necessity the Nation should prepare to defend itself.—President Burton, of Smith College.

The question which confronts the country is how to be prepared through suitable training for defense of home and kindred, and at the same time eliminate the spirit of militarism.—President Hamerschlag, of the Carnegie Institute of Technology.

We need to mobilize our industrial, commercial, and transportation resources, so they will work together with our naval and military equipment and enable us to maintain whatever position our duty and patriotism may indicate we should take.—President Boyd, of the University of New Mexico.

Preparedness seems to me another term for efficiency, and I am a great heliever in efficiency—President Eggleston of the Virginia Poly-

of New Mexico.

Preparedness seems to me another term for efficiency, and I am a great believer in efficiency.—President Eggleston, of the Virginia Polytechnic Institute.

I can see little hope for civilization unless the peace-loving nations of the world can bind themselves together and arm themselves with a stick big enough to keep the peace.—President Maclaurin, of the Massachusetts Institute of Technology.

One hundred thousand men, the strength of our present Military Establishment * * * is far too small. Five hundred thousand is, in my judgment, a safe minimum for the Regular Establishment.—President Nichols, of the Virginia Military Institute.

I am sure it will be most pleasing to patriotic Americans and the friends of national preparedness to hear the testimony of Archbishop Ireland, of St. Paul, Minn., who served with distinction as one of the patriotic chaplains of the Union Army. who in an eloquent oration at the funeral of Josias R. King, said by Minnesota historians to be the first man to answer the call of Lincoln for 75,000 volunteers in 1861, gave utterance to the following patriotic sentences:

My prayer is that our country may have social and commercial peace, that we may have the prosperity to make us great in all things good, and may have a quick response to patriotic duty. We hear much of peace at any sacrifice. Peace with honor, aye. Peace to the glory of our country, yes. But if it means that we are to be the prey of international ambition; if it means that we are to do the bidding of every country on earth, and that our flag must dip in disgrace, then we must not have peace. No nation can be weak to-day in preparedness and strong to-morrow in efficiency.

In recently addressing a public audience Cardinal Gibbons named four hopes of the Republic, the second and third of which were as follows:

My second hope rests upon the intelligence and patriotism of the American people. They fully appreciate the civil blessings which they

enjoy, and they will not permit those blessings to be snatched from them without defending them with their lives.

My third bope rests upon a strong Army and Navy that will uphold the dignity of the Republic and repei every invasion. We have no desire to increase our territory, but we are determined that not one acre of our and shall ever be withdrawn from us without a loyal defense.

Other distinguished prelates of all creeds and denominations in the country have by voice and pen urged the speedy adoption of all reasonable measures to enable this country to defend itself

in case of invasion by any foreign nation. In the recent annual national convention of the Grand Army of the Republic resolutions were adopted by such convention approving and urging the necessity and wisdom of this movement. Numerous patriotic and industrial organizations throughout the country have spoken by resolutions to the same effect. The press has voiced the sentiments of a vast majority of its readers

in indorsing this patriotic movement.

It is apparent to all impartial and intelligent American citizens that this Nation can not longer continue in safety with an Army and a Navy and a preparedness such as that which was sufficient when we were a nation of only a few million people and of much less wealth than is now found within our borders. When the Navy and Army strength of this Nation in the Revolutionary and 1812 Wars is compared with our present naval and military strength and our present national wealth it will be found that we are not now maintaining even as strong a military and naval defense in proportion to our present popula-tion and wealth as we were in the Revolutionary and 1812 Wars,

This Nation is now enjoying its one hundred and fortieth year of independence, and yet such an eminent student of military history and military science as Gen. Upton asserts that during the short life of our Nation 18 years have been spent in unnecessary wars. He gives as his unbiased opinion that with preparedness even the Rebellion might have been averted and other struggles shortened. He further says that with an adequate Army in 1861 there would have been no four years of bloody struggle. The Nation before the breaking out of that struggle was consoled with an Army on paper, which failed the Nation in the hour of need, and that the Nation was the victim of pacifists' failacies. I take the liberty of quoting from one of his articles published in the press, which is as follows:

The indisputable facts of history show the horrible cost of unpreparedness in 1861—over half a million men slaughtered by their brothers.

The opening of this war found the Government with an Army of but 16,367 men.

Of the 198 companies of the Regular Army 183 were on frontier posts or west of the Mississippi and the other 15 were distributed along the Atlantic coast from Canada to Mexico.

As an Army, considered in relation to the area and the population of the Nation, it was utterly inadequate. Insufficient as it was, its strength existed largely in the imagination of the public. Companies were scattered so far and wide it could have been assembled in its full force only after a long delay, and then only by leaving important posts in the custody of caretakers.

THREE MILLION MILITIAMEN.

True, we had 3,000,000 militia, another army whose strength lay in the imagination of the public. "Excepting a few regiments, these did not merit the name of a military force," and when Lincoin turned to this he found the militia to be, as it ever was, a broken staff.

Many of the District of Columbia militiamen refused to be sworn, and others dictated that they should not be required to go outside of the District.

Many of the District of Columbia militiamen refused to be sworn, and others dictated that they should not be required to go outside of the District.

The governors of six States indignantly refused to supply any troops, and then from the mistake of depending on the militia, we turned to the companion error of short enlistments. The Government called for 75,000 men, and the President, by a law 60 years old, was obliged to limit their service to three months.

The disaster of the First Battle of Bull Run was the logical result of the short-term error in the military system and the ignorance of the public in military matters. Raw troops—28,568 of 90-day men opposed to 29,949 Confederates—were sent into battle because the North desired to get some service out of them before they were dishanded.

THE POPULAR BELIEF.

"The disaster that ensued demands that the causes leading to it be carefully considered: First, was the popular but mistaken belief that because our citizens individually possess courage, fortitude, and self-reliance, they must necessarily possess the same qualities when aggregated as soldiers. And next to this error was the fatal delusion that an army animated by patriotism needed neither instruction nor discipline to prepare it for battle."

The Union loss was only 5 per cent. Military authority declares that the same force after a year's training would have scorned to retreat with less than a loss of from 30 to 50 per cent. The complete rout of the Union forces convinced the country that war had arrived, but the public did not perceive that war had come because the Government was unprepared.

public did not perceive that war had come because the Government was unprepared.

If the Government had had at the outbreak of the war a regular army with a mobile strength of 20,000 men and had burled it against the Confederates at Buil Run and followed up the victory which would surely have ensued, there would have been no four years of Civil War. There would not have been lost 559,928 lives in four years of strife. The three-year term of enlistment which next followed gife. Government an Army of 637,126 men in 1862, but again the lack of another kind of preparedness prolonged the war—the armies were mismanaged because military knowledge was lacking. "The President and the Secretary of War," Upton observes, "were simply eminent civilians, distinguished lenders at the bar, who, like the mass of our citizens,

had given very little thought to the national defense. In military matters or the direction of armies they made no profession of knowl-

Gen. Upton makes no criticism of individuals enforcing the military system of a people who were grossly ignorant of military knowledge and imbued with the thought that there was nothing to learn. But he abserves that the military system by which Prussla in two campaigns of seven weeks each humiliated Austria and subverted the French Empire was 60 years in the making, while the system by which the Civil War was won in four years was fixed up in just four weeks by Contross.

The weakness of the short term of enlistment often revealed in other wars caused the usual demoralization in the rebellion. One regiment of lafantry and one battery of Artillery, their time expired, despite the catreaties of the Secretary of War and of their commanders, marched home "to the sound of the enemy's cannon."

GRANT'S OFFER IGNORED.

So little value was placed on the services of a trained officer—even a graduate of West Point—that when Gen. U. S. Grant wrote to The Adjutant General telling him that he felt it to be his duty to place whatever skill and experience he had acquired at the disposal of the Government no notice was taken of his letter, and he had to take service in a regiment in Illinois under the governor's commission. Nevertheless, the first real success of the North in war was won by a professional soldier, Gen. Halleck.

Our lack of military knowledge in the Revolution compelled Washington to assume dictatorial powers. Our lack of military knowledge and system compelled Lincoln to assume dictatorial powers. That meither retained the powers offers no excuse for the system.

Numerous political evils, of course, crept into the management of the armies in the rebellion, many such evils springing from mistaken motions of humanity and expediency. Strategical principles gave way to polities. Through the hospital system governors took away with one hand what they gave with the other.

PREPAREDNESS V. UNPREPAREDNESS.

PREPAREDNESS V. UNPREPAREDNESS.

PREPAREDNESS V. UNPREPAREDNESS.

If the cost of adequate preparedness is considerable, it is as nothing compared with the cost of unpreparedness.

The expenditures of the United States for its Army during the 10 years preceding the Civil War were \$168,079,707.57.

The cost of the Civil War (for which we are still paying at the rate of hundreds of millions a year) was \$10,902,768,219.09.

Now, suppose that the United States had spent three times as much on its Army during the decade preceding the war and in 1861 had possessed an Army of 50,000 men (strong enough to have quelled the rebellion), we would have spent in that decade only \$504.239,121, and we would have saved in money alone over \$10,000,000,000, the difference between what adequate preparedness would have cost and what we have up to the present time paid for that one war!

Adding to the four years of Civil War which came from unpreparedness the other years of wars prolonged because of the same neglect, it appears that the best agents of the makers of arms and ammunition are the advocates of defenselessness.

The Revolution lasted five years longer than it would have run had we met the issue intelligently; the War of 1812 ran two years longer than it would if we had been prepared; the Creek War six months; the Florida War six years; the Mexican War one year.

Thus, eliminating the smaller Indian wars, unpreparedness has given us a clear total of 18 years of war.

Many lessons of truth, wisdom, common sense, and patriotism may be gleaned from the following expressions of opinions by learned men upon this great question of preparedness:

YALE'S RESPONSE TO APPEAL

President Hadley, of Yale University, said:

President Hadley, of Yale University, said:

To-day the younger men of our Nation are confronted with the possible need for public service in the defense of their country.

You already know how the Yale students have responded to this appeal. Gen. Wood told the Yale boys at Plattsburg that the most effective work of preparation that they could do during the winter at New Haven was to organize a battery. So many enlisted that they egganized four batterles instead of one. A large number of our best men are giving time and labor and serious study to a kind of work which has little of the show of military life and much of its substance. The Yale battalion is not a cadet corps, but an organized unit of the State militia. Neither officers nor men have parade uniforms. If there should be a riot with which the civil authorities could not deal they would be called upon to take their share in suppressing it.

In the critical conditions, national and international, which we are now facing, the Natioa is going to be saved by the character of its citizens. No physical or governmental machinery is going to protect us. The advocate of peace who believes in international arbitration must be prepared to compel assent to the decrees of his court; otherwise his peace talk will promote either ridicule or attack. The advocate of preparedness who places his reliance on a large navy may perhaps give us security against some of the dangers which threaten us at the moment if he can get the Navy sufficiently out of politics to place his ships in charge of intelligent fighters; but in the face of modern scientific progress the safety that can be given by the largest battle-ship program is only temporary. Unless a growth in the size of the fleet is accompanied by a corresponding growth in the size of the fleet is accompanied by a corresponding growth in the size of the fleet is accompanied by a corresponding growth in the size of the fleet is accompanied by a corresponding growth in the size of the fleet is accompanied by a corresponding

TO PREVENT EXCUSE FOR WAR.

Elmer E. Brown, chancellor of New York University, said:

The aspect of international preparedness in which I am chiefly interested at the present time is the wide range of nonmilitary preparedness. In order that this country may be protected against aggression it should not only be prepared to resist aggression, but it should be prepared to forestall aggression. The agencies which prevent international misunderstandings from arising certainly do as large a part in

the advance of the country as do those which deal by force with misunderstandings which are already far advanced.

I am destrous of seeing the American Diplomatic Service greatly improved. The detailed suggestions for such improvement which were made some years ago by Ambassador Andrew D. White seem to me particularly worthy of careful consideration at this time. The building up in our colleges and universities of departments of international affairs which shall cultivate a thorough understanding of our commercial, cultural, and political relations with other countries is greatly to be desired. And the systematic promotion of an international understanding by the press of our country, together with the systematic discouragement by the press of unnecessary international irritation—these are elements of our advance for which we should especially take thought in these critical times.

WARS OF DEMOCRACIES WASTEFUL.

WARS OF DEMOCRACIES WASTEFUL.

Dr. Harvey A. Garfield, president of Williams College, said:

Dr. Harvey A. Garfield, president of Williams College, said:

Our Army and Navy ought to be well oragnized and equipped and economically maintained, but we ought not to have a larger Military Establishment than we need to police our country and defend our shores. To base our building program upon that of other nations is to put ourselves in the vicious circle of navai competition and to commit ourselves to a policy dictated by Europe and absurdly inapplicable from a political point of view to our needs.

Democracles have waged great wars, but they have done it wastefully and have succeeded only when they have evolved themselves for the time being into something not democratic. The departure advocated by the enthusiasts for a big Army and Navy is not for a season, but permanently. If this is to be done, it is folly to attempt longer to maintain our democratic institutions. If necessity dictates that we enter into competition with European States in the maintenance of great Army and Navy establishments, wisdom demands that we adopt as the permanent machinery of government that which under our Constitution was intended or emergencies only. In other words, that we put our liberties in commission and clothe our President with autocratic powers and surround him with expert military advisers.

Political parties are preparing new to make capital out of conditions that need mending. Fears and prejudices are being played upon to put through programs involving vast expenditures. It is the part of wisdom, of true patriotism, to look before we leap. Preparedness in every department of civic and social life is our present need. That is our first line of defense. Military preparedness is our second.

DEFENSE AGAINST AGGRESSION.

William De Witt Hyde, president of Bowdoin College, said:

The conscience of the country demands such measures of preparedness as will defend us against aggression, fulfill our responsibilities to our neighbors, maintain our rights in treaties, and contribute to fusitive and peace of the world an influence commensurate with our numbers, our wealth, and our intelligence. Less is folly; more is crime. There is room for wide difference of opinion between parties and between members of the same party as to what that measure is. But whoever attempts to make out of those differences political capital for himself or his party is a traitor to the country and an enemy of the human race.

UTILIZE LAND-GRANT COLLEGES.

UTILIZE LAND-GRANT COLLEGES.

Edmund J. James, president of the University of Illinois, said:

I am very much interested just now in vitalizing and energizing work of military training which is going on in our land-grant colleges. I think that the Federal Government might accomplish more in a shorter time and with less money by developing immediately the possibilities of these institutions than in any other way.

NATIONAL DEFENSE A NECESSITY.

M. L. Burton, president of Smith College, said:

I believe in peace as a counse of perfection, and I am unalterably opposed to militarism as such. But I do believe that as a practical necessity the Nation should prepare to defend itself.

VALUE OF MILITARY TRAINING.

Arthur A. Hamerschlag, president of the Carnegie Institute of Technology, said:

Technology, said:

Martial exercise on the part of the young is in itself a salutary method for upbuilding the strength, endurance, and hygienic attributes of the race. The method by which a plan of this kind is enforced is more important than the good results attained, since other exercise without the martial spirit can easily be substituted for developing physique. The military spirit introduces with martial exercise a possibility of the militant ideal. This will be more difficult to overcome than to accomplish the service which martial exercise is to do for preparing youth for military service. Therefore the question which confronts the country is how to be prepared through suitable training for defense of home and kindred and at the same time eliminate the spirit of militarism.

defense of home and kindred and at the same time eliminate the spirit of militarism.

Switzerland has undoubtedly solved it by placing the question in a threefold way before the people. First, as duty involving patriotism for the safety of the Republic; second, by placing a social stigma upon those who attempt to avoid this responsibility; and lastly, but equally important, by an intelligent plan of general education which makes the nation a peace-loving people, who have no foreign aspirations for conquering neighboring territory.

This end can not be attained in the United States by legislation alone. We need general educational propaganda to establish our foreign relations upon a basis of the brotherhood of nations; we need growth in the acceptance of individual responsibility toward the Republic; and, lastly, we need a training which makes each able-bodied citizen a useful unit for the defense of the Nation. Any movement which couples these ideals impresses me as being the right beginning.

MUST NOT EVADE RESPONSIBILITY.

MUST NOT EVADE RESPONSIBILITY.

David R. Boyd, president of the University of New Mexico, said:

At the end of this war the United States will become the financial center of the world. The large recent accumulation of wealth in this country has been brought about by the war. After the war is over the belligerents will have both the motive and efficient armies and navies to deal with us in securing privileges and even reimbursements on account of our contributions to the war in the sale of munitions and

loans, and in securing commerce on the high seas that was lost to the nations at war. Whatever part we may wish to take in the peace negotiations after the war must be based on such resources as will enable us to make our proposals with dignity and assurance.

I think it is conceded that although our Navy is of good quality, it is not large and strong enough for these purposes; and it has also been conceded that our land forces are not sufficient for our present purposes, even though we are not called upon to deal with foreign forces. Moreover, the naval and military forces, as Gen. Wood has pointed out, are only the sharp edge of the tool. We need to mobilize our industrial, commercial, and transportation resources so they will work together with our naval and military equipment and enable us to maintain whatever position our duty and patriotism may indicate we should take. The steps we must take to enable us to accomplish this preparedness should be so safeguarded that it can be done with the most efficiency, from a financial point of view. Members of Congress and others charged with the duty of carrying into effect these plans must not evade this responsibility. The sentiment of our country is absolutely in favor of it, and they will be held responsible for whatever they may do or fail to do in dealing with this great question.

THINGS WORSE THAN WAR,

J. D. Eggleston, president of the Virginia Polytechnic Institute, said:

Preparedness seems to me another term for efficiency, and I am a great believer in efficiency in every phase of life and in every department that touches life.

Looking at the matter solely-from the standpoint of protection, it would seem to be as logical for the Nation to be in a position to resist evil-minded and evil-intending force as it is fer cities and towns and rural districts to protect themselves and their citizens by an efficient police force.

rural districts to protect themselves and their citizens by an efficient police force.

It happens that I am a father. I am not "raising my boy to be a soldier" unless he desires to enter that profession. Certainly I am not raising him to be a raw recruit either in peace or in war. I am endeavoring to raise him to be as efficient a citizen of his State and country as it is possible for him to be, and to be ready not only to offer his services for any call that may come to him, but to see that those services shall be efficient through previous preparation. To find that when called, either in peace or war, he should prove either unworthy of the call or unprepared for it would be to me heartbreaking.

Some things are more terrible than war, and some things very much dearer than life itself.

SPIRIT OF DOMINANCE ABROAD.

Dr. Richard A. Maclaurin, president of the Massachusetts Institute of Technology, said:

The one great truth that has been made indisputable by the war is the fact that the spirit of dominance is still very much in evidence in the world, and while that spirit is prevalent there must always be danger to the unguarded. How to deal with this spirit of dominance when it appears is, to my mind, the greatest of all problems presented to the human race, and I can see little hope for civilization unless the peace-loving nations of the world can bind themselves together and arm themselves with a stick big enough to keep the peace.

Says our distinguished ex-Secretary of State, W. J. Bryan, in eloquent and patriotic terms-

if any foreign foe should declare war on our country and attempt to invade it a million brave and patriotic American citizens would rise up in arms between sunrise and sunset, in the same 24 hours, to defend their country.

It is my conscientious belief that in bravery and in patriotism there are no people on the face of the earth that are imbued with greater patriotism and bravery than the citizens of this country. The citizens of no country would fight braver, longer, or sacrifice more to drive a foreign foe from our shores than the citizens of our country, but, in the present condition of our Military Establishment, where would those million brave and patriotic American citizens obtain their arms and ammunition? Where would they obtain personal training and discipline? Where would they obtain the experience to handle and manipulate modern and scientific weapons of war?

Gen. Charles King, of Milwaukee, Wis., a veteran of the Civil and Spanish Wars, said recently in a speech on prepared-

ness, delivered at Sheboygan, in my district:

That the claims of the pacifists, that our isolation from the fighting countries would automatically protect us, are absolutely false in this day and age, owing to modern facilities in shipping, which would allow a European nation to embark 300,000 soldiers in 48 hours and land them on our shores in 15 days.

He further says:

The United States does present a temptation to foreign nations, for all the armor-plate factories in the United States, excepting one, all but one of the cannon factories, ship-building plants, and rifle factories are located at easily accessible places on the eastern coast, and we are not on the best terms of friendliness with all the world. If an enemy struck the country stretching between Boston and Philadelphia, this Nation would be crippled for 50 years.

And in concluding he asks respect of our citizenry for the National Guard, composed of young men who are sacrificing their

leisure hours in preparedness.

The preparing of trained and disciplined troops to defend the country in time of war is, notwithstanding their bravery and patriotism, a matter that can not be rapidly done. It takes time and work to train a citizen, however brave and patriotic, into a trained fighting soldier capable of giving a good account of himself in the defense of his country.

Many important lessons in military preparedness may be drawn from the experience of certain nations engaged in the

present European war. It is now exactly 20 months since the war began and England is still preparing for the war. She has found that by depending upon the bravery and patriotism of her citizens that she is not able to build up her armles to the proportions necessary to defend the interests of herself and that of her allies. In a final effort to raise the necessary number of untrained and undisciplined men for her armies she has finally resorted to conscription of both single and married

men of her population.

England was not ready when the war began; and why was England not ready when the war began? Because she maintained a small regular army, exactly as does the United States; because she relied upon volunteers in case of trouble, just as does this country to-day. The result has been chaos. During all of these dreadful months England has as a military power amounted to very little. She has trained an army of volunteers. We hear of these volunteers on paper, but they are not in evidence on the battle lines, excepting as they occupy a limited portion of the western battle front in Belgium and France. Witness this spectacle of unpreparedness: The length of the western battle front between the central powers on the one side and the allies on the other is estimated at 525 miles. Until recently the little Belgium army occupied and defended 17 miles of this battle front, and England, with a mass of great untrained troops, occupied and defended 31 miles, while the gallant and brave French, who were prepared in small numbers, occupied and defended nearly 500 miles of the battle front. This illustrates the difference between preparedness and unpreparedness.

On the other hand, witness the domination of the seas by the British nation, due solely to her wisdom in preparing her sea power. On the other hand, witness the result of the preparedness of the armies of Germany. At the first call to arms her troops were immediately on the march for Paris, and whatever advantage the German armies have gained on the western front has been due solely to the fact that her armies were maintained in preparedness, ready to march at a moment's notice. But the French Army, much inferior in numbers to the Germany Army, was prepared and did finally raily, and through the fact of their preparedness held the German armies at bay within a few cannon shots of the French capital for the last 18 months.

It is clearly to be seen, that although inferior in number, it was solely the preparedness of the French Army which prevented the capture of Paris in September, 1914, and the overrunning and surrender of the entire nation would have been the result of the capture of the French Capital. If this result had taken place there is every reason to believe that the war would have been ended many months ago, and the French Nation would have had imposed upon itself by the conquering Germans millions of dollars in indemnity, and perhaps lost large and valuable territory.

It is also clear to be seen that in the event that the French Army had not been prepared and France was overrun and conquered by the German Armies, and if the British were not masters of the sea by reason of their preparedness, that long before this German Armies would have invaded English soil and easily conquered the untrained and green troops of England; thus again illustrating that it was solely the prepared-

land; thus again illustrating that it was solely the preparedness of England on the sea that has prevented the German Armies from invading England and planting the flag of the Kaiser on the throne of the British Monarchy.

These clear and positive lessons from the present European war also teach us that our first line of national defense must be a strong and powerful Navy, the equal of that of any other nation; that our second line of defense must be our coast defenses, well equipped, well manned, and well gunned; and our third line of defense a well trained and disciplined and fairly large-sized Army Establishment

large-sized Army Establishment.

Again we have a momentous example in the lessons of pre-paredness when we look upon the history of the ill-fated expedition of the allies in attempting to capture the Dardanelles where for months the ally troops, filled with a bravery and skill seldom equaled in any war, and after losing some of the most magnificent superdreadnaughts in the British Navy and over 100,000 allied troops were compelled to sneak away from the Dardanelles shores in the dark of night.

There is to be found in the whole history of war no more splendid example of preparedeness than during the Spanish War, when our Government deemed it necessary in order to have a naval fleet to match the Spanish naval fleet, that the Oregon, then stationed on the Pacific coast, should round Cape Horn and join the Atlantic Fleet in order to be able to fully match the Spanish fleet. The Oregon made this historic trip watched by the eyes of 90,000,000 American people, who lustly cheered as she joined her sister ships in the Atlantic Ocean prepared to fight the Spanish armada. This vessel was sufficient, and it was the only one to spare or to add, to overcome the Spanish fleet. The battleship Oregon was one of the products of naval preparedness instituted and installed during the Democratic administration of President Cleveland, under the leadership of that great statesman Hon. William C. Whitney, then Secretary of the Navy

What impartial and intelligent American citizen can look upon the fate of peace-loving China, with her 400,000,000 people, without heartfelt sympathy? Who can read her recent history and from it see the various ports and territories of China which have been seized by plundering nations against her will simply because she was unprepared to defend herself? This is unpreparedness with a vengeance. This is the condition of helplessness into which this country would easily drift if we listened to the advice of those who preach "peace at any price."

During this period of agitation over preparedness there has been much said untruthful that is detrimental to our Navy and our Army. Our naval and military leaders have been freely charged with being the instigators of the preparedness They are charged with being in league with the movement. manufacturers of arms and ammunition needed by the Government for its defense because they have given it as their opinion based upon study, that the present Military and Naval Establishments of this country are not sufficient to properly and adequately protect this country in case of attack by a strong foreign foe. They have been accused of seeking to unload on the Government of their country the products in armor, ammunitions, and weapons of manufacturing plants in which it is alleged that some of them are interested.

President Wilson repeatedly in his preparedness speeches made during his Western tour resented and answered that criticism in the building up of the Navy and Military Establishments in this country. He said that in obtaining preparedness that he and Congress would see to it that graft in all forms was eliminated. He advocated Government ownership and operation of all plants necessary for the making of armor for battleships, and to build, operate, and maintain the fleet necessary, and to manufacture weapons and ammunitions for the Military and Naval Establishments. I have no doubt that this Congress, acting in conjunction with the President, will see to it before this session adjourns, that everything in the line of armor, weapons, and ammunition necessary for the Naval and Military Establishments that can be satisfactorily, efficiently, and eco-nomically made by the Government will be undertaken by the Government, and as the manufacture of armor plate and of weapons and munitions are practically a monopoly, this will be a wise and patriotic undertaking.

There are many things that we know about our Military and Naval Establishments; it has finally been admitted that instead of being second our Navy is only fourth in strength among the naval powers.

The present international man hunt in Mexico discloses the fact that most of our Military Establishment is scattered in our outlying possessions, and that there is at call barely enough of troops of the regular line to carry on the celebrated inter-national man hunt, and hourly the National Guard of the country is expecting to be called into service to participate in the same hunt.

We know that our Navy is weak in spite of padded statistics, wea' in ships, in guns, in munitions, in men, and especially in destroyers, submarines, and hydroaeroplanes.

We know that our Army is negligible in numbers and scat-tered in units. We know it is unequipped with proper artillery, that it lacks aeroplanes and every other necessity of modern warfare.

We know that we have neither ammunition or munition plants. We know that our private arms and munition plants are so near the Atlantic coast that they would be an asset to the enemy rather than ourselves.

We know that our coast-defense guns are outranged by any of the large guns on any modern battleship. We know that New York, for example, could be bombarded and destroyed comfortably and safely by ships beyond the reach of our artillery.

And we have in the past year been getting educated. have learned some things we did not know before, and we know the falsity of some doctrines we have always unquestionably accepted.

Thus: We know that war is not an impossibility nor was an improbability in the modern world.

We know that police forces and fire departments are necessary; that insurance money is well spent.

We know that modern warfare means the handling of great bodies of troops, and that therefore it is not sufficient to arm a State militia and drill it on armory floors.

We know that our Atlantic seaboard could be taken by any foe better equipped than ourselves, and that once taken it could be held almost indefinitely. The development of modern trench warfare has taught us that.

We know that we are wealthy enough to provide ourselves

adequate protection.

And knowing it, we know further that the humiliation of redeeming our proudest cities by ransom would not be tamely accepted by us. This is a patriotic country. Our men would fight, and they would continue to fight until they had won. Can you doubt that it would be a long and deadly process? first volunteers, the flower of our patriotic spirit, would go into the struggle unequipped, untrained, overmatched. They would fight and they would die, probably almost to the last man. They would know this, as they know all the above facts, and they would go to their certain fate cursing the men whose shortsightedness or petty political maneuverings made such a martyrdom necessary. It will seem to them better to have paid in advance by wise legislation and mere money than to pay now usuriously in blood. They will know that their resistance will be ineffective, but they will know also that their sacrifice will arouse the spirit of the Nation to sweep pork-barrel and party politics aside and belatedly to try to accomplish what its servants should have done long ago.

We do not want war; we do want preparedness against war. We know that unless we can defend ourselves we are a tempta-

tion to attack.

I admit that, in common with most of the Members of this House, I have never had any practical experience in military affairs and have never been, until the agitation over the present preparedness movement arose, much of a student of such matters. The Committee on Military Affairs, however, has had the experience and knowledge of Army officers, both those who are on the retired list as well as those on the active list. I am not one of those who believe that the patriotism of American Army and Navy officers has been dimmed or dulled by mercenary connections with the manufacturers of any of the supplies furnished the United States Government for its Army and Navy. I believe that they are equal in patriotism, bravery, and loyalty to the institutions of this Government and its welfare as any set of officers to be found in any nation of the world. The Military Affairs Committee has had the benefit of their advice and experience. It has prepared the pending bill for an increase in the efficiency of the Military Establishment of the United States. On the whole I am fairly well satisfied with the bill, excepting the provision with relation to the increase in the standing army. increase is for but 40,000. If these 40,000 were to be provided within the first year, my objection to this small increase would be less; but as the first increase of 10,000 is to be within 15 months after it becomes a law, and the balance of the increase in the standing army at the rate of 10,000 for each of the succeeding three years it does not receive my indorsement, and will not receive my vote if a proper amendment to increase the same is offered. Otherwise the bill has my hearty indorsement.

FEDERALIZATION OF THE NATIONAL GUARD.

The constitutional power of Congress to provide for the discipline, organization, training, and pay of the militir as set forth in the bill under consideration has been doubted by many able lawyers, trained in constitutional law, of our country. am satisfied, however, that the reasons given by the Committee on Military Affairs in the report accompanying this bill demonstrate clearly that the provisions of the bill relating to the federalization of the National Guard, when enacted into law, will be found constitutional. Convincing proof of this fact may be found in the following quotations from the report of the Military Affairs Committee:

Affairs Committee:

The framers of the Constitution evidently intended that the militia provided for in that instrument should be a national force, and never had any doubt that Congress had full power to make it so.

Patrick Henry, in a speech delivered in the Virginia Convention on June 14, 1788, said: "Your militia is given up to Congress; all power will be in their own possession."

Quoting the Constitution, be further said: "By this, sir, you see that their control over our last and best defense is unlimited."

George Washington, in a message to Congress in 1795, said: "In my opinion, Congress has the power, by the proper organization, disciplining, equipment, and development of the militia, to make it a national force, capable of meeting every military exigency of the United States."

Madison believed that the Congress had the power to call out the militia for training during peace. In his message of December 5, 1810, he said: "Toward the accomplishment of this most important work (that is, the developing the militia). I recommend for the consideration of Congress the expediency of instituting a system which shall, in the first instance, call into the field at the public expense and for a given time certain portions of the commissioned and noncommissioned officers."

Total_

In his message to Congress on September 20, 1814, he said: "I can earnestly renew a recommendation of such changes in the system of the militia as by classing and disciplining, for the most prompt and active service the portions most capable of it."

On December 3, 1816, he said: "An efficient militia is authorized and contemplated by the Constitution."

Mr. Monroe said, December 2, 1823: "As the defense and even the liberties of the country must depend in time of imminent danger on the militia, it is of the highest importance that it be well organized, armed, and disciplined throughout the Nation."

The cpinions of these men who were at the birth of the Constitution, and who must have known the intent and meaning of the framers of that instrument, are quoted here to show that not until a much later day did there arise any doubt as to the power of Congress to discipline, train, organize, and arm the militia, not the militia of the States but the militia of the country.

Much has been said by well-meaning but superficial persons about 48 little armies, commanded by 48 different generals, and trained in 48 different ways. Even a superficial study of the Constitution would have convinced any unprejudiced person that Congress has the power to discipline, train, organize, and arm the militia of the entire country with uniformity.

It is admitted by those who think that the militia can not be brought under full control of the General Government that Congress can exercise the following powers:

"1. The power to prescribe lower age limits for service in the Organized Militia and other conditions of the enlistment contract so as to insure the presence in the Organized Militia of any State of men in a position to respond to the call of the General Government without the severance of too many local ties; in other words, prescribe the organization of the recruiting service of the Organized Militia.

"2. The power to prescribe the qualifications of officers, providing in his regard that no person shall be appointed an offic

It is estimated by the committee that when this bill becomes a law and is in full force that it will provide for the following number of trained men, from whose ranks a sufficient number may be called to properly defend the country:

The bill provides for, in time of peace, a standing Army of	140,000
National Guard	129, 000 995, 790

Even if there should be an honest doubt about the constitutionality of the federalization of the National Militia, I for one firmly believe that the brave and gallant members of the Na-tional Guard in the several States will banish the doubt of constitutionality of the President's power to do so by rushing pell-mell to the defense of our country.

Address of Hon. William M. Calder.

EXTENSION OF REMARKS

EDMUND PLATT, HON.

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 6, 1916.

Mr. PLATT. Mr. Speaker, availing myself of the privilege granted me, I wish to say that the following address was delivered by my former colleague, Hon. William M. Calder, who in all probability will be the next Republican nominee for United States Senator from the State of New York, at the annual banquet of the Merchants and Manufacturers' Association at Little Falls, N. Y., on the evening of March 24, 1916:

ADDRESS OF HON. WILLIAM M. CALDER,

Mr. Chairman and gentlemen, it gives me great pleasure to be present this evening and discuss with you for a few minutes a matter of great importance which is occupying the attention of our people at this time. I know much of your great county, of its fertile soil and the character of its agricultural products. Your villages and cities are well known far beyond the borders of your county.

For a number of reasons I have always had a very high regard for your people. Your former Representative in Congress, the late Vice President Sherman, was my intimate friend during all of my 10 years' service there. When he became Vice President dent it was on his recommendation that I succeeded him on the great Committee on Interstate and Foreign Commerce, which has so much to do with the business affairs of the Nation.

In this presence I am glad to pay a tribute to your present Representative, your own fellow townsman, the Hon. Homer P. Snyder, who in the few short months that he has represented you at Washington, has made a distinct impression on the affairs of the Nation. His sound business sense has made him exceedingly valuable, and often in debate his advice has had much to do with deciding the question at issue. I know that on this grave question of the national defense he has been foremost among the New York State delegation in Congress in insisting

that the country be properly prepared to meet any emergency.

May I be permitted to say a personal word to you? In 1914

I was a candidate for the Republican nomination for United

States Senator, and although many of your people did not know me, I received a very handsome vote here, carrying the county over Senator Wadsworth by a vote of 948 to 630. I have not forgotten it, and in the near future may give you another op-portunity of indicating your judgment of me; and while I thank you from the bottom of my heart for your very fine support in 1914, I am hopeful, now that you have looked me over, I may do just a little better the next time.

The great world war, engaging more than half of the civilized world, has brought to us a realization of a condition of things in the country that we have never before fully appreciated. We have gone along for half a century without any conception of the possibility of conflict with any of the other nations of the world.

Preparing our Nation for war in time of peace is a duty that we owe to ourselves. It is a duty that every country owes to itself—not that we seek war, but that we wish to prevent and guard against it. It is not to be assumed because a nation prepares to defend itself against possible attack on the part of another that it seeks war, or that it expects it.

Such preparedness is simply a form of insuring national integrity, with the additional merit of promoting a spirit of patriotism and love of country among the people of the Nation. If our country is worth living in, it is worth defending and main-

taining.

1, 324, 790

We have learned from the great war in Europe what preparedness means. It was preparedness of the army that enabled Germany to make great initial gains of territory. It was similar preparedness on the part of France and Belgium that checked the German offensive when it was almost at the gates of the French capital. It was the preparedness and superiority of the English Navy that saved the seaports of France from her enemy, without which it seems certain that the initially more powerful military machine of Germany would have swept through the French Republic. It was and still is the prepared-ness of the English Navy that has saved the British Islands from invasion by a foe which, in the beginning, was capable of putting 20 trained soldier into the field to England's 1.

We have seen little Belgium forced into war. Switzerland,

with her proportionately large reserve army, is at peac in the midst of war. If she had not been prepared, might not her plight be that of Belgium—her men at war, her homes ran-

sacked, her people outraged?

The United States is a large Nation; one of the greatest in the world. Prepared against war in proportion to its vast resources of men and material would mean that no country in the whole world could conquer this Republic. To-day the country is not prepared. The entire Army within continental United States numbers about 40,000 men. The Navy ranks

fourth in tonnage among the great fleets of the world.

It is always to be assumed, because of the fortunate isolation of this country from powerful enemies, that the Navy will constitute the first line of defense. The United States Navy to-day is not large enough successfully to withstand the navies of either England or Germany. It would be about on a par with that of France, if we assume, as we must, that great modern navies are practically identical in point of effectiveness when rated shir for ship. There may be slight superiorities here and there, with regard to special types of ships, but, generally speaking, modern war vessels of whatever nation are very much

alike and are of approximately equal power.

The latest reports issued by the United States Government indicate that on July 1 last the tonnage of Great Britain's Navy was 2,704,000; Germany's, 1,306,000; France's, 899,000, and the United States', 894,000. The Navy must be made larger. How much larger is a matter for experts. Certainly the program

zow put forward by the administration seems to represent a minimum of naval preparedness. We should not do less; we may be compelled to do more. And in building this enlarged fleet the United States must promptly make the necessary provision for caring for it, else it will become a useless thing. There must be more dry docks, more efficiently equipped navy yards, and fewer navy yards. We are scattering our resources to-day among 11 navy yards within our home borders, of which several are obsolete. England has 6 yards for her infinitely greater navy Germany has 3. France has 5. We have nearly as many as these three great naval powers combined.

A greater Navy must go hand in hand with a more scientific and centralized shore equipment. Generally speaking, I believe we should maintain no navy yard that is not prepared to dry dock and repair a modern superdreadnaught such as we have already built and are building. Yet there are but two navy yards on the Atlantic coast and one on the Pacific which can dock these great fighting units. In other words, only 3 of our 11 home navy yards could offer refuge and repair to a wounded superdreadnaught. This is a matter which should be considered simultaneously with a policy of upbuilding and increasing the fleet. It goes to the very root of naval effectiveness, Big navy yards can handle small ships as well as big ones; small navy yards can handle only the small ones. For strategic and economic reasons the day must inevitably come when we shall consolidate and reduce the number of these plants.

The great trouble with all navies is that because of the development of naval armament a vessel becomes obsolete after a few years. For some reason or other the Navy Department and Congress have failed to appreciate the need of a thorough equipment of this most important branch of our Military Establishment. For instance, the keels of the two battleships authorized on March 3 of last year have not yet been laid, and they can not be for at least three months' more time. After that it will take several years to build them. The seagoing submarines authorized in June, 1914, will not be completed for two years. Germany can build hers in six months' time. Our whole system of naval construction must be revised. There is something radically wrong with it.

The second line of defense of the United States must be the

The second line of defense of the United States must be the Army. It will come into action in case the Navy should fall to check the invasion of an enemy, or be defeated by a superior navy. It is wholly unlikely that any army raised in this country, however large, would be sent on an errand of invasion against a great foe. It will be primarily and almost exclusively an instrument to be employed on home ground.

It is the opinion of most military experts that such an army, with its trained reserves, should number not less than half a million men. Forces of that magnitude, fully equipped and armed, could be set upon our shores by more than one possible foe, if our Navy should fail us. It is merely common sense that we should be prepared to combat such forces. It is a national duty. Certainly, there should be an immediate increase of the Regular Army to 200.000 men, with provision for training reserves. Whether we must rely upon the proposed continental army or upon a development of the present National Guard for our trained reserves is a matter that must be worked out by the experts.

It has been suggested that we adopt the system in vogue in Switzerland. In that country every schoolboy on reaching the age of 12 is trained in calisthenies; after reaching the age of 15, the use of the rifle and military discipline; and between the ages of 19 and 25 he must give part of his time each year to field and camp duty.

The youth of Australia are trained in practically the same way. Examination of the military records shows that after the age of 21 the Australian youth is required to give up only six weeks of his time to intensive military training in camp, and the Swiss soldier 20 weeks; previous to this, however, both Australian and Swiss, from the age of 15, are required to spend about 14 months of their time in equipping themselves for military duty. After they have come to manhood they pass out into their chosen professions, and are not expected to give further military service.

It may be maintained by some that this plan would tend to inculcate the military spirit in the youth of the Nation. Many believe it to be an excellent scheme, however. In my judgment, it would teach our young men to be more patriotic, to appreciate the value of discipline, and would tend, more than anything else, to insure peace not only within this Nation but throughout the entire civilized world. At the outbreak of the European war Switzerland had only 1,400 men under arms, who were doing simple police duty, but at the end of 48 hours they had available 300,000 men, fully equipped and ready for service.

That would, indeed, be an effective plan for this country to follow. We have 5,000,000 young men between the ages of 19 and 25, and if we trained them as Switzerland and Australia do theirs we could have a reserve force of that number always ready to go into the field in the defense of their country.

The term of enlistment of the men in the Regular Army is now four years. In my judgment it would be an excellent idea to change this so that a soldier could retire of his own accord at the end of a year's service, with a provision that if he did retire he would be subject to call for the full term of enlistment. The records of the War Department show that it takes a year to make a good soldier, and this method would not only increase the size of the Army, but would also establish a very large reserve.

We must remember, also, that not only is our Army far too small in point of numbers, but is wholly unfamiliar with methods of warfare that have been developed in the European struggle. They are employing new devices, new weapons, new methods of attack and defense, of which we know nothing save by report. We must be prepared in the event of war to meet an adversary armed after a fashion of which as yet we have virtually no knowledge. We must study equipment as we enlarge our Army.

Europe has taught us the lesson of training and maneuvering men in large masses. We know nothing of this in the United States. Our Army, the mobile force, is located in 49 posts, widely scattered, some capable of accommodating but a few companies of Infantry or a troop or so of Cavalry. Most of these posts are obsolete. Many were established in the days of Indian warfare, which has ceased in this country. They are expensive to maintain. But their worst feature is that they make for the scattering of the Army into small units, so that nowhere may a considerable force be quartered for training on a scale that modern warfare demands.

We must do away with a lot of the old Army posts. We must assemble our new and greater Army on a scientific basis, train it with a view to large operations, equip it on a scale that would enable it to withstand successfully the invasions of possible enemies, which are infinitely more advanced in these respects than ourselves.

I know what it means to advocate the abolition of useless navy yards and Army posts. It means determined local opposition from every quarter. But in putting this Nation in a position to defend its territorial integrity we can not permit either local or political differences to stand in our path. We must keep the big idea constantly in mind. If sacrifices are necessary, they must be made. Much of the old system will have to be torn down. There must be reorganization along modern lines. The mere building of more ships and the raising of more men will not suffice. That is but a part of national preparedness. We must plan to care for our Navy and our Army as the lessons of the European war dictate, otherwise they will be cumbersome and in many respects helpless.

Have any of the gentlemen present heard the speech of Darwin P. Kingsley on the subject of "Democracy versus Sovereignty," in which he brings out the fact that in the preparation of the Constitution of the United States a way was made clear for a real democracy here on this continent? Previous to that Constitution we had thirteen independent States, each one setting up a barrier against the others. These barriers were broken down, and we lived here for three-quarters of a century, developing the finest traditions of a free people, until we were compelled in the great War between the States, from 1861 to 1865, to fight out the principle again, and at the conclusion of that war to establish, let us hope for all time, a democracy of all the States.

Mr. Kingsley points out that the opportunity to create a democracy of the world, or at least of the English-speaking nations of the world, is greater to-day than it was in 1787. He further suggests that the larger English nation which could be so created would do for its units what the United States has done on this continent; that it would bring the "federation of the world" within the realm of probabilities. He asks if we are great enough at the same time to plead for peace, and strong enough to lead in the movement which must ultimately unite the English-speaking States of the world, if the glorious Anglo-Saxon tradition is to survive, if democracy and not the doctrine of sovereignty is to prevail.

Perhaps this is impossible in our day; but who can say but that out of this conflict the opportunity may be afforded us of being the beacon light, around it to gather the greatest thinkers of the civilized world, in the hope that by some means a democracy of all the nations of the world may be formed, perhaps not under one flag, but under some sort of an agreement that will insure for all time "Peace on earth, good will toward men."

Until that time comes, however, we can not afford to leave

ourselves unprotected.

These things are questions of patriotism and national wisdom, so overwhelmingly overshadowing local and political issues that they must ultimately prevail, if the United States is to establish a sound and effective insurance against disaster in war, and to elevate itself to a position which will be as nearly a perfect guaranty of peace as human minds can yet conceive. never seek war because we are ready for it; we shall not become a fighting Nation until we are forced to fight. But if war should come, and we are not ready for it, we may cease to be a Nation at all.

Letter to Senator CLARKE:

BROOKLYN, N. Y., March 7, 1916.

Hon, James P. Clarke, Chairman Committee on Commerce, United States Senate, Washington, D. C. My Dean Senator: My great interest in the development of the waterways in and about the city of New York prompts me to write you, so that during the discussion of the river and harbor bill you may have in mind how greatly it affects the matter of our national defense.

In case of trouble with a foreign nation the most vulnerable places of the Union would be the cities on the seaboard, particularly the port of New York

The destroyable property on Manhattan Island alone is competently estimated at over eleven billion and a half dollars, besides bullion, preclous metal, and securities in vaults and safes of unascertainable value. An hour's bombardment and ensuing confagration would ruln all of the insurance companies in the country. The ransom asked to save Greater New York from bombardment would stagger the country, rich as it is.

It seems worth while to call the attention of Congress to the possibility of such calamities and the urgency of avoiding them, if possible. The cost, great as it would be, would be an insignificant percentage of the rich.

The cost, great as it would be, would be an insignificant percentage of the risk.

It is well established that some of the foreign nations have ships whose range of gunfire very greatly exceeds the range of the guns on our harbor defenses. So for example, a big ship, with the latest modern guns, lying off Rockaway, could devastate Kings, Queens, and most of Manhartan without fear or hindrance from fortifications.

The Navy must be, then our greatest reliance. Its efficacy as to New York would be saidy handicapped by the narrowness of the fairway north of the Ambrose Channel, the impassability for big ships of the East River, and the uselessness of the Harlem River and Kills for submaruses.

north of the Ambrose Channel, the impassability for big ships of the East River, and the uselessness of the Harlem River and Kills for submarines.

Continuing the Ambrose Channel to its full width and depth to deep water in the Hadson, opening the East River and Hell Gate into long Island Sound, with a channel wide enough for big ships to turn about, as in the Kiel Canal, and deep enough for ships of any draft, making the Harlem River and Külls usable for submarines, would divide the force of an enemy fleet and so more than double the efficiency of our own. That is the plan of the division officer. It could be carried out by contract within the time it takes to build a battleship, carried out, too, at less than the cost of two battleships.

While the proposition to improve the East River up to the navy yard is desirable, it is not nearly sufficient for the purpose of the Government, and is not indicative of the broad and comprehensive policy which Congress should adopt at once. For example, if the splendid new ship Pennsylvania should be ordered to the Brooklyn Navy Yard, and while there the Brooklyn Bridge or Manhattan Bridge be blown down, the Pennsylvania would be compelled to remain idle at the yard for the reason that she could not get out by way of the Sound because of the fallure of Congress to open the channels of the East River through to the Sound, and thus enable the ship to resume her active duty in the line. To prevent such an unfortunate condition justifies any expense.

Apprehensions of the outlay necessary to put our seaboard ports into the best defensible shape are lessened by remembering that they would bring, incidentally, commercial advantages, repaying the outlay many times over.

Taking this port as an example again, widening and deepening the

bring, incidentally, commercial advantages, repaying the outlay many times over.

Taking this port as an example again, widening and deepening the channel in the Upper Bay the East River and Heil Gate Channels would cheapen transportation between the whole Gulf and southern seaboard and New England, and save the perilous outside passage. Making the Harlem River and Kills passable for submarines would make that channel passable for barges, and so immensely benefit all the States on the Great Lakes and New England.

I am sure you will see the great importance of this matter, and will see that it is given the earnest and careful attention of Congress.

Believe me, sincerely, yours,

WILLIAM M. CALDER.

WILLIAM M. CALDER.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. KENNETH D. McKELLAR, OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 6, 1916.

Mr. McKELLAR. Mr. Speaker, when the McLemore resolution was up for discussion I prepared some remarks, but could not get time to make them on the floor. I now ask unanimous consent to insert those remarks in the RECORD.

I have had a number of letters and telegrams, some urging

me to favor the resolution warning Americans not to travel on belligerent merchant ships, armed or unarmed, and others urging me to vote against the resolution.

This question is peculiarly within the jurisdiction of the President. Men on all sides agree that under our Constitution the President is the head of our foreign affairs. The Senate, indeed, has a right to approve or disapprove, but the House is left out of the equation entirely, except in the final matter of declaring war.

One hundred and one years ago Chief Justice Marshall in a decision of the Supreme Court of the United States settled this question. In the Nercide case, in Ninth Cranch, he held that a neutral had a right to transport himself and his goods on a vessel of a belligerent, whether the vessel was armed or unarmed. In his opinion he quotes the King of Prussia as holding to the same view. This opinion was delivered in February, 1815, and has been the law of the United States ever since.

No well-informed persons deny that this is a correct statement of the rules of international law, and the resolution itself admits this, and admits that the President has entire charge in dealing More than a year ago the question first arose in Congress in the Lusitania case. That ship was sunk, the belligerent power apoligized, agreed to make reparation, and promised to do so no more, and everyone, including that power, thought the matter was settled. At that time, as now, President Wilson simply demanded that the provisions of international law should be complied with. The President won out in his contention then, and every patriotic American felt proud of him, and all hoped that the trouble was over. Now, some gentlemen who dislike the President, and who took the other side of it then, have seen fit to raise the question again in Congress. There can be but one result of this agitation, and that is, to embarrass the President in handling a most trying and difficult foreign complication, over which only he has jurisdiction. He is elected by the whole people, and is the representative and spokesman for them all in matters of foreign policy. Neither of the Houses of Congress is given charge of our foreign affairs.

Again, the resolution is wholly ineffective. It merely asks the President to warn Americans to stay off of armed belligerent ships. Surely, all citizens who might go abroad are now sufficiently warned. The only effective measure, if Congress desired to act at all, would be to prohibit passports to citizens

who would travel on such ships.

If Congress should give this warning it will be misunderstood by some of the belligerent powers. The newspapers say that some of them are already taking it to mean a congressional criticism of the President, and they may be misled into believing that Congress may not uphold him, when every citizen knows

that when the test comes Congress will uphold him.

Our President is face to face with a critical situation. He is fighting now, as he has been ever since this war began, to maintain the well-known principles of international law, and thereby at the same time to keep our country at peace. If the President accedes to the annulment of one provision of international law, belligerent powers would insist that other provisions be also nullified by us, and the result would be chaos, and perhaps, war—something that all of us are intensely desirous of avoiding. There is but one sure foundation that this Goverament can stand on, and that is, for the strict maintenance of the established provisions of international law. We are almost certain to get into trouble if these provisions are dis-regarded. I have no bias whatsoever for or against any of the belligerent powers. I think they are all wrong in going into or keeping up this horrid warfare. I am for America first, I am for peace above all things save honor.

Again, there is a practical side to the question. If America permits any belligerent power to disregard the provisions of international law and merchant vessels are swept from the seas, where are we going to get ships to transport our wheat, corn, cotton, and lumber in? Looking at it from purely a selfish standpoint, ought we not to be very careful before we allow the

provisions of international law to be violated?

Finally, the idea that the President wants war is ridiculous and absurd. It is wholly untrue. I know personally, from having talked with him and from having heard him talk, that no man in the Nation is more desirous of peace than he is; that no man in the Nation is more thoroughly neutral than he For 19 long months during this awful conflict he has safely carried our country through a trying situation with honor and without war. Why should we at this time seek to embarrass him who has thus far so splendidly preserved our country in an honorable peace? At this late day, why swap horses in the middle of the stream? Why take our foreign affairs out of the hands of the President and put them in the hands of excited Representatives and Senators? Why hamstring our President? Why line up with his enemies to destroy him? Looking at it from a purely party standpoint, what has our Democratic President done to us that we should desire to

humiliate and disgrace him and make it so much harder for him to keep us at peace? Our President is a God-fearing, Christian gentleman, striving for peace, abhorring war. Under his leadership our country has been blessed with prosperity, with happiness, with peace, and with honor. Jingoes in and out of Congress have been trying to get him into some war ever since he came in, but he has remained steadfast. While all the other great nations have gone war mad, our Nation, under his leadership, has thus far retained its sense. Let us all who love peace and happiness and prosperity and honor uphold our President's hands and think only of America and her interests in this crisis brought about by his enemies. I believe that it is the duty of every patriotic citizen in this country, foreign born or native, to uphold our President in his fight for peace with honor-a fight that he has made so successfully up to this time, and a fight which he will win if we let him alone.

I shall vote to lay this resolution on the table.

Gasoline Situation.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 5, 1916.

Mr. BAILEY. Mr. Speaker, the gasoline situation has become acute and it is engaging the attention of the country in a way that calls for some action looking to prompt and effective relief. Investigations, however interesting in themselves and however clearly they may reveal the sinister influences of monopoly, will hardly reach the root of the trouble. In my opinion, this is to be done only by making it unprofitable, through taxation, to hold valuable oil-producing opportunities out of use or by opening up such opportunities in the public domain by the Government itself.

I do not mind saying that the former method appeals to me as the simpler and the more desirable, yet I realize that it can not be so quickly or so certainly applied, as the taxing power with reference to lands rests in the hands of the several States; and we could not get very far in the matter of taxing valuable oil lands, whether used or unused, without first securing the active and sympathetic cooperation of the Commonwealths in

which such lands are located.

Let me briefly call the attention of this House to one or two salient facts which should be considered in connection with the proposal I shall make in the direction of affording the public relief from the extortions practiced upon them by monopolistic control of oil and its derivatives and manufactures. About 90 per cent of the oil lands are now under lease, but less than 10 per cent of the operated. Oil lands are put under lease not to be operated, but to forestall them. This is something that should command the earnest attention of every Member of this House who sincerely desires to solve the problem of high-priced gasoline.

According to official information, there are in the public domain to-day approximately 6,000,000 acres of oil lands. There are considerable bodies of proven territory. My information is to the effect that in California there is a strip of territory 125 miles long and averaging about 12 miles in width held in alternate sections by a land-grant railway and the Government. The land-grant portion of this territory is largely developed and oil in great volume is being produced and marketed. As I understand it, the private owners of the alternate sections have drilled wells in large numbers along the very borders of their holdings and are pumping oil as much perhaps from the sec-tions belonging to the public as from their own. They are robtions belonging to the public as from their own. They are robbing the American people to the extent that that is possible, but it is understood that it is impossible for them to suck the oil from any considerable distances, this, however, being no fault of theirs. They would suck the last barrel of the product from the public domain through the wells on their own territory if that were possible. They are restrained, as I understand it, by no qualm of conscience, by no respect for the rights of property, but only by the nature of the case.

It is not so many years ago that gasoline was selling at retail as low as 5 cents a gallon. There must have been a fair profit in the product at this price, as otherwise the producers would

either have advanced the price or quit business. The price has been advanced only as the grip of monopoly on oil and gasoline became firmer. About 80 per cent of the production of gasoline is now in the hands of one great interest. This interest dominates the field. The independent producers do not dare challenge it in any effective way. They know that to do so would spell destruction. It is simpler and more profitable for them to accept the situation and keep well within the shadow of the great interest which commands the field.

I am persuaded that gasoline at 5 cents a gallon or perhaps even less is not an iridescent dream. All the figures which have been put out by the monopoly which controls the product by way of justifying the staggering advances in the price exacted from the public are designed merely to befog the actual fact— that prices are fixed not by the cost of production, not by the law of supply and demand, but simply by "what the traffic will bear." The profits resulting from this magnificent holdup of the American people run into stupendous figures, as indicated by the market value of the stocks of the subsidiaries of the great corporation which was forced to dissolve, yet which seems

Is there any sound reason why the people of the United States should not protect themselves against the extortions of this powerful and merciless monopoly? It must be obvious that they have the remedy in their own hands. With millions of acres of oil-bearing lands belonging to them, much of it proven territory, they have only to proceed to develop their own. And this is what I am venturing to urge and which I am proposing to bring about under the terms of a bill which is now pending before one of the committees of this House, a copy of which is here given.

A bill (H. R. 14126) to authorize and empower the Secretary of the Interior immediately to develop oil-producing lands belonging to the public domain, to make an appropriation therefor, and for other

purposes.

Be it enacted, etc., That the Secretary of the Interior be, and he is bereby, authorized and empowered immediately to proceed to the development of oil-producing lands included in the public domain wherever located, under regulations to be prescribed by him, the product of such development to be sold in the open market and the proceeds covered into the Treasury of the United States as miscellaneous receipts: Provided, That in the sale of the product preference shall be given to independent refiners: Provided further, That, in the discretion of the Secretary of the Interior, the oil produced from such lands may be refined by contract with private refiners under terms to be agreed upon after due public notice given by advertisement in at least six newspapers of general circulation: And provided further, That it shall be the duty of the Secretary of the Interior to undertake forthwith the development hereinbefore authorized; and for this purpose the sum of \$10,000,000, or as much thereof as may be necessary, is hereby appropriated, out of any moneys in the Public Treasury not otherwise appropriated, to be drawn upon as required.

Sec. 2. That all acts or parts of acts in conflict with the provisions of this act are hereby repealed.

Mr. Speaker, the extent of this gasoline holdup is hard to

Mr. Speaker, the extent of this gasoline holdup is hard to estimate, but it is enormous. It affects not alone the users of motor vehicles. It affects hundreds of industries. It affects perhaps many hundreds of thousands of poor people who use gasoline for domestic purposes. It affects the farmers, who have become heavy consumers of the commodity. It would be difficult indeed to follow gasoline into all the fields where it is employed and where it has become a prime necessity. But this is unnecessary. We all know its importance to the welfare of the people. We all know the burden the present extortionate prices are placing on the shoulders of the consumer. know that the demand for relief is insistent and steadily grow-Why then should we hesitate in responding to the call of the people?

Congress has the power at its command to afford relief. Let it proceed to draw upon the resources of the people themselves. That is all the situation requires. The people have the oil. But as matters stand they are deprived of its benefits. Under the terms of my bill these benefits are made almost instantly available, not perhaps in the actual production of crude oil from the public domain, but in the salutary influence development of the oil in the public domain would have on the monopoly now in control. Nothing can be much more certain than that a declaration of purpose on the part of the United States to develop this great resource would be effective, and instantly effective, in checking the rapacity of the oil barons. They would hunt cover without delay. And rather than meet such competition as this would involve they would make haste themselves to offer relief

to the oppressed consumer.

The suggestion is left with the House for its earnest consideration. I regard it as something really worth while; and it may be said, in conclusion, that it should have the support of an administration which is building railways in Alaska and proposing to engage in shipping on the high sens. Immigration.

EXTENSION OF REMARKS

HON. DENVER S. CHURCH, OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 5, 1916.

Mr. CHURCH. Mr. Speaker, over in India there are 350,000,000 Hindus who would like to come over and mingle with our people and live on our shores. The question is, Do we want them to come? If so, let us leave our golden gate ajar and they will come in upon us like swarms of hungry flies. If we do not want this plague to fall upon us, let us exclude them in this bill, and do it now. If we do not make this exclusion, in time to come there will be 15 Hindus to every white man in California, and its fertile valleys will be then crowded with heathen

shacks and shanties.

There are many reasons why they should not be admitted to ar shores. First, their manner of living and ours is fundamentally different. Ours to them is a matter of amusement and curiosity, while theirs to us is ridiculous and absurd. It is impossible, within the same land, for Christians and heathen to live in peace. Each will be an object of hatred and ridicule to the other. Had we not excluded the Chinese, by this time their presence would have caused the wholesale shedding of blood; and if we do not exclude the Hindus their presence will in time

I am in favor of excluding the Hindus because they can never be assimilated by our people; because we have no use for them and they have no use for us. They dislike us as a people as much as we dislike them. They will not stop at any American hotel nor eat at a white man's table, neither will they partake of food unless prepared by people of their own caste and race. While I was district attorney of Fresno County, Cal., I was frequently called upon to prosecute Hindus for robbery and other violations of the law, and it was a real problem to keep the defendants from starving while they were in jail, for they refused to eat the food prepared by the American hand. In my district in California, where there are thousands of them, they make their homes generally beside the public highway. Their visible earthly belongings consist of a few blankets spread upon the ground. When they move they have but to put out their fires and walk away. They can be seen traveling on the public highways all hours of the day and night.

I maintain that their heathen and outlandish superstitions forbid even the thought of their living in this land. Let us recall some of their vicious practices and decide whether we want them

in the United States.

Heretofore the most terrible of all the Hindu gods was the crocodile, and in order to appease the wrath of these scaly and saw-toothed monsters, loving but superstitious mothers fre-quently cast, from the banks of the Ganges, their helpless off-

spring into the crocodile's mouth.

Their land is overrun by 33 species of poisonous serpents, the worst of which is the cobra. By the natives this reptile is worshiped as a god. The bite of the cobra is certain death. A hundred thousand lives each year are sacrificed as victims of its fangs. To injure this miserable, slimy reptile is an insult to the Hindu's god, and so the cobra is everywhere given the right of way. To kill a poisonous snake would equal the assassination of a god. They have special shrines for snake gods in the Himalaya Mountains. Harmless snakes they regard as the ghosts of their ancestors and guardians of their homes and goods. Many of the villagers believe in the domunha, a serpent with a mouth at both ends.

With these thoughts in view, it is plain that the notions of the Hindu will not fit the ideals of the West. Their sacred crocodiles and serpents can not exist in harmony with our emblem-the California bear. Their darkness will spoil our light, and their

strange gods can never reign with our God—Jehovah.
I wish you had seen the Hindu and knew him as I do. such were the case, I would not have to speak to you of him. His swarthy, ragged form, his leaden, dreamy eyes would speak. His lifeless, shuffling walk and drooping, downcast head would speak. He is as hopeless as a lonesome crane, a human form from which light and hope seem gone, while the body wanders on, guided by strange, superstitious fears.

Another reason for making the exclusion is to prevent the debasing of our wage standard. In India the average wage is from 12 to 24 cents per day. The Hindu is perfectly willing

to work for the same wage in this country that he does at home, if necessary. At present he cuts wages and is content with what he gets. The only thing a Hindu likes that pertains to our civilization is the American dollar. By and by, if the immigration of these fellows is not restricted, wages will be the same here as in India; for everyone who comes lowers, in a Not only do certain definite degree, our standard of wages. they do this but every dollar that comes into their possession they send home to British India, from whence no dollar ever returns. American labor can not and does not want to compete with them. A Hindu can live as cheap as a coyote, and he is as wiry and tough as a piece of rawhide. He has the same love for this country that a crocodile has for a julcy fish. About all he consumes comes from India, and he can live on a handful of rice or corn for a day. When he becomes hungry he simply takes up another notch in his belt.

At present they do not bring their slaves—the female Hindus-with them; traveling expenses are too high; but it will be only a matter of time when they will establish themselves here domestically and religiously. That is, they will bring with them their families and their family gods, the latter consisting of graven images, crocodiles, and venomous reptiles. When that day shall come, tourists traveling in our sublime Sierras will have to wear iron boots in order to escape the poisonous fangs of the Hindu god; and I suppose on the banks of our two majestic rivers—the Sacramento and the San Joaquin-there will be Hindu temples dedicated to the charming

god crocodile.

I say it is constitutionally wrong for these strange people, who have slept and degenerated through the ages, to wait until the last great prize of civilization, America, has been discovered and won, and then take a short and reversed course across the sea, traveling in ships made possible through the inventive genius of other lands, and fall upon us like hateful birds upon the first fruits of spring. I believe the rewards of civilization should be enjoyed only by those who have endured the hardships of the way. I object to having California become the babbling and gabbling ground of people speaking strange tongues. I object to our beautiful valleys being filled with serfs, and hovels in which strange people dwell. I object to our far-famed cities being disfigured by oriental sheds and shacks, and I object to the seashore, the river banks, and the green mountain sides of California becoming the building places of heathen temples.

No; we do not want the sun, as it goes down behind the sea and bids our native land good night, to lift its last beams from heathen temples dedicated to unknown gods. We want the great West to be left as it now is-the abiding place of Anglo-Saxon pioneers; the most beautiful land of all the earth, free from superstitious fears; where the people live in harmony, having the same ideals, the same hopes and fears, and where they speak one language, and all worship the same God.

Letter from Samuel D. Pepper, Judge Advocate General Michigan National Guard.

EXTENSION OF REMARKS

HON. LOUIS C. CRAMTON, OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 7, 1916.

Mr. CRAMTON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from Samuel D. Pepper, judge advocate general Michigan National Gnard.

The letter is as follows:

MICHIGAN NATIONAL GUARD, April 5, 1916,

Hon. Louis C. Chamton,

House of Representatives, Washington, D. C.

My Dear Congressman: I have been endeavoring to follow the House and Senate debates on the Hay and Chamberlain bills and to make a study both of the purposes of and the objections to the two bills. It is, of course, difficult for a person at this distance from Washington to follow the debates, as we do not get the Congressional Record for three or four days after each day's proceedings.

Doubtless you have been interested in the constitutional questions involved, and I was pleased to note your support of the Hay bill in the House, which, on the whole, I think will meet with the approval of the National Guards of the country and of the people.

The main objection I have to the Hay bill is based upon the language of section 76, wherein use is made of the word "draft." I noted with

great interest the debates upon this section and the arguments made especially by Mr. Hay as to the use of this word.

Conceding for the sake of argument that the National Guard, which is carved out of the militia of the United States, can not be used for foreign service under its present status, I still disagree with Mr. Hay that the only method by which the National Guard can be used for foreign service is by the process of "drafting." In this connection is have undertaken to look up both the ordinary and the military meaning and acceptance of the term. The ordinary meaning of the word makes it synonymous with the word "drawing." The military meaning of the word is almost similar. In its popular meaning it denotes a process by which men liable to military duty are compelled to perform that duty.

During the Civil War the process of drafting was only resorted to after it was found that an insufficient number of men were volunteering. It is interesting in this connection to read the provisions of the act of March 3, 1863, volume 12, United States Statutes at Large, page 731. The title of this act is as follows:

"An act for enrolling and calling out the national forces, and for other purposes."

The process consisted of the following steps: (1) The President's proclemation calling for quetes from the resulting districts.

"An act for enrolling and calling out the national forces, and for other purposes."

The process consisted of the following steps: (1) The President's proclamation calling for quotas from the enrolling districts; (2) the appointment of provost marshal for each enrolling district; (3) the creation of enrolling districts; (4) the provost marshals were required to enroll all persons Hable for military duty as defined in the act; (5) provost marshal made a "drawing" of the number required from his lists; (6) those drawn were notified and required to report; (7) compulsion could be used; (8) those so drawn for duty or drafted were examined and forwarded to the units to which assigned.

I am informed that under the ordinary method used in carrying out the provisions of the act, and possibly under regulations prescribed, the provisions of the act, and possibly under regulations prescribed, the provisions of the men on his lists in a box and draw out, as by lot, a sufficient number. I am not certain that this was the universal method, but I imagine it was very generally followed.

This is what became known as "drafting" in the Civil War, and it will at once be seen that the word "draft," as used in the act, is synonymous with the word "drawing" or the words "drawing by lot." It is difficult to understand how the use of the word "draft" or "drafting" in the act of 1863 can be construed in any other way, popular notions to the contrary notwithstanding.

The word "draft" itself is not so generic as to carry with it when standing alone the entire process. In fact, it is only applicable to one of the steps in the process, namely, the method of determining the exact persons who shall be taken for service.

The fault with section 76 of the Hay bill is that the word "draft," as therein used, is taken to imply the entire process. As used in section 76 I doubt if its meaning is even clear. At best it means no more than the word "call." You will note that the title to the so-called draft act of 1863 uses the word "call "and, as a

of 1863 uses the word "call" and, as a matter of law, the word "call" is much more appropriate than the word "draft" when used to define the power lateaded to be given to the President with respect to the National Guard.

It occurs to me that the right of the President to the services of the National Guard in time of war should rest upon something more in harmony with the spirit of our institutions than a mere arbitrary act, as Mr. Har supposes the word "draft" to imply. That is, it is argued that because the President can draft any person into the service or any class of persons, even to the extent of saying that all red-haired persons could be so singled out and compelled to serve, therefore he can draft the National Guard without regard to their former status. Such an arbitrary use of the President's power has never been recognized in this country, even admitting that it exists. Even in the Civil War when the exigencies were so very great, Congress devised an absolutely fair and impartial method of obtaining soldlers by compulsion. If the arguments in favor of the word "draft" are true, then the President might call upon the uniformed ranks of the various lodges to the exclusion of all others. It is scarcely conceivable that any President would ever do such a thing, however.

It occurs to me that the term to be used in section 76 should be conformable to the purpose sought to be attained. What is desired is that the National Guard should be available for duty in a foreign war. It seems to be generally conceived that their status must be changed from that of militia to that of "armies of the United States." The idea expressed in section 76 appears to be that the National Guard can only be taken forchly into such service because of their militia status, and that the President can do what Congress has not the authority to do in that respect or that Congress can delegate to the President the authority to do something which Congress tiself can not do. This, it seems to me, is a mistaken idea, pecause the right to

praise that followed voluntary service. The term implied service against one's will and consequently unwilling service.

To the extent above indicated, the meaning of the word "draft" is derived from the :aw of 1863, both its legal and popular meaning. As said above, its legal meaning is not sufficient for the purposes of section 76, while its popular meaning makes its use extremely inappropriate.

My suggestion is that the proper method would be for Congress to prescribe the entire process by which the President may call the National Guard into the full service of the United States; that such process should include (a) the enrollment of the National Grard; (b) an original enlistment contract which would include foreign service; (c) the payment of a small bounty to each National Guardsman on the signing of his enlistment contract; (d) the declaration in the act of Congress that the National Guardsmen who comply with the above requirements and who accept the bounty shall be deemed liable for foreign as well as domestic service, and prescribing a punishment for disobedience to any call of the President; (e) authorizing proper regulations for the mustering of the National Guardsmen into the United States service contemplated.

By defining the various steps in the process it becomes unnecessary to use the word "draft" or any similar term, and the effect is the same as intended by section 76 as it now stands.

I trust I have made myself clear in this matter, but, if not, I would be very glad to write you again upon the proposition. You are at liberty to make any use you see fit of this communication, and if it would be of any service I should be pleased if you would take the matter up with Chairman Hav.

With kindest personal regards, I am,
Yours, sincerely,

SAML. D. Pepper,

Judge Advocate General Michigan National Guard.

Judge Advocate General Michigan National Guard.

Immigration.

EXTENSION OF REMARKS

HON. PERCY E. QUIN,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES.

Friday, April 7, 1916.

Mr. QUIN. Mr. Speaker, under the privilege granted me to extend my remarks on the Burnett immigration bill (H. R. 10384), which passed the House almost 4 to 1, March 30, I in-10384), which passed the House almost 4 to 1, March 30, 1 insert in the Record the following articles clipped from the Weekly News Letter of the American Federation of Labor, just out and dated Washington, D. C., Saturday, April 8, 1916, together with an editorial from the Boston Evening Transcript of March 31:

HOUSE PASSES BURNETT IMMIGRATION RESTRICTION BILL 307 TO 87.

WASHINGTON, April 8.

Washington, April 8.

By a vote of 307 to 87 the House passed the Burnett immigration bill, with the literacy test, on Thursday, March 30. Prior to this vote Congressman Sarath moved to recommit the bill "with instructions" to strike out the literacy test. This was defeated on a roll-call vote, 284 to 107.

Opponents of the measure presented no new arguments, while the position of its advocates was strengthened by conditions in Europe because of the war. Congressman Mann, the minority leader—who voted for the Sabath amendment, but later voted for the bill—indorsed this position. He said:

"And unless those countries (European) by their own legislation can prevent their citizens coming here, we are liable to have a flood of immigration such as no country in the world ever experienced before. I am not willing to take the chances on it."

Advocates of restriction referred to the increasing sentiment in favor of greater effectiveness in every field of activity. They insisted that democracy can not be developed to its highest possible point while we encourage the admission of liliterates who destroy living standards of American labor and who refuse to become a part of our national life.

The literacy test provides that aliens over 16 years of age must read at least 30 words in some language or dialect, including Hebrew or Viddish, chosen by the immigrant. Exceptions to this test are made in the case of an immigrant's father or grandfather over 55 years of age: his wife, his mother, his grandmother, or his unmarried or widowed daughter

Exception to the literacy test is also made where an immigrant flees

In the case of an immigrant's father or grandfather over 55 years of age; his wife, his mother, his grandmother, or his unmarried or widowed daughter

Exception to the literacy test is also made where an immigrant flees from religious or political persecution. The latter exception includes "persons convicted, or who admit the commission, or who teach and advocate the commission, of an offense purely political." Under this provision the Old-World revolutionist who advocates force to overthrow his Government, or who admits the use of force for that purpose, will be admitted to this country regardless of educational qualifications.

The question of immigration restriction by a literacy test has been favorably voted on by almost every Congress since 1896. On three occasions the proposal has been vetoed—by Presidents Cleveland, 'latt, and Wilson. In 1897 the House passed the bill over President Cleveland's veto, 193 to 37. This was 37 votes more than the necessary two-thirds vote. The Senate failed to act, owing to a rush of business and Congress adjourning a few hours after the House vote.

In 1913 the Senate passed the bill over President Taft's veto, 72 to 18, but the veto was sustained in the House by a few votes. On February 4, 1915, the House sustained President Wilson's veto, 261 to 136. If any 4 of the 136 that voted to sustain the President had voted with the majority a two-thirds vote would have been secured and the bill passed.

The last vote in favor of immigration restriction—307 to 87, recorded March 30 last—indicates the increasing demand by the people for this legislation.

The bill is now in the Senate. Its passage by that body is conceded if its advocates can overcome the small minority that will take advantage of the rules of the Senate to keep the bill from being voted on.

Trade-unionists and other friends of this legislation are urged to write their two United States Senators and insist that the Burnett immigration bill be voted on at this session of Congress.

VOTE ON RESTRICTION IN HOUSE ANALYZED.

An analysis of the House vote on immigration restriction, March 30, indicates an increasing demand for this legislation.
Out of a possible 434 votes in the House, only 87 were cast against the bill, 36 were recorded "not voting," and 3 "present." Of these 39 only 13 were paired against the passage of the bill. There was not a single vote against the bill from the following 26 States: Alabama, Arizona, Arkansas, Colorado, Delaware, Florida, Georgia, Idaho, Kansas, Minnesota, Mississippi, Montana, Nevada, New Hampshire, New Mexico, North Carolina, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Vermont, Virginia, Washington, West Virginia, and Wyomling. Eighteen States were divided in their vote, but in none of these was a majority of the Congressmen against the bill.

In only four States—Connecticut, Michigan, New York, and Rhode Island—was a majority of the delegations recorded against the bill on final passage. In these cases the vote was: Connecticut, 4 out of 5 against or were paired against; Michigan, 7 out of 13; New York, 27 out of 43; Rhode Island, 3 out of 3.

Rhode Island was the only State whose entire delegation either voted or was paired against the bill, 2 voting nay and 1 being paired to vote nay.

But one-fifth of the total membership of the House voted against the

But one-fifth of the total membership of the House voted against the bill, which passed by nearly a four to one vote of Congressmen fresh from the people, just a year and two months after the President's veto of the same bill January 28, 1915, when the Chief Executive stated that he doubted whether there was a popular demand for this legislation.

HOUSE ROLL CALL VOTE ON BURNETT IMMIGRATION RESTRICTION BILL. THE VOTE EXPLAINED.

Prior to the final vote on the immigration restriction bill, Congressman Sabath moved to strike out the literacy test. This was defeated on a roll-call vote, 284 to 107.

The bill was then passed by the vote printed herein.

The names in the "Aye" column, with a star (*) at their left, indicates that these Members first voted to strike out the literacy test, and when the motion to strike out was defeated, these Members voted for the bill on its final passage.

ALABAMA.

Aye: Abercrombie, Almon, Blackmon, Burnett, Gray, Heflin, Huddleston, Oliver, and Stengall.
Not voting: Dent.

ARIZONA.

Aye: Hayden.

Aye: Caraway, Goodwin, Jacoway, Taylor, and Tillman. Not voting: Oldfield and Wingo. Wingo was paired in favor of the passage of the immigration bill with Cary, of Wisconsin, against.

CALIFORNIA.

Aye: Church, Curry, Elston, Hayes, Kent, Kettner, Nolan, Raker, Randall, and Stephens.

Nay: Kahn.

COLORADO.

Aye: *Keating Taylor, and Timberlake.
Not voting: Hilliard.
Hilliard was paired in favor of the passage of the immigration bill with Loud, of Michigan, against.

CONNECTICUT.

Aye: Hill.
Nay: Freeman, Glynn, and Oakey.
Not voting: Tilson.
Tilson was paired against the passage of the immigration bill with Edwards, of Georgia in favor of the passage of the immigration bill. DELAWARE.

FLORIDA

Aye: Clark, Sears, Sparkman, and Wilson.

GEORGIA.

Aye: Adamson, Bell, Crisp Howard, Hughes, Lee, Park, Tribble, Vinson, and Wise.

Not voting: Edwards and Walker.

Edwards was paired in favor of the passage of the immigration bill with Tilson, of Connecticut, against.

Aye: McCracken and Smith.

Aye: Buchanan, Chiperfield, Copley, Denison, Foss, Foster, Fuller, King, McKenzle, McKinley. *Mann, Rainey, *Rodenberg, Sterling, Tavenner, Wheeler, Thomas S. Williams, and Wilson.

Nay: Britten, Cannon, Gallagher, McAndrews, McDermott, Madden, Sabath, and Stone.

Not voting: Wm. Elza Williams.

INDIANA.

Aye: Adair, Cline, Cox, *Cullop, Dixon, *Gray, Moores, Moss, *Rauch, and *Wood
Nay: Barnhart and Lieb.
Not voting: Morrison.

IOWA.

Aye: Dowell, Good, Green, Haugen, Huil, Kennedy, Ramseyer, Steele, and Sweet.

Nay: Towner and Woods.

KANSAS.

Aye: Anthony, Ayres, Campbell, Connelly, Deolittle, Helvering, Shouse, and *Taggart. KENTUCKY.

Aye: Barkley, Cantrill, Fields, Helm, Johnson, Kincheloe, Langley, Powers, Rouse, and Thomas. Nay: Sherley.

LOUISIANA.

Aye: Aswell, Lazaro, Morgan, and Wilson, Nay: Dupré, Estopinal, and Martin, Not voting: Watkins.

Aye: Hinds and Peters. Not voting: Guernsey and McGillicuddy. McGillicuddy was paired against the passage of the immigration bill with Guernsey in favor.

Aye: Linthicum, *Mudd. Price, and Talbott.
Nay: Coady,
Not voting: Lewis.
Lewis was paired in favor of the passage of the immigration bill with
Doremus, of Michigan, against.

MASSACHUSETTS.

Aye: Gardner, Gillett. Olney. *Rogers, and *Treadway. Nay: Carter, Dallinger, Gallivan, Greene, Paige, Phelan, Roberts, Tague, Tinkham, Walsh, and Winslow.

MICHIGAN.

Aye: Hamilton, Kelley, McLaughlin, Mapes, Scott, and Smith.
Nay: Beakes, Cramton, Fordney, James, and Nichols.
Not voting: Doremus and Loud.
Doremus was paired against the passage of the immigration bill with
Lewis, of Maryland, in favor.
Loud was paired against the passage of the immigration bill with
Hilliard, of Colorado, in favor.

MINNESOTA. Aye: Anderson, Davis, Ellsworth, Lindbergh, Miller, Schall, *Smith, Steenerson, Van Dyke, and Volstead.

MISSISSIPPI. Aye: Candler, Collier, Harrison, Humphreys, Quin, Sisson, Stephens, and Venable.

MISSOURI.

Aye: Alexander, *Borland, Decker, Dickinson, Hamlin, Hensley, Lloyd, Rubey, Rucker, and Russell.

Not voting: Booher, Dyer, Igoe, Mecker, and Shackleford.

Booher answered "Present."

Igoe answered "Present."

Dyer was paired in favor of the passage of the immigration bill with Igoe against.

Macker was paired in favor of the passage of the immigration bill with

Byer was parted in favor of the passage of the immigration bill with Booher against.

Meeker was parted in favor of the passage of the immigration bill with Booher against.

Champ Clark—Speaker—not recorded. (The Speaker does not vote as a rule except in the event of a tie vote.)

Shackleford voted to retain the literacy test in the bill.

Aye: Evans. Not voting: Stout.

NEBRASKA.

Aye: Kinkaid, Reavis, Shallenberger, Sloan,* and Stephens, Nay: Lobeck.

NEVADA.

Aye: Roberts, NEW HAMPSHIRE.

Aye: Sulloway and Wason.

NEW JERSEY.

Aye: Browning, Capstick, Drukker, Gray, Hutchinson, Lehlbach, and Parker.
Nay: Bacharach and Eagan.
Not voting: Hamill, Hart, and Scully.
Hamill was paired against the passage of the immigration bill with Young of Texas in favor.
Hart was paired in favor of the passage of the immigration bill with Graham of Pennsylvania against.
Scully was paired against the passage of the immigration bill with Rowland of Pennsylvania in favor.

NEW MEXICO.

Aye: Hernandez.

NEW YORK.

Aye: Charles, Danforth, Dempsey, Dunn, Hamilton, Hicks, Husted, Magee, Mott, Parker, Pratt, Snell, Snyder, and Ward.
Nay: Bennet, Bruckner, Caldwell, Carew, Chandler, Conry, Dale, Dooling, Driscoll, Farley, Fitzgerald, Flynn, Gould, Griffin, Haskell, Hulbert, Loft, London, Maher, Oglesby, Patten, Riordan, Rowe, Sanford, Siegel, Smith, and Swift.

Not voting: Fairchild and Platt.

NORTH CAROLINA.

Aye: Britt, Doughton, Godwin, Hood, Kitchin, Page, Pou, Small, Stedman, and Webb. NORTH DAKOTA.

Aye: Helgesen and Young, Nay: Norton.

OHIO.

Aye: Allen, Ashbrook, Brumbaugh, Cooper, Emerson, Fess, Gard, Hollingsworth, Kearns, Key, Longworth, McCulloch, Matthews, Mooney, Overmeyer, Ricketts, Russell, Switzer, and Williams.

Nay: Crosser, Gordon, and Sherwood.

OKLAHOMA.

Aye: Carter, Davenport, Ferris, Hastings, McClintic, Morgan, Murray, and Thompson. OREGON.

Aye: Hawley, McArthur, Sinnott.

PENNSYLVANIA.

Aye: *Bailey, Beales, Butler, Coleman, Costello, Crago, Farr, Focht, Garland, Heaton, Hopwood, Keister, Kiess, Kreider, Lafean, Lesher, Miller, North, Porter, Scott, Steele, Temple, and Watson.

Nay: Barchfeld, Casey, Liebel, Moore, Morin, and Vare.

Not voting: Darrow, Dewalt, Edmonds, Graham, Griest, McFadden, and Rowland

Graham was paired against the passage of the immigration bill with Hart of New Jersey in favor.

Griest was paired in favor of the passage of the immigration bill with Edmonds against.

Rowland was paired in favor of the passage of the immigration bill with Scully of New Jersey against.

RHODE ISLAND.

Nay: Kennedy and O'Shaunessy. Not voting: Stiness. Stiness was paired against the passage of the immigration bill with Henry of Texas in favor.

SOUTH CAROLINA. Aye: Aiken, Byrnes, Finley, Lever, Nicholls, Ragsdale, and Whaley. SOUTH DAKOTA.

Aye: Dillon, Gandy, and Johnson.

TENNESSEE.

Aye: Austin, Byrns, Houston, Hull, McKellar, Moon, Padgett, Sells, and Sims.

voting: Garrett.

TEXAS.

Aye: Black, Callaway, Davis, Dies, Eagle, Garner, Gregg, McLemore, Rayburn, Slayden, Smith, Stephens, and Sumners.
Nay: Burgess, Buchanan, and Hardy.
Not voting: Henry and Young.
Henry was paired in favor of the passage of the immigration bill with Stiness of Rhode Island against.
Young was paired in favor of the passage of the immigration bill with Hamill of New Jersey against.

Aye: Mays. Nay: Howell.

VERMONT.

Aye: Dale and Greene.

VIRGINIA.

Aye: Carlin, Flood, Glass, Hay, Holland, Jones, Montague, Slemp, and Watson.
Not voting: Saunders.
Saunders voted against striking the literacy test out of the bill.

WASHINGTON.

Aye: Dill, Hadley, Humphrey, Johnson, and La Follette. WEST VIRGINIA.

Aye: Cooper, Littlepage, Moss, Neely, and *Sutherland. WISCONSIN.

Aye: Browne, *Cooper, *Esch, Frear, Lenroot, and Nelson.
Nay: Burke, Konop, Reilly, and Stafford.
Not voting: Cary.
CARY was paired against the passage of the immigration bill with
Wingo, of Arkansas, in favor.

WYOMING.

Aye: Mondell.

POLITICAL AND RELIGIOUS REFUGEES ARE NOT BARRED.

The Burnett immigration restriction bill makes clear provision for the continued admission of political and religious refugees to this country.

Opponents of the bill evade discussing the main purpose of this legis-lation—to maintain American living standards of workers by debarring illiterates

As it is unwise to combat this principle, the trusts and other cheap-labor advocates insist that the act would change America's traditions and policy toward those who are forced to leave the Old World because of political or religious beliefs.

The following sections of the bill, however, completely refute these

claims:

"That the following classes of persons shall be exempt from the operation of the liliteracy test, to wit: All aliens who shall prove to the satisfaction of the proper immigration officer or to the Secretary of Labor that they are seeking admission to the United States to avoid religious persecution in the country of their last permanent residence, whether such persecution be evidenced by overt acts or by laws or by governmental regulations that discriminate against the alien or the race to which he belongs because of his religious faith.

"Nothing in this act shall exclude, if otherwise admissible, persons convicted, or who admit the commission, or who teach or advocate the commission, of an offense purely political."

Congressman Burnett, author of the bill, and chairman of the House Committee on Immigration, has repeatedly stated that the friends of immigration restriction would not support legislation that would evar these refugees.

immigration restriction would not support legislation that would debar these refugees.

Other advocates of restriction have taken a similar position, which is in line with the innumerable humanitarian declarations of the American Federation of Labor, and which was pointed out by Congressman MERKER, of Missouri, who made this answer to the claim of anti-restrictionists:

"You speak of the positical refused."

restrictionists:

"You speak of the political refugee. If the language is not distinct and plain on that one issue, then I can not understand how it is to be written. The revolutionist, your Kosciuszko, and all those men to whom reference has been made, could enter this country under this provision. This country will always remain the home of the religious and the political refugee, but we would just as well begin now to face that other problem of imported ignorance."

WHY THE TRADE-UNION MOVEMENT URGES IMMIGRATION RESTRICTION. [By President Gompers, in American Federationist.]

[By President Gompers, in American Federationist.]

As a people we have barely begun to appreciate the value of those qualities which make for real progress, the necessity to insist and persist in formulating sound policies to redound to the interests of the people of our Nation. Indeed, for years we have delayed in even formulating a national policy that would protect us against such elements and conditions which act as a barrier to the development of American character and national unity. We have excused this delay on the ground that we were a young Nation; that we had vast public lands and national resources that must be developed, and that we could afford to open our doors to a practically unrestricted immigration in order to increase our population.

But conditions have changed. We are no longer a young Nation. We have wasted much of our national heritage and the frontier has

practically disappeared. Recent events that have tested national institutions and men's faith to the uttermost proved conclusively that we can not hope to be the ideal which America represents, we can not maintain a place of influence in the affairs of the world, if we do not plan to carry out those purposes. Haphazard development may do well enough for the ordinary activities from day to day but will not endure the tests of a great crisis or the slower test of time.

To achieve the best that is possible for our Nation and for our citizens generally, we can not escape the duty devolving upon us of thinking out a national policy that will develop out of the many peoples within our boundaries a homogeneous nation bound together by common ideals, common customs, common languages, and a common culture.

To achieve the best that is possible for our Nation and for our citizens generally, we can not escape the dury devolving upon us of thinking out a national policy that will develop out of the many peoples mon ideals, common customs, common languages, and a common culture.

America has not yet become a nation. It is still a conglomerated months and the property of the common and the common languages, and a common culture.

America has not yet become a nation. It is still a conglomerated and the conglomerated of the conglomerated

persecution in the country of their last permanent residence, whether such persecution be evidenced by overt acts or by laws or by governmental regulations that discriminate against the allen or the race to which he belongs because of his religious faith: Provided, That nothing in this act shall exclude, if otherwise admissible, persons convicted, or who admit the commission, or who teach and advocate the commission, of an offense purely political."

The proposed legislation does not represent a radical change in the policy of our Nation. It is an extension of our educational policy, and is in harmony with the conviction that has been growing recently that we, as a Nation must leave our haphazard methods of development behind and inaugurate a definite sustained national policy that shall promote our best development, and shall coordinate and organize all of the resources of our country and plan for their best utilization.

Opposition to the literacy test and to any proposition to restrict immigration has come from steamship companies, steel corporations, coal operators, and other employers whose financial interests were associated with the maintenance of large numbers of workers forced by their helplessness to work for low wages. The activities of these interests have been given a cloak of respectability by many who, for sentimental reasons, were unwilling to Indorse any form of restriction of immigration. But selfish interest or sentiment that is contrary to the fundamental principles of national welfare can not frustrate efforts to promote the best interests of our Nation.

The meaning of America lies in the ideal she represents. That ideal is liberty and opportunity. But beautiful as any ideal may be, it becomes of practical value when it has effectiveness in the daily lives of men and women.

Real liberty and opportunity mean a certain mental attitude toward life, certain standards of life and work, and possession of that which

becomes of practical value when it has effectiveness in the daily lives of men and women.

Real liberty and opportunity mean a certain mental attitude toward life, certain standards of life and work, and possession of that which secures the enjoyment of opportunities.

America the ideal—the land of the free—exists only when her people are Americans in all things.

Ours has been a most perilous task—to weld together those from other lands who have sought our shores and to make of them homogeneous people, a nation with common ideals, common standards of living, a national language, and an ideal national patriotism.

The building of a nation is not a thing of chance; it is the result of statesmanship, knowledge of tendencies, a discernment of cause and effect, ability to distinguish the good from the evil.

Too long our national policies have been determined by sentimental emotions, business profits, and political expediency. But there must come a change. These months of terrible warfare have compelled a testing of things that have passed over. "The world is afire," and we must put our own house in order lest we, too, be caught unawares. We must search out each weakness and strengthen every danger point.

The workers of America make the demand that there shall be restriction of immigration to such as can be readily identified and assimilated with Americans and can become truly American.

USTS ARE PROTECTED PROM FOREIGN PRODUCTS BUT DEMAND AN UNLIMITED FLOW OF CHEAP LABOR, WHICH DESTROYS AMERICAN WAGES AND IDEALS.

[By Frank Morrison, secretary American Federation of Labor.]

[By Frank Morrison, secretary American Federation of Labor.]

"A high tariff against European cheap labor products is insisted upon by American trusts, but these trusts are the chief opponents of immigration restriction intended to protect American workers," said Frank Morrison, secretary of the American Federation of Labor, at a recent hearing on this legislation before the House Committee on Immigration. The American Federation of Labor official declared that American manhood can not compete with the living standards of eastern Europe and Asia and that it "is unwise to expect them to resist the tidal waves of Slav and oriental onslaught." He further said:

"The proposition to prohibit immigration to the United States of able-bodied men and women because they can not read has a sympathetic viewpoint, where individuals are considered; but, notwithstanding such a viewpoint, the American Federation of Labor, which represents the organized workers of the country, and which is the only method of organization or agency which can with any justification or reason represent the unorganized workers, has repeatedly declared by resolutions in conventions 'that the literacy test is the most practical means of restricting the present immigration of cheap labor whose competition is so ruinous to the workers already here, whether native or foreign.

"A great deal has been said and published in an endeavor to create the impression that it is necessary to induce immigration to come to this country for the purpose of securing agricultural workers. There is

competition is so ruinous to the workers aiready here, whether native or foreign."

"A great deal has been said and published in an endeavor to create the impression that it is necessary to induce immigration to come to this country for the purpose of securing agricultural workers. There is no question, in my mird, but that such agitation has for its purpose the enticing of immigrants to our country to supply the United States Steel Corporation, the great manufacturing concerns, coal companies, packing houses, and railroads with men willing to work at a cheaper wage than those who are born here.

"The opponents to this test make the argument that common laborers would belong to the class that could not pass the literacy test, and that this country is very much in need of that particular kind of labor.

"The great industrial companies of this country have more men today than they can emoloy, but they want two men for every job. They know that unemployed men must work to live and their necessities will force them to accept any wage set by the companies. Hence the workers' wages are afterally held below a living wage by the hunger, misery, and distress of the unemployed.

"The organized wageworkers have declared in favor of restriction of

distress of the memployed.

"The organized wageworkers have declared in favor of restriction of immigration to maintain unlowered the American standard of life. Those who oppose restriction are representatives of companies and associations composed of employers of labor whose dominant interest is the dollar, and associations that depend for their existence upon contributions from the employing class.

"They feel that a reduction of immigration will result in a higher wage for their workers, which will disturb the profits and dividends from products manufactured by them, or perhaps they have been informed that it the steamship companies do not receive \$60,000,000 a year for transporting aliens, they will raise their freight rates.

"This reason will account in a great measure for the opposition of societies of various nationalities composed wholly or partly of business men and the attorneys of business men. Restrictions may interfere with their profits.

"We oppose any attempt to lower the standards of American life. We want to raise them: and we are opposed to the exploitation of millions of aliens, with its attending evils, to swell the profits of the steamship companies, even if it adds to the resources of those companies \$50,000,000 a year, even if it enables the United States Steel

Trust to pay dividends and interest on \$400,000,000 of stocks and bonds which never cost that company 1 cent.

"I wish to call your attention to the fact that industry is protected, but we have a free flow of labor coming to our shores all the time; that manufacturers have protection against products manufactured by cheap labor in foreign countries, but labor has not protection against the importation of cheap labor is measure say that if the products of planor are protected, them also itself must be benefited, because the manufacturer can sell the products at a much higher price than can be obtained in other countries and will be in a position to pay higher wages to his employees. The protected must be benefited, because the manufacturer can sell the products at a much higher price than can be obtained in other countries; and the second contention—that they are thus made able to pay higher wages to the employees.—Is also true, but the fact is they do not pay higher wages.

"We find that the most highly protected industries, particularly the industries that are now controlled by trusts, such as the Steel Trust. Repeated the products of the most of their employees the lowest wage in the country, and soft of with the wages in these industries.

"We hold that limitation of immigration to our country will compel social and industrial reform in the countries from which the immigrants flow. The fact that these countries have an outlet for a great number of their people means that there is an outlet from the oppressive conditions in these countries, For that reason hose countries are induced to tons in these countries, because their clienes are induced to the fact by degrated to retain the American standard of living. The standard of wages for both skilled and unskilled labor in this country is the result of many years' effort by organized labor. When an immigration downward the prevailing rate of wages in the fundatory, which result carries with it a corresponding reduction in the physical, moral, and in the steel in

"UNAMERICAN" IS FAMILIAR PLEA OF REFORM-LEGISLATION OPPONENTS. [Editorial in the Unpopular Review, January-March, 1916.]

"UNAMERICAN" IS FAMILIAR PLEA OF REFORM-LEGISLATION OPPONENTS. [Editorial in the Unpopular Review, January-March, 1916.]

The assertion that the literacy test is un-American is one which has been urged against many measures of social progress, and which can be employed against any proposition which involves departing from traditional methods or policies; in other words, which recognizes that the world moves and conditions change. When policemen were first introduced into the cities of the United States the innovation was bitterly opposed on the ground that it was un-American and interfered with the natural rights of the Individual. The "penalty clause" by which the cooperative farmers' elevators of the Middle West maintain themselves has been attacked as un-American by those whom it affects unfavorably.

It would seem hardly necessary to consider arguments of this type were they not propounded with so much frequency and earnestness and accepted with so much sobriety. Especially it seems extraordinary that a measure which asks that the foreigner should have the same training for citizenship or residence that we require of our own children should be called un-American. When we spend over half a billion dollars annually on our public schools and then compel children born in this country to take advantage of them, is it illogical—not to say un-American—to say to the adult foreigner that he should have so much of an education as is indicated by the ability to read?

But it is asserted that an educational test would be un-American, because it would exclude allens on the basis of opportunity, not of character. Illiteracy, it is maintained, is not a test of ability but of early opportunity. But a test based on opportunity is not un-American. For our immigration law already contains a number of tests which reest, in part at least, on opportunity, such are the tests excluding paupers, those likely to become public charges, persons with contagious diseases, etc. In fact, when the individual immigrant, appears before the i

and that illiteracy stands for very different things now from what it did in the days of the Pilgrim fathers or of the Revolutionary heroes. Another argument which proves too much is that produced so triumphantly and with so great effect in some such words as these: "This measure would keep out a great many people who would be very useful citizens. If it had been in force in earlier years, it would have kept out the mother of Abraham Lincoln, who signed her name with a cross." Certainly the literacy test would keep out some who would be useful. So do many, if not most, of the tests now in force. The futility of such arguments may be illustrated by another reductio ad absurdum. "Booker T. Washington was one of the most useful citizens of the United States. His ancestors on one side were brought over as negro slaves. Therefore it was a mistake to abolish the slave trade."

Such are the arguments of the opponents of the literacy test. Aside from these, their efforts are devoted to countering the claims of the opposite side, which, as has been shown, can be done successfully only with respect to the strictly and temporarily economic aspects—the building up of quick fortunes by questionable and probably dangerous means. There are those who do not regard this as an argument against the literacy test, but for it.

The matter can be rightly understood only by taking the broadest possible view of the relations, not of this generation alone but of the generations to come. The natural destiny of the United States is to be the leader of the nations into the fullest development of the common people. Our duty is to set standards, not to distribute the natural advantages we possess. We can not render our highest service to mankind by hastily and inconsiderately yielding to the demands of a specious humanitarianism and dissipating to-day what should be the heritage of future generations.

heritage of future generations.

RAILROAD EMPLOYEES AND PARMERS FAVOR IMMIGRATION RESTRICTION.

RAILROAD EMPLOYEES AND FARMERS FAVOR IMMIGRATION RESTRICTION.

Railroad train service employees and the millions of organized farmers have repeatedly declared for immigration restriction, and their representatives are cooperating with the American Federation of Labor to secure the enactment into law of the Burnett immigration bill.

Last January, when the House Committee on Immigration held public hearings on this measure, the American Federation of Labor was represented by Secretary Frank Morrison; the railroad men by Val Fitzpatrick, vice president and national legislative representative of the Brotherhood of Railroad Trainmen; and the organized farmers by J. H. Kimble, national legislative representative of the Farmers' National Congress.

Congress.
Val Fitzpatrick also spoke on behalf of these legislative colleagues:
H. E. Wills, assistant grand chief engineer, Brotherhood of Locomotive

Val Fitzpatrick also spoke on behalf of these legislative colleagues:

H. E. Wills, assistant grand chief engineer, Brotherhood of Locomotive Engineers.

P. J. McNamara, vice president, Brotherhood of Locomotive Firemen and Enginemen.

W. M. Clark, Order of Railway Conductors.

The railway employees' spokesman referred to a resolution passed on November 20, 1915 at a meeting of the chief executives of the four railway brotherhoods, when it was "unanimously agreed that we indorse the bill on this subject (immigration restriction) approved by the American Federation of Labor." Mr. Fitzpatrick told the committee that "our members have no guaranty that they are going to remain as engineers, fremen, and brakemen," and that the railroads annually dismiss between 30,000 and 40,000 'rain service men, and these workers are forced to enter other industries, where wages are often reduced because of the large number of illiterates. The speaker read numerous resolutions passed by the various railroad brotherhoods in favor of immigration restriction and the literacy test.

Speaking for the organized farmers, J. H. Kimble denied that agriculturalists favor unlimited immigration. He said:

"The farmers' organizations—and I am an actual farmer and live on a farm and make a living out of a farm—are opposed to any attempt to distribute the present immigration until the laws are stiffened up.

* * There is no demand among the farmers of the country for allens unable to speak our language or to read their own. A glance at the last annual report of the Bureau of Immigration, which, by the way, gives many reasons for adopting the Burnett bill, shows that very few 'farmers' are coming to this country. Out of a total immigration last year of 434,244 aliens, only 9 210 were 'farmers,' and only 29,247 could be classified as 'farm laborers.' Very few 'farmers' or 'farm laborers' come to this country. That is one important reason why distribution of immigration is a failure. Another reason is that the farmers do not want and can not use th

ONLY PRACTICAL TEST OFFERED.

TOLEDO, OHIO, April 8,

Toledo Blade in these few words sums up the agitation for and against the Burnett immigration restriction bill:

"The literacy test for immigrants has never been advertised as perfect. In operation it would turn back many allens who might become worthy citizens. But no other test that promises to restrict immigration in a practical way has been suggested.

"The advocates of this measure are trying only to slow down the stream of foreigners who, for so many years, poured through our gates. The opponents of the test do not offer a substitute, and for a very good reason. They are not really troubled as they profess to be, least an occasional nealthy and intelligent though illiterate alien be refused admittance. Their concern is lest the supply of cheap labor be restricted."

CHICAGO TRIBUNE STATES CASE.

CHICAGO, April 8.

The Chicago Tribune is one of the very few large newspapers in this country that is fearless enough to state the forces for and against the Burnett immigration bill. In an editorial last week this paper

the Burnett immigration bill. In an editorial last week this paper said:

"The literacy test has just one purpose—that is, to reduce immigration into this country.

"Opposition to the literacy test has just one purpose—to prevent any limitation of immigration into this country.

"Proponents of the literacy test believe that the time has come when we must slow up the inrush of foreign blood, in order to allow the Nation to assimilate the multitude of strange races now within its borders and in order to dmit the competition of pauper labor, which is more and more bearing upon American-born workingmen.

"Opponents of the literacy test desire a broader labor market or they desire to open the oenefits of America to foreigners, let the consequences to Americans be what they may.

"People favoring the literacy test wish to reduce immigration into America. People opposing it wish an unrestricted flow of foreigners, literate or liliterate."

Geographical Description of the State of Louisiana.

EXTENSION OF REMARKS

DUPRE. HON. H. GARLAND OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES.

Saturday, April 8, 1916.

Mr. DUPRÉ. Mr. Speaker, under the leave to print accorded me by the House, I desire to insert in the Congressional Record an extract from a book published by William Darby, in 1816, entitled, "Geographical Description of the State of Louisiana." By so doing I do not mean to convey the fact that I subscribe to the views expressed in this excerpt, but I do regard it as a very quaint and instructive discussion of the flood problem in the lower Mississippi River which, even after the lapse of a century, should prove of value and interest to the earnest and unprejudiced student of this great question.

The extract is as follows:

[Extract from "Geographical Description of the State of Louisiaua," by William Darby, published in 1816.]

Extract from "Geographical Description of the State of Louislaua," by William Darby, published in 1816.]

Many treatises have been written upon this great river, but few correct philosophical ideas respecting it have been published. The cause of its rise and fall, the revolutions in its quantity of water, and the changes of its course, have been too obvious to permit mistake; but the laws of its general motion, and the real rapidity of the stream, have been but little understood.

We may lay down the following as the universal law of the motion of water. It moves with equal velocity, in equal times, at equal depths, on equally inclined planes.

The preceding law, when once understood, is like that of gravitation; too obvious in its principles to permit doubt. The consequence of its application to rivers, is that their waters at equal elevations, move equal distances, in equal times; therefore, when swelled by accretion of water, no additional velocity is communicated to the decumbent volume. If rain produces an accumulation near the sources of rivers, a greater inclination is given to the surface; therefore an increased rapidity is the consequence, but the decumbent waters continuing to move upon the same plane, retains an uniform motion.

Either from inattention to the principles of hydraulics or from assuming the velocity of the surface as that of the mass, the motion of all rivers have been overrated. Respecting none, has ignorance of their true motion led to more erroneous conclusions than the stream of the Mississippi.

Presenting the following observations upon that very important river, we are far from pretending that our inductions will all be clearly drawn from correct reasoning upon the phenomena under review. We will exhibit the facts to the public, and give as far as our means of information extend, an accurate view of the estuary of the greatest river in the United States territory, and the longest and largest stream of this globe whose whole course lies within one sovereignty.

cierry man from correct reasoning upon the phenomena under review. We will exhibit the facts to the public, and give as far as our means of information extend, an accurate view of the estuary of the greatest river in the United States territory, and the longest and largest stream of this globe whose whole course lies within one sovereignty.

From the thirty-third degree north latitude to the mouth of Red River only one bank of the Mississippi is in the State of Louislana, the distance 306 mlies. From the mouth of Red River to the sea (following the meanders of the river) is 326 mlies. Fifty mlies above the entrance the banks are too low for cultivation, therefore the arable lands below Red River, including both banks, may be estimated at 550 miles, and adding in round numbers 300 miles above Red River gives 850 miles, and adding in round numbers 300 miles above Red River gives 850 miles as the cultivable border of the Mississippi within the State of Louislana. In making an estimate of the quantity of cultivable soil and woodland that would be adequate to a farming establishment, 1½ miles may be assumed as the mean depth, which ought to be included in the valuation of river lands; this data would produce 1,275 square miles, or 826,000 acres, as the arable superfices of fluviatic soil adjacent to the Mississippi below the thirty-third degree of north latitude, considerably more than one-half of which is below Red River. Nothing can be more vague than an attempt to calculate the mean depth of the Mississippi; so much variation arises from the ever-varying helight of the water, from projecting sand banks, from islands and other localities. The breadth is equally variable as is the depth, but can easier be reduced to a medium. One observation may be made here that will apply to most rivers; that is, the over-alculation that is generally made of their width. From careful triangular measurement of the Mississippi, made at Natchez, at the efflux of the Atchafalaya, the efflux of the Plaquemine, and near to the efflux o

its depth, allow 150 feet as the length of the ordinate line or depth of water at the greatest elevation, and 2.400 feet as the extent of the elliptical diameter or river's breadth, we are confident that these constituent principles will give a very correct result. From the application of the above elements 141,372 cubic feet would be contained within 1 foot, longitudinal section, of the river. At the rate of 1 mile an hour, 5.280 feet in length, would be discharged every hour, or 746,444,160 cubic feet of the entire mass. (Equal to 4.573,938,000 gallons.) If the water at different stages of elevation is considered as superincumbent strata every single stratum will move with nearly uniform motion, the friction of the superstratum having exactly the same tendency to retard its own motion as to accelerate the one next below.

gallons.) If the water at different stages of elevation is considered as superincumbent strata every single stratum will move with nearly gallons.) If the water at different stages of elevation is considered as superincumbent strata every single stratum will move with nearly gallons.) If the water in the close the superincumbent strata present of the superincumbent strata every single stratum will move with nearly stratum gallons. The exposition of this simple hydraulic principle will demonstrate the falsity of the idea that the whole mass of vater in the river moves and more inclination on the plane of acceleration, yet the incumbent strata, preserving the same inclination, with little variation, must move and more inclination on the plane of acceleration, yet the incumbent strata, preserving the same inclination, with little variation, must move and more inclination on the plane of acceleration, yet the incumbent strata, preserving the same inclination, with little variation, must move more shown in the stratum of the superiod of the plane of acceleration, yet the inclination of the eartherness. We will now proceed to apply the principles lidd down to their use in improvements made or that may be made to reader the bank of the Mississippi an agreeable, said, and profitable method appeared obvious, or, indeed, practicable but to raise an embankment or level of earth in front of every plantation. These levees by stopping the overflow reclaimed a small portion dry like the properties of the stratum of the carther stratum of the cartherness of the control of the cartherness of the stratum of the cartherness of the control of the cartherness of the stratum of the cartherness of the control of the cartherness of the control of the cartherness of the control of the cartherness of th

vessels of 6-feet draft. The tide flows up the Manchac to the mouth of Wards Creek, within 9 miles of the Mississippi.

It is a singular and curious circumstance that the tide in the Manchac and Plaquemine flows within 15 miles of actual contact, upward of 200 miles following the stream, above the mouth of the Mississippi.

Galveston stands on the right bank of the Amite at its junction with the Manchac. The ground is sufficiently elevated to admit the building of a city without any artificial accretion of soil. Were the bed of the Manchac made sufficiently deep and wide to admit uninterrupted navigation, the advantages that would accrue to the commerce of Louisiana would be certainly immense. The point of contact between boat and ship navigation would be removed much farther into the interior of the country. A route would be opened for the direct introduction of the produce of the regions upon the northern waters of the Ohio and Mississippi into the fine settlements of west Florida.

No great diminution of the waters of the Mississippi could be made by the Manchac without producing a refluent mass of water that would materially injure the plantations upon the Mississippi between St. Gabriel Church and Bonnet Quarre.

It may be observed that there are two evils arising from surplus water to be remedied on the Mississippi—one, the incumbent waters in the river; the other, the reflux from the swamps. It is in most instances very difficult to remove one inconvenience without producing the opposite.

water to be remedied on the Mississippi—one, the incument waters in the river; the other, the reflux rom the swamps. It is in most instances very difficult to remove one inconvenience without producing the opposite.

It may be assumed as a postulatum that no useful purpose, as it respects the consequences of overflow, can ever be answered by drawing part of the waters of the Mississippi into new channels unless a reservoir, into which the surcharge can be thrown, exists within a few miles of the main stream. (See note.) This advantage is only offered by the Plaquemine on the left bank of the Mississippi. On the right shore Bonnet Quarre Point is the first place where a contiguous deposit for the water approaches sufficiently near the Mississippi. A moment's inspection of the map will at once determine this place to be, without comparison, the most eligible ion the creation of a large channel of conveyance for the superabundant water that every summer injures, more or less, the inhabitants of Louisiana, sented on the Mississippi between Manchac and the English Turn.

Like the descent at Plaquemine, there must be the same fall from the low-water mark at Bonnet Quarre to the level of Lake Pontchartrain extra distance from the Bonnet Quarre to the level of Lake Pontchartrain than 5 miles. If a large canal of communication was cut, there is no doubt but that an immense quantity of water could be drawn from the Mississippi. Finding an immediate deposit where the decumbent mass could expand, none or very little accumulation of water could take place in the intermediate space between Pontchartrain and the banks of the Mississippi in the parishes of St. Bernard and Oriens.

How much a canal from Bonnet Quarre to Lake Pontchartrain would benefit the people of Louisiana in their commercial pursuits is very difficult to determine. There is no doubt, however, but that a great part of the waters of the spring floods could be diverted from the Mississippi at this place. The real expense attending the necessary works would no

If this great river had at any time flowed in any other route than the present, monum-nts would remain to attest that fact. The natural process of the Mississippi is to protrude the lands near its outlet. There are good reasons to believe that this protrusion is still in slow

operation.

All observations made respecting a canal from Bonnet Quarre will equally apply to one, if made from Gen. Villaret's or Jumonville's plantation, below New Orleans, into Lake Borgne, by Bayou Blenvenu. Similar improvements may also be made from the Mississippi into Black Lake at the mouth of the River Aux Chenes and at the profile Aux Moucles, but below English Turn neither commercial facility nor diminution of overflow would result so extensively from canals as above the latter place.

above the latter place.

Perhaps, in fact, no situation on the Mississippi could be more beneficially improved than the space between Villaret's and Lake Borgne. This place has been rendered remarkable by the advance toward New Orleans of the British Army in December, 1815.

These general remarks on the Mississippi might be much dilated, but we trust enough has been said to give a correct idea of the country adjacent to the bank and included in the Delfa of this noble river.

Note 1.—No correct judgment can be formed upon the best means of obviating the inconvenience of the inundation of the Mississippi without having determinate ideas upon the real motion of the water. That the rapidity of the mass of water in the Mississippi is usually overtated has been shown; but not only the body of the fluid in the river has been supposed to move more rapidly than it does; in fact, the current itself proceeds a much less distance in a given time than is

commonly thought. The following, taken from actual measurement, will illustrate the soundness of the conclusions formed in the text:

From the Falls of Niagara to Lewiston is 7 miles, following the stream; about 5½ miles in a direct line. In this distance the water falls 104 feet, and from very careful admeasurement and observation runs within a small traction of 4 miles an hour.

The given fall in the above distance is very much greater than the depression of the plane upon which the Mississippi flows: If the motion of the great mass of water was as great as commonly thought, no inundation would succeed; the fluid must reach the Gulf too soon to admit accumulation. When the water flows from the main stream and meets with no place of deposit, like Lake Ponchartrain, Lake Borgne, or the Atchafalaya, it quickly rests on the back lands and finally produces a reflux toward the river.

Water would be reduced to foam by having fall enough to produce but very little more acceleration than is allowed to streams moving upon planes having very slight inclination, such as the Mississippi and Atchafalaya.

Note 2.—Mr. Schultz, in his travels, makes a similar remark respecting the Mississippi. Most writers on Louisiana, being better acquainted with the surface than the bottom of this subject, have drawn contrary conclusions.

Safeguarding Commerce.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 6, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, under leave to extend my remarks and because it is appropriate to the rivers and harbors bill now under discussion, I extend as a part of my remarks an address made by me at the centennial celebration anniversary of the Coast and Geodetic Survey:

THE UNITED STATES COAST AND GEODETIC SURVEY'S PART IN THE DEVELOPMENT OF COMMERCE.

[An address by Hon. J. HAMPTON MOORE at the centennial exercises of the Coast and Geodetic Survey at the New National Museum, Wash-inton, D. C., Wednesday evening, Apr. 5, 1916.]

Ladies and gentlemen, some day this great country of ours, which talks much of preparedness, will realize the truth familiar to every American household, that if we are to provide for preparedness or a future state of contentment we must have and maintain a source of revenue. The country can not spend money for preparedness or any other purpose unless the people of the country have an earning power. The situation is no different from that of the family which spends in excess of its income, with no trade or occupation to fall back upon. The importance of encouraging the media through which revenue is raised for governmental purposes is therefore clear. We can not forever tax the people for preparedness or for any other purpose without giving the people the opportunity to earn what they are called upon to pay. Neither can we expect the highest type of patriotism from those who are not prospering and who find their

individual burdens heavy.

At the outset, therefore, I wish to make it plain that while we are agitating for preparedness in a military sense, we should not overlook those substantial instrumentalities of production and commerce upon which all preparedness, whether foreign or domestic, must depend. It is not necessary to carry the analogy further except to remind ourselves that while the State Department, the Department of Justice, and the War and Navy Departments have been with us almost from the beginning of the Government, it is only in recent years that we have begun to recognize officially and to give direct encouragement to agriculture and manufactures, and the other wealth-producing factors of the Nation. The Coast and Geodetic Survey has been with us for 100 years in one department or another, and has been contributing its part to our commercial development, but it was not until President Lincoln's time that we gave direct Federal recognition to the development of agriculture; nor was it until 1903 that commerce and the industries were given recognition at the Cabinet table of the Nation.

OUR FOREFATHERS FORESAW COMMERCE.

Notwithstanding all this our forefathers had great foresight as to the import of our commercial affairs. They considered them in the Constitution of the United States when they delegated to Congress the power "to provide for the common defense and general welfare of the United States"; "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes," and also "to establish post roads," which in the days anterior to the railroads were carriers of the mails, as well as of commerce, both by land and water, since water routes were held to come under the designation of post roads.

The framers of the Constitution dealt in their time with a population approximating 4,000,000 people, but they were shrewd enough to perceive that the country would expand, and that commerce would grow, and in due course come under the regulation of law. When they announced the Constitution in September, 1787, an extensive international commerce had already been developed. It was carried in American ships, which did a profitable business, though at great risk, in all the seas of the world. It was the active operation of these ships and the importance of American interchange with other nations that induced Thomas Jefferson to suggest the establishment of a Coast Survey to chart our coasts and otherwise provide for the encouragement and safety of American shipping. Congress was a laggard in those days, even more than it is accused of being now, and it was not until 1816, after the close of the War of 1812, that field operations were undertaken by this new arm of the Government service. We are celebrating the one hundredth anniversary of this event to-night, a celebration that is timely and appropriate, since so little is known by our more than 100,000,000 population of the direct benefits which this service is constantly rendering to life and trade.

PATHFINDING ALONG THE COASTS.

Organized originally as a bureau of the Treasury Department, continuing under the rigorous methods of the Army and Navy, and now operating under the civil jurisdiction of the newly created Department of Commerce, the Coast and Geodetic Survey pursues its prosaic work of discovering new water routes, charting new regions, and recharting old ones in a manner that invokes our highest admiration. Loss of vessels along the Atlantic seaboard and on our inland waters was not infrequent when the survey was organized 100 years ago, but the draft of vessels and the depth of channels were far different then from what they are to-day. In the beginning it was sufficient to make surveys and point out the marine menaces to vessels of so shallow a draft as 12 feet; to-day it is necessary to extend the survey over inland waters and across tempestuous seas upon which vessels drawing as much as 38 feet must have leeway for maneuvers. It is not difficult. therefore, for those who entertain a kindly appreciation of faithful Federal service to understand the extent of the hardships and privations that must be endured by the men who in fair weather or in foul, in daylight or in darkness, mark the channels and point out the impediments to navigation in our rivers and harbors and upon the high seas. Like the Lighthouse Service or the Coast Guard, which we formerly knew as the Revenue-Cutter and Life-Saving Services, the Coast and Geodetic Survey is constantly on duty at the frontier where it is needed to preserve and safeguard the life and property of our people. I can not respond more happily to the subject that has been assigned to me than to say that the Coast and Geodetic Survey is an arm of the Federal service that is indispensable both to the Government and to commerce. It is made up of as loyal and devoted a body of public servants as may be found anywhere under the Stars and Stripes.

SILENT PLOTTERS OF THE SEA.

In the midst of our prosperity, and more particularly since we have come to discuss the preparedness of this Nation to maintain its honor in peace or at war, it may be wondered whether the Government, and the people who support it, have fully appreciated the part which the Coast and Geodetic Survey has played in our commercial development. We may wonder whether the business man who has been a great beneficiary of this service has thoroughly understood the work and the needs of this important bureau, for we know how easy it is to criticize the work of public servants, and how unusual it is to properly and justly appraise their services. Here we have a bureau unmixed with political conditions, sharing the perils which beset the Army and Navy, and yet which never attains the spotlight. Even Congress sometimes unduly stints itself in its efforts to protect the public funds when appropriations are sought to support the work of these silent sea plotters who sound the lead off the rocky coast of Maine or haul the wire drag in the icy waters of Alaska. The persistence and the heroism of these men pale into insignificance when it comes to the adjustment of the dollars and cents. It is one of the misfortunes of these men whose hearts and hopes are wrapped up in the serious work they have to do that, like "the flower born to blush unseen," they are obliged for the greater part of their lives "to waste their sweetness on the desert air." And in this connection we may appropriately observe that while poetry is not sufficient compensation for self-sacrifice it is still something of a solace.

CHARTS MUST BE KEPT UP TO DATE.

Vast as has been our national growth, and important as it is that our water routes shall be made safe for transportation, it is regrettable that the facilities of the Coast and Geodetic Survey, both as to men and means, have not been increased in proportion to the work that is to be done. There is a strange misunderstanding in the public mind as to the need of appropriations for rivers and harbors. It is said that appropriations once made for improvements, or for maintenance, should be sufficient for all time. An outcry is raised when Congress is asked to provide for the maintenance of a channel that was dredged last year or the year before, as if a channel once dredged would forever maintain itself. This sort of reasoning is sometimes indulged with respect to the Coast and Geodetic Survey, as if a chart of a sandy shore made a decade ago would be safe and serviceable for the mariner of to-day.

With the old type sailing vessel giving way to the steamer

With the old type sailing vessel giving way to the steamer and dreadnaught, with the modern barge taking the place of the antiquated canal boat, how absurd it is to hold that the ancient condition will suffice for the modern or that nature will stop short at the beck of man. No body of men is more capable of dealing with the forces of nature than the United States Army engineers, and yet I doubt if any of them, efficient and capable as they are, would undertake to guarantee that the forces of nature in 1920 will not sweep around the most expensive but unsupported jetties of 1916. It is inevitable that new shoals will form and that new obstructions to navigation will be discovered, as it is incontrovertible that artificial channels in tidal streams will not forever maintain themselves. They must be cared for, just as the horse must be curried.

OUR COAST LINES EXTENSIVE.

What the Coast and Geodetic Survey undertakes to do for commerce is to keep commerce informed as to hydrographic conditions. It surveys the waters; it marks upon a chart the underlying conditions; it points the mariner to the lanes of travel that are safe; it warns him, so far as it is able to do, of the rocks and the shoals that may bring him to grief. When I speak of a lack of public appreciation of the invaluable service thus performed I rely upon the facts as they are revealed by a study of our geographical conditions.

Who stops to think of the extent of the coast lines of the United States? Coupled with that of Alaska it exceeds 10,000 miles. All this is supposed to be traversed by the men who

explore our waters for the sake of commerce.

Add to this 10,000 miles of coast line the actual shore line including all the islands, bays, sounds, and rivers in the littoral or tidal belt, and we bring into the purview of the Coast and Geodetic Survey for investigation and exploration, for sounding by lead, and dragging by wire, no less than 91,000 miles. But the work of the bureau does not stop with its oversight of the shore lines of continental United States and Alaska. It embraces the shore lines of Porto Rico, Guam, Tutuila, the Hawalian Islands, and the Philippine Islands, whose general shore line exceeds 6,300 miles and whose detailed coast line is in excess of 13,000 miles. Since the commerce of the United States, greater within the United States than out of it, finds lodgment in every port of this country, and in all our islands and possessions, and in every nation of the world, it is easy to understand how tremendously important it is that our coast charts should be accurate and up to date.

HIDDEN DANGERS AND THEIR AVOIDANCE.

In discussing the relation of the Coast and Geodetic Survey to commerce, the element of human life must be considered. It is bad enough that valuable property in ships and cargo shall go to destruction upon uncharted rocks, but it is deplorable that human life should thus be lost, and yet each great storm on any of our coasts brings its chapter of accidents. wreck of the revenue cutter Tahoma on an uncharted reef in Alaskan waters is easily recalled. For days the captain and men drifted about in an open boat, and were finally rescued, but the valuable property of the Government was lost. many such instances. The crash of the Titanic against a berg in the waters of the Atlantic, and the loss of hundreds of lives is still fresh in the minds of the reading public. These and hundreds of other tragedies of the sea contribute to the annual toll which is due to a lack of information as to hidden dangers. It is possible that many of these accidents would have occurred in spite of any survey, and yet it may be assumed that the incompleteness of the survey of the American coast is responsible for many of them.

I shall give some facts later with respect to the work that is yet to be done, especially as it pertains to some of the more frequented watercourses along the Atlantic coast. For the present I shall cite the figures of passengers carried on the vessels of the United States which are obliged to report to the Super-

vising Inspector General of the Steamboat-Inspection Service. They are imposing. I wish all those who give little heed to the life-saving functions of the Government and who are sometimes led into violent criticisms of public service after reading of exceptional accidents, might peruse these figures.

SOME FIGURES AS TO PASSENGERS.

For the fiscal year ending June 30, 1915, the number of passengers carried on steam vessels obliged to report to the Steamboat-Inspection Service, and these were not all the water-borne passengers by any means, was 307,348,008 passengers. Dividing this number by 107, the total number of passengers lost, it is shown that only 1 passenger was lost for 2,872,411 passengers carried. The total number of lives lest from all causes, includ-

ing passengers and crew, was 368.

herever commerce is there human life is also. It is not unfair, therefore, in discussing the relation of commerce to the Coast and Geodetic Survey to introduce this human-life feature. But if we were to ignore it altogether, the commerce side of the question is formidable enough. We can even afford to eliminate the Government's own interest, including naval vessels and the fleets of the various departments, including that of the Army, which, although it is not generally known, includes about 2,500 vessels. All these have to do with the work of the Coast and Geodetic Survey; but my purpose now is to introduce the commercial statistics so far as I have been able to assemble them. I am unable to give the figures with respect to our coastwise trade. For some unaccountable reason Congress has never made any appropriation to enable us to obtain statistics as to the business done along the Atlantic seaboard. I presume the same condition prevails on our other coasts.

ESTIMATING COASTWISE TONNAGE FROM LOSSES.

The Secretary of Commerce has sought to obtain appropriations for this purpose, but they have not been granted to him. It is a fair presumption, however, that our coastwise trade in tonnage and value is not far below that of our foreign trade. However, this is but a guess. We have haphazard statistics brought up through commercial bodies, but they are not de-However, we can tell something about our losses. They constitute so small a percentage of the entire commerce of the coast as to be an indication of its magnitude. A few years ago a voluntary board of experts reported to the Atlantic Deeper Waterways Association that in 10 years, from 1900 to 1909, inclusive, there had been no less than 5,700 disasters to shipping along the Atlantic seaboard. The loss of 2,200 lives was involved and more than \$40,000,000 worth of property was destroyed. If these figures may be relied upon, and they were taken principally from the Life-Saving Bureau statistics, it is to be inferred that the volume of trade along the Atlantic seaboard that passed safely was enormous.

We are more fortunate with regard to statistics in our foreign trade, all of which, of course, passes from or returns to the United States through charted waterways. A perusal of these figures is illuminating. They throw much light upon mooted questions with respect to tonnage and values in geographical divisions of the United States, and they serve to emphasize the value of the Coast and Geodetic Survey. I intend to present as a part of this address an official statement by the Department of Commerce of the number and net tonnage of sailing and steam vessels entered and cleared in the foreign trade of the United States during the fiscal year ended June 30, 1914, but for convenience shall summarize the totals. Our greatest foreign trade, tonnage and values considered, is along the Atlantic seaboard, but including the Pacific, the Gulf, and the Great Lakes the number of vessels coming and going during the year referred to was 80,667. Their net tonnage aggregated 106,571,986, and their total value was \$3,785,468,512. The detailed statement is as follows:

SIGNIFICANT FOREIGN COMMERCE STATISTICS.

Number and net tonnage of sailing and steam vessels entered and cleared in the foreign trade of the United States during the fiscal year ended June 30, 1914.

Note.—The above tables cover only the commerce of the United States with foreign countries. No data are available for the domestic coastwise commerce. A COMMERCE WORTH WORKING FOR.

These figures relating to foreign and domestic commerce, which may be credited up to our aids to navigation, speak eloquently for themselves. It is to be regretted that they do not speak loud enough to be heard by the beneficiaries in commerce whose interest in a continuance of the service would assist in procuring for it the congressional recognition it deserves. Men of commerce, if they would only stop long enough to consider the needs of the service which serves them, could speak more eloquently upon this subject than can the tireless workers who heave the lead and draw the wire drags. In the presence of scientists and explorers, professors of universities, and picked men of the Army and Navy, I shall not attempt a discussion of the technical phases of the Coast and Geodetic Sur-I am fairly familiar with the practical side of it, and that, I take it, is about equal to the average information possessed by the millions of passengers who sail upon the steamboats and the thousands of merchants and traders who busy themselves with the commerce that seeks the markets of the world.

I know what it means for a vessel to run upon the sands; I can understand the sensation of striking a pinnacle rock. If I were the captain of a merchant vessel I would not enjoy a meeting with the owners if the ship entrusted to my care had run upon a bar that was not marked in last year's chart. If I were captain of a naval vessel under like circumstances I would expect to be court-martialed. I think all of us, scientists or laymen, understand the significance of running a ship aground, And yet it is not impossible that a new captain with an old chart, or a smart captain without any chart at all, may find that the shifting sands have made impassable the course he ran when he made his voyage the year before. It is not improbable that venturing into new territory he may run upon the point of a rock which he did not know was there. All these things have occurred to captains of merchant vessels, and even to officers of the highest skill in the Navy. It is because these things have happened and because they are bound to happen so long as the winds blow and the tides ebb and flow, that the work of the Coast and Geodetic Survey must be supported and extended.

SURVEYING IN DISTANT TERRITORY.

We can not adequately survey a coast line of 10,000 miles with men and equipment for 5,000 miles. We can not increase the area over which the force must operate without increasing the force. We can not successfully survey the Philippine Islands and our other island possessions and continue effectively the work along the shore lines of continental United States without neglecting a part of the work in one place or the other; and yet it is evident so long as nature continues to roll the waves of the ocean against our sandy shores that the changes must be studied and observed.

Compare the work that is going on in Alaska with the work along the lower regions of the Mississippi River. The Coast and Geodetic Survey has recently made a relocation of the Kuskokwim River, which empties into the Bering Sea. Commerce is picking its way along that river into the rapidly developing Alaskan Territory; but men and vessels were required to do this work, and they had to be drawn from other sections of the country. The Kuskokwim River, wonderful stream that it is, is only an insignificant part of the work that is awaiting the surveyors in Alaskan waters. The pinnacle rock prevails in that territory, and, left uncharted, threatens the vessels which attempt to enter it; and yet the surveyors have only begun their work in Alaska.

MISSISSIPPI AND THE ATLANTIC.

Now, as to the Gulf approaches to the Mississippi: The com-

wonders at this point. The original depth of 10 fathoms of water off Southeast Pass of the Mississippi has shoaled up to a a few feet only. Big ships can no longer enter. When the commercial public grows tired of denouncing pork-barrel appropriations for rivers and harbors it may find food for serious thought in the proposition that commerce is more interested in the maintenance of channels than are the overworked engineers of the United States Army, or even the Members of Congress, who stand a good deal of unwarranted abuse because they endeavor to keep the channels of commerce in order.

In closing, I wish to refer to the Atlantic seaboard. I am interested in the safety of life and commerce on all our coasts, but by reason of familiarity with the Atlantic coast, I may be pardoned for calling attention to a few of its needs. some day, as many experts think probable, the Caribbean Sea should become the base of a great naval warfare. Florida undoubtedly would become a center of American activities. Her inland waterways, so far as they are fit, would be serviceable for supply and munition ships and for small vessels of the Navy. We can not count too much on these waterways now, for they have not been improved as they should have been. But what layman ever knew, or knows now, that the Coast and Geodetic Survey has 72,000 square miles of hydrographic surveying ahead of it before all sides of the Florida coast are thoroughly covered?

Our needs by way of protection against reefs and shoals around the Florida coast are far more extensive than they are in the Alaskan waters, and yet in Alaska but 8 per cent of the navigable waters have been surveyed to the satisfaction of the

DANGERS OF CAPE HATTERAS.

The dangers of Cape Hatteras are known to every American, and the currents that abound on that treacherous coast demand the frequent inspection and oversight of the chart makers. Just above Hatteras, along the North Carolina coast, the shore line is constantly changing, as is well known. Inlets close and open according to the whims of nature. It is an interesting historical fact that no living man is now able to locate the inlet through which passed the Sir Walter Raleigh expedition, which made the first English settlement on Roanoke Island in That the vessels of Amidas and Barlow entered Croatan Sound is well established, but the channel through which they came has long since disappeared.

The closing of inlets as far north as New York has not been of infrequent occurrence in the course of the last century, nor has the accretion or recession of land where the waves and

storms have played upon it.

Near Chincoteague Inlet, Va., is a comparatively new harbor, known as the Assateague anchorage. It owes its existence to a natural change in the coast line at the south end of Assateague Is and, which has converted an exposed bight into a well-protected and much-frequented harbor. This harbor is preferred by local shipping to some of the artificial harbors of refuge along the coast. It has an added importance because it is the only harbor between the entrances to the Chesapeake and Delaware Bays, but it must be examined frequently in order that the shifting sands may be so charted as not to deceive the mariner.

SHOALS ALONG THE NEW JERSEY COAST.

Advancing along the coast to the New Jersey and Delaware shores, where shipping increases, it is observed that at the present time the Coast and Geodetic Survey stands in need of funds to survey and resurvey about 13,000 square miles offshore. There are shoals constantly forming on these shores which should be examined and charted in the interests of navigation. This is an area which is presumed to have passed the pioneer stage, but it evinces that same disposition to conform to the forces of nature that prevail in less frequented waters.

More remarkable than this, however, is the situation with respect to the waters approaching the great metropolis of New York. The rivers and harbors bill now pending in the House of Representatives carries an appropriation of \$700,000 to extend and deepen the channel from the sea to the Brooklyn Navy Yard, a very important work that should have been completed long ago. The reason for this appropriation is that there are obstructions in the channel, possibly of rock formation, which make navigation perilous for the dreadnaughts of the When vessels of 12 feet draft were sailing into New York Harbor it made no difference about this channel, but the increase in the size and draft of vessels has made a difference and the lead and the drag must be invoked again.

ROCKS A MENACE IN EAST BIVER, N. Y.

There are rocks in the East River, as everyone knows. merce in that vicinity warrants a careful and accurate survey. of them are of the pinnacle type, and, strange as it may seem, We are informed that nature's constant changes have worked have only recently been located. As late as 1915 the wire drag

was used by the Coast Survey in the East River, locating certain dangerous shoals, which are a menace to navigation, and which in the event of war would seriously handicap our battleships. If commercial New York, exposed as it is to the guns of a hostile fleet, is just beginning to make discoveries of new formations and obstructions in its waterways, it is high time that the people elsewhere along our coast line should wake up to the importance of increasing and developing the Coast and Geodetic

I have not time to further discuss the work along the Atlantic coast, except to say that the Maine waters abound in rocks and shoals. The wire-drag service is badly needed there, as it is all along the New England coast. The report of a recent survey in the vicinity of the Rockland naval trial course discovered no less than four shoals, on any one of which a battleship might have been seriously damaged. It is noteworthy also that in a survey of the approaches to Narragansett Bay, one of our most beautiful sheets of water, evidences of hidden formations were discovered. As late as 1914 the wire-drag party found no less than 50 shoals at the entrance to Buzzards Bay, from which vessels now pick their way into the newly constructed Cape Cod Canal.

A WORD TO THE BENEFICIARIES.

Ladies and gentlemen, this is as far as my time will permit me to go. Enough has been said, I trust, to show the value of the Coast and Geodetic Survey Service to commerce and the Nation. What has been said I hope may attract the favorable attention of those who reap the advantages of the service without knowing the difficulties with which it has to contend. The Coast and Geodetic Survey is worthy the highest praise that you and I can bestow upon it. It has had a long and useful career. It has been less appreciated than it deserves. Its work is not finished; it never will be. So long as the winds and tidal currents exist, so long as the waters of the ocean beat upon our shores, so long as the waterways and canals of the interior are capable of bearing the burden of commerce, just so long will the work of the survey be necessary for the promotion of trade and the preservation of life and property.

Arkansas River, Ark. and Okla.

EXTENSION OF REMARKS

HON. H. M. JACOWAY.

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES.

Friday, April 7, 1916.

Mr. JACOWAY. Mr. Chairman, I wish to incorporate into my remarks at this time an argument made by me before the Committee on Rivers and Harbors of the House February 2,

COMMITTEE ON RIVERS AND HARBORS, HOUSE OF REPRESENTATIVES, February 2, 1916.

The committee met at 10.30 o'clock a.m.
The CHAIRMAN. Mr. Taylor, are you ready to proceed?
Mr. TAYLOR. Mr. Chairman, I would like to proceed now with our side, as this is the day set for it. I present, first, Mr. JACOWAY, who desires to speak in regard to the improvement of the Arkansas River.

STATEMENT OF HON. H. M. JACOWAY, MEMBER OF CONGRESS FROM ARKANSAS,

ARKANSAS.

Mr. Jacoway. Mr. Chairman and gentlemen of the committee, to my certain knowledge this committee has been in session for a number of weeks listening to the arguments of Congressmen, Senators, and various representatives of commercial bodies from many sections in regard to various and sundry river and harbor projects. I appreciate the fact that the committee is more or less tired, and for that reason will go through with the remarks I have to submit to the committee in as hasty a manner as the subject will permit.

I will try to reduce my remarks to the least possible compass and present the subject in the light of testimony that has been taken in regard to the Arkansas River being made navigable, at least from its mouth to Ozark, in Franklin County. When that is done, I will leave the final disposition of this important question to the good sense and the judgment of this committee for them to decide what projects shall be incorporated into the rivers and harbors bill for Arkansas River for the coming year.

In stating my case, Mr. Chairman, I will be very frank to say that we have the favorable report of the district engineer's office at Little Rock, Ark., and have an unfavorable report from the division engineer and the Chief of Engineers of the War Department, Gen. Kingman. I contend that in this case the report of the district engineer should prevail, due to the fact that he has more first-hand, complete, and defailed knowledge of the project than the Chief of Engineers has or

can possibly have. This matter should not be lightly passed and ifficustation of the considered by this committee.

The CHAIRMAN, You are addressing yourself to the report on the Arkansas River made by the Board of Engineers to the Chief of Engineers in response to a provision in the rivers and harbors to the Chief of Engineers in response to a provision in the rivers and harbors of Engineers in response to a provision in the rivers and harbors who died?

Mr. BEROSS, Is this A. B. Putnam the engineer who was formerly stationed at Little Rock, Ark.

The the control of the committee by stating that the Arkansas River has been the subject of serious consideration by the Pederal Government ever since the year 1832. The first project that was adopted for this river was in that year, and it called for snage stationed at the control of the committee by stating that the Arkansas River has been the subject of serious consideration by the River up to and including the year 1869, one year after the Civil War, at which time a ocal project was taken on for Fort Smith in 1876. In 1876 the Arkansas From Fort Smith to Wichita, Kans., received a 1880 a local project for Pine Bioff was also added and an appropriation made for this city. In 1886 improvement on the river between Little Rock and the Mississippl River, at a cost of \$2.588,544 received the second of the control of the control of the Chief of

growth of the West than of the growth of a state of the document.

"It is a difficult matter to give in condensed form any idea of the immense quantity of produce that is waiting the opening of this river to navigation.

"In a short reach from Dardanelle to Fort Smith, on the south side of the river only, about 70,000 bales of cotton are raised now, and the amount is steadily increasing. This cotton can be sent to New Orleans at 60 cents per bale by boat. If sent by rail, it costs \$2.25 per bale, exclusive of ferriage and cost of hauling by wagons. Corn and wheat command good prices in Little Rock, but the railroad rates are so high that it can not be moved.

"Timber that sells in Little Rock as high as \$75 per 1.000 is abundant in this section, but can not be marketed owing to the high freight rates.

"What has been said of this section applies with greater or less force to the entire reach from Little Rock to Fort Smith. A just conception of what benefits are likely to accrue can only be found by looking at some great fertile river valley in the Northern or Eastern States as they were years ago and as they are now, since settled up and with its river improved.

"What benefits have accrued to that community will surely accrue to this, with this addition, that the mineral resources of this valley are to be added. Its coal products alone and its wealth of timber will place it well to the fore.

"When the vast acreage of the Indian Territory is brought under cultivation its products must go this way. That already well-known and exceedingly fertile State of Kansas will find Fort Smith or Little Rock its nearest water outlet eventually.

"It will be seen how difficult it is to handle this question briefly if it is borne in mind that, with deep water to New Orleans from the Gulf, the Mississippi improved, and the Arkansas River navigable to Little Rock by boats drawing 5 feet of water, we have the conditions likely to exist when the improvements are completed.

"I have, therefore, only attempted to outline this matter, and trust that when this portion of the report is read a map of the territory covered may be had in mind, as this will probably be of itself the strongest proof that the benefits likely to accrue can but be too yast to summarize in a report like this."

He also states that this plan, with the estimates, is condensed, from the fact that the time to prepare it has been limited. He said further:

"This plan, with the estimates, is condensed from the fact that the time to prepare it has been limited. Time has been given to elaboration in examinations rather than to elaboration in this plan. The data is at hand for elaboration if the same is desired."

Mr. Kennedy. What date is that, Mr. Jacoway?

Mr. Jacoway. That is 1888.

Mr. Booner. Will you please state again what you said the rates on cotton by river and rail are, and the points?

Mr. Jacoway. Col. Taber said the rates by rail were \$2.25 per bale, and if shipped by boat it was 60 cents per bale.

Mr. Kennedy. From what point to what point?

Mr. Jacoway. He takes the initial point of shipment as Dardanelle and terminating at New Orleans.

The CHAIRMAN. Can you state now what the rates are from the same point to the same point?

The CHAIRMAN. The river point?

The CHAIRMAN. The river point?

Mr. Jacoway. No; I can not, offhand, but will supply this information to the committee. I will state now, for the benefit of the committee. If you desire, I can put into my remarks a table showing those rates.

The CHAIRMAN. We would be glad to have you do that.

STATEMENT OF TRAFFIC BUREAU OF THE CHAMBER OF COMMERCE, PINE BLUFF, ARK.

Statement showing the present rail rates and the boat rates from river points to Pine Bluff, Ark.

	Class rates.										
From-	First class.		Second class.		Third class.		Fourth class.				
	Rail.	River.	Rail.	River.	Rail.	River.	Rail.	River.			
Cincinnati, Ohio. Louisville, Ky. St. Louis, Mo. Memphis, Tenn.	\$1:219 1:128 1:00 .78	\$0.75 .75 .75 .45	\$1.026 .956 .85 .60	\$0.65 .65 .65 .36	\$0.782 .722 .65 .45	\$0.50 .50 .50 .30	\$0.598 .548 .49 .36	\$0.40 .40 .40			

Freight moving from Cincinnati, Louisville, and St. Louis to Pine Bluff is handled by 3 boat lines and from Memphis by 2 lines.

The above rates have been effective for only 1 year, and it will be noted that they are from 20 to 75 per cent lower than the rail rates.

The estimated saving to the Pine Bluff shippers during the past year on traffic from these points alone is \$4,000, and the movement is doubling every few months.

Statement comparing the class rates from St. Louis, Mo., to Pinz Bluff and Little Rock, Ark., with the rates to various other points where the distance is the same or greater.

Mr. KENNEDY. The report here says it would have no effect on freight

Mr. Kennedy. The report here says it would have no effect on freight rates.

Mr. Taylor. Here is a gentleman who has investigated, and he gives this not only of his own knowledge but from the tariff commission.

Mr. Jacoway. I will just state, Mr. Chairman, that the consensus of opinion is this, and it is by experts that the reduction in the freight rates to the people of Arkansas that will necessarily follow from improvement of the Arkansas River from its mouth to the Oklahoma line will be a decrease of from 30 to 300 per cent. I think this statement will be abundantly borne out by the facts.

Mr. Frear. May I ask a question?

Mr. Jacoway. Yes.

Mr. Frear. Is this the report of Col. Harry Taylor, the one that you have been reading from?

Mr. Jacoway. No: this is Col. H. S. Taber.

Mr. Frear. Col. Harry Taylor, I see, was present at the hearing in November, 1915

Mr Jacoway. This is 1888. That which I have just stated is borne out by the testimony of Col. Taber. This project for the Arkansas River received his sincere official approval. He says it is not only feasible but it is practicable, and that the Government can carry it to a successful consummation with a slight outlay of money in comparison to what It spends upon other streams of less dignity and far less merit. In a later report, which will be designated as Document No. 510, Sixty-first Congress, second session, and for the information of the committee, I want to quote from the report made by Maj. Walker. In that report he says, Mr. Chairman, speaking of freight rates, page 7:

"That the freight rate on coal from the coal fields west of Little Rock is exorbitant in comparison with the rates from other fields there is no doubt. The rates from the southern Illinois fields are shown in the following:

"Southern Illinois fields to East St. Louis, 76 miles, \$0.36 per ton:

doubt. The rates from the southern Illinois fields are shown in the following:
"Southern Illinois fields to East St. Louis, 76 miles, \$0.36 per ton; southern Illinois fields to Chicago, 260 miles, \$0.90 per ton; southern

Illinois fields to Memphis, 239 miles, \$1 per ton; Spadra (Arkansas) to Little Rock, 105 miles, \$1.25 per ton; southern Illinois fields to Little Rock, 335 miles, \$2.70; southern Illinois fields to Monroe, La., 530 miles, \$2.25 per ton; southern Illinois fields to Monroe, La., 530 miles, \$2.60."

Now, in that report which I have just read to you he says, further:

"Showing the average rate out of the southern Illinois fields to the several places mentioned as 4.7 mills a ton-mile, while out of the Arkansas field to Little Rock it is 12 mills a ton-mile, the rate out of the latter field being nearly two and one-half times that out of the former."

He makes comment, as follows:

"Taking Denning, 119 miles from Little Rock, as representing the average point of origin for coal shipments, and taking one-half a cent a ton-mile as reasonable charge for haulage and 20 cents a ton flat for terminal costs, on account of short haul, the reasonable rate out of the Arkansas coal fields to Little Rock becomes 80 cents a ton, a reduction of 45 cents a ton on the present rate."

In other words, Mr. Chairman and gentlemen of the committee, every ton of coal shipped out of Spadra or Denning fields by river transportation, the rate now being prohibitive on the rallroad, there would be saved to the city of Little Rock in freight rates on coal alone the magnificent sum of \$86,500 a year, as reflected by the report of Maj. Walker: and it will be far greater now, for this report of Maj. Walker was made in 1910 and this is 1916.

Mr. Frean. May I ask you a question right there?

Mr. Jacowax, Just a minute. He further says that the saving of freight rates to the other towns between Fort Smith and Little Rock, Ozark, such towns as Coal Hill, Atkins, Clarksville, Dardanelle, Russellville, Plummerville, Argenta, Morritton, and Conway, an additional saving on coal alone of another \$86,500 a year, making, in all, \$176,000 a year saving on coal rates to the State of Arkansas. He makes the other significant suggestion that there would be an a

Now. your question, Mr. FREAR.
Mr. FREAR. I was going to ask, after 18 years succeeding the report, how many tons of coal have been carried on the Arkansas River last

how many tons of coal have been carried on the Arkansas River last year?

Mr. Jacoway. I will state, in response to your question, that there has been no way of ascertaining how much freight moves upon the Arkansas River. I regret that such is the case.

With all due respect to the engineer's report, it states that the tonnage upon the Arkansas River is decreasing each year; it also says that only 55,000 tons of freight was moved upon the Arkansas River last year. In answer I wish to say to this committee that this is as erroneous a statement as was ever incorporated into a public document. If the engineer who made that report had looked west out of his window across the river to the Big Rock Stone & Construction Co, and then secured the tonnage of crushed rock that went alone from there for the purpose of revetting the banks of the Mississippi River he would have found in that single item that last year 160,000 tons of crushed rock went down the Arkansas River for the purpose of improving the Mississippi River banks.

Mr. Freere how far was that carried?

Mr. Jacoway. That was carried from Little Rock to the mouth of the Arkansas River, a distance of 174 miles, and how much farther I do not know.

Mr. Treasnway. In view of Mr. Jacoway's statement, contradicting

do not know.

Mr. Treanway. In view of Mr. Jacoway's statement, contradicting so completely the report of the Chief of Engineers, I would like to ask the gentlemen if they can suggest any way in which the committee can secure information, if we do not put credence in statements such as

can secure information, if we do not put credence in statements such as are submitted to us?

Mr. Jacoway. I will state that a member of the Arkansas delegation attempted to get from the War Department the total tonnage that floated upon the Arkansas River last year, what boats carried it, what was the nature of the tonnage, when it was shipped, and, as yet, we have been unable to get it. I do know that when this report says that only 55,000 tons of freight went down the Arkansas River last year it is an erroneous statement. I do not say it was incorporated into the report intentionally, but, perhaps, it was unintentionally and unwittingly done.

have been unable to get it. I do know that when this report says that only 55,000 tons of freight went down the Arkansas River last year it is an erroneous statement. I do not say it was incorporated into the report intentionally, but, perhaps, it was unintentionally and unwittingly done.

The Chairman. Are you able to supply this statement?

Mr. Jacowax. I think I can; and the reason I know about this tonnage is due to this fact; I introduced a bill last year having for its object the purchase of 15 acres of land from Fort Logan H. Root, across the river, for the use and benefit of the Big Rock Stone & Construction Co. In a way I was recognized by Speaker Clark, on account of it being in the nature of an emergency matter, and by talking with Mr. W. W. Dickinson I found this to be true. This fact was further shown, and in the testimony taken before the board of engineers at Little Rock in November last I think I will have no trouble whatever in getting that tonnage for the committee.

Mr. Treadway, In statistical form?

Mr. Jacoway, I do not know. Mr. Dickinson can give a detailed statement and possibly will state, I suppose, that he shipped so many tons of rock.

The Chairman, Are you speaking of the entire tonnage on the river?

Mr. Jacoway, I do not suppose I can get all of that. I would not say I could.

Mr. BOOHER, Could it not be obtained through the boards of trade along the river?

Mr. Jacoway, I do not see how it could, Mr. BOOHER, for this reason: They keep no record of freight inbound and outbound; and I think that is one weak point in the engineer's department down there.

The Chairman, If the people were to make an effort to get that done, I think that committee wants information along that line I invite their careful reading of the hearings held in Little Rock in November. A copy of these hearings is before you now on the table.

Mr. Pream, Mr. Jacoway, on page 719 of the Engineer's Report it is stated that 2,696 tons of coal were shipped 7 miles. That is all it shows in the last report. Of course

Mr. Frear. I was speaking of the report, which you may not have seen before.

Mr. Treadway. Not as a question to Mr. Jacoway, but may I ask, for information personally as a member of the committee, in what manner do the Board of Engineers secure their information which is incorporated in these reports?

The Chairman. In various ways, but chiefly from boards of trade and other commercial bodies near the water in the way of replies to questions seeking the desired information.

Mr. Treeadway. I think, in view of the Representative's statement that this is a gross error, for the information of the committee we ought either to secure further details as to where they secure their figures or else secure them ourselves.

Mr. Jacoway, I will answer your question again, if you will permit me. In the report of Maj. Putnam for this year—

The Chairman. Just one moment. In some instances communities appoint a committee on statistics and have them gather and furnish data to the engineers, which are incorporated in their reports. But these statistics may be gathered in other ways.

Mr. Treadway. That evidently has not been done in this case, because the statistics are not satisfactory to the representatives.

Mr. Booher. I find here on page 84 of the hearings a letter that was introduced.

Mr. Jacoway. Answering the question further, I call attention to Document No. 461, present session, on page 9. Maj. Putnam, the district engineer for Little Rock, at the bottom of the page, section 7, says:

"I have not available an analysis of the freight movement in the

says:

"I have not available an analysis of the freight movement in the Arkansas Valley from which to determine the quantity that would be affected in dependable transportation lines on the Arkansas River. In the report upon the examination of the river between Little Rock and Ozark, this was given as 608,000 tons for that 144 miles of river. Of this quantity 400,000 tons was coal. By using this as a basis, the assumption may be made that the total tonnage of freights that would be affected by dependable transportation lines on the Arkansas River from its mouth to Muskogee and Fort Gibson would be 675,000 tons of general freights and 600,000 tons of coal, making a total of 1,275,000 tons."

May I supplement this statement with the observation that if the committee will read the reports of Col. Taber, Maj. Walker, and Maj. Putnam, referred to by me, and then in addition read the hearings held at Little Rock, Ark., in November last, the most doubting will be convinced that the tonnage on the Arkansas River will be forthcoming when the river is made navigable by the Federal Government.

Another thing, Mr. Chairman, when you come to study what would be the tonnage for the Arkansas River—
Mr. Treadwax. Pardon me just a moment, in that same connection. Just continue that, Jacowax.

Mr. Jacowax (resuming reading):

"The actual freight movement on the river during the 10-year period ending with the calendar year 1913 was:

Year.	Short tons.	Value.
1905 (ending May 31) 1906 (ending May 31) 1907 (ending May 31) 1908 (ending May 31) 1909 (ending May 31) 1910 (ending May 31) 1910 (calendar year) 1911 (calendar year) 1912 (calendar year) 1913 (calendar year)	103, 214 104, 593 103, 919 92, 455 62, 172 59, 516 81, 371 71, 516	\$1,636,930 1,512,719 2,192,531 2,150,269 2,122,105 1,630,338 1,612,288 1,085,018 1,170,990 573,089

The next statement is for each calendar year from 1905 to 1913. Taking that as correct testimony in this case, he makes it for 1913, 55,228 tons.

Mr. Treadway. That is in accordance with the other report?

Mr. Jacoway. That is in accordance with the other report. That statement is made and will be found on page 10.

Again, Mr. Chairman, when you speak of tonnage for the Arkansas River, any man who will study this proposition carefully and painstakingly and go into it in detail, having for his object the ascertainment of truth, he will be unalterably driven to the conclusion that this proposition is most practicable and most feasible, and should receive generous favor at the hands of Congress.

Referring again to the testimony taken before the Board of Engineers at Little Rock, we have a statement by a man who has been in the coal businesses in Arkansas for 25 years, Mr. James P. Hoye, a man of unquestioned integrity and a successful businesses man. In the statement are some remarkable observations. He states that there are 131,000 acres of coal alone between Little Rock and Ozark, and that each year there is being produced a tonnage of 960,000.

He further states that these mines have an annual capacity of 2,000,000 tons per year.

This is not hearsay on the part of Mr. Hoye. That statement made by him is not chimerical, but is based upon solid facts. He states that this coal is located as follows: Shinn Basin, 3,000 acres; Ouita Basin, 2,500 acres; Spadra, north side of river, 14,000 acres; Parife View, south side of river, 20,000 acres; Denning, 3,000 acres; Parife View, south side of river, 20,000 acres; and eastern Oklahoma, 50,000 acres; Sebastian, 35,000 acres; and eastern Oklahoma, 50,000 acres; Sebastian, 35,000 acres; and eastern Oklahoma, 50,000 acres; Afr. Wingo. That does not include either Scott County or Crawford County.

Mr. Jacoway, I think not.

View, south side of river, 20,000 acres; Denning, 3,000 acres; Paris, 4,000 acres; And eastern Oklahoma, 50,000 acres, making a total of 131,000 acres.

Mr. Wixoo. That does not include either Scott County or Crawford County.

Mr. Hoye further says the present production is nearly as follows: Russellville, about 60,000 tons; Ouita, about 15,000 tons; Spadra, 200,000 tons; Denning, 175,000 tons; Paris, 20,000 tons; Sebastian, 350,000; and eastern Oklahoma, 150,000, making an approximate total of 960,000 tons the testimony of Mr. Hoye further, he said that he had a project with Mr. G. O. Patterson, of Clarksville, a gentleman whom I know well, and he stated before that board that if he could get the benefit of a used river, if the Arkansas River were made navigable from Little Rock to Spadra, he would guarantee each year as a traffic upon that river from that small enterprise alone of 50,000 tons.

Another thing that should challenge the unstinted attention of the committee to-day is this: That the Bauxite & Aluminum Co., at an expense of some \$5,000,000 or \$6,000,000, has erected a reduction plant 20 miles from Little Rock. It works, as the testimony shows, some 600 men, and the testimony further shows that if the Federal Government will appropriate a sufficient amount of money to make this river navigable even from its mouth up to Little Rock that this aluminum company will guarantee each year, in bauxite alone, 400,000 tons of freight. If has been shown that the freight rate is exorbitant on bauxite out of Arkansas. The railroads have raised the freight rates on bauxite until now it has become almost prohibitive. It is an anomaly within an anomaly when I state to this committee that buaxite mined in my district in the State of Arkansas, and within only a short distance of St. Louis, comparatively speaking, costs more money for transportation to St. Louis than it does to mine the bauxite in France, transport it across the Atlantic Ocean and up the Mississippi, and lay it down at the dock in St. Louis, on accoun

400,000 tons of bauxite; there are 150,000 tons of crushed rock; there are 122,802 tons, as reflected in Maj. Walker's report, of classified freight and 75,000 tons of unclassified freight that will float upon the Arkansas River if it were made navigable, the total of which is grand and should be overwhelmingly convincing.

In House Document No. 510, on page 7, is given you the reduction in freight rates if the Arkansas River is made navigable.

On page 9, speaking of coal tonnage, we find that the outbound tonnage is 400,000 tons; that cotton is 28,000 tons; hay, 12,000 tons; cooperage stuffs, 24,000 tons; produce, 5,000 tons; wood, 7,000 tons; not classified, 32,000 tons; inbound, not classified, 100,000 tons, making a total tonnage influenced by the river, as reported by Maj. Walker, of 622,000 tons.

In that report he also makes a summary on the reduction of freight rates to the people of Arkansas when this stream is made a used river. On page 8, at the bottom of the page, Document No. 510, Maj. Walker makes this observation: That the decrease on coal freights, outbound, \$225,890; and decrease on general freights, outbound, \$220,000, or a total saving in freight charges to Arkansas of \$667,010 yearly, and greater would be the amount to-day, since it was six years ago when this report was made.

Maj. Walker and others have made no comment, Mr. Chairman, of the cotton that would go over that stream if made navigable. In the State of Arkansas we produce 1,000,000 bales of cotton. Three-fourths of that million bales are raised in the Arkansas River Valley. A great portion of that, on account of the excessively low freight rates, would find its outlet to the markets of the world down the Arkansas River, and the saving in this item alone to the people of Arkansas would reach into multiplied thousands of dollars.

So, Mr. Chairman, from a standpoint of engineering we find that this proposition is feasible and is practicable, as stated by the district engineers in reports—1880, 1900, 1910, and 1915, and others.

Th

So, Mr. Chairman, from a standpoint of engineering we find that this proposition is feasible and is practicable, as stated by the district engineers in reports—1880, 1980, 1910, and 1915, and others.

The Chairman, Mr. Jacoway, I notice the local engineer, Maj. Pulnam—
The Chairman, Mr. Jacoway, I notice the local engineer, Maj. Pulnam—
The Chairman, Kin. Jacoway, I notice the local engineer, Maj. Pulnam—
The Chairman, Kin. Jacoway, I notice the local engineer, Maj. Pulnam—
The Chairman, Kin. Jacoway, I notice the local engineer, Maj. Pulnam—
The Chairman, Kin. Jacoway, I notice the local engineer, Maj. Pulnam—
The Chairman, Kin. Jacoway, I notice the local engineer of the propose of securing the channel and confined ourselves alone to dredging by a few dredge boats to be constructed. I notice in his recommendation be first says i reading!

"I am not of the opinion that the improvement of the Arkansas River should be abandoned, but am inclined to the belief that the work of revetting the banks should be revived. The commercial importance of the valley is increasing all the time, as is natural under an increase of population. While this laborace is not reflected in the river commerce, "In line with the foregoing, I must report that I think the project for the improvement of the river from its mouth to Grand River (40 miles) by sangging operation, by reverting of banks, and by drediting the providence of the river from there to Oxark, 25 feet from there to the mouth of Neosho River."

He seems to recommend dredge boats and snagging operations, containing two of the different plans of improvement under the old project, Mr. Jacoway, 1 and 1 and

We have one steamboat captain, whose testimony is in the hearings, stating that he made 52 consecutive trips on this river in a given year. We have another steamboat captain who has been plying that river for fifty-odd years, and he says there are but two places between Little Rock and Fort Smith that those dredge boats would have to operate before there would be a navigable stream from Little Rock to Fort Smith

Rock and Fort Smith that those dredge boats would have to operate before there would be a navigable stream from Little Rock to Fort Smith.

Mr. Kennedy. Are there any boats running clear through now?

Mr. Jacoway. They run when the river is high. Answering further let me say that the board of trade and the chamber of commerce of Little Rock followed out the suggestions of the War Department and other parties and spent \$200,000 for boats to ply between the mouth of the river and Fort Smith; but on account of the Government being derelict in not doing the necessary work to be done, and because a stream is just as mavigable as the weakest point in it, or like a good road it is just as good as the worst place in it, they could not make these trips regularly; and as a result the people of Little Rock lost in that enterprise some \$200,000, as I am informed:

Mr. Chairman, allow me to say this, that if I were called upon to prove this issue by a preponderance of evidence, I think it has been amply done. I think if the sterner test should be made and the case should be placed in my hands to prove this issue beyond a reasonable doubt, that there is ample testimony here to warrant a verdict favorable in detail to my contention.

Mr. Lieb. May I ask a question?

Mr. Jacoway. Yes.

Mr. Lieb. With reference to the tonnage of coal being mined, I would like for you to repeat the amount of tonnage that you stated.

Mr. Jacoway. 960,000 tons.

Mr. Jacoway. Maj. Walker in his report says that 40 per cent of that will go by rail and 60 per cent by the river. That is the report of 1910.

Mr. Lieb. How many mines are there opened along the river now, accessible to shipping by water?

Mr. Jacoway. That is in the hearings. I will state it again. The production for Russellylile is about 60,000 tons; Paris, 20,000 tons; Spadra, 200,000 tons; and eastern Oklahoma, 150,000, making the total of 960,000 tons; and eastern Oklahoma, 150,000, making the total of 960,000 tons; and eastern Oklahoma, 150,000, making the total of 960,000 tons; an

say 70 per cent of it would find its way to the markets of the world by water.

Mr. Wingo. If you will permit me, most of that that would not go by water would go by joint haul of rail and water. It would be a very short haul to the water.

The Chairman. In going down the river it is the tendency of the heavy freight to go by water?

Mr. Jacoway. It is.

The Chairman. Where would that freight on those boats go to?

Mr. Jacoway. To Cincinnati, St. Louis, New Orleans—it would go to the markets of the world.

The Chairman. After its transport on the river, where would it seek rail transportation?

Mr. Jacoway. At various points.

In conclusion, I would say, Mr. Chairman, that Senator Burton, as I am informed, on one occasion, when he was chairman of a subcommittee, came to Arkansas for the purpose of looking over the Arkansas River, lie went up the Arkansas River as far as the Grand and then he came down to my town on some big boat and took the railroad. He is quoted as saying that the Arkansas River project was entirely feasible and practicable, but that he thought that not to exceed \$2,000,000 should be spent in any one eyear.

down to my town on some big boat and took the railroad. He is quoted as saying that the Arkansas River project was entirely feasible and practicable, but that he thought that not to exceed \$2,000,000 should be spent in any one year.

Mr. Faear. Where do you find that opinion?

Mr. Jacoway. I said, as I had been informed. That was told to me bi a gentleman who said that Senator Burton said it to him. I think that Senator Burton is a sensible man, and I know that in making those findings he reflected the conditions found on that river.

Mr. Hulbert. Out of an expenditure of \$117,000 last year, did you say that the dredges only operated 60 days?

Mr. Jacoway. The report says some 90 days, but I do not think it exceeded 90 days.

Mr. Hulbert. Did you say that you operate for a greater length of time, due to lack of or oversufficiency of water?

Mr. Jacoway. Both.

Mr. Hulbert. Have you had called to your attention this expression of the Chief of Engineers at page 5 of House Document 461 [reading]: "The physical conditions on this stream, however, and particularly its small low-water discharge, are such as to prevent any radical improvement except at a cost which is entirely disproportionate to resulting benefits, as far as they can now be foreseen."

Mr. Jacoway. I have read that, and I want to say that while the report shows this, an eternal traverse has been written upon that proposition by the reports of other engineers who have examined this matter in detail and gone over the physical river. The man who made that statement, I believe, never saw a great deal of the Arkansas River. I do not believe he traversed it for any great distance. I think the most he knows about it is shown by the geography and reports. But the most he knows about it is shown by the geography and reports. Mr. Halbert. You spoke of the matter of discriminatory rates of stream points along the Arkansas River and St. Louis.

Mr. Halbert, Have you not been able to get any relief from the Interstate Commerce Commission?

Mr. Jacoway. The city o

Mr. Jacoway. I did not catch the name correctly. I want to say that, as reflected in the testimony of the Walker report and other sources, railroad lines would put competing boats upon the river,

lower the rates, and when they ran the river traffic off they would withdraw and then raise the rates.

As a final remark to the committee, let me add that the people of Arkansas are intensely interested in the improvement of the Arkansas River from its mouth, and at least as far up as the Oklahoma line. An expenditure of \$20,000,000 by the Federal Government would not be a waste of public funds. To the contrary, it would be money well spent, and the beneficent results that would flow from the permanent improvement of this great stream would be told in the story of multiplied millions of dollars that would go toward the betterment and progress of the State of Arkansas and the people who have made her what she is.

The committee will observe that I have addressed myself to the improvement of the Arkansas River from its mouth to Fort Smith. With equal force the argument can be made for the stretches of the Arkansas River in the State of Oklahoma, but for the want of the detailed data I can not do so at this time.

I thank the committee for the kind and patient hearing they have given for an hour.

given for an hour.

Dairy and Cream Industries.

EXTENSION OF REMARKS

HON. ROBERT L. DOUGHTON,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 8, 1916.

Mr. DOUGHTON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a letter which I addressed to Dr. Melvin, Chief of the Bureau of Animal Industry, and the reply to the same by Secretary Houston, in regard to the dairy and creamery industries of the country.

The letter is as follows:

House of Representatives, Washington, March 30, 1916.

Dr. A. D. Melvin,

Chief Bureau of Animal Industry,

United States Department of Agriculture,

Washington, D. C.

Dear Sir: I am inclosing you copy of House resolution No. 137,
introduced by Mr. Linthicum, in which he makes very startling statements as to the insanitary conditions of the creameries and dairies of
the country.

I would be glad to know by what authority this statement is made
and whose investigations show that such conditions exist; also whether
or not your bureau has power and authority to correct these conditions, and, if not, what you would suggest in the way of the necessary
reliet.

Any and all information you can give me beging on the

Any and all information you can give me bearing on this very interesting subject will, I assure you, be greatly appreciated.
Yours, very respectfully,

Chairman Committee on Expenditures in the Department of Agriculture.

APRIL 6, 1916.

Hon. R. L. Doughton,
House of Representatives.

Hone R. Le. Doughton.

House of Representatives.

Dear Mr. Doughton: I have your letter of March 30, addressed to Dr. A. D. Melvin, Chief of the Bureau of Animal Industry of this department, transmitting a copy of House resolution No. 137, regarding an investigation of the sanitary conditions of the dairies and creameries of the country.

The Bureau of Animal Industry already has done a good deal along the line of renovated-butter factory and dairy inspection; milk examination, quarantine of, tuberculin tests of, and experimentation with dairy cattle. Much good undoubtedly has been accomplished, resulting in the destruction of tubercular cattle and improved sanitation in dairies and renovated-butter factories. The work is being continued to the fullest extent possible with the funds available under existing authority of law.

Much has also been done by the Bureau of Chemistry, under the food and drugs act, which has been beneficial in securing better sanitation in dairies and greater cleanliness of milk products shipped in interstate commerce. This statute provides that an article of food shall be deemed to be adulterated "if it consists in whole or in part of a filthy, decomposed, or putrid animal or vegetable substance." Under this provision milk containing bacteria and dirt, indicating the presence of filth or decomposition, has been sampled and the shippers have been prosecuted. These prosecutions have resulted in great improvement in the milk supply of some of our larger cities. The bureau is continuing to perform this work, but, of course, its operations are confined solely to milk and milk products shipped in interstate commerce or sold in the District of Columbia or the Territories of the United States.

From a large amount of correspondence received by the department is appears that a campaign has been started having for its object the se-

or sold in the District of Columbia or the Territories of the United States.

From a large amount of correspondence received by the department it appears that a campaign has been started having for its object the securing of Federal legislation governing the inspection of milk and milk products, and that this subject is involved in trade controversies which have long existed between people financially interested in dairying and the resultant industries and others who are active business competitors. While this condition should not interfere with the securing of effective legislation to protect the public against impure milk and milk products, nevertheless it emphasizes the necessity of proceeding carefully to analyze the situation in order properly to understand what evils are intended to be remedied and how the personal and property rights of citizens will be affected by the proposed legislation. Were Congress to enact a statute providing an effective and comprehensive system of inspection of milk and milk products shipped in interstate commerce, this would require extremely large appropriations at least equivalent to those now provided for meat irspection.

Unquestionably some of the dairies and creameries are insanitary; but the data available, especially on the subject of creameries, are prob-

ably not sufficient to be used as a basis for legislation. The terms "dairies" and "creameries" have often been erroneously used as synonyms, which has led to some confusion and misunderstanding. The word "dairy" is commonly accepted as meaning a dairy farm where milk is produced, while the term "creamery" implies a manufacturing establishment where butter is made.

Our officials in the course of their educational work have been in close contact with State and municipal health authorities and have inspected hundreds of dairy farms annually during the past decade. Nearly every State of the Union and most of the cities have statutes, ordinances, and regulations to control the milk supply, and dairy inspections are required by most of these regulations. The quality of milk supplied for use in the fluid state has improved considerably within the last few years due to better sanitary conditions at the dairy farms and the more extensive use of pasteurization.

The regulation of creameries and the material used for manufacture in such establishments has not been so extensive or complete as that of dairies producing milk for city and town consumption. The Bureau of Animal Industry has made investigations to determine the sanitary condition of creameries and cream-buying stations, and has found that while some of them were in excellent condition, others were very unsatisfactory. Recent observations, however, indicate that there is a desire on the part of those interested to secure improvement.

The department has in its files much valuable information regarding the production of milk and milk products. This was not collected for the purpose of furnishing a basis for legislation, but was obtained in the course of investigations which the department has been authorized to undertake from time to time. You will understand, of course, that a large number of the dairies and creameries of the country operate only local y, and consequently could be dealt with only by the State or local authorities. It would not be possible to d

The Acid Test on Preparedness.

EXTENSION OF REMARKS

HON. CHARLES A. LINDBERGH.

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 8, 1916.

Mr. LINDBERGH. Mr. Speaker, think of it! Two per cent of the people own 60 per cent of all the wealth, while 98 per cent of the people own only 40 per cent. Plutocracy has plundered the Nation. The toilers do all the work that creates the wealth, but the schemers get it. The majority of us are slaves to the "system" and get only a bare subsistence. This we know to be a fact. The question is, What shall we do to get justice? It is simple enough, but it takes determination on the part of the people to put it into force. Therefore we must grit our teeth, clinch our fists, exercise our judgment, and fight with a determination to win.

Every civilized country faces crucial problems in its fights against plutocracy, the greatest foe to humanity. Washington, the Capital of the greatest Nation on earth, is under its control. It has been operating here to undermine the noble institutions which were the inspiration of our forefathers and gave birth to the American flag and the United States of America. Plutocracy has often desecrated the Star-Spangled Banner by using it to inspire America, and while the minds and work of the people were directed to patriotic purposes, plutocracy has robbed the people of 60 per cent of all their wealth. All humanity must now join in the fight against this bold, unscrupulous power.

At other times, here and elsewhere, I have discussed the causes of a few becoming immensely rich and the masses remaining always poor. The pending wars prove conclusively what a folly, yes, worse, what a crime the "system" is that has governed our economic relations with each other and with the world at large.

Anyone not having special privilege who, in contemplation of the last two years, will still support the "system" that special privilege has created must either be contented to be an industrial slave, not know that he is such, or be one of its beneficiaries. A beneficiary must have been of a low order to accept it, for no self-respecting American would voluntarily be a nincompoop. How the toilers and plain consumers who bear the burdens of the "system" could have tolerated the injustice as long as they have is strange.

The existing ravages of war furnish a complete example of how absolutely ridiculous the existing commercial system is. In this war period we have exported enormous quantities of valuable products from farm and factory. We have loaned the credit of our country as well. As yet we have received comparatively little value in return, except that some of our foreign debts were liquidated. For every shipment of goods, the press boasts that the "balance of trade" is enormously great in our favor. In the true measure of value it has been tremendously to our disadvantage, Our toilers have been working to feed, clothe, and shelter foreigners while millions of Americans were needy and able to pay for what they need if given employment. Unfortunately, too, and in addition we have employed our valuable energy to supply foreigners with material for the destruction of valuable property and human When war began we arose out of a state of unnatural industrial and commercial depression and emerged into a state of extraordinary unnatural industrial and commercial activity. Neither was or is satisfactory to the toilers and consumers and both will become more objectionable as time progresses.

SOMETHING OF THE REASON.

The best preparedness in the world against foreign aggression, commercial or other, is to reinforce ourselves with a contented, prosperous, and well-informed American public, by utilizing the great natural resources of this grand continent, as well as the machinery necessary to productive effectiveness, for the common welfare of America all the time. The public is fairly well informed and it knows that no such use has been made of our resources. On the contrary, it knows that the natural resources as well as the most effective machinery have been and now are utilized principally to the advantage of a few-the privileged class.

In order to be prepared to defend our rights-domestic and foreign—we should simultaneously and immediately do two great works: First, correct our social system so that the toilers would be the principal beneficiaries of their own toil; second, and coordinate in time, make ourselves impregnable from foreign foes, should there be any.

SOMETHING OF THE FACTS.

There are still great numbers of unemployed persons willing and able to work. Comparatively few of those who are employed receive more than is barely necessary to a subsistence. There are many hungry, poorly clad, badly sheltered, and unentertained people. This is not natural, but is due to a commercial system that favors speculation more than it favors industry of toil. Let us see what has transpired in this respect since the war began.

In general terms, whatever has been produced in our country, that has been shipped abroad, has depleted an equivalent of our natural resources. It has put to work persons who were idle, to be sure, but who could far better have been employed to supply the necessities of these whom I have described as not having the necessaries of life. They in turn should and could be employed producing necessaries. Then benefits would be reciprocal.

No amount of speculative foreign commerce can make good this lamentable failure in our domestic industry and commerce, either in supplying the needs of a great people or in reenforcing the country in a belief on the part of the people in the practical operation of its industrial, political, and social purposes, thus making its own power of defense the greatest.

Instead of permitting the use of our machinery, the draft upon our material resources, and the employment of our people to make munitions of war and supplies for foreigners, those forces and agencies should be employed producing what is necessary to satisfy the needs of our own people—America—and to put our country in a state of proper preparedness. To reenforce our future needs the Government should buy and store all the excess products except what are required to exchange for foreign products that we need and can not as practically produce. This is the first and most important law of preparedness. Instead of doing that, speculators continually keep their agents on the ocean. traveling between here and Europe and other continents, making bargains for the speculators.

American speculators alone have already made probably over \$2,000,000,000 in the war period. In the meantime, and in consequence of that practice, the cost of the necessaries of life increases constantly, so that for every exportation of goods made to enable the speculators to scalp their enormous profits, the goods of the kind necessary for home consumption have increased in price to the consumers at home.

Take the price of gasoline alone as an example. A year ago it was sold at retail for 11 to 15 cents per gallon. Now, because of export demand it sells for an average of twice what it did then. The press boasts of exports because, as it says, it increases the balance of trade in our favor. How absurd their boast is!

The total profits the Oil Trusts make on all the gasoline

they export does not begin to equal the amount that the consumers in our own country have been forced to pay over what they did in the previous year. Therefore the thing that has really happened is that for the support of the "national honor" (?) we have spent hundreds of millions of taxes collected from the people and made the taxpayers pay very much more for the necessaries of life, and we have reduced our natural resources in the supply of gasoline. Is this the part of wisdom on the part of a mighty people? These Oil Trust magnates,

of preparedness that builds up that kind of business-the very thing that weakens us year by year as time passes.

I will give one more illustration, which will further explain

the folly of the existing system of commerce. industry. I have not the exact figures at hand and will state the case hypothetically: The foreign commerce in shoes, we will say, has netted \$90,000,000 profit to the dealers. The price of shoes to the consumers in America has increased on an average \$1 per capita additional for shoes worn during that period. This is equal to \$100,000,000. That would be equivalent to every dollar of the profit the Shoe Trust made on foreign trade and \$10,000,000 additional. That came out of our home consumers to support foreign commerce. In the meantime the material and industrial resources of the country were being consumed to the disadvantage of the American people. Additional examples are not needed to illustrate the operation of the fake system. That is the system of economics practiced and for which some misguided but patriotic and honest Americans would fight the world in arms. The beneficiaries of this system have subsidized every agency that could be influenced to cry for their kind of "preparedness," a preparedness which would ultimately reduce the people of this country to the very dregs.

True Americans want the preparedness that would mean an independent American citizenship, one that is not under the heels of plutocracy. Plutocracy demands the preparedness that will add additional billions to their individual bank accounts and property holdings in order to force from the toilers an additional toll to pay interest, dividends, and profits upon it. Such "preparedness" will undermine the very foundations of our Government and weaken America. Let the toilers who are now employed in making munitions of war for Europe and foreign lands be employed to make the things needed to protect ourselves and to build an honest domestic commerce. I would vote billions upon billions of dollars, if necessary, for such preparedness, and for preparedness against foreign aggression, but not a penny to support a false commercial system. I insist that so far as my vote goes it shall be for the kind of preparedness that strengthens rather than weakens us; of the kind that makes to the independence and prosperity of the people, which in turn makes the strongest America and one that is worth

After the war is all over the plain people will, in the mean-time, have lived up all their earnings secured from a false system, and have nothing ahead; but the speculators who have had their agents traveling on the ocean between America and Europe to drive sharp bargains will have additional billions of capitalization to their credit, and it will be used as a basis on which to levy against the toilers an additional so-called "rea-sonable profit." The toilers will have to pay this or go hungry, unless America arises to its duty and establishes a just system.

Why is it that all the letters, petitions, and demands for so-called "preparedness" are for one kind of preparedness only— for gun-armament preparedness? No one who asks for this kind of preparedness has ever suggested economic preparedness to go with it. I get letters, demands, and petitions from bankers, club men, munition factories, navy leagues, steel and other trusts by the thousands, but not one of them ever suggested that military preparedness should go hand in hand with economic preparedness. They are not willing to sacrifice one dollar of their own unless they get back many.

The bankers know that military armament preparedness will require more credit, increase the debts, make the interest rates higher, and their profits greater. The munition trusts know that they can make hundreds of millions in profits out of that kind of preparedness. The navy leagues are known to have been organized by those who get the profits out of the kind of preparedness they demand. The same thing is true of the rest of those making these persistent demands.

What about the plain toilers and consumers? To them the whole expense of armament is assessed. The bankers, instead of reducing the rates of interest, increase the rates. others who profit out of that kind of preparedness will increase their profits. Why, if they are the "sole" Americans, do they not offer to reduce the rates of interest or the profits for themselves? When they do that, instead of letting the burden all fall on the tollers, even to adding a big profit for the bankers and others, I shall believe that they are really loyal, patriotic Americans instead of the "sole Americans," as the subsidized press now labels them.

In my remarks a few days since I showed that by certain economic changes we could save for the toilers several billion dollars per annum and that the toilers would gladly stand for what is necessary to pay for true and necessary preparedness against any possible contingency. If the country demands of on the part of a mighty people? These Oil Trust magnates, the tollers that they bear the expense of preparedness, let it together with the other trust magnates, are demanding a kind include economic preparedness, so that it will all be worth white.

Oh, how the plain people-the toilers, the producers, and con--have been deceived! The general impression is that truth is free. No one seems willing to buy it, however, and since it costs money to compile and present it in practical form to be read, not much of it comes before the public in concrete ferm so that everybody can get at it. Everybody is therefore puzzled about existing conditions.

DECEPTION AS A FINE ART.

At no period in the world's history has deceit been so bold and aggressive as now in attempting to engulf all humanity in the maelstrom of hell. The whole world is sizzling in the " Sober men and women who measure the conditions with unselfish judgment and suggest sane action are pounced upon by the devils in command of the "hell storm" in an attempt to have them labeled "cowards," and to force us into war over a standard of false national honor. Many of the highest officers of Government fail to sustain their moral courage for common sense and add to the confusion of the excited by trying to support the demands of the speculators.

Amid all this confusion the lords of "special privilege" stand serene in their selfish glee, coining billions of profit from the rage of war. They coldly register every volley of artillery, every act of violent aggression, as a profit on their war stock and war contracts. They commercialize every excitement, scalp in and out of the market alternately, taking a profit both ways on a

fluctuating market.

Deception has paid a few so well that its practice has become a fine art and is maintained by many ingenious schemes. who earn their living by the sweat of many hours of daily toll have little time left after their work is done to figure out the ways in which the schemers gather in the cream of the products

THE INVISIBLE ORGANIZERS.

We have been buncoed, and a majority of us do not know how it was done. "Invisible organizers" did it. Special privilege employs many agencies for the purpose; Rockefeller Institute, Carnegie Foundation, and the like, besides most of the great city press, are maintained by them for that purpose. Their work is even stealthily being introduced into the public schools. They do not leave the tender minds of the children free to unselfish tutorship by parents and teachers, but use adroit means in an attempt to warp the youthful minds in a belief in special privilege. They also seek to control civic bodies and league them with the United States Chamber of Commerce, supported by and for special privilege. Their articles disclose no selfishness. On the contrary, they are commendable in terms, but back of it all are the "invisible organizers" who make use of these civic bodies to further selfish ends.

The ordinary work of these civic bodies is beneficial. Most of the members are from the best citizens, acting with the best motives. Little do they know when they join of the deep-laid schemes of the "inner circle" or even that an "inner circle" exists. It is the underground lines that are used by the "inner circle" only that lead to the crooked work, and only the "inner circle" and the attorneys of them know how it is done. Now, however, we have come to the acid test of existing capitalism. I have simply given a few hints of the folly of the plain people supporting it. I realize that for the attacks I have made heretofore, and now, and will continue to make upon this unjust system, that I will be misrepresented and libeled by that portion of the press that belongs to special privilege. I further realize that their agents scattered into nearly every community will be busy with the purpose of injuring me if they can.

Cumberland River.

EXTENSION OF REMARKS

HON. JOHN H. SMALL, OF NORTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES, Saturday, April 8, 1916.

Mr. SMALL. Mr. Speaker, at the top of page 10 of the minority report by Mr. Frear it is stated:

After deducting floatable timber and sand that does not require 28 locks, a commerce of 53,000 tons is reported. The haul is not stated, possibly 20 to 50 miles.

On page 2847 of the Annual Report of the Chief of Engineers an itemized statement of the commerce of this river on the section above Nashville is given. It shows a total of 314,028 tons, valued at \$6,784,999; the average haul being 64 miles, and the rate per

ton-mile 1.59 cents; 172,672 tons consisted of wood products, 96,993 tons of which were rafted; farm products amounted to 16,037 tons; manufactured articles, 23,445 tons; sand and gravel, 100,925 tons (carried 12 miles); coal, 199 tons; mussel shells, 810 tons. Out of 35 different commodities transported 7 were carried a distance less than 100 miles, 14 between 100 and 200, and 14 between 200 and 271.

On page 2848 of said annual report an itemized statement of the commerce on the lower river is given. Forest products amount to 102,003 tons, of which 46,335 tons were rafted; farm products, 6,151 tons; manufactured articles, 6,054 tons; sand and gravel, 38,976 tons (average haul, 12 miles). commerce amounted to 153,458 tons, valued at \$2,238,207, and the average haul 100 miles. Average rate per ton-mile, 1.05 cents. The average haul on 14 commodities was between 1 and 100 miles, and on 14 others between 100 and 200 miles. There is not continuous navigation on this stretch of the river, which is 192.6 miles long.

The construction of Lock 21, on the upper section, caused a reduction of freight rates of about one-half within its pool area (p. 1087); Locks 1 to 7, on the upper section, have caused a reduction in railroad freight rates between Nashville and Carthage, 115.8 miles, and in river freight rates between Nashville and West Point, 125.2 miles.

Page 1088:

Only one of the six locks and dams covered by the project is completed; nevertheless, even in its present condition, the lower Cumberland River has a marked effect on railroad freight rates, and the navigable facilities offered by this stream are undoubtedly responsible for the favorable freight rates which Nashville has been granted, as compared with rates between towns not connected by a navigable waterway. The effect of the continuous navigation provided by the canalization for the 41.4 miles below Nashville was noted from the immediate reduction by about 50 per cent in the rates charged by the Tennessee Central Railroad over that part of its line which parallels the pool of Dam A.

What is Americanism?

EXTENSION OF REMARKS

HON. EDWARD KEATING.

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 8, 1916.

Mr. KEATING. Mr. Speaker, I have asked unanimous consent to extend my remarks in the Record, in order that I might insert an article on "Americanism," by the distinguished gentleman from Illinois [Mr. Buchanan]. This article was prepared for the Illinois Staats-Zeitung, of Chicago, and appeared in a recent issue of that paper. Mr. Buchanan's article is as follows:

WHAT IS AMERICANISM?

[By Frank Buchanan, Congressman from Illinois.]

When we ask "What is Americanism?" we instinctively call to mind the struggle which made this great Republic possible. We ask ourselves why this great sacrifice, why this heroic determination to throw off the yoke of a mother country? The answer is to be found in the preamble of the greatest instrument of freedom in the history of mankind, our Constitution, and in the immortal words of Thomas Jefferson: "Equality for all, and special privilege to none."

True Americanism means upholding the basic principles of humanity, upon which this Government is founded. It means a love and attachment to our institutions and ideals. It means that America shall be held above all other nations and that there shall be no divided allegiance. But this, however, does not preclude a man from loving his native land; it does not mean that he must wipe from his vision the picture of his childhood days, from his mind the memories of his youth,

and from his heart the love and associations that grew and were fostered there.

and from his heart the love and associations that grew and were fostered there.

If a man raise his voice in behalf of universal peace, should he be maligned by a venal press and pronounced a traitor? If he lifts his hand in opposition and protest to the manufacture of death-dealing weapons meant to slay men who are our friends, and to widow their wives and orphan their children, should he be condemned and ostracted? Let us hope that our race has not fallen to such a level. Let us hope that the crimson words of our Constitution shall not have been written in vain.

A true American is one who loves the people of America and faithfully tries to serve them, and whose fidelity to their cause will not be swerved by imminent danger to his personal interests or by threats from powerful influences to destroy him. True Americanism exists in him who has the courage to strive for the rights and freedom of humanity under great difficulties. A true and intelligent American understands that he is to a degree a citizen of the world, and while striving to serve the best interests of America, realizes that their interests are best served by directing his influence to serve humanity elsewhere.

There were men—mostly of foreign birth—in the coal districts of Colorado, who, but a few months ago, arose in their might and wrath in protest against the tyrannical and despotic rule of their masters. They fought, they suffered, they died for the principles of humanity and justice. Who dare say that they were not Americans does not mean a family tree. Americanism means liberty, equality, and justice, and he who stands firmest in support of these principles deserves most to be called an American.

Woman Suffrage.

EXTENSION OF REMARKS

HON. C. C. DILL,

OF WASHINGTON, IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 8, 1916.

Mr. DILL. Mr. Speaker, under the permission granted me to extend my remarks in the Record on the subject of woman suffrage, I include a letter from the Washington branch of the Congressional Union and my reply thereto. The letter reads as follows:

CONGRESSIONAL UNION FOR WOMAN SUFFRAGE, Seattle, Wash., April 1, 1916.

Representative C. C. Dill, Washington, D. C.

Representative C. C. DILL,

Washington, D. C.

Dear Sir: We beg to submit to you for your most earnest consideration the attached resolution which was unanimously adopted by the 200 women voters of Washington assembled in State conference in Seattle, at the Washington Annex, March 30, 1916.

The conference was for the purpose of organizing women voters on behalf of the passage of the Susan B. Anthony amendment during the present session of Congress. All the leading women's clubs in the State were represented, and the delegates pledged political and financial support to the work.

We hope you will do all in your power to make possible the immediate passage of this measure.

Very respectfully, yours,

Mrs. Frances Axtell; Mrs. Floyd Otis Lamson, Seattle; Miss Frances Skinner, Seattle; Mrs. Wallis Williams, North Yakima; Mrs. Ella Balabanoff, Tacoma; Dean Rhoda White, Pullman; Mrs. Marion Field Green, Spokane; Miss Grace Isaacs, Walla Walla, vice charman; Mrs. Marshall Fulton, Spokane, treasurer.

Officers Washington Branch, Congressional Union:

FLORENCE DES CAMT TERRY, Secretary.

Address, Mrs. Frances C. Axtell, 413 Maple Street, Bellingham, Wash.

Address, Mrs. Frances C. Axtell, 413 Maple Street, Bellingham, Wash. The resolutions are as follows:

The resolutions are as follows:

Resolved, That we, as women voters of the State of Washington, assembled in conference at the Washington Annex, in Seattle, the 30th of March, 1916, protest against the action of the Judiciary Committee of the House in voting to postpone indefinitely reporting the Susan B. Anthony amendment to the House for action.

Resolved, That we, as women constituents of the Federal Government, demand an immediate and favorable report of this measure to the House, that the women of the East may soon enjoy the same political freedom as the women of the West, and we call upon the national administration leaders as well as the members of the Judiciary Committee to do all in their power to give facilities for the immediate passage of the amendment: Be it finally

Resolved, That a copy of this resolution be sent to all men herein named and to the entire Washington congressional delegation, and be read into the Congressional Record.

My reply therefo is as follows:

My reply thereto is as follows:

APRIL 8, 1916.

APRIL 8, 1916.

Mrs. Frances Antell,
413 Maple Street, Bellingham, Wash.

Dear Mrs. Antell: I am in receipt of your letter of the 1st instant, inclosing a resolution adopted by 200 women voters of Washington at Seattle, March 30, 1916, under the auspices of the Washington Branch of the Congressional Union. In the resolution you request that I place a copy of the proposed resolution in the Congressional Encoup, which I shall be glad to do, together with your letter and my reply.

I am informed by some of the women who were present at the meeting at Seattle that one of the representatives of the Congressional Union, Miss Doris Stevens, criticized me for not supporting woman suffrage. As a basis for her statements, she repeatedly referred to the fact that in sending out a list of questions to the voters of my district recently, asking their opinions on certain public questions, I did

not include a question on the subject of woman suffrage. The argument seems so ridiculous on its face that at first I questioned whether or not it is worthy of a reply, and had this meeting been held in Spokane, my home town, I certainly would not have dignified it by discussion. As her address was made in Seattle, however, I think it but fair that you and the women associated with you should know the facts.

facts.

It seems to me that to have included a question on the subject of woman suffrage to the voters of my district would have been the strongest possible way to suggest that I was in doubt as to what they thought on the subject. I knew beyond any doubt that they are overwhelmingly in favor of woman suffrage, and they knew how strongly I favored suffrage because of the speeches I made before I was elected to Congress and my work since I was elected. In short, to have asked them such a question as Miss Stevens suggested would have been an insult to their intelligence.

snifrage because of the speeches I made before I was elected to Congress and my work since I was elected. In short, to have asked them such a question as Miss Stevens suggested would have been an insult to their infeligence.

I may add that during the campaign of 1914 this same Congressional Union sent a worker into my district, who opposed me in every way possible and appealed repeatedly to the women voters of the fifth congressional district to vote against me. She did this in spite of the fact that I had for years been an ardent supporter of woman suffrage, that I was then in favor of woman sufrage, and that I was pledged to support any amendment or bill which might come up in Congress granting suffrage to women in any part of the United States or its Territories. This woman spent the last 10 days preceding election in my district, because she said she was especially anxious to defeat me. When the votes were counted I had a plurality of more than 4,000 and was the only Democratic Representative elected from the State of Washington.

Since that election I have worked for suffrage at every opportunity. I have spoken for the cause again and again. During the last 10 days preceding the election of 1915 I donated my services as a speaker for suffrage in the State of New York, traveling through the northern part of the State, speaking every night at suffrage meetings, and also at two meetings in New York City the closing day and night of the campaign. Since Congress convened I have repeatedly urged the members of the Judiciary Committee of the House to report the woman-suffrage amendment favorably. On different occasions I have laid aside other work and have gone to see individual Members of the House in the interest of suffrage, at the request of members of the House in whe interest of suffrage, at the request of members of the House in the interest of suffrage, at the request of members of the House in the interest of suffrage, at the request of members of the House in the interest of the suffrage, at the reques

The Fable of the Wolf and the Lamb.

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON.

OF ALABAMA. IN THE HOUSE OF REPRESENTATIVES,

Monday, April 10, 1916.

Mr. HUDDLESTON. Mr. Speaker, as the old fable runs, a wolf going for a drink of water saw a lamb drinking farther down the stream, and wishing to make an excuse for making a meal off the lamb approached it, saying:

"You are muddying the water I was going to drink."

"That can not be," meekly replied the lamb, "for the water is running from you to me."

The baffled wolf took a new tack. "You insulted me last week," he snarled.

week, 'ne snarled.

"Spare me," said the lamb, "I was born only yesterday."

"Then it was your brother," growled the wolf.

"No," said the lamb, "I have no brother."

"Oh, well," snarled the wolf as he advanced on his prey, "it is no matter; it was one of your kind." And so the wolf pro-

"Oh, well," snarled the wolf as he advanced on his prey, "it is no matter; it was one of your kind." And so the wolf proceeded with his breakfast.

The moral of this fable is that the wicked can always find an excuse for their misdeeds.

Prior to my entry into public life I had been a sort of self-appointed champion of the rights of the people in my city. I had volunteered to defend the public interest on several occasions against the encroachments of large business interests which were seeking their selfish ends at the expense of the public good. I had taken an active part in movements for the

beauty and healthfulness of my city and for lower water and light rates. I had given close study to questions affecting the rights of labor and had dared to be sympathetic toward the poor and oppressed and to show an interest in the common man.

As a result of my activities along these lines, I incurred the enmity of selfish interests engaged in exploiting the people. These interests opposed me in my election to Congress and have refused to accept in good spirit the result of the election. They have continued to cherish the rancorous dislike which they disclosed in my first campaign. My efforts to conciliate them by a high-minded devotion to the duties of my office have failed. These small but powerful interests, with their newspaper organ and their friends and sycophants, have belittled and ridiculed me ever since my election. They have been resolved that I should not be reelected and have plotted and planned to defeat

The selfish interests opposing me have hunted diligently for some excuse for their course. Not being able to find any real excuse in my public or private life, they have been forced to manufacture a false one. They now bring against me the charge of lack of loyalty to my party.

Those who criticize me are not Democrats; never have been and never will be. They are mere self-seekers, and selfishness is their highest principle. They merely masquerade as Democrats in order to further their selfish ends.

The charge of party irregularity which my opposition brings against me is based upon my vote at the beginning of the present Congress to postpone the adoption of rules for the House so that some needed amendments might be made, it happening that o majority of my party voted on the other side. The question was not a party question. It had not been mentioned in any party caucus. It had nothing to do with the principles of Democracy and was a trifling matter relating merely to how the House should carry on its business. But my enemies needed an excuse, and they made this the excuse; and to further carry out their plot they not only misropressed my too but how too business. carry out their plot they not only misrepresent my vote but charge that as a result of it I have lost my influence and standing among the Democrats of the House, and that my usefulness as a Representative is gone.

The suggestion that my vote has affected my influence with the Democrats in the House is not only false but absurd to anyone who knows the facts. After I had cast that vote I was elected by the Democrats to three important committees in the House, one of them the Committee on Foreign Affairs, which at this critical time is a committee of the greatest importance. I have been treated with confidence and respect by every Democrat in the House. Not one of them has ever mentioned my vote on the rules. Nothing whatever has been heard of it in Washington. It is only in false and unjust reports in my own city that the matter has been exploited. I have been invited into small circles of leaders for consultation on matters of party policy. On more than one occasion, by invitation of Speaker Clark, I have presided over the House, an honor which would not have been conferred had my party regularity been in question.

I was the first of all the Alabama Members, new or old, to get a bill passed by the present Congress. It was not much of a bill. It was merely a bill for the pension of a poor, paralyzed, blind veteran who was a cook in our company kitchen in the Spanish War. I had been one of his flunkies and dishwashers when I was a soldier, and knew all about his case, and it was not hard to get his bill through. I succeeded in getting an item for the survey of Valley Creek included in the general rivers and harbors bill, which has passed the House. I am willing that my work here may be compared with that of any other new Member.

A few days ago Mr. T. H. Molton, of Birmingham, one of my friends, wrote to Hon. CLAUDE KITCHIN, the Democratic House leader, and asked whether the charge of party irregularity against me was true, and whether my vote on the rules had destroyed my influence. To this letter Mr. KITCHIN made the following reply:

WASHINGTON, D. C., March 31, 1916.

Mr. T. H. Molton, Birmingham, Ala.

up to every requirement of an able, useful, patriotic, and wise Representative and legislator. I count any district fortunate in having such a Representative.

With best wishes and kind regards, I beg to remain,
Sincerely, yours,

CLAUDE KITCHIN.

This correspondence was known to the Birmingham papers. Only the Ledger published an account of it. Other papers had published the criticism against me, but they did not mention r. Kitchin's letter.

My opposition is insincere in the criticism. It is a dishonest criticism. They are seeking to make an excuse. They conceal their real reason for opposing me. My critics know that I am kept in Washington by the pressure of my official duties. can not come home to expose their malice and insincerity. They take advantage of my absence to stab me in the back with false criticisms.

I am at my post in Washington, and I shall not leave it. The Democratic majority is very small in the House. My absence might prove fatal to some important measure for the public Our great President needs me to hold up his hands in the House and to help to preserve the peace and prosperity The House Committee on Foreign Affairs, of of this Nation. which I am a Member, has charge of matters affecting our relations with foreign countries. We can not tell when something may break loose in Mexico or Europe. I am needed here. I will not desert my post merely to further my own private

My critics are indeed like the wolf. Having the desire to tear me to pieces they seek for some excuse for their meanness. It may be that the wolf who had made up his mind to eat the lamb was himself satisfied with the excuse that he made. may be that my critics have satisfied themselves with their silly excuse. I doubt that they can deceive the honest people of my

I am willing to trust the fairness and good judgment of my people. They know me personally, nearly every one of them. They know that I am honest and that I am not the candidate of any clique or faction and under no obligation to such. They know that I am a good Democrat. They will give me a square

The Valley Creek Survey.

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON.

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, April 11, 1916.

Mr. HUDDLESTON. Mr. Speaker, some months ago I introduced a bill (H. R. 8225) providing for the survey of Valley Creek in Jefferson County, Ala., with the view to making same navigable. This bill was referred to the Committee on Rivers and Harbors, and after receiving consideration by that committee was reported as an item in the general rivers and harbors bill, which is now before the House.

The improvement of the Warrior, Black Warrior, and Tombigbee Rivers for the purposes of navigation has been under way for a number of years. These rivers flow in the main through an agricultural section, which does not produce much commerce. The upper reaches of the Warrior lie in the celebrated Birmingham district of Alabama, with its rich veins

of coal and its deposits of red iron ore.

The improvement of these rivers was entered upon chiefly for the purpose of giving the Birmingham district water connection with the Gulf. They flow through the Appalachian foothills and have many shoals and rapids, and the expense of improving them for navigation would have been unwarranted had the commerce produced by agriculture alone been considered. However, it was realized that there was an immense tonnage of heavy freight suitable to be carried by water originating in Jefferson County, where Birmingham is situated, and that with suitable improvement of the rivers transportation of these heavy products would be greatly facilitated.

The district intended to be reached is rich in coal, iron ore, and other raw materials. It is splendidly adapted to iron and steel manufacturing. It is said that pig iron may be made more cheaply there than anywhere else in the world. It has many coal mines, coke ovens, iron furnaces, steelworks, rolling mills, The matter presented foundries, and similar establishments. The products of the dis-

trict are in the main of the kind to demand low cost of carriage and do not require rapid transportation. For this reason water carriage is much to be desired and will prove highly beneficial.

The extension of navigation up the Warrior River was recently completed by the construction of Lock 17, which provides slack water to within about 20 miles of Birmingham. The total cost of all the improvements on these rivers to date is \$9,928,879.18, exclusive of maintenance and care. Lock 17 was opened for operation on May 13, 1915. The tonnage of freight passing through that lock had gradually increased until for December, 1915, it was 11,218 short tons. At Tuscaloosa, some 60 miles down the river from Birmingham, the entire water-borne commerce for 1915 was only 54,088 tons.

These figures indicate that the commerce borne by these streams is greatly less than had been anticipated. It is a shocking fact that if all the commerce borne by these rivers had been confiscated and sold at full value the amount realized for 1915 would be insufficient to pay interest upon the amount which the Government has expended upon the river improvement. This is

a situation provocative of thought.

By the completion of Lock 17 slack water is brought to certain coal measures in the southern and central portions of the Warrior coal field. The iron deposits are not reached. The coal measures reached by slack water are worked by a number of mines located on or near the river. Three concerns have availed themselves of the opportunity to use the river to transport coal. Two of these shippers have mines near the river, but have used it to no great extent. The third concern which has used the river has carried its coal over the Ensley Southern Railroad to a point near Short Creek, where it has been loaded into barges for Mobile and New Orleans, the operation being carried on at a cost of from 5 cents to 10 cents per ton more than it would cost to ship the coal by an all-rail route from the mines to the same

It is expected that the use of the Warrior River for carrying coal will be increased and that a commerce in other commodities will be built up. It is a fact, however, that to the present the Birmingham district has received very little benefit from the improvement of these rivers, and the result has been a great disappointment. The people of our community are thoroughly alive to this situation, and a number of solutions for it have been presented. It has been urged that the corporate limits of Birmingham be extended so as to include a narrow strip extending to the river with the idea that this would force the railroads to reduce freight rates to the basis of water competition. Another project urged is the construction of a paved wagon road from the city to slack water with the idea of establishing lines of trucks and other vehicles for hauling the freight to the water. Another scheme has been to build an electric railway to the river.

None of the projects advanced for the solution of Birming-ham's transportation difficulties has appeared to meet the situation. The making of freight rates is a practical matter. Competition in carrying commodities is practical and not theoretical. Railroads will reduce their rates only if by failing to do so they will lose traffic to a competitor. It must also be manifest that there can be no real competition with the rail-

roads by means of trucks or similar vehicles.

Birmingham has three lines of railroad touching slack water on the Warrior River. Two of these lines reach it at Cordova, some 30 miles west, but to this time little, if any, benefit has been derived on account of this fact. The chird railroad is the Ensley Southern, some 20 miles in length, which reaches the river near Short Creek. It is stated that a proposition has been made to sell this railroad to the city of Birmingham, but this is unpractical, for the reason that it is more of a scenic than a commercial road and is full of extremely difficult grades and curves, and it would have to be practically relocated and rebuilt to have much value as a line for freight transportation.

For many years the desire of my community for slack-water connection with the Warrior River has been keen. The project was first brought to the public attention in 1896 by J. A. Van Hoose, then mayor of Birmingham, who insisted that it was feasible. Under an authorization of the general rivers and harbors bill of 1896 an examination was conducted by Maj. W. T. Rossell, who reported that he was of opinion that a thorough investigation should be made, as he believed that the

The original project was to bring slack water to a point on Village Creek near the suburbs of Birmingham. It was contemplated that Valley Creek should be canalized to Bessemer, and from thence to the terminal north of Birmingham, about 15 miles, a canal with numerous locks should be constructed. The matter presented difficulties, not merely of cost but of water

A thorough investigation of the project was made by the United States Engineer Office in 1898 and a report made which is found in House Document No. 88 of the Fifty-fifth Congress. This report is as follows:

OFFICE OF THE CHIEF OF ENGINEERS, UNITED STATES ARMY, Washington, D. C., December 13, 1898.

OFFICE OF THE CHIEF OF ENGINEERS,
UNITED STATES ARMY,
Washington, D. C., December 13, 1898.

Sir.: I have the honor to submit the accompanying report of November 10, 1898, with map, by Maj. William T. Rossell, Corps of Engineers, of a survey made in compliance with requirements of the sundry civil act of June 4, 1897, to examine into the feasibility and advisability of the improvement of the waterway beginning at a point at or near the site selected for Lock No. 13 on the Warrior River, and continuing up Valley River from its month to Bessemer, Ala., thence to Birmingham, Ala., and beyond to Five Mile Creek, so as to secure a channel to have a minimum depth of 6 feet, with a least width of 50 feet at the water line, and to ascertain the cost of such improvement.

Maj. Rossell states that the country through which the Valley River runs is very broken and rocky, with high banks; that there is no question of the feasibility of building this line; and that, if the work is confined at present to canalizing Valley River and building storage reservoirs for supplying the canal with water in times of drought, the project is both feasible and advisable.

The project for this improvement contemplates the construction of 21 dams and locks of 10 feet lift, between the Warrior River and McAdory (about 40 miles), a storage-reservoir dam at Big Blue Creek. I at Little Blue Creek, and 2 at McAdory, and the estimated cost of the entire work, including damages, water powers, snubbing posts, telegraph and telephone lines, contingencies, and the construction of a railroad for transporting materials, is \$4,500,000.

A separate project is presented for continuing the improvement by canal to Five Mile Creek. It provides for construction between McAdory and Five Mile Creek (about 23 miles) of 13 locks and dams and a reservoir dam, and the estimated cost of this work, including miscellaneous items and contingencies, is \$4,000,000; but the local engineer states that it is doubtful if the canal can be operated throughout the year on accou

JOHN M. WILSON, Brigadier General, Chief of Engineers, United States Army.

Italics are not in the original.

The project then under investigation was not the same as that which we are now considering, which contemplates terminals at Bessemer. The original project contemplated terminals 15 miles north of Bessemer, at a point north of the city of Birmingham. I also call attention to the fact that Locks 16 and 17 had not been constructed at the time this examination was made, and that the situation has materially changed.

The construction of Lock 17, into the pool of which Valley Creek empties, has backed the water for several miles up Valley Creek, so that this much of the stream has already been taken care of. The item carried by the bill is for the improvement of the remainder of the creek up to a point adjacent to the city of Bessemer, where terminals would be located. The most expensive and troublesome part of the project—that is, the extension from Bessemer to the point north of Birmingham, which is over difficult ridges-is eliminated.

The change in the project will reduce the cost, it is believed, to less than half, and will solve the difficulty of water for This was one of the chief difficulties in the original project and one of its chief items of cost, for it was found to be necessary that water for this purpose should be brought by canal from the Locust Fork of the Warrior, some 25 miles from the Birmingham terminal, which involved impounding dams and other expensive works.

The city of Bessemer has a population of about 15,000. It is a manufacturing center and is the site of numerous furnaces, rolling mills, foundries, and so forth. It is connected with Birmingham by two electric lines and practically all the railroads of the district have terminals there. It is believed that slack-water navigation with terminals at Bessemer will be almost as beneficial to the Birmingham district, as a whole, as though the terminals were at Birmingham itself. All sources of heavy freight are located substantially as conveniently to Bessemer as to Birmingham, and the railroads and other convenient means of transportation would cause a great reduction in freight rates on other commodities.

The Government has been generous in appropriations for the Warrior River. As previously stated, the prime object of the improvements made on this river is to reach the Birmingham district, so as to give it the benefit of water transportation for

the heavy mineral products originating there. The work of improvement, however, has stopped short of accomplishing the desired results, and it must be admitted that the benefit which is now being derived by the district from the improvements which have been made is so small as to be most disappointing. The traffic is there. A larger tonnage of freight originates in that immediate section than any other similar region south of the Ohio or west of the Mississippi. Many millions of tons of coal, coke, iron, and steel products are waiting to be moved.

I regret to fear that the Warrior River improvement will re-

main a failure and disappointment if the work stops where it now is. I fear that the Government's millions will be shown to have been spent in vain unless something further is done. A crown should be placed upon these improvements by canalizing Valley Creek to Bessemer. When this is done the transportation problems of the district will have been largely solved. It is not fair to argue that the city of Birmingham itself will not be benefited unless water should be brought to its very limits. The fact is that our whole manufacturing and industrial district is a single community, and what benefits one part of it will benefit all. It is also a fact that with the water terminals at Bessemer practically every advantage will be gained as though these terminals were at the point originally contemplated north of Birmingham.

This project does not rely for its merits upon forcing the railroads to reduce their rates by water competition. The commodities are there that need to be carried by water. There is plenty of traffic for both railroads and river. To-day there is a plenty of traffic for both railroads and river. To-day there is a distressing car shortage in the Birmingham district, a shortage which greatly hampers our mines and mills. We want these improvements made, not to be kept in costly idleness but to be put into the actual service of transporting freight. There is an actual necessity for this,

The canalization of Valley Creek is not a matter which concerns the mineral district of Alabama alone. The Gulf ports need our products of coal and iron. They need these products freed from the heavy tax of railroad freights. The growth and development of every city on the Gulf would be promoted by this work. Great ships sailing the seas would be able to obtain our superior Alabama coal for their bunkers at these ports and would be encouraged to call at them. Commerce with all the world and the development of the entire southern country would be promoted.

Parcel Post.

EXTENSION OF REMARKS

HON. THOMAS D. SCHALL.

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES, Tuesday, April 11, 1916.

Mr. SCHALL. Mr. Speaker, I am in favor of recommitting the Post Office appropriation bill to the Committee on the Post office and Post Roads with instructions to report it back forth-with with an amendment adding the words "one hundred and" before the words "fifty pounds." One hundred and fifty pounds as the limit of a parcel-post package would not, as the gentleman from Illinois [Mr. Mann] suggests, require derricks to load the mail, but it would effectually put this valuable branch of the Post Office Department at the service of the farmer. This innocent-looking amendment to limit the parcel-post weight to 50 pounds is in the interest of the express companies.

The parcel post is the people's express company. Although it is still in its infancy, it has almost revolutionized farming of to-day, and it is capable of almost limitless development in the rural districts. The reciprocal advantages to the consumer of obtaining fresh, crisp vegetables, new-laid eggs, and plump country chickens, and to the farmer of a ready market, caused hope to spring that the fell ghost of the high cost of living would be a little put to rout.

Parcel post has opened to the farmer a new vista. In conjunction with good rural free-delivery service, it solves the marketing problem. In the fruit district around Lake Minnetonka, where I live, members of the cooperative association pick and box their berries, apples, or vegetables, load them on the parcel post, and they are taken to the cooperative ware-houses the same day. The poultry industry has been given an impetus; both fowls and fresh eggs finding their way quickly the consumer via the parcel post.

Merchants in small towns send out their advertisements to their rural patrons who return the order on the next mail. By the original bill, the weight, the size of the parcel-post package is left to the regulation of the Postmaster General.

The Madden amendment is in the interests of the express companies, who are deadly rivals of the parcel post, and would be happy to see its scope and future development strangled, which the Madden amendment seeks to do. It is vicious in its intent. No one can tell what the future of the parcel post may To limit it in the direction of weight now is subversive of the best interests of the farmer. Suppose the rural carrier has only a small cart, and is unable at present to accommodate parcels anywhere near the limit, shall that be used as an argument to choke forever the future possibilities of this institution, when light, practical motor trucks are in sight? If the business warrant, it is easy to put on more carriers. One hundred and fifty pounds would take in a dressed hog, or a calf, a sack of pota-toes or rutabagas. The United States can surely take care of the simple problem of transportation and roads when our citizens are convinced of the necessity. It is medieval to sit down by the wayside in the face of so slight an obstacle when the advantages on the other side is so overwhelming. The question of economic delivery and a proper structure for rural delivery ought to be left to the discretion of post-office experts to meet as the traffic develops. The parcel-post limit should begin where the express company becomes exorbitant-that is, at the 100-pound limit. Under that limit express-company prices are prohibitive. They bar the farmer from using that medium for the exchange of his commodities.

I am not in favor of cutting down the service to the farmer. This is the one tangible benefit that accrues to him from his taxes. I am, therefore, opposed to limiting the parcel post.

River Improvement in Idaho.

EXTENSION OF REMARKS

HON. ROBERT M. McCRACKEN, OF IDAHO.

IN THE HOUSE OF REPRESENTATIVES, Monday, April 10, 1916.

Mr. McCRACKEN. Mr. Speaker, this bill incorporates the main provisions of House bill 10762, introduced by me on the 3d day of February of this year, looking to the survey of the Snake River from its mouth to Pittsburgh Landing, with a view to canalizing the Snake River so that it might be utilized for the purposes of commerce and the development of hydroelectric power. The Rivers and Harbors Committee considered my bill very carefully before its provisions were written into the bill which is now before the House, and I am glad to know that there is no sentiment in the House against making the surveys which we ask for.

The Dalles-Celilo Canal was opened to traffic less than one year ago. Within three months after the opening of the canal and before the low-water season, the Dalles-Columbia line made 18 trips to the city of Lewiston on the Snake River, carrying an average cargo of 100 tons a trip. This is the equivalent of 180 boat carloads, or 90 rail carloads, as designated in transportation These cargoes were carried over the practically unimproved stretch of the Snake River from the mouth of that stream to Riparia, a stretch of the river that for years unfriendly interests contended would forever bar steamboat navigation. The tonnage referred to in the brief period of three months embraced everything from salt to automobiles. The rate on disferent classifications varied, but for the purpose of clearly demonstrating the saving made to shippers the lowest base rate is taken. example, if these 18 boats had carried only salt to Lewiston the saving in freight would have been \$2,700. If only sugar, \$3,600. Instead, due to the advanced rates on other classes, the saving easily reaches \$5,000 to \$7,000 on incoming Lewiston freight During this same brief period of three months 1,000 passengers were carried by boats out of Lewiston, and the saving to these passengers over the rail rate to points of destination would average \$3.30 each. While I have no specific data as to the outgoing tounage hauled by these boats, yet I am informed by some of the best business men of the city of Lewiston that the saving on freight charges for incoming and outgoing business taken together for that period of three months would approximate \$10,000, and for the year should reach a total of \$40,000. As to the outgoing business, numerous instances could be cited not only as to profit but the convenience of the boat line to

shippers. In this connection I should like to mention a certain shipment of hogs to Portland, Oreg. These hogs were owned by George Ansman, of Asotin, Wash. They were loaded on the beat at Ten Mile warehouse above Lewiston. On the all-water trip to Portland the hogs had full rest, were fed conveniently, and actually weighed more upon delivery at Portland than at the point of loading. A feature of open-river boat operation of importance also is that, in addition to this saving of freight, the money spent in connection with the operation of boats is largely distributed in that vicinity. One boat company in a single month paid a Lewiston business concern \$612 for supplies. An inspection of the tariffs of the boat and rail lines shows that on every classification there is an important saving to the shippers using boat service. Comparisons are made, for instance, on six classifications from Portland to Lewiston. The saving per hundred pounds in class 1 is 23 cents; class 2, 18 cents; class 3, 12 cents; class 4, 12 cents; class 5, 17 cents; class A, 7 cents. The saving on sugar is 10½ cents per hundred and on salt 7½ cents per hundred. As to passenger service, the saving is shown in a pronounced way, when it is considered that the rate by water from Lewiston to Kennewick is \$1 and by rail \$3.30; from Lewiston

to Portland by water, \$4; by rail, \$10.65.

With the improvement and canalization of the Snake River there will be developed great water-power possibilities. The Salmon and Clearwater Rivers, which are tributaries to the Snake, have wonderful power facilities which await the touch of the engineer. Along the Snake River there are thousands of acres of land which will be reclaimed when cheap power is afforded. I can not conceive of any project in the general scheme of preparedness which is more comprehensive than the improvement of the Snake River from its mouth to Pittsburgh This locality is the natural home of the largest body of white pine in the world, estimated by the Government at 20,000,000,000 feet. The Nez Perce and Camas prairies are contiguous and produce annually on the average of 10,000,000 bushels of wheat, besides hay and grain. Hundreds of carloads of horses, cattle, sheep, and hogs raised in that section are shipped to the markets of the world annually. On account of its low altitude, the Lewiston section, which is only 600 feet above sea level, has become famous for its production of both hardy and delicate fruits. It has long been known as the home of fine grapes, and many of the most favored European varieties grow in profusion. Not only will the improvement of the Snake River increase the tonnage of agricultural products and live stock to be shipped in the future, but the river is the outlet of a great undeveloped mining region, with some 54 mining districts which have been organized for many years, and the development of which depends entirely upon cheaper transportation. Among some of the districts which have already gained recognition as producers of high and low grade ore are the Florence, Pierce, Elk, and Warren.

I assure the Members of the House that no mistake will be made by Congress in granting liberal appropriations for the improvement of the Snake River and its tributaries, and on behalf of the people of that region in Idaho known as the inland empire I want to thank the House of Representatives for the friendly consideration it has given to this important

item in the bill.

Address of Hon. Franklin K. Lane.

EXTENSION OF REMARKS

HON. WILLIAM KETTNER. OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

Mr. KETTNER. Mr. Speaker, I ask unanimous consent to insert in the RECORD the remarks made by Mr. Lane, Secretary of the Interior, as representative of the President at the reopening of the Panama-California International Exposition at San Diego, Cal., March 18, 1916. It is as follows:

ADDRESS OF HON. FRANKLIN K. LANE AT THE OPENING OF THE PANAMA-CALIFORNIA INTERNATIONAL EXPOSITION AT SAN DIEGO, CAL., MARCH 18, 1916,

I know that those of you who are Californians will sympathize with the feeling of elation that I have in coming home and bringing to you the personal greetings of the First Citizen of our country. The time will surely come when the country will call to its first place a son of California, but until that time does come no greater honor can be given to a Californian than to speak for the President. He asked me to give you his greeting; not a perfunctory word, formal and set, but a word of hearty cheer at the spirit, the confidence, and the courage you have shown. He had intended to make this trip himself; but circumstances, some to the east of him and some to the south of him, made that an impossibility. It is necessary now, above all times, that he should stay at the seat of government that the nations of the world may know that, while our Army may be small and our Navy rank but third in the world's calendar, the spirit of this democracy will not permit the invasion of her rights either upon the land or upon the sea.

It is a great burden that we have cast upon our President. He must interpret to all other peoples the sense of dignity, of self-respect, and of proper pride of a hundred million people whose voice he can not hear but whose self-reliant will he must assert. Pitted against him are the trained and cunning intellects of the whole world outside our hemisphere, and no one can be more conscious than is he that it is difficult to reconcile pride and patience. I give you his greetings, therefore, not out of a heart that is joyous and buoyant but out of a heart that is grave and firm in its resolution that the future of our Republic and of all republics shall not be put in peril.

It is a fine thing that you have done here. You are presenting to the world one of the greatest expositions ever seen. Not so great perhaps in the multiplicity of machines or fabrics or works of art; not so costly as some, but no exposition ever presented to the eyes of man gave proof of more daring and splendid spirit. And after all it is the spirit of the man or of the thing that he does which makes him noble or mean.

If the patron saint of San Diego, the Padre Serra, could cross that bridge which steps the canyon like some grand dame in a minuet and mount the steps of that church and look out of the bell tower upon this city, upon those red roofs, these cloisters and arcades, these turrets and towers, and cast his eye over this land which so lately was desert and which now is the rarest of gardens, I believe that he would not think himself demeaned were he to hear me say that the spirit which has built this thing of beauty was like to the spirit that brought him to this shore to win a people and a country for the glory of his God and his king. Men are the creatures of their times, and he was bold in his adventure of the eighteenth century as you are bold in your adventure of the twentieth century. - If he heard men say this is an age of the grossest materialism when men worship only money and have souls for things no nobler than trading stamps, I believe he would point at what you have done and say this is my answer to that charge. Here is the proof that men glory in beauty and in the work of their hands. taught my Indian boys to lay before the altar tributes of I taught them to lead the stream over the fruits and flowers. desert, to make it bring forth vine and fig. I taught them to model with their hands the cunning arches of our Holy Church. I taught them to have joy in the things that they did that their souls might be satisfied and these things these men of a

You call this an international exposition, because there are exhibited here the products of the minds and fingers of some 30 or more nations. They show to us porcelains and silks, pictures and statues, carvings and carpets, finer than any that we can show; but in return we show to them a continent conquered and civilized in a century, a people more fertile in imagination than any that the world has ever known, and enterprises of greater magnitude than Cæsar or Napoleon dreamed of.

This is a fitting place for such an exposition. the rim of the continent. The Aryan race, which was born in the other hemisphere, has encircled the globe and has come back to report to its wise and aged mother the story of its great adventure. What has this Nation to say to those who lie before it and round about it? We answer that we have come to know that this world is made not for the gratification of the desire of a few, but for the benefit of the many. That power must be common capital. That nature, not man, is the enemy man must conquer, and that the world belongs to him who reclaims the desert, who bores the mountains, who most swiftly sails the sea, and most surely masters the air; who with plow and microscope, furnace and blowpipe, test tube and machine makes this world serve mankind best.

To conquer nature man broke down the gates of the Garden of Eden and came forth to meet the challenge of an unordered world. For 10 times 10,000 years he has been engaged in this conquest. Trench after trench he has taken, hilltop after hilltop, and no one can dare to say what shall be the limit of his progress. A thousand years hence I have no doubt the world will see another international exposition beside this very bay, and then will realize that the high purpose of democracy is to prove it is the conquerer of the world by being its supreme The Cotton Tax and the Confederate Pension.

EXTENSION OF REMARKS

JAMES HON. H. DAVIS, OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

Mr. DAVIS of Texas. Mr. Speaker, since the bill introduced by Mr. TILLMAN, of Arkansas, to appropriate the fund known as the cotton tax to a pension fund for the old Confederate soldier there has been great anxiety among the old gray veterans over the final outcome of that measure. Scores of letters have come to me from the haggard, helpless, and worn-out gray coats, wondering if it is possible for them to have the joy of receiving a small portion of that fund as a pension in their declining years.

Falling under the fate of the lost cause 50 years ago they returned to desolate homes and began to resuscitate and rebuild their southland. With an energy and application born of indomitable courage and energy they helped to make what the commercial world calls the new southland. Recognizing the right of the conqueror over the conquered, they laid down their arms, undertook to revamp their lives, and make themselves and their posterity a part and parcel of the future history of this great Republic. Those who know the South best know this has been heroically done.

Some years ago the Supreme Court of the United States, neither a southern court nor one of Democratic membership, but a court made up of Republicans, high-class, broad-minded, brainy men from the North and West, decided that a certain cotton tax, levied on the South during the later part of the war and recon-struction period, was unlawfully collected and hence was unlawfully held against its rightful owners in the South. This fact becoming known throughout the South, inspired an anxious solicitude among many of the old grizzly, gray veterans, who are already journeying far down the decline of life and are often found in straitened and stringent circumstances. Many of them maimed, wounded, and battle scarred, have struggled for half a century to earn a livelihood, making no complaint and feeling no spite toward the brave boys in blue whose bullets and bayo-nets lacerated and pierced their bodies in the struggle of the

When it became currently known that this fund, consisting of some \$65,000,000, might in justice and reality be returned to the South, the question arose as to whom it should be returned. Many of those from whom it was collected had long since passed to the other shore without leaving a record of the transaction. Yet occasional records show persons eligible to refund.

When Mr. Tillman introduced his measure setting this fund aside as a pension for old Confederate veterans there was an exclamation of exultant joy from the hearts of several thousand of the old sons of the South. Having been born in South Carolina, reared in Texas with southern environments and antecedents, it may be that I am unable to see the meritorious viewpoint of those who would oppose this measure. I realize that in the heat of campaigns and even here on the floor of Congress the faint echoes of sectional strife are yet sometimes heard and felt. It is not so with me, feeling a pride in the history, traditions, and glorious achievements of the South. I realize to the fullest extent that the glory, grandeur, and perpetuity of this Republic must rest not only upon constitutional legal bonds, but it must rest upon a union of sentiment, fraternity, love, fellowship, and community of interest that knows no North, no South, no East, no West when acting for the destiny and hope of the

It seems to me there can be no just grounds for opposition to such a measure. Mr. Tillman's bill does not ask this Republic to pension those old veterans from the funds of the Republic. He simply means, in common terms, that although this fund was collected on the cotton of the South in good faith at the time, it has since been declared an unconstitutional, illegal method of taxation. Hence, this fund rightfully belongs to the South, from whence it was collected-held, as it were, in trust for its rightful owners for adjudication.

The Government itself has what it calls a conscience fund, into which any person in any part of the earth may remit and refund any money that the owner feels in his conscience he has wrongfully taken from this Republic. And we are told that many thousands of dollars come into the Treasury of the United States every year from those who, under the lash of their conscience, feel they had once wrongfully taken money from their Government.

Now, let this Government rise in its majesty and make this a kind of conscience fund and tender it to the South from whence it came. Speaking for myself and family, we could readily make a just claim for refund to a small portion of this \$65,000,000. But, sir, I am sure that I join in the common sentiment of the younger men and women of the South when I state that I would rather see the amount go to the old veterans than to receive it myself.

And now, Mr. Speaker, while I am on this question let me state that on the 5th of February in my remarks on this floor, having occasion to discuss the imperious designs of syndicated wealth, as represented in the "Gary dinners" and great feasts of the "frenzied financiers," whom I felt and yet feel had sinister designs against the commonweal of our country, I made some comparisons, in which I used the names of Jeff Davis, William L. Yancey, and Bob Toombs in such a way as to cause some of my friends and many of my enemies to think that I had used these names in an unjust and unfair manner. I had no thought of reflection on their character as great men in the age in which they lived. I have often said that my father and all my nearest relatives stood for every principle of slavery and secession that actuated the life of John C. Calhoun, Yancey, Toombs, or Davis. Realizing this, I would have no more cust a slur on their name and character than one on my father, brother, or three uncles, whose bones lie beneath the silent sods of southern battle fields, where they went down beneath leaden hail wearing a tattered uniform of southern gray.

Having received letters from men who I know to be my friends and whose motives I know are pure, telling me that my remarks are likely to do these men and their places in history a serious injustice, I now withdraw the names of those men from my remarks of February 5, and thereby disclaim any intention to mar either their historic standing or personal probity, having simply spoken of them and the slave power of the South in the light of history. The following letter from Senator Sheppard and the following address to the old soldiers

of the South explain themselves:

UNITED STATES SENATE, April 10, 1916.

My Dear Sir and Friend: In further reference to the Jefferson Davis matter I wish to say that I have again looked over the statement to which Camp Sterling Price, at Dallas, drew my attention.

As your friend and well wisher permit me to say that there are words in the statement conveying serious personal reflection on the character of Yancey, Toombs, and Davis,

Inasmuch as you have said that you would no more attack the character of these men than you would attack the character of your own father, brother, or uncles, who stood with these men and believed in their doctrines, it is evident that this language is unfortunate and did not convey your real meaning.

I believe that in justice to yourself, your friends, and the memory of these men who represent a large part of the history of the South which you with us all cherish you should withdraw and disclaim this language through a statement to that effect in the Recone, and that you should accompany this withdrawal with such an explanation as you have given through other channels.

I make this suggestion to you in all sincerity and with an earnest desire to promote your own welfare and your usefulness to the people. Yours, very sincerely,

Morris Sheppard.

Hon. J. H. Davis, M. C., Washington, D. C.

MORRIS SHEPPARD.

House of Representatives, Washington, D. C., April 8, 1916.

To the old soldiers of Texas:

Washington, D. C., April S, 1916.

To the old soldiers of Texas:

I see some of your camps are condemning me in severe terms, alleging that I standered Jeff Davis in a speech of the Congressional Record, February 5 in which I charged that Toombs, Yancey, Davis, et al. stood for the extension of slave power which resulted in the Civil War.

I made those statements, commenting on the "Gary dinner," while arraigning the trusts and combines, the Steel Trust and war traffickers, as being ready to plunge us into war to make good their millions and prolong their sway. I meant no more personal thrust at or discourtesy to the memory and honor of these Southern men than of my own father who stood with them in every contention and through every trial. He and my only brother that was old enough offered their services to die for the cause if necessary. My brother did die, and his bones lie in the trenches at Corinth, where he fell at the breech of a Confederate musket. For the valor, honor, and chivalry of these men, among whom my own father, brother, and seven uncles stood, I have the flighest esteem, but for the institution of slavery there is no defense and the world now knows it brought on the war. The negro has been a burden, a blight, and a curse to this country from the time the "Boston brigands" traded red beads to the savage chiefs in Africa for the first shipload landed in this country to the present time.

My tather was a slaveholder and a Confederate, like his kinsman, Jeff Davis, for whom one of my four living brothers was named. Three of my uncles went down under the missiles of death that came from the boys in blue. As slaves and confederate currency—all on earth my father had—went down with the southern cause, left homeless and destitute, I came up through great tribulation.

But David said he had "never seen the righteous forsaken nor his seed begging bread."

Many low-flung, lecherous debauchees that swill around saloons in Texas are now, with vitest insulting, unsigned letters, sending marked copies of ma

Morgan and his war traffickers are quoting your resolutions with great gusto and hoping to gloat over my downfall. Men who stood for freedom, justice, and human überty have often been mariyrs to the mad passions of hero worshipers. Men who opposed crowns, aristocracy, organized greed, and legalized infamy, as i now oppose Morgan's gang and the booze brigade, have aiways had to suffer bitter persecution. My life is now becoming a marked "xample of that truth.

The great trust masters, Morgan's meion cutters and war traffickers, the Steel Trust, and the money devil are all joined with that organization of political infamy and social corruption, known as the liquor traffic, to drive Cyclone Davis out of Congress. He has tormented them on the stump for 20 years and is now in Congress, where his presence has become a national terror in uncovering and exposing their hideous and infernal methods of peculation, pillage, and plunder and the putrefying corruption and venal political influence of the liquor traffic. They can neither suppress or intimidate him, nor can they expunge his speeches—hence he must be destroyed.

Among the last words my tather ever said to me, speaking of the war, was, "My son, if there had been no negro, there would have been no war. We lost everything. It is now the patriotic duty of every son of the South to see that the great corporation combines neither make wage slavery worse and more oppressive than chattel slavery has been nor make the farmer helpless in their clutches."

Speaker Clafac this week, in referring to a ruling made by a former Speaker in the struggle over the admission of Kansas and Nebraska, said that was one of the most noted parliamentary battles ever fought, and was followed by more bloodshed than was spilled in the siege of ancient Troy. The great struggle over the admission of fhose States was whether they should be "free States" or "slave States." The crists came in 1858, when they were "organized" as free Territories, to be "free States."

came in 1858, when they were "organized" as free Te "free States." The war followed three years later. Two lines of the first war song I learned as a lad ran:

Two lines of the first war song I learned as a lad ran:

"Old Andrew Johnson, of east Tennessee,
Has gone to join Abe Lincoln to set the negroes free."

Even the war songs showed what the issue was. In my speech I spoke only of the economic issue involved in that war, having in mind economic effects, and had no thought of casting any personal reflections on those historic characters. I think there are scores of men now who feel that they represent the best interest of the country when they defend the unscrupulous trusts and the ungodiy and damnable liquor traffic. I do not despise them. I despise the institutions they defend. I shall be glad to have you request and read my remarks of March 22, in which I answer my traducers in Texas, which is costing me. at Government rates, about \$350 per 100,000 to distribute, even under frank.

A few Republicans, led by Mr. Madden, of Chicago, resenting, I infer, the manner in which I attacked the trusts and the liquor interests, tried to have this speech expunged. The same kind tried to expunge a speech made by Tillman, of South Carolina, when he first came to Congress.

Respectfully,

J. H. Davis.

Now, Mr. Speaker, in closing let me make a last appeal in the interest of justice, fair play, and righteousness for the old soldier of the South. A large majority of the old soldiers on both sides of the battle lines of the sixties are now close to the banks of the river, and must soon cross a pontoon bridge not built with hands. The old soldier of the South, for 50 years, many of them limping along the lane of life, have borne their share of the burdens of government without murmur, receiving few of the special blessings of government. Many of them now live in tenement houses with their sons and daughters, earning in toil barely enough to keep them above penury.

I said in a speech a few weeks ago that I would be glad to see at least \$250,000 of this fund set aside as a reunion fund to entertain and care for the veterans in blue and the veterans in gray, to meet in a grand union in the National Capital on the 4th day of July, our national birthday, and the balance of that fund allotted in pensions to soldiers of the South. No more transcendent example of fraternity and national patriotic pride could, in my judgment, be adopted to cement and forever seal the North and the South in reunited bonds of fraternity.

The Second Lincoln Campaign and the Second Wilson Campaign, 1864-1916.

EXTENSION OF REMARKS

HON. HENRY T. RAINEY,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 12, 1916.

Mr. RAINEY, Mr. Speaker, 52 years ago the campaign for the reelection of Abraham Lincoln was opening. The real issues were surprisingly similar to the issues of to-day. The same arguments were being used for and against the reelection of Lincoln as are being used to-day and will be used throughout the campaign which is opening for and against the reelection of President Wilson.

LINCOLN STRONGLY OPPOSED BY PROMINENT LEADERS IN HIS OWN PARTY, BUT HIS STRENGTH WAS WITH THE PEOPLE.

On page 183 of the very excellent work of A. K. McClure, Our Presidents: How We Make Them, Dr. McClure calls atten-

tion to the fact that prominent leaders of Lincoln's own party were bitterly opposed to Lincoln and were opposed even to accepting him as a candidate. Chase, Wade, Henry Winter Davis, and Horace Greeley were among those who did not think Lincoln would make the best candidate. Sumner was not heartly for him. Stevens was earnestly opposed to him "because he had not pressed confiscation and other punishments against the South, and the extreme radical wing of the Republican Party was aggressive in its hostility. Lincoln's strength was with the people, and they overwhelmed the leaders who sought his overthrow."

There are, however, few, if any, men prominent in Democratic councils who are opposing the candidacy of Mr. Wilson; but the

real strength of the President is with the people.

In his Twenty Years of Congress, volume 1, page 530, James G. Blaine, commenting upon the presidential elections of 1864, calls attention to the fact that it seemed that Lincoln would be defeated. President Lincoln thought so himself, but the crisis through which the country was passing soon brought an end to mere political controversies.

Mere political feeling largely subsided and the people were actuated by a higher sense of public duty.

In this connection Mr. Blaine also says:

The argument for Mr. Lincoln's reelection addressed itself with resistible force to the patriotic sentiment and sober judgment of the

The Nation is passing through a crisis now in its history as great as the crisis which confronted the country during the campaign of Lincoln for reelection in 1864. Fortunately under one flag, the 48 great States of this Union stand united against the international perils which confront us. Alone among the great nations of the earth, we must accept the task of keeping brightly burning upon the seas, as well as on the continents, the lights of civilization. We can not shrink within our national boundaries and avoid the duties imposed upon us in this great crisis of the world's history. We can not permit the nations of the earth to sink back into the darkness of the medieval night. We confront a world in arms. Under the wise guidance of President Wilson we have so far been able to uphold the standards of civilization and escape participation in the present struggle. It is not wise to adopt any other leadership.

DISAPPOINTED OFFICE SEEKERS IN 1864 AND IMPATIENCE WITH MR. LINCOLN'S CONSERVATIVE METHODS.

The disappointments among those who had not succeeded in their ambition to secure appointive positions were more marked during Lincoln's second campaign than now. The Republican Party was absolutely new in national politics. Thousands of men who had been interested in its prior campaigns and who had fought hard for the things the party stood for had not been able to obtain the appointments they desired. Lincoln had at his disposal more appointive positions than President Wilson has had at his disposal. There was no civil service in those days and

the appointments were both civil and military.

James G. Blaine, on page 514 of volume 1 of his Twenty Years of Congress, calls attention to this situation:

Years of Congress, calls attention to this situation:

A part of the hostility was due to a sincere though mistaken impatience with Mr. Lincoin's slow and conservative methods and a part was due to political resentments and ambitions. The more radical element of the party was not content with the President's cautious and moderate policy, but insisted that he should proceed to extreme measures or give way to some bolder leader who would meet these demands. Other individuals had been aggrieved by personal disappointments, and the spirit of faction could not be altogether extinguished even amid the agonies of war. There were civil as well as military offices to be filled, and the selection among candidates put forward in various interests could not be made without leaving a sense of discomfuture in many breasts.

PRESIDENT LINCOLN IN THE GREAT CRISIS WHICH CONFRONTED THE

PRESIDENT LINCOLN IN THE GREAT CRISIS WHICH CONFRONTED THE NATION PREQUENTLY CHANGED HIS MIND.

President Wilson is charged with changing his position on important economic questions. In this present period of rapid kaleido-scopić changes in world affairs men who stand still will soon find themselves standing alone. The charges of changing his mind and of vacillation urged with such insistence against President Wilson at the present time were urged with equal insistence and vigor against President Lincoln during the campaign of 1864, and in order to meet the arguments along this line it was necessary, in the month of October, 1864, to bring back from the front a popular military hero to deliver an address, which was at once widely circulated, on this very subject. The meeting was advertised for the 9th day of October, 1864, and on that day one of the greatest mass meetings of the campaign assembled in the city of Brooklyn. The military hero who was brought back from the front to address this great meeting was Maj. Gen. Carl Schurz. President Lincoln had already made an answer to the charge of changing his policies. After reviewing the policies and the particulars upon which President Lincoln had changed his position, with great force

and effect, Gen. Schurz, in his speech on that occasion, quoted from Lincoln as follows: "I am not controlling events, but events are controlling me." The speech was printed in the New York papers of October 10, 1864, and was widely copied throughout the country. People saw at once the force of Lincoln's position, and so at the present time, in the great crisis which confronts us amidst changing world conditions, when our industries are reaching out for a world trade they never had before, and when the charge of vaciliation and changing his mind is made against the President of the United States, we can reply, as Lincoln replied over a half a century ago, the President is not controlling events; events are controlling him.

THEY CALLED LINCOLN NAMES AND ABUSED HIM.

At the present time vile, scandalous terms are being used by critics of President Wilson and his policies in the magazines and newspapers of the land. These terms are being used by writers from the caliber of Owen Wister, with his mastery of English, down to the most insignificant penny-a-liner who writes for metropolitan papers in great cities, but they have not been able to invent as many opprobrious words as were used by the critics of Lincoln in 1864. The New York Daily Tribune of Tuesday, September 6, 1864, assembles some of the names used by the opponents of Lincoln in and out of his party in the campaign of 1864. According to the Tribune these are some of campaign of 1804. According to the Pribate these are some of the names applied to Lincoln during that campaign: "Filthy story-teller," "despot," "big secessionist," "liar," "thief," "braggart," "buffoon," "usurper," "monster," "Ignoramus Abe," "old scoundrel," "perjurer," "robber," "swindler," "tyrant," "fiend," "butcher," "land pirate," and other pleasant epithets.

The article in the Tribune assembling these terms concludes as follows:

The vocabulary of billingsgate is limited and their ammunition of abuse may be exhausted before the day of battle.

So may we not hope in this campaign that the vocabulary of billingsgate, in which so many of the President's opponents are apparently so splendidly skilled and their ammunition of abuse may be exhausted before the day of battle? But whether it is or is not it will have no effect on the final result.

NOT BEST TO SWAP HORSES WHILE CROSSING STREAMS.

This was the argument which prevailed in Lincoln's second campaign, and in the strangely similar campaign which opens now before us this appeals most strongly to men of all parties. The phrase is not a new one. It has been used in American politics from 1864 to the present time. Its origin, however, has become obscured. It may be interesting at the present time in this connection to call attention to the origin of this expression which had such tremendous effect in the campaign of 1864.

The Republican convention closed its sittings at Baltimore on the 9th day of June, 1864. On the next day a committee selected by it assembled in the East Room of the White House and Gov. Dennison, who had been president of the convention and who was chairman of the committee, addressed the President officially, conveying to him the information as to the action of the convention. President Lincoln replied, accepting the nomination conferred upon him and approving the platform declarations. This meeting in the East Room of the White House, however, attracted not the slightest attention in the campaign which followed; but on the afternoon of that day a number of the members of the National Union League informally called on the President at the White House to congratulate him upon his renomination. In the entirely extemporaneous address made by Lincoln on this occasion he was at his best, and it was in this address that he sounded the keynote of the campaign which followed. After expressing his thanks for the personal compliments paid to him on that day he assured his callers that the only compliment he was entitled to appropriate was the one expressed to the effect that he might hope that-

I am not entirely unworthy to be intrusted with the place I have occupied for the last three years. I have not permitted myself, gentlemen, to conclude that I am the best man in the country, but I am reminded on this occasion of the story of an old Dutch farmer who remarked to a companion once that "it is not best to swap horses when crossing streams."

The story was new in national politics. It was greeted with tumultuous applause and laughter when Lincoln related it in the White House on the afternoon following the adjournment of the Baltimore convention. It was reported the next day in the New York Daily Tribune and was copied throughout the country. It found a place in the campaign literature and on the campaign banners used in 1864. During the present campaign which so strangely parallels the second Lincoln campaign it can appropriately be used again.
On the night of June 9, at a great meeting at the Cooper

Union Institute in New York City, the Rev. Dr. Buddington, of New York, in his eloquent address caught the spirit of the ap-

proaching campaign and alluded to Mr. Lincoln as the man "who was and is leading the people as Moses led the children of Israel through the Red Sca," and this phrase, along with the homely story of Lincoln, became popular throughout the cam-paign which followed. The story told by Lincoln had its effect again when one week later the great hall of the Cooper Institute in New York was again crowded at the ratification meeting of the Central Union Lincoln Campaign Club, of New York. On the platform were Peter Cooper, Theodore Tilton, and others, but the greatest enthusiasm was provoked by the speech of Hon. Charles S. Spencer, the president of the club, when he said:

We have no disappointing ambition, no personal revenge to gratify. As the President has stood by the country in the hour of trial so stand we by the President.

I can think of no better expression than this with which to depict the sentiment which ought to prevail and will prevail in the campaign which opens now for the reelection of President Wilson, 52 years after the speech of Mr. Spencer was delivered.

The New York Daily Tribune of Wednesday, September 14, 1864, calls attention to the appeal for the reelection of Lincoln sent out by the national union committee from its headquarters in New York City. The appeal went out on the 9th day of September, 1864. It was a stirring appeal for the reelection of Lincoln. It was in harmony with the sentiment which dominated the campaign. That part which appealed most strongly to the country, and which those who favor the reelection of President Wilson can appropriate at the present time, read as follows:

We call upon you to stand by the President, who under circumstances of unparalleled difficulty has wielded the power of the Nation with unfaltering courage and fidelity, with integrity which even calumny has not dared to impeach, and with wisdom and prudence upon which success is even now stamping the surest and the final seal.

In Edward Stanton's History of the Presidency, on page 299, referring to Mr. Lincoln's reelection, he calls attention to Lincoln's story, which he does not quite correctly quote, and says:

Mr. Lincoln neither obtrusively urged himself as a candidate for re-election nor made any coy professions of unwillingness to be chosen again. He was simply and frankly a candidate. He believed that it was best for the country, under the circumstances, that he should be continued in office. It was not good policy "to swap horses while cross-ing a stream."

IMPORTANT ISSUES OF 1864 AND 1916 THE SAME.

No matter how much we may differ on the question of the tariff and on other economic subjects, we must all agree that the crisis through which we are passing as a Nation at the present time is as important in its consequences as the crisis of 1864. The same questions of soul-stirring patriotism appear again and, strangely, the same methods used against Lincoln in the campaign of 1864 are being used now by the enemies in all parties of President Wilson. May we not hope that the shafts of envy and malice aimed now against President Wilson will fall as harmlessly to the ground as they did in the second Lincoln campaign? It was not best 52 years ago, it is not best now "to swap horses while crossing streams."

River and Harbor Bill.

EXTENSION OF REMARKS

HON. HENRY A. BARNHART, OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Tucsday, April 11, 1916.

Mr. BARNHART. Mr. Speaker, it is unfortunate that in framing bills committees can not meet the special views of all the 435 Members of this House, but such never has been done and probably never will be. However, in river and harbor bills there are always some projects open to question, and this bill is like all its predecessors in that respect. But much of this is hearsay. One Member contends that his item in the bill is all important and others are not, while other Members insist that the reverse is true. And in these heated contentions things are said which lead the country to understand that there is "pork" in all river and harbor legislation.

Mr. Speaker, I can not believe that the honorable men who work for months on bills like this intentionally admit unworthy projects and neither do I question the sincerity and honesty of those who vote for the legislation. But the national calamity of war threatens us every day, we are expected to spend large sums for preparedness to protect our country if trouble comes, and so I feel that we should now omit every expenditure of

public money that can be done without damage to the well-being of the Nation.

Therefore I shall vote to reduce the proposed appropriation to \$20,000,000, an amount sufficient to continue work already commenced and work necessary for preparedness, and if this proposition is defeated I shall vote against the bill.

I shall do this not as a reflection on the members of the committee and others who favor the bill, but because I believe that we ought to keep expenditures down as low as possible.

And I have another reason for voting against anything more than expenditures for emergent improvements this year. I want to be consistent; I am a member of the Committee on Public Buildings and Grounds and opposed to any bill being reported by this committee which covers more than actual necessary improvements. Therefore I am opposed to a rivers and harbors bill which carries anything more than emergency provisions, and shall oppose any public-buildings bill reported by my own committee which undertakes to spend money for new improvements which can wait, and which ought to wait at this time when we are going to spend so much public money for military defense.

Deed to Homestead of Abraham Lincoln.

EXTENSION OF REMARKS OF

HON. PAT HARRISON,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 12, 1916.

Mr. Speaker, in the consideration and Mr. HARRISON. discussion of this bill, proposing that the Government of the United States take over and preserve the home in Kentucky in which Abraham Lincoln was born, it is not inappropriate that I place in the Record a letter that I received in my mail only a few moments ago from as gallant an array of men and women as ever lived.

Not far from the home in which the martyred Lincoln was

born, Jefferson Davis was born.

Like Lincoln, his life was spent in another State—and service extended beyond any section. Beauvoir, on the shores of the Mississippi Sound, was the last home of Mr. Davis. For the last decade that beautiful place has been transformed into a home for Confederate veterans. About 250 of these gallant old soldiers, although true to the cause which in the sixties they espoused, to-day are as true to the Union and as loyal to the flag as are the men who in the sixtles enlisted in the Federal Armies. The letter, Mr. Speaker, which I ask unanimous consent to place in the Record has come to me from these old patriots, tendering their services to the President to go into Mexico as a part of the Armies of this Government, if necessary.

THE JEFFERSON DAVIS BEAUVOIR SOLDIERS' HOME, Gulfport, Miss., March 23, 1916.

Mr. Pat Harrison, M. C.

Dear Sir: We the undersigned Confederate veterans of Beauvoir Soldiers' Home tender our services to the President, if needed, to join the Army for Mexico.

J. C. Granigan, Dan. Robertson, J. C. Calhoun, A. Adair, J. S. Brown, R. I. Lanius, J. C. Summers, S. O. Freeman, J. T. Fair, A. R. A. Harris, J. F. Mercer, W. D. Cooke, A. S. Furr, J. L. Thomasson, G. F. Jones, W. W. Gibson, Sam. E. Jones, C. W. Agnew, J. W. Patterson, S. H. Powell, T. J. N. Bloodworth, H. M. Wilson, C. M. Walker, J. C. Bridewell, W. M. Collins, R. C. Clark, R. C. Le Cloud, A. P. Sparks, W. R. Jonston, Capt. W. A. Dill, W. F. Gainey, J. C. Alinsworth, E. A. Johnson, Jas. A. Locke, G. W. Barns, F. M. Sharp, J. W. Hunter, R. B. Johnson, Chas. Tallaferro, Thom. D. Reed, W. E. Luse, J. C. McKenzle, J. H. Allen, J. H. Jennings, W. J. Ray, A. G. Wood, W. S. Hickingbottom, J. G. Worsham, J. H. Harell, B. C. Covington, P. R. S. Baily, I. I. Baldridge, J. McDonald, R. N. Robinson, P. A. Cook, Mrs. P. B. Kine, T. J. Buckley, S. H. Box, O. R. Mallette, John Noble, R. H. Porter, O. S. Beck, W. D. Franks, James Everett, J. A. Lott, B. F. Sadler, Dennis Kane, James A. Cuevas, S. W. Brister, W. J. Pittman, G. F. Allin, C. S. Smith, W. J. Long, C. A. Binet, W. W. Robeson, C. A. Breard, T. W. Hughes, G. W. Hill, W. H. Stevens, E. C. Robiuson, W. M. Marshall, E. P. Hitt, A. H. Honse, Georg W. Christe, J. T. Gibson, J. H. Thorn, T. J. Harrell, S. J. Lane, J. W. Dyers, W. A. Wood, I. N. Webb, C. C. Nelson, A. J. Eastling, A. J. Duren, J. D. Grubbs, W. T. Hester, Sol Happs, J. A. J. Cagle, Thomas E. Wright, G. J. Ward. Totat, 100, and many others.

If we are old, we are good guns yet.

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY,

In the House of Representatives, Thursday, April 13, 1916.

Mr. BAILEY. Mr. Speaker, it is hardly necessary for me to say that, although living in a district largely given over to steel and coal, my interest in agriculture and in its development and extension is as keen as that of the author of the measure now under consideration or that of any member of the great committee whose labors it represents. It is in no perfunctory sense that I speak of agriculture as the basis of our prosperity. It is with no purpose of flattering him that I refer to the farmer as entitled to the very highest consideration at all times and under all conditions. For it is to the farmer we must look for the very means of keeping soul and body together; and when the farmer fails or falls behind, every member of society must inevitably suffer.

I am not here, Mr. Speaker, to toss bouquets to the farmer. Nor am I here to ask for him any special privilege. would ask in his behalf is that he shall be given a fair field, an equal chance; that he shall not be called upon to render tribute to any other man in any form whatsoever. And let me add that if the farmer were here seeking a special privilege, if he were clamoring at our doors as manufacturers have been wont to clamor, begging that the taxing power be turned over to him for his enrichment at the expense of mill men and others, I would as sternly and as uncompromisingly withstand his demands as have withstood the demands of the steel barons, the sugar kings, and the beggars in velvet gowns, who for years have descended upon the Capital in a hungry horde in quest of The farmer needs no legislative bounties. He needs nothing at our hands except unfettered markets and a free highway thereto.

THE WORKING FARMER'S HEAVIEST HANDICAP.

In a previous talk on this floor I endeavored to call attention to what I consider one of the heaviest handicaps under which the working farmer labors-the steadily advancing prices of farm land under the pressure of speculation. At first blush one is apt to look upon rising farm-land values as a most excellent thing for the farmer. And the farm owner who finds himself enriched without any effort of his own by the enhanced value of his land is very likely to look with entire complacence on the fact. He will not easily be convinced that the rise in values which has placed gold in his pocket without labor on his part is otherwise than a blessing. Yet if we look about us we shall discover that farmers as a class do not prosper with the growth of land values. The reverse seems to be true. It was in the era of cheap farm lands that agriculture was in its highest estate and that farmers as a class were the most prosperous and the most influential in the affairs of State and Nation. As farm-land values have advanced we have seen agriculture relatively decline and the farmers as a class become less potent in shaping the course of government.

I fancy that every man on this floor has observed how farm production has been pushed back from points of highest results to points of lower results and increased effort as land values have advanced. This phenomenon is particularly apparent near our great centers. Lands that should be yielding abundantly are yielding practically nothing; they are so excessive in price that no one can afford to work them. The working farmer has been driven back by increasing prices toward the margin, and it requires greater effort at the margin to secure a given result than would be required at the center. I think everyone on this floor will readily agree to this proposition.

WHY AGRICULTURE HAS DECLINED.

Mr. Speaker, I think that we shall be able to account for much of the increased cost of living if we regard this factor in its influence on production. I have said that agriculture, in a relative sense, has declined. No one is likely to contend that agriculture in the United States has kept pace in its extension with population or with manufactures. High premiums have been placed on this particular branch of industry, and these premiums were paid out of the profits derived from agriculture. The substance was ruthlessly drained by our Republican friends out of the farmer for the benefit of the manufacturer. But, happily, legislation effected by the Wilson administration

through a Democratic Congress has modified this in very large measure, not in as great a measure as I had hoped for, but in sufficient measure to justify the claims made by the Democratic Party on the interest and good will of the great farming class of the country.

It was in part because of the premiums offered through the tariff to capital engaged in manufactures that agriculture tended to decline in a relative sense. Obviously it was not going to engage in agriculture, with all its hazards, when it could more profitably engage in manufacturing enterprises from which practically all hazards were removed by means of a benevolent and paternal Government which blandly robbed a portion of its people for the enrichment of another and much smaller portion. It was inevitable under the tariff system maintained by the Republicans and still besottedly advocated by them that agriculture should undergo a relative decline. But even the protective tariff fails to account for all the relative shrinkage. It is my belief that the tendency to speculate in farmland values has played a very large part in bringing on this relative decline.

In this connection, Mr. Speaker, permit me at some length to quote from a remarkable book published some years ago by a very dear friend of mine who has but lately joined the silent majority. This book, The Problem of the Unemployed, was published anonymously. I do not know what circulation it has enjoyed, but I know that it ought to have a wide circulation and that it should be in every library in the United States and in the hands of every thoughtful student of modern economic and industrial problems. The author of the book, the late Henry F. Ring, of Texas, devoted the greater part of a long and useful life to be dissemination of ideas which ought to appeal to the farmers and the toilers of the country in an especial manner. I have just spoken of the effect of the artificial scarcity of land resulting from speculation in land values. Let me here quote from the book of my lamented friend:

THE PROBLEM OF THE UNEMPLOYED,

"If there were no artificial obstacles to prevent it, the most fertile or most favorably situated land would always be first selected for use. There would then be few, if any, of the intervening spaces, to which attention has been called, of more valuable unused land between lands in use. There would rarely, if ever, be such space in cities and towns. Land most conveniently situated and most valuable for use would no longer be withheld from use. Capital and labor would no longer pass by vacant lots and unused farming lands, coal beds, and mineral deposits and apply energy to lands more remote and naturally less valuable. The waste of effort occasioned by the present custom would be saved and the aggregate amount of wealth produced vastly increased.

"Let it be assumed, then, for the purpose of argument only, that the taxing power of the Government was so exercised as to make it unprofitable to withhold land from the use to which it was best adapted, and that no one could afford, as a business proposition, to own land without putting it to such use. were the case, vacant land would always be free land. Under such conditions there would be none of the intervening spaces between business houses and between residences and between cultivated or improved fields to which attention has been called. Moving from the center of any city improved business lots would join improved residence grounds, and the latter would join cultivated or improved fields which would extend in almost unbroken masses to the unimproved pasture lands and unused lands beyond, except as such natural order might be modified by difference in the fertility of soils or other natural causes. The land beyond and adjoining the last improved or cultivated fields would thus be practically free land, open to the use of whoever cared to take a deed for it from the State and use and improve it.

"Let it also be assumed, for illustration only, that the tax was so adjusted as to give the Government approximately the unearned increment or increase in value of land resulting from increase of population and progress generally. The State would then take, in the form of a tax, what the landowner now takes in the form of rent, according to the economic definition of rent heretofore given. In the division of the wealth produced, the portion attributable to land as rent would then go to the Government in the payment of a tax. At present it goes to an individual in the payment of rent. Of course, the tax would be levied on the value of the land alone in lieu of all other taxes, without regard to the improvement. The tax on land would be so adjusted from year to year as to take practically the entire unearned increment, and hence no one would have the slightest desire to accept a deed to land from the Government for speculation or investment purposes. Hence unused land would always be free land. When, with increase of population, the necessity for the use of such land arose, no private owner would then

stand in the way of its use, and thus the purchase price of unused land, the greatest of all obstacles to employment, would disappear.

FREE LAND CLOSE AT HAND.

"Let it be further assumed, for illustration only, that under the conditions above shown, there would always be free land, thus conveniently located for the small capitalist and the laborer This land would not lie in a roadless wilderness, remote from markets, schools, and neighbors. It would always adjoin a compact and thickly settled community, with macadamized roads at every farmer's door, and all the social and economic advantages which come with density of population. The settler upon it would at once become a member of such community, and a participant of its advantages. It would be land from which the bulk of the product would often go almost directly to the consumer, unaffected by trusts and combinations in restraint What such advantages are worth is apparent from the fact that men will often pay hundreds of dollars per acre for raw land thus situated, rather than \$10 an acre for equally fertile lands 20 miles farther from the center of a neighboring city. This difference in price arises in part from the fact that while a day's labor on the remote land will produce, say, a dollar's worth of wealth, the same amount of labor on the other land will produce, say, three times as much. Yet, under the condition stated, this three-dollar-a-day land would at first be practically rent free. The tax, to begin with, would be but nominal. It would only increase as with increase of population and material progress, labor applied to the land would become more effective, and then the increase of the tax would only be sufficient to give the State, instead of the individual, the benefit of the uncarned increment. The values created by the community would thus go to the community instead of to individuals.

"With an abundance of unused land to be had on such terms, situated as thus described, how absurd to suppose that labor would then be abjectly dependent upon capital, even though plants requiring an investment of hundreds of millions of dollars might be necessary in many kinds of enterprises? How could the wages of employees in such plants, or in plants of any kind, be forced below the scale of wages fixed by what labor could make on rent-free land? What possible combination of employing capitalists could compel employees to accept less than laborers would make on lands of this character? Under the conditions described many laborers would be able practically to employ themselves without the aid of capitalists, and speedily creating their own capital, they would become personally independent of all capitalists. Since agriculture is the simplest, most easily learned, and most generally followed of all trades, the independence of agricultural laborers would mean the independence of all laborers.

WHAT PINGREE POTATOE PATCHES TAUGHT.

"The success of the Pingree potato patches proves that the earnings of even common laborers on valuable free land would exceed those now usually earned by ordinarily skilled laborers. No one can doubt that with free access to near-by unused lands more labor would be employed and that labor would naturally become less dependent upon capital. As already stated, the unemployed laborer himself might not go to the soil, but if conditions were such as to make its cultivation highly profitable to other laborers and to small capitalists enough of his competitors would do so largely to increase the demand for his labor, no mat-

ter what the line of his employment might be.

"It follows, then, that the extent of labor's necessary dependence on capital does not rest upon the amount of capital in existence nor on the amount of capital required successfully to carry on manufacturing and commercial enterprises. simply on the amount actually needed to enable the laborer to produce wealth on near-by unused lands, and, exclusive of the price of the land, this amount is so small as to be within the price of the lithi, this amount is so shad as the first including reach of every laborer possessed of moderate forethought and prudence. Labor existed before capital, and unaided it brought forth capital. Given free access to unused lands and the laborers would be as independent of the capitalists under the most complex as under the most simple conditions of society. Experience tends to prove this to be true. In new countries, where the least amount of wealth is needed for the purchase of conveniently located unused lands, wages are highest; in old countries, where the most is needed, wages are lowest,

"Increase of wages arbitrarily by trade-union methods, like increase of prices produced by trusts, means gain for some one and loss for others; but the independence of the laborer when brought about naturally by the unrestricted operation of the law of supply and demand means greater wages for employers as well as employees and greater prosperity for workers of every The reason for this difference will presently be made

clearly apparent.

NO LACK OF ROOM ANYWHERE ON EARTH.

"The thought thus suggested, for the purpose of showing to what extent labor is necessarily dependent upon capital, will be recurred to and more fully developed in subsequent pages. Before leaving it, however, one of the questions which may have arisen in the mind of the reader in this connection will be briefly answered. The query is this: While the conditions re-ferred to might exist and produce the results described in a new and thinly settled country, what application can it have to those countries in which there is little or no vacant or but partially used land suitable for agricultural purposes? The answer simply is that in no country in the world is there any lack of an overwhelming abundance of such unused land, nor is it likely that there ever will be, considering the probable results of the application of science to agriculture. When such unused land is not literally close at hand modern transporta-

"Where are the thickly settled countries to which the question mentioned above is supposed to apply? The population of India is but 100 to the square mile; of China, 200; Japan, a little more than 300; France, about 150; the islands of Great Britain, a little over 300. The population of the State of Massachusetts, which is 350 to the square mile, slightly exceeds in density that of Great Britain. Holland is perhaps the only country in the world, except Belgium, where the population is more dense than in the State of Massachusetts, and it has only about 400 to the square mile. The enormous amount of unused land which careful investigation brings to light in the most densely settled countries is shown from the following extract, taken from Thomas F. Millard's article on the 'Financial prospects of Japan' in the September number, 1905, of Scribner's Magazine:

"'It will probably surprise many people to learn that there is now only about one-half the arable land of Japan in culti-Some time before the war the Japanese Government appointed a commission to inquire into the state of agriculture in the realm, which in due time reported certain facts bearing thereon. Commenting upon the findings of this commission, one of the leading and more conservative native journals had

this to say:
""According to the latest statistics compiled by the geological investigation bureau of the department of agriculture and commerce, the present total area of cultivated fields in Japan forms only 133 per cent of her total area. Comparing this with the ratios of cultivated lands in foreign countries it will be seen that the land cultivated by countries in Europe covers from one-third to one-half of the total land area. the above (figures) it will be seen that Japan still has 48 per cent of the total land area which can be turned into cultivated land. There is at present about 5,000,000 cho (a cho is equal to 2.45 acres) of cultivated land in the country, leaving some four and a half million cho to be still cultivated. efforts be made to turn this arable land to advantage, the increase of population is little to be feared.'

WHAT MASSACHUSETTS FIGURES SHOW.

"The amount of unimproved land compared with improved land in Massachusetts, therefore, must illustrate, to some extent at least, the situation in all countries in which population is supposed to crowd the means of subsistence. is supposed to crowd the means of subsistence. The facts in this connection, as shown by the 1895 census of Massachusetts, prepared under the authority of that State, are as follows: To begin with, there are only 902,650 acres in Massachusetts classed as 'cultivated lands,' or less than one-fifth of the improvable land in the State; 1,320,522 acres are classed as unimproved lands, and 1,460,994 as woodlands, making a total of 3,847,749 acres used for agricultural supress. of 3,847,749 acres used for agricultural purposes. This leaves 1,437,434 acres in and near cities and towns which are not used for agricultural purposes, and on which about five-sixths of the population of the State, or 2,100,000 people, were living. This was enough to have given every five of these people two and a fifth acres of land, after allowing one-third of the total area for public parks and streets. Yet the lots in actual use for residence and business purposes in the cities and towns of Massachusetts do not probably average the one-tenth part of 2½ acres of land to the family unit of five. But say that the allowance per family ought not to be less than an area of 100 by 100 feet, including business as well as residence lots, and it follows that at least six-sevenths of the 1,437,434 acres of land referred to is wholly unused. In other words, in Massachusetts there are considerably over a million acres of land in and adjoining cities and towns spoiled for any present productive use, because its owners believe that in the succeeding 5, 10, 20, 50, or perhaps a hundred years, some of it may be used as sites for buildings. The laborer and the capitalist are unable to use this land for agricultural purposes because of the high price demanded for it, and so most of it is practically abandoned to the speculator and to the mere landholder. Yet of all the land in the State, this, with few exceptions, is the most valuable for farming purposes.

"As in Massachusetts, so everywhere in connection with thriving cities and towns, an area from five to ten or twenty times greater than that on which the population would be concentrated under natural conditions referred to is excluded from use. In Massachusetts the amount thus excluded exceeds all the land in cultivation in the State.

HAD THE NATURAL ORDER PREVAILED.

"Had the natural order been observed in Massachusetts in the use as well as in the appropriation of land, had the land most suitable for use always been first used, doubtless most of the farmers of that State would now be located on the most valuable and conveniently situated 1,000,000 unused acres in the suburbs of cities and towns instead of upon the 902,650 acres classed as 'cultivated lands'; the remainder of the unimproved land in the State, amounting to over 2,400,000 acres, besides the 1,400,000 acres of woodland, would still be unimproved, the only difference being that nearly all the 'cultivated would then lie adjacent to compactly built cities and Of course this is but an approximation of what would really have happened under the conditions referred to, but in the main the lands of Massachusetts would have been settled in the manner stated. The best and most valuable land, considering the fertility of the soil and its proximity to centers of population, would always have been first used, and unused land would always have been the least valuable land for use. Under the effects of the taxing power applied in the manner which has been suggested, the unimproved land in Massachusetts, amounting to nearly 4,000,000 acres, would have been practically free land. And, as heretofore shown, this free land would generally have commenced where the cultivated fields ended, and where labor could produce as much wealth as when it is now applied to land held at perhaps hundreds of dollars or more per acre.

WHAT A GOOD ROAD MEANS.

"A macadamized road at the farmer's door will often alone add 10 per cent and more to his gross income, and quadruple the fund from which his possible savings must come. He can haul his crops over it when wet weather suspends work upon the farm, and at such times, especially, it facilitates the exchange of visits between neighbors, and adds immensely to the enjoyment of life. It also enables him constantly to increase the richness of his soil by easily placing upon it the fertilizing material often obtained without price from neighboring cities and towns.

"Compare the lot of a man located on land of the character above referred to with that of the average husbandman on his oft mud-bound and storm-bound farm. The former has almost all the advantages of a city, including perhaps a telephone, a trolley line, and electric light and power, and the best of educational facilities close at hand; while the latter lives remote from neighbors, schools, and churches, deprived not only of many economic advantages but also of social pleasures which would add so much to the happiness and contentment of himself and family. What wonder that so many of the sons and daughters of farmers crowd the trades and professions in cities and towns. What else could be expected when the social instincts of mankind are taken into account?

"There is no economic necessity for the hard and dreary lives which so many farmers and their wives and children are forced to live on lonely farms. Less than half the money, for instance, now expended in the construction and maintenance of dirt roads would put macadamized roads and a telephone line to every farmer's home, together with electric light and power if all farmers were located on the lands best situated for farming purposes, and the remainder devoted to pastoral uses. Not only so, but the same amount of labor wholly applied to such lands, under such advantages, would produce double and quadruple the wealth at present obtained from much of the farming lands in use.

WHAT ANY MAN MAY SEE BY OPENING HIS EYES.

"What has been stated as to the enormous areas of unused lands near the centers of population is not exaggerated. Careful observation in and adjacent to any city in America will convince the most skeptical on this point. Start from the business center of any average city, and note the proportion of improved to unimproved, or but partially improved, land between two parallel lines a quarter of a mile or so apart, running into the country. Extend these lines until a region is finally reached where the price of land is based upon the wealth which

it is capable of producing when devoted to agricultural uses, Or, in other words, extend them until land is reached, the value of which is not inflated by the hope of its sometime being used for other than agricultural purposes. In every instance, it will be found that not one acre in five, often not one in ten or twenty, between these lines, is used for any productive purpose

"If the natural order of settling upon and using land were observed, unused lands would be found everywhere in abundance immediately adjacent to thickly settled communities. Given conditions under which land could not be profitably appropriated in advance of any economic demand for it for actual use-let the forces of government be so applied that all unused or but partially used land would be practically free land, and free land then could always be found where the laborer upon it would be able to enjoy from the very start the social and economic advantages of a densely settled community. On such land most laborers, as heretofore shown, could produce wealth without the aid of any so-called capitalist, and the wages earned by them upon it would many times exceed what can now be earned on the free land which can only be found at present in

the heart of a wilderness.
"The necessary dependence of labor upon capital, and of the laborer upon the capitalist, can only be ascertained when both are supposed to have access to free land under the natural conditions which have been described. Under such conditions, the agricultural laborer would always be practically independent of the capitalist as well as the landlord, and, as already remarked, his independence would bring about the independence of all laborers. Under the natural conditions thus described, employers would compete for the privilege of employing labor, even as laborers now compete for the privilege of being employed, and wages would rise accordingly.'

Speech of Hon. Carter Glass at the Jefferson Day Banquet.

EXTENSION OF REMARKS

HON. FINIS J. GARRETT,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES, Friday, April 14, 1916.

Mr. GARRETT. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD, I include a speech delivered by Hon. Carter Glass, of Virginia, at the Jefferson Day banquet held in this city last night.

The speech is as follows:

SPEECH OF HON. CARTER GLASS AT THE JEFFERSON DAY BANQUET.

Mr. Toastmaster and gentlemen, the task to which I shall briefly address myself this evening is that of presenting a compendium of the financial achievements of this Democratic administration as they relate themselves directly or indirectly to the Federal reserve act. This can not more impressively be done than by drawing a simple contrast between the deficiencies of the old system, with its persistent disorders, and the effectiveness of the newer system in abating the distempers which, for so long a period, afflicted the country in every phase of its business life.

And it may be remarked at the outset that the defects of the old system were so glaring, as the failure to remedy them was so fraught with disaster, that the omission, when we contemplate it, not only causes amazement but constitutes an offense against the well-being of this Nation of which our political adversaries should feel ashamed. It affords justification for an indictment of the Republican Party from which it can find no avenue of escape. The party was plainly incompetent or it was afraid to alter a banking and currency system which lent itself so inevitably to the enterprises of financial adventurers and, periodically, visited every community of the country with blight.

FIFTY YEARS OF BARBAROUS BANKING.

For exactly half a century, almost to the very day, the United States was compelled to endure the handicap of the most unscientific banking and currency system of any that prevailed in the major nations of the earth. For a part of the time we seem to have been ignorant of our plight; for another part indifferent to the situation, and for the remainder of the time afraid to apply the remedy lest we should wound the sensibilities or interfere with the profits of a privileged class. We were during no protracted stage without ample warning, for the malady manifested itself irequently and violently in disturbances which swept the country like a hurricane from end to end. Five times within 30 years, immediately preceding the advent of this administration, a financial catastrophe had overtaken us right in the midst of apparent business prosperity and contentment. Each time the disaster was due largely, if not altogether, to a defective banking and currency system; and it is literally certain that our always tedious restoration was rendered vastly more difficult and painful by the sad lack of well-devised facilities.

SIAMESE TWINS OF DISORDER.

The old system had two fundamental defects. One was an inelastic currency; the other a fictitious bank reserve. They were Siamese twins of disorder; and sometimes I am inclined to ascribe the invariable failure of our Republican friends to reform the financial system of the country to their unwillingness to subdue both of these evils at the same time. While they repeatedly would tackle the problem of an inelastic currency, which everybody wanted solved, they seemed never in a mood to defy the powerful interests behind the national bank reserve system, through the peculiar operation of which nearly the whole sum total of idle bank funds in the United States was congested at a single center for use in the stimulation of speculative enterprises.

AN UNRESPONSIVE CURRENCY.

The national currency was inelastic because based on the bonded indebtedness of the United States, rather than upon the sound, liquid business assets of the country. For 50 years we proceeded upon the assumption that the country always needed a volume of currency equal to its bonded indebtedness, and never at any time required less, whereas we frequently did not need near as much as was outstanding and just as often could have absorbed vastly more than was available. Hence, when it happened that the circulating medium was redundant, when its volume was too great to be used in local commercial transactions, instead of taking it through the expensive process of retirement it was bundled off to the great reserve centers at a nominal interest rate, to be thrown, at call, into the vortex of stock speculation.

In a different way and to an immeasurably greater extent the business of the country was made to suffer by this rigid currency system in times of stirring development and enterprising activity. It could not begin to meet the commercial and industrial requirements of the country. For example, the total capitalization of the national banks of a given community in time of stress, under the old system, measured the full capacity of those banks to respond to the currency requirements of the locality. If the combined capital stock of the national banks of a city was \$5,000,000, that exactly circumscribed the ability of those banks to supply currency of their own issue to meet the demands of business, albeit these might necessitate the use of \$10,000,000 or more. And in time of panic, such as that which convulsed the country in 1907, had these banks held \$5,000,000 of gilt-edge short-time commercial paper in their vaults, they could not, under the old system, have exchanged a dollar of it for currency wherewith to make up the deficiency and promptly respond to the requirements of business, for practically all the banks were in the same desperate plight, every one, with rare exceptions, looking out for itself, with no other source of supply.

A NOTABLE ACHIEVEMENT.

The first notable financial achievement of the Wilson administration was to revolutionize this wretched currency system, the unhappy victims of which are without number and the losses beyond human approximation. We substituted for a rigid bondsecured circulating medium, unresponsive at any time to the commercial requirements of this great Nation, a perfectly elastic currency, based on the sound, liquid commercial assets of the country, responsive at all times and to the fullest extent to every reasonable demand of legitimate enterprise. It comes forth when required and is canceled when not needed. The amount is ample when business is active and only enough when business is Contradistinguished from bond-secured currency, every dollar of it is based on a stable commercial transaction, whether of a mercantile, industrial, or agricultural nature, fortified by a 40 per cent gold reserve, by the assets of a great banking system, by the double liability of member banks, and by the plighted faith of a Government of a hundred million free citizens. So that in a case similar to the one cited a while ago. where the banks of a given community, with \$5,000,000 of liquid commercial assets, could not, under the old system, in time of stress get a dollar of currency on their holdings, because there was no source of supply, the same banks, under the Federal reserve system, could exchange their \$5,000,000 of liquid assets at a Federal reserve bank for \$5,000,000 of the best currency on earth, less a fair rate of discount. That one reform, gentlemen, represents the difference between disaster and success.

A VICIOUS RESERVE SYSTEM.

Another fundamental defect of the old system was its fictitious bank reserve, created by that provision of the nationalbank act which authorized a deposit or book credit of individual country banks, with banks in reserve and central reserve cities to be counted as reserve, just as if held in the vaults of the interior banks. On these reserve balances, subjected to a process of multiplication, the big banks of the money centers would pay nominal interest, which operated as a magnet to attract the reserve funds of the entire country; so that on March 14, 1914, eight months before the Federal reserve system was put in actual operation, the New York banks alone held \$836,000,000 of the funds of outside banks, while they were loaning outside banks only \$192,000,000. Already the congressional monetary inquiry had disclosed the startling fact that on November 24, 1912, the legal custodians of these reserve funds had put \$240,000,000 of them in the maelstrom of Wall Street stock operations. Do you realize quite what that means? It means that these millions and many millions more were withdrawn from the reach of mercantile and industrial uses throughout the United States at a fair rate of interest and loaned to stock gamblers at an abnormally low rate of interest in comparison. We talk about the law of supply and demand and pass laws to punish combinations in restraint of trade; but before the enactment of the Federal reserve act the banking community, under the sanction of the atrocious system of an inelastic currency and a fictitious reserve, was enabled to defy the law of supply and demand both in the lax season and in the tense. For in the season of lax trade and abundant currency, as I have already indicated, instead of keeping the money at home and giving the local commercial and industrial interests the advantage to be derived from low rates of discount, the surplus funds were sent to the money centers for the accommodation of Wall Street.

A PANIC BREEDER.

And, likewise, the old system was a rank panic breeder. In periods of greatest business activity the country was made to suffer desperately for lack of adequate credit facilities. When the prospect was brightest; when men of vision and ambition and energy would press forward in pursuit of prosperity and the hum of industry would literally be heard throughout the land, two links in the chain would suddenly snap, tearing to shreds the whole business fabric and carrying dismay to every community on the continent. That is to say, in plain terms, that when the country banks of the United States, trying to respond to the commercial and industrial demands upon them in their respective localities, being unable to issue additional currency, would seek to draw in their reserve balances from the congested centers, and when the big banks of these centers would, in turn, be compelled to call their loans on stock, thus contracting the credit facilities of "the street," interest rates would quickly jump, mounting higher and higher, until panic would ensue, banks throughout the country would stop pay-ments across the counter and consternation would reign where confidence and contentment so soon before had prevailed. I have said the losses are beyond computation; and that is so. They affected not alone the financial institutions immediately involved, but the merchants whose credits were suspended; the industries whose shops were closed; the railroads whose cars were made idle; the farmers whose crops rotted in the fields; the laborer who was deprived of his wage. No business enterprise, if any individual, ever entirely escaped.

ANOTHER GREAT ACHIEVEMENT.

Another great achievement of the Wilson administration, therefore, was to remedy this monstrous condition. No other legislative effort, as I recall the history of events, was ever directed against this bank-reserve evil. It required courage. It constituted a challenge to the dominating financial interests of America, and they accepted the invitation to the conflict. It was a memorable fight, in which sound economic principles triumphed so completely that many of the great bankers who seemed once implacable now concede that a tremendous advance has been made in the direction of scientific banking, and there is a general concurrence of belief that the Federal-reserve system saved this country from a financial convulsion in the fateful autumn of 1914, even before it was in full operation.

We corrected this vicious bank-reserve system by establish-

We corrected this vicious bank-reserve system by establishing regional reserve banks and making them, instead of private banks in the money centers, the custodians of the reserve funds of the United States; by making these regional banks, instead

of private correspondent banks, the great rediscount agencies of the country; by requiring these regional banks to minister to commerce and industry rather than to the schemes of speculative adventure. Under the old régime we had been taught to believe that the balance of the country was dependent on the money centers. Under the new dispensation the fact has been revealed that the money centers are dependent on the balance of the country. Under the old system the country banks were subservient to the money centers, for only there could they resort for rediscount favors. Under the new system it is no longer a question of favor; it is purely a question of business. Under the old system it was at times a question of ability to serve, and at other times of willingness. The new system supplies both the ability and the incentive to do business. Indeed, this financial product of the Wilson administration is both a proclamation of emancipation and a declaration of independence for the national banking system of the United States.

NEW YORK'S RIGHTFUL PRIMACY UNDISTURBED.

I noted the other day that a Representative in Congress tauntingly referred to the fact that bank deposits in New York had vastly increased since the adoption of the Federal reserve act and triumphantly asked what had become of the boast that the primacy of New York as a money center would under the new system depart. Such talk, however specious it may seem, is assuredly not sensible. Nobody ever made such a silly boast. Nobody ever dreamed of such a stupid notion. Nobody ever pretended to desire anything of the kind. Of course, New York has more deposits under the Federal reserve act than ever before. So has Pittsburgh, so has Boston, so has Baltimore, so has Richmond, so has Chicago, so has San Francisco, so has Dallas, so have the banks of a thousand other communities scattered from one end to the other of this country. That is exactly what we expected; that is precisely what we predicted; that is the very thing the Federal reserve act was designed to It was contrived for the express purpose of putting the whole national banking system on such a sound basis as to create confidence and stimulate business and swell the volume of deposits of every community of the United States.

People put their money in banks now, and banks redeposit with other banks now, because they know that under the new system no panic will ever come to keep them from getting their funds back. The proponents of the Federal reserve act had no idea of impairing the rightful prestige of New York as the financial metropolis of this hemisphere. They rather expected to confirm its distinction, and even hoped to assist powerfully in wresting the scepter from London and eventually making New York the financial center of the world. Eminent Englishmen with the keenest perception have frankly expressed apprehension of such result. Indeed, momentarily this has come to pass. And we may point to the amazing contrast between New York under the old system in 1907, shaken to its very foundations because of two bank failures, and New York at the present time, under the new system, screnely secure in its domestic banking operations and confidently financing the great enterprises of European nations at war.

AN INSPIRING CONTRAST.

In 1907, after six years of Theodore Roosevelt and 43 years of the old system. New York could not let a country bank have \$50,000 of bank currency to meet the ordinary requirements of commerce or the pay rolls of industry. In 1915, after three years of Woodrow Wilson and one year of the new system, New York let two European nations, in the very cataclysm of a stupendous war, have \$500,000,000, still leaving the banks of that city with larger deposits than ever before in their existence. Oh, yes, Mr. Toastmaster, New York City banks have greater deposits to-day than they had 17 months ago by \$605,000,000, thus putting to shame the evil Republican prophecy that the Federal reserve act would create a disastrous constriction of commercial credits and precipitate a panic of unsurpassed violence in this country.

THE COUNTRY'S RESERVES SECURE.

But, with all this, there are some things that New York once had which it has not to-day and never will have again as long as the Federal reserve act shall remain on the statute books. It has not the gold reserve funds of the country for use in the stock markets of "the Street," nor has it any longer the power to control the rediscounting system of the United States upon terms of its own adjustment. To-day 12 regional banks of the new system, strung from Maine to Mexico, from the Atlantic to the Pacific, hold more than \$500,000,000 of these funds, and soon will have many millions more, to be used as basic credit facilities for cheerfully rediscounting the commercial paper of the

merchants and manufacturers, the farmers and stockmen, the exporters and importers of America, with not a dollar for the whirlpool of speculation. And these trade loans are already being made at an average rate of interest 1½ per cent lower than has prevailed before in a long number of years.

FOREIGN BANKING.

In the foreign field, for the first time in the history of national banking, six great branch banks have already been established in countries to the south of us, four of them by the very national bank of all others that most desperately resisted the passage of the Federal reserve act, but which was quickest to avail of its advantages. Other branch banks are in contemplation, and before many years have clapsed the branch-banking system authorized by this Democratic administration will not only be saving millions of dollars in foreign exchange, hitherto paid to London, Berlin, and Paris, but will be a powerful factor in establishing and fostering foreign trade relations throughout the world.

RURAL CREDITS.

I sometimes think that in its eagerness to do more for the farming community of the United States this Democratic administration has failed to appropriate full credit for the really great things it already has done. Not in 50 years did the Republican Party ever write a provision into the national-bank act for as much as one dollar of rural credits. On the contrary, by the text of the law, by the rulings of the Treasury, and by decisions of the courts, every semblance of farm credits was seduously excluded. In the first great banking measure put on the statute books by the Democratic Party, in nine months after the inauguration of a Democratic President there are millions of dollars of farm-credit facilities, whatever professional demagogues may so to the contrary. Not a dollar of the funds of a national bank could be loaned on improved farm land by any legislation of a Republican Congress. Under the Federal reserve act, according to a computation by the late Charles A. Conant, one of the best financial experts this country ever had, \$359,000,000 are made available for loans on farm mortgages alone having five years to run. In the matter of current rediscounts every possible advantage is given to farm credits over mercantile paper, and in the matter of acceptances on the exportation of the great staple products of this country infinite aid is extended to the American farmers. In addition to this the Federal reserve system has already had a powerful influence in lowering the rate of interest, and in this circumstance alone it may confidently be predicted that the farmers of the country will be saved annually hundreds of thousands of dollars.

AN UNPRECEDENTED RECORD.

In the limited time prescribed for me I can not begin to recount the financial achievements of this Democratic administration as embodied in its legislation and illustrated by the splendid service of its executive efficers, at the head of whom stands the most courageous and resourceful Secretary of the Treasury the country has had in a quarter of a century. These accomplishments, in their number and magnitude, surpass the record of any other administration of which I have knowledge.

THE MASTER MIND.

As to the Federal reserve act itself there has been occasional speculation as to who most deserves credit for its conception and its enactment into law. Its paternity has curiously been ascribed to men who were savagely hostile to the act; to men who never saw a sentence of the original draft; to men who could not write its title in a month's trial. I know very well that the chairman of the Banking and Currency Committee of the House has been given an undue part of the praise. commendation so seldom is applied to a public man that I have never repelled the pleasant things said of me. With outward gravity and inward amusement I have heard myself accused of statesmanship, and-have liked it. But, gentlemen, the serious fact is that the master mind of the whole performance was Woodrow Wilson's. It was his infinite prescience and patience; it was his admirable courage and wisdom; it was his patriotism and power-his passion to serve mankind-that gave zest and inspiration to the battle for financial freedom. And when, on the evening of December 23, 1913, he affixed his signature and seal to House bill 7837, there was consummated in the offices of the White House the greatest legislative miracle of our It is because I realize now as never before the inevitably dangerous as well as the tremendously beneficent potentialities of the Federal Reserve System that I earnestly for the reelection of the man who may most be relied on to administer the law to the lasting good, and not to the injury, of the American people.

The Navy League.

EXTENSION OF REMARKS

HON. OSCAR CALLAWAY,

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 14, 1916.

Mr. CALLAWAY. Mr. Speaker, under leave to extend my remarks, I insert herewith the following:

[By W. T. Bost.]

RALEIGH, April 11.

Wiley Croom Rodman to-day furnishes the newspapers something in the shape of lobbies that must be impressive even to a National Con-

in the shape of lobbles that must be impressive even to a National Congress.

Col. Rodman's statement is made up of letters written to the president of the National Security League, resigning from membership in that league because of Rodman's cordial disagreement with its evident purposes. It combines letters also to Senators Overman and Simmons, and the letter of President Mengel to the members of the league.

All of them are very interesting documents. Recently the National Guard was charged with "lobbyism," the reproach attending the activities of the guard in defeating some of the military measures pending before Congress. Adjt. Gen. Young gave to the newspapers last week a statement respecting the guard's interests. Col. Rodman, who is also a member and an officer of the guard, supplements the adjutant general's with some letters that carry a good deal of interesting news matter.

Col. Rodman tells the league's president that he not only does not think that the league's purposes in attacking the National Guard are patriotic but he thinks it exists solely as a professional lobbying organization. He follows his attack on it with quotations from the letters being sent out. Manifestly he puts the next move up to the Security League.

Col. Rodman is a native of Washington, a brother of Division Counsel.

Col. Rodman is a native of Washington, a brother of Division Counsel W. B. Rodman, of the Norfolk Southern, and former member of the general assembly from Beaufort County. The letters written by himself and by the president of the National Security League are decidedly germane to the charges of lobbying.

LETTER TO THE SENATORS.

Col. Rodman writes to Senators Overman and Simmons as follows:

"Having read in the public press the charges of 'lobbyism' made by Senator Chamberlain et als. with reference to the National Guard, I beg to inclose herein a printed letter, which I have just received from the National Security League.

"This, it seems to me, is 'lobbying' of the most undesirable kind, and I suggest, if you think proper, that you present it to the Senate in rebuttal of the charges made against the officers of the National Guard. I have received many such letters from the National Security League and have received many such letters from the National Guard Association.

"In June, 1915, I happened to be in New York and read of a meeting at Carnegie Hall and an exhibit at the Astor House, presumed to be in the interest of national preparedness. I attended both the exhibit and the meeting and became then a member of the National Security League under the innocent presumption that the promoters had the best interest of our country at heart. For some time past I have thought, and I am now convinced that their only interest was the creation of a large 'professional army' in the United States.

"To this I am as utterly opposed as to the principle of 'peace at any price."

"The position you gentlemen have taken in this matter, if you will

"To this I am as utterly opposed as to the principle of peace at any price."

"The position you gentlemen have taken in this matter, if you will permit me to say so, is to me the only possible patriotic American stand to take.

"The National Guard has for years and years served to the best of its ability without regard of any kind. It has at all times been opposed and belittled by the professional soldier for reasons too obvious to need explanation, and by virtue of the propaganda by them conducted it has unfortunately been misunderstood by its friends at home.

"In connection with this I take the liberty of inclosing a copy of my letter of resignation forwarded to-day.

"Yours, very truly.

"WILEY C. RODMAN, G."

"WILEY C. RODMAN, "Colonel Second Infantry, N. C. N. G." LETTER TO MENDEN.

The following goes to Stanford Menden, president of the league:
"I am in receipt of your favor of March 28, 1916, and have also received your previous favors with regard to contributions, etc.
"In addition to this I read your full-page advertisement in the Washington Post when the Hay bill was before the House of Repre-

Washington Post when the Hay bill was before the House of Representatives.

"I Joined your association in New York in June, 1915, and attended your meeting at Carnegie Hall from the purest patriotic impulses, believing that your society had the best interests of our United States at heart. I have felt, since I saw your advertisement in the Washington Post, that I was mistaken in my impression, and since the receipt of your letter of March 28 I am convinced that my opinion is correct.

"It was a pleasure to me, as well as a duty, to associate myself in any capacity, no matter how humble it might be, in any matter that looked squarely and fairly toward the defense of our country, but for some time charges have been made which I now believe were not made in good faith against the National Guard, of which I have the honor to be a member. Your letter of March 28 is to me the ultimate proof. "In resigning I feel constrained to say that it seems to me that your organization is not founded in the interest of the welfare and protection of our country, but exists solely as a 'professional lobby,' which seeks by every means within its power to control and dominate our country, at the same time seeking to impute its own faults to others.

"Yours, very truly," "WILEY C. RODMAN,"

"WILEY C. RODMAN."

THE LEAGUE'S LETTER.

"To the Members of the National Security League:

"To the Members of the National Security League:

"We ask that you immediately write or wire to your Senators and Congressman in Washington in favor of preparedness along national lines. Although it is highly preferable that you make the appeal in your own language, the following wording may be employed: 'I earnestly request that you use your vote and influence for adequate military and naval preparedness of the United States. I believe we should have an adequate standing army and reserve, together with a large body of citizen soldiery trained to arms, in a second line of defense; all of these to be under absolute and direct Federal control in every particular. I am convinced the Hay bill is weak and insufficient and therefore wasteful. As to the Navy, I advocate immediate and energetic prosecution of a naval program substantially as recommended by the General Board of the Navy.'

"League headquarters or any newspaper office can give you the names of your two United States Senators and of the Representative from your district.

"In addition to your individual letters and telegrams, it is desirable that you write any other Members of Congress whom you may be able to influence, and that you induce as many other persons as possible to do likewise.

"Evel of your should and every to induce at least fine ether persons."

that you write any other and to induce as many other persons as possible to influence, and that you induce as many other persons do likewise.

"Each of you should endeavor to induce at least five other persons to comply with the request of this letter. Do not allow any one to persuade you that letters written to Congressmen are ineffective; it is not true. Such letters are valuable, especially if written by constituents. The influence already exerted by the antipreparedness people (entirely out of proportion to their numbers) is evidence of this.

"This is the most important request that has been made of you as a member of the league for individual constructive action. Do not fall of your patriotic duty at this critical time, but act and act promptly.

"We have inclosed a card which we should be glad to have you mail to this office when you have written to your Senators and Congressman.

"Yery truly, yours,

"S, STANWOOD MENDEN, President."

Agricultural Appropriation Bill.

EXTENSION OF REMARKS

HON. FREDERICK L. BLACKMON.

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

Mr. BLACKMON. Mr. Speaker, our people have been handlcapped for many years by reason of the high rate of interest charged. Our wonderful and practically unlimited resources can never be developed until we secure a lower rate of interest. The continuous appeals from the farmer for a lower rate of interest have been ignored by the Republican Party, and it is now up to us to do something that will secure to the farmer and those desiring to develop our waste lands a cheaper rate of interest. My contention is that we should do this now, and, for my own part, I object to any further delay on the subject. [Applause.

Some progress has been made in an effort to provide legisla-tion for the creation of an efficient system of rural credits. In my judgment, the time has come for efficient, definite congressional action. A glance at the great subject demonstrates that it is beset with seemingly insurmountable obstacles. There are approximately in the United States more than 6,000,000 farms in operation to-day. About 2,000,000 of these farms are carrying mortgage indebtedness, most of them at a rate of interest much higher than the merchant, manufacturer, promoter, or speculator pays for loans. It is estimated that the aggregate amount of farm mortgages exceeds \$6,000,000,000 and that the rate of interest being paid upon them, including the cost of procuring the loan and the cost of renewals, averages 8 or 9 per cent. When it is remembered that land-mortgage loans in the Northeastern and a few of the more progressive Hiddle Western States bear an interest rate of less than 6 per cent, it becomes apparent that the landowning farmer, who borrows money on such land in the South and West, pays perhaps an

money on such land in the South and West, pays perhaps an interest averaging 10 per cent per annum.

Again, it is a fact that 2,000,000 of the country's farms are operated under a system of tenantry. Therefore 2,000,000 of the country's farmers have no interest other than that of lessee in the land which they till. The presence of this large number of landless farmers makes it necessary to provide two systems of rural-credit legislation, one adapted to the landowning farmer and the other to the landless farmer. One system must provide facilities based upon personal or character. owning farmer and the other to the landless farmer. One system must provide facilities based upon personal or character security, while the other can be builded up on farm-land security. On this occasion I shall address my remarks to the land phase of the subject.

The low interest rate on farm-land mortgages prevailing in Iowa, Illinois, New York, and Pennsylvania demonstrates that

density of population and proximity to consuming markets stabilize land values to such an extent that the owner of desirable farm lands in these favored States borrows money today about as cheap as the maximum interest rate contemplated in the bill now pending in Congress.

Density of population and proximity to markets have long since stabilized land values in the more progressive countries of Europe. This condition largely accounts for the fact that the German Landschaft has sufficed to provide the German farmer with abundant funds for farm development on long terms at a very low rate of interest, certainly less than 5 per cent per annum.

The German Landschaft scheme is readily adaptable to conditions in Pennsylvania, New York, or Illinois, and would probably, if put into practice there, lower somewhat the rate of interest prevailing in these States and materially extend the life of farm loans. But this is not proof that the German Landschaft, or any other particular system of rural credits now prevailing in any of the progressive countries of Europe, are adaptable to present-day conditions in the South and West, or that, if adopted, they would bring relief to the landowning farmer in these vast sections of the country. The profound study which has been made of the European systems of rural credits is very valuable and will prove helpful to Congress in solving this commanding problem. But the advocates of the present systems will fall into grievous error if they attempt to blindly follow these systems in building up an effective and beneficent system of American rural credits.

The report of the joint committee of the House and Senate on rural credits and a draft of the proposed bill to provide a system of land mortgage credit in the United States under Federal supervision, made to the House on January 4, 1916, demonstrates the fact that public sentiment has crystallized into the following conclusions:

I.

That the land-owning American farmer has been and is a very sick man, suffering from an acute attack of "dearth of credit." The Federal and State tax and banking laws have The Federal and State tax and banking laws have been so shaped that they have tended to isolate him from the Nation's abundant source of credit, and this conclusion is fully supported by the history of our legislation. National law called into being the national banking system, conferred upon the na-tional bank valuable special privileges, threw around it alluring safeguards, such as direct Federal supervision and double stockholder liability. These special privileges and safeguards in-stantly made the national bank attractive as a public depository. Billions of the people's money was and is deposited in these national banks. A single provision in the national banking law provides that neither capital stock, accumulated surplus, nor deposits, aggregating to-day \$9,000,000,000, shall be loaned upon land. This inhibition rested upon the national bank for more than half a century, and was only partially removed by the wisdom of the Democratic Party upon its accession to power. Under Republican rule, for more than 50 years, as a result of the operation of Federal statute, the farmer and his land were absolutely cut off from access to half of the country's available money supply.

A Republican Congress dealt the farmer another deadly blow and further estranged him from the country's sources of credit when it created central reserve banks and authorized the Comptroller of the Currency to count deposits made by the interior banks in such central reserve bank as cash in making up the reserve fund which the national bank is required to continuously keep on hand. As a practical result of this Republican stroke in high finance it came to pass that interior bankssouthern banks and western banks-were lending their money to Boston, New York, and Philadelphia banks at less than 3 per cent interest per annum when some were charging local borrowers on gilt-edge security from 6 to 60 per cent. (See recent charges of Comptroller of the Currency.) In this way the big interests, in sympathetic touch with the great central banks of the country, were provided with cheap money for long-term periods, while the southern and western farmer, with his land, was left to the mercy of an artificially depleted local money market in his pursuit of funds to develop and operate his little The Republican Party, under the lash of the manufacturer, the merchant, the promoter, and the speculator-the dominant personalities in big business—built a Chinese wall be-tween the vast resources of the national bank and the farmer. The Republican protective tariff system has made the farmer pay two prices for machinery, implements, clothes—practically everything that he has to buy—and all this because the Republican Party never dared to enact legislation which would restrict the manufacturer to a reasonable profit on his goods,

Congress has power to levy an excise or income tax. This vast power has always been and is available under the decisions of the Supreme Court of the United States to protect the consumer and the wage earner from the unrestricted greed of the manufacturer without exposing American industry to foreign competition.

One big, tragic fact tells the tale. There isn't a farmer in the United States who has amassed a million dollars out of his strictly agricultural activities, while manufacturing, merchandising, banking, promoting, and speculating count their millionaires by the thousand and their multimillionaires by the hundred. This grim harvest is the logical result of the gross discriminations which the farmer has suffered during the last 50 years of Republican misrule.

II.

THERE IS A NECESSITY FOR FARM CREDITS.

The land-owning farmer of the South and West, as well as many of those who live in the favored States of the Union, could profitably employ in farm development and operations \$10,000,000,000 on a long-term basis at a rate of interest not to exceed 5 per cent. They could use several billions more in preventing their products, after harvest, from being sacrificed upon glutted markets. The cotton producer, for lack of fair and reasonable borrowing facilities, has to dump his cotton upon a conscienceless market within three months after its production, frequently regardless of price, when fair credit opportunities would enable him to house it, to hold it, and to feed it out to the consumer throughout the whole year, and in that way escape the onerous toll annually extorted from him by the speculator, who only buys because he knows that he can subsequently sell at a profit. The farmer who produces wheat, corn, meat, and other such staple products is also forced to make the same annual sacrifice upon the artificially created altar of short-term credit loans.

The farmer needs ten or twelve billions of dollars, and if he ever gets it on a long-term basis at a reasonable rate of interest, the capital stock, surplus, and deposits of national, State, and savings banks and trust companies will have to be utilized. To supply this need the constitutional power of Congress must be exercised to remove every barrier, both natural and artificial, which intervenes between the farmer's land and the country's credit resources. It is a distinct disappointment to public expectation that the joint committee should come to the conclusion that the resources of such existing lending institutions may not be made available for long-term farm loans. It is true that demand and short-time deposits held by existing banks under existing Federal and State law could not be invested in long-term loans without jeopardizing the depositor. It is true that existing lending institutions have a large clientelle demanding loans who have, by reason of previous patronage, the first claim upon the assets of the institution, but it does not follow, as the committee seem to think, if I correctly gather their sentiment from their proposed bill, that Congress should shape its rural-credit legislation along lines which would, as a matter of law, exclude the farmer and his \$30,000,000,000 worth of land from participating in the loans which are being made out of perhaps \$25,000,000,000 now owned or controlled by existing money-lending institutions of the country. If the farmer and his lands are directly cut off from all these sources of credit, then it is utterly impossible for Congress to create other sources of credit to meet the farmer demand.

Should Congress attempt to shape any legislation which would produce sufficient credit for the farmer outside of existing national credit resources, it would have to flood the country with flat money, even to the verge of economic suicide, raid the United States Treasury, and rape the Constitution. Neveras unbelievable and inconceivable as it is, it doth appear that in the bill proposed by the joint committee, as well as the bill reported out of the Senate Committee on Banking and Currency, that the authors and advocates of the two bills contemplate bringing into being a Federal rural-credit system so conceived and so shaped that the great pressing agricultural demand for credit will be supplied independent of present-day money-lending institutions, which own or control as trustees 95 per cent of the national credit resources. The idea, as avowed in the proposed bill, is to bring the farmer and his land in closer touch with the Nation's credit, and, as incredible as it may appear, in order to promote the indispensable sympathetic contact between the farmer and the money lender, the authors of the bill propose to exclude substantially all of the money-lending institutions now in existence. They propose to bring the farmer in loving communion with the country's credit resources by further isolating him from existing lending institutions, which now have under their control the aforesaid credit resources. The bill at once proceeds upon the theory that the way to promote this contact is to call into being a brand-new system of banks, known as farm-loan banks, a system of banks without any capital stock, without any surplus, without any deposits, without any experience, without any commercial prestige whatever other than the capital stock which the United States Government, under the terms of the bill, is required to purchase in the event other agencies refuse to buy the capital stock. The mysterious psychological element lurking behind the farm-loan bank seems to be that they will entice the owners of deposits in existing banking institutions to draw their deposits out of these institutions and fall over each other in an effort to buy the imperfectly secured farm-loan bonds issued by the different farmloan banks. The whole scheme is fundamentally unsound, unsafe, and unfair. Among the more obvious of the innumerable objections to it are: (1) It creates a horde of highsalaried middlemen to feast upon the sweat of an overtaxed people; (2) it casts aside the experience, the prestige, the assets, and the solvency of old-established banking institutions, whose unconditional indorsement upon said bonds would instantly inspire Nation-wide—yea, world-wide—public confidence, and substitute therefor the indorsement of a brand-new, inexperienced, surplusless, depositless, farm-loan bank.

Again, the scheme as outlined in the bill possesses inherently constitutional infirmities. It obviously takes money out of the United States Treasury and devotes it exclusively to farmmortgage loans. This, indirectly at least, makes the United States Government liable for the redemption of the farmmortgage bonds. It distinctly involves Government aid, and that, too, in a novel and unprecedented way. As drawn the bill vests the power in the Federal farm-loan board, just as their discretion may dictate, to create 12, or 1,200, or, for that matter, 12,000 regional farm-loan banks, 90 per cent of whose \$500,000 minimum capital stock must be purchased by the Secretary of the Treasury upon a time-limit public default. Under the terms of the bill \$6,000,000, \$60,000,000, \$600,000,000, in the discretion of five men, must be loaned out by the United States Treasurer, and exclusively upon land security. If only 12 banks are established under the terms of the bill, the august sum of \$6,000,000 of capital stock will be provided to meet the ten or twelve billion dollar immediate pressing demand of the land-owning farmer of this country. A limited number of regional banks would only stultify Congress and mock the farmer in his hour of distress. A number of such banks, adequate to create sufficient funds to meet the farmer demand, would deplete the Treasury of the United States and bankrupt the Government, provided the millions of depositors do not draw their funds out of existing money-lending institutions and come to the rescue of the Treasury either by subscription for come to the rescue of the Treasury, either by subscription for the stock of these farm-loan banks or by purchasing as rapidly as issued the farm-loan bonds issued by these banks.

If it be the purpose of the two bills now before Congress to

If it be the purpose of the two bills now before Congress to raise sufficient funds to meet the actual needs of the country in this indirect, awkward, unjust, unsafe, and unconstitutional manner, then I am against the proposition simply because an unconstitutional or uneconomical farm-loan system is predestined to speedily prove a gigantic boomerang, disastrous to the Government and the American people.

tineoustrutional of the conomical farm-roan system is precestined to speedily prove a gigantic boomerang, disastrous to the Government and the American people.

It is fundamental, in my judgment, that all of the credit resources of the country must, by Federal statute and through constitutional governmental aid, be made available for long-term, low-interest-bearing farm-mortgage loans. That the quickest, the best, and the fairest way to bring the farmer in personal contact with the country's credit resources is to utilize existing banking machinery of every kind and character. gress would be well within established and universally recognized precedents if it extended the facilities afforded by the Federal reserve bank act to long-term, low-interest-bearing loans on farm-land security. Let the discount provision of the Federal reserve act be so amended and extended that any member bank, or any other reputable, solvent bank willing to comply with the conditions in the United States, State or National, shall have the right to lend its assets on governmentally supervised and controlled long-term land mortgages-as to confer upon such bank holding such a farm mortgage, the right at its option to immediately turn over, through unconditional indorsement, such farm mortgage to the Secretary of the Treasury, or some Federal officer designated for that purpose, and receive therefor its face value in Federal reserve notes, and that a hundred millions of the unlimited amount of the Federal reserve notes now authorized by the Federal reserve bank act be specifically devoted to that purpose. That when in the judgment of the Secretary of the Treasury, the Treasury of the United States has accumulated enough of such farm mortgages

it shall be the duty of the Secretary or person in control of such fund to issue farm-mortgage bonds, bearing not less than 4 per cent, running for 36 years, interest payable annually, or semiannually, as he may determine, and state thereon: "This bond is secured, first, by the land mortgaged; second, by all the assets of the bank discounting the mortgage; third, by the United States Government." In this way any citizen or trustee having money to invest would find an absolutely safe, long-term investment, paying an attractive rate of interest, simple in terms, and immediately convertible into cash. Such a bond would almost pass as legal tender. The banks of the country would naturally hold these mortgages just as long as they could in order to secure the interest, as upon their discount the interest would immediately pass to the bondholder, while the responsibility of the bank for the bond's redemption would continue. With immediate liquidity thus guaranteed the timid, law-hampered banks would be reanimated and thereby glad to lend their assets upon such mortgages, because they could convert them into cash as the exigencies of their business might require. The swarm of middlemen would be eliminated, public consumption of the bonds would be assured, and the bonds would be as safe as if offered by the United States. The rapid sale of these bonds would automatically restore and maintain the original hundred million dollars of reserve notes appropriated. It would follow that the farm lands and the money lender would be brought into direct and effective contact, and, in addition to that, the plan would have the hearty and unqualified support of all existing money-lending institutions in the country. The plan would be founded on constitutional grounds, as safe and sound as that upon which the national-banking system and the Federal reserve system now rest. In fact, every constitutional qualm would vanish. The plan would operate in such a way as to show the money lender that he could not oppress the people, and the banks would vie with each other in taking the loans, and the present disinclination to accommodate the farmer would disappear. The friends of the farmer and of a square deal, who are enamored of the common weal, should insist that the ruralcredit legislation passed at this session of Congress proceed along these fundamental, enduring, and constitutional lines.

The faith of the United States Government has been frequently pledged to increase the Nation's sources of credit. More than three hundred millions in greenbacks circulate to-day as legal tender with popular and judicial approval. Seven hundred millions of national-bank notes also circulate as money, based exclusively upon the deposit of Government bonds in the Treasury of the United States. The Federal reserve notes circulate freely, based upon commercial securities and the assets of the bank that discounts them.

With the farm lands of the Nation specifically pledged to the extent of 50 per cent of their governmentally appraised value, the highest and best security in the world, plus the unconditional indorsement of reputable, solvent, governmentally inspected banks, furnishes an ample basis of security to warrant the United States Government in guaranteeing bonds designed to supply the farmer with sufficient funds to develop and operate the Nation's farm life. When Mother Earth, tickled by the implements of husbandry, ceases to produce her perennial harvests, then credit, then civilization itself disappears. The national-reserve banks are creatures of Congress and therefore are subject to national control. Their best friends must admit that many of them have been great sinners in the past, but the big fact remains that as an institution they retain the confidence of the great investing public and control the Nation's money supply. Therefore they needs must be reckoned with in framing effective rural-credit legislation.

I hold no brief for any bank; but I do hold in my heart an ardent desire to emancipate the great agricultural classes of this country from the clutch of an oppressive financial bondage. The great money-lending institutions of the country are indispensable in any scheme of emancipation. Any congressional effort, however honestly made, to ameliorate agricultural conditions, which excludes them, must needs be a farce and a mockery.

If we would give to the farmer a cheaper rate of interest, his past thrift and industry have demonstrated that he is capable of developing and building up this great country of ours. The banks need have no fear, because, as the farmer prospers and accumulates money, he is too intelligent not to deposit it in some safe and reputable bank.

I have given the subject of rural credits a great deal of study, and I am firmly convinced that until Congress passes a safe and sane rural-credits bill, our great resources, as I have said, will never be fully and properly developed.

Government Ownership of Dredges.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1916.

On the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. MOORE of Pennsylvania. Mr. Speaker, the so-called Good amendment, prohibiting river and harbor appropriations if the contract price exceeds 25 per cent of the estimated cost of Government work, is of dubious value. It is a further step in the direction of Government ownership which the Congress ought not to take. The argument that contractors should be satisfied with a profit of 25 per cent is specious, because there is no assurance now of any profit to the contractor and his risk of loss would be just as great under this amendment as under the existing order. I have no special information about the profits or losses of contractors who do dredging for the Government, but in this as in other instances, I do not believe we should be swept off our feet and made to discourage private enterprise, because some private individual or concern doing business for the Government has made a profit. Neither am I in favor of the delaying of legitimate work, which I believe the adoption of this amendment will result in.

Why is the amendment objectionable?

First. Because it would postpone, if not completely stop, many needed river and harbor improvements where Government plants are not available. It would not seriously interfere with the great Mississippi River and its tributaries, because appropriations carry provision for the construction of dredges and the other equipment necessary to keep that work going. Along the Atlantic seaboard, the Pacific coast, and the Lakes and the Gulf, where contracts are entered into because the Government is not equipped to do the work, we would probably wait indefi-nitely under certain conditions, in the event that private contractors were not available under the terms of the amendment.

Second. Because if the Government, which is already at great expense for the construction and maintenance of dredges and other equipment, must fit itself out for all the river and harbor work that is to be done where contractors are not available under the terms of the amendment, it could not obtain dredges or equipment for urgent work for a series of years. The Government was obliged to build a dredge for the Absecon Inlet at Atlantic City, N. J., because no private contractor would invest the \$180,000 that was necessary to construct the special type of dredge needed for the work. The Government was in substantially the same position with respect to the Ambrose Channel, approaching New York; no contractor or set of contractors were willing to build dredges costing \$360,000 apiece for that one job. This sort of work the Government has to do itself, and its dredges are available for open-sea work on which contractors, in view of the expense and risk, have no desire to compete. It is not probable that any sane contractor in the ordinary course of business would build a special type of dredge at a cost of \$360,000 if he could see no use for the dredge after a single contract was fulfilled. He is presumed to be smart enough, as most any business man would be, not to the himself up with a worthless but expensive plant which used up all of his capital. It is different with the Government of the United States, which has the taxpayers' money to fall back upon whether the plant is kept going or not.

Third. Because the confusion arising from the interpretation of the meaning and effect of the amendment will tend to prejudice legitimate improvements where there is no Government plant as against those localities where Government plants are established. This would apply particularly to inland river work. We have Government dredges at work on the Delaware River channel now, and they are very effective because of their being designed for the work; but probably 75 per cent of all the work on this important stream is done by contract. If we have to wait until appropriations are obtained for a sufficient number of Government dredges to keep the work up to date, we must suffer great loss through the delay that will ensue.

On other projects than the Delaware, where there is no Government competition, who is to tell whether the contractor will get 25 per cent more or 25 per cent less than it will cost the Government to do the work? Granted that given the dredges and

the appropriations free from taxation, free from interest charges, and free from insurance, the Government can dredge a per cubic yard cheaper than a contractor with all his overhead charges can do it. How are the engineers to make an estimate on a given project where there is no Government competition? The whole trend of the amendment speaks confusion and delay, to say nothing of a lack of confidence in the War Department.

Fourth. Because an increase of the Government dredge outfit can only be acquired after much legislation and a terrific increase in construction cost. The seagoing dredges, to which reference has been made, could not be constructed to-day for the prices that obtained when they were built; and even if they were authorized at an increased cost, they would be of no service to the Government except for the special projects that called them into being. The Government dredge in this respect is different from the privately owned dredge, because the private distribution of the private work in off concerns while the Government. dredge can obtain private work in off seasons, while the Government dredge is a dead loss, with maintenance cost added, when it is not in service on the work for which it was designed.

I do not believe the amendment will have the effect its spon-

sors claim for it; but, on the contrary, will hamper the engineers and delay the public work.

Interview With Josephus Daniels, Secretary of the Navy.

EXTENSION OF REMARKS

HON. EDWARD W. POU, OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 14, 1916.

Mr. POU. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD I include an interview with the Secretary of the Navy, Josephus Daniels, published in the New York World of Sunday, March 26.

The interview is as follows:

The interview is as follows:

Secretary of the Navy Daniels Takes the Field Against His Enemies—How He Has Smashed Rings and Defeated Grafters Told in a Frank and Enlightening Interview.

(George Cree's name is familiar to readers of periodicals and newspapers as that of a writer who devotes himself to causes that need assistance. With fights for good government in various parts of the country he has identified himself as a type of journalistic knight errant. His valiant support of Judge Ben Lindsey and his defense of the miners made him a conspicuous figure in Colorado. Mr. Creel had never met Secretary Daniels up to the time he secured this interview.)

[By George Creel.]

[By George Creel.]

Josephus Daniels, Secretary of the Navy, is at once the most maligned and most misunderstood man in the United States to-day. To wade through the lies that have been told about him, to discover the truths that have been hidden or distorted, is to come to a new loathing of the greed that poisons when thwarted and to an added contempt for the public that takes no larger interest in a public servant than to swallow every slander circulated about him.

Ask the average citizen about Josephus Daniels and he'll wag his head and mouth something about mountchank and demagogue. Press him for details and he can cite none more definite than vague generalizations that Daniels has "let the Navy run down" and has "made us a laughingstock."

This derision is the price that Josephus Daniels has been made to pay for saving millions of the people's money from the traffickers in armor plate and munitions; for breaking up the armchair clique that ruled the Navy for years; for making merit the test of promotion rather than "social pull"; for opening the doors of advancement to the enlisted man. He has given us a Navy that, according to Admiral George Dewey, "is not excelled, except in size, by the fleet of any nation in the world" Facts and figures entitle him to rank with the greatest Secretaries of history, and yet so well have his enemies wrought that many of the people for whom he has labored grin at his name.

Practically all of this ridicule has flowed from his abolition of the

wrought that many of the people for whom he has imbored grin at his name.

Practically all of this ridicule has flowed from his abolition of the wine mess. Back in 1890 Secretary Long Issued an order forbidding the sale or issue of liquor to enlisted men on board ship, and all that Mr. Daniels did was to extend the rule to officers, taking the step upon the official recommendation of the Surgeon General of the Navy. This policy, that was to make the United States the "langhingstock" of the nations, was followed within the year by all other world powers. Russia and France first, then Lord Charles Beresford scored the use of liquor in the British Navy, and after that Emperor Wilhelm, addressing the German navai cadets, uttered these words:

HOW HE HAS EARNED HATRED.

"The next war and the next sea battle demand sound nerves of you. "The next war and the next sea battle demand sound nerves of you. Nerves will decide. These become undermined through alcohol. * * * The nation which consumes the least alcohol wins, and that should be you, my gentlemen. And through you an example should be given the crews. And in consequence of this I expect of you * * * that you take heed thereto and provide that indulgence in alcohol be not counted as belonging to your privileges."

In the Hearst papers most active in ridiculing the "grape-juice" order, pages are devoted to proving that all of the great businesses of the country are refusing to employ men who drink. Yet for the foresight that enabled Josephus Daniels to point a way to the nations he is denounced.

Such attacks, of course, are mere blinds. The real causes of the campaign of hatred against Secretary Daniels are not to be found on the surface, but deep down in the mud of human greed. The Powder Trust hates him because he is manufacturing smokeless powder for 34 cents a pound as against the 50 to 80 cents that used to be paid to the monopoly. In 1915 alone \$1,115,793 was saved, and this year the capacity is doubled. The projectile makers hate him because he cut out \$1,077,210 on one bid alone and is asking Congress for money to build his own plant. The grafters hate him because his economies have effected a reduction of fifteen odd millions on public work at shore stations. The armor-plate monopoly hates him because he made them poof \$1,110,084 that was headed for its pockets and has caused a bill to be introduced for a Government plant where armor can be manufactured for \$230 a ton as against the \$440 exacted by the trust. Back in 1900 Congress appropriated \$4,000,000 for a Government armor plant unless contracts could be made at "a reasonable and equitable figure," but Secretaries Moody, Morton, Bonaparte, and Meyer closed their eyes to the expert reports that proved the gross extortions of the monopoly and paid out over \$76,000,000 in high prices.

When Josephus Daniels took office he found an investment of millions in navy yards going to waste. Many stations were closed and the others were used for petty repairing so as not to infringe upon the profits of private companies. Secretary Daniels opened them up for real business, and to-day every one is aiding naval construction and saving millions. Two dreadnaughts are building at New York, and the keel of a third will be laid this summer; manufacture of torpedos has reduced the cost over \$1,000 per torpedo; airships are building at New York, and the keel of a third will be laid this summer; manufacture of torpedos has reduced the cost over \$1,000 per torpedo; airships are building at York provided as an all-year-round aviation school.

Everything that is be

EIGHTY-FIVE PER CENT REENLISTING.

EIGHTY-FIVE PER CENT REENLISTING.

"They charge that the Navy is going down hill, that enlisted men hate the service, and that my brand of democratization has spelled the demoralization of the service. What is my brand of democratization? I nave established schools on board ship, attempting to let every enlisted man have an opportunity for academic and technical education, and I have opened certain doors of promotion to these men. What demoralization has resulted? When I took office only 52 per cent of the men discharged in good standing were reenlisting, while to-day the percentage is 85 per cent.

"I found a Navy 5,000 men short of the number allowed by law. In my three years 0,365 men have been added. There was an average of 1,800 men in prison, while to-day there are less than 700, permitting us to restore two prison ships and two disciplinary barracks to normal uses. During the Taft administration there were over 10,000 desertions. A decrease of 17 per cent has been achieved already, and every day sees the number lessening. Do these figures indicate discontent, hatred of the service, and destroyed discipline?

"I stand by my schools, and if necessary I am willing to fall with them. No man believes more firmly in discipline than I do; never in spoken speech or written have I questioned the absolute necessity in all military service of instant and implicit obedience to a superior; I will have no mercy on insolence or insubordination, be it from seaman to his petty officer or junior lieutenant to his captain, but I do not hold that discipline is dependent upon ignorance or the denial of an American's right to rise as high as his ability will carry him.

"Time and again it has been declared to me that education does not better fit a man for deck washing or coal heaving, and the contemptuous snobbery of it has never failed to offend. If 85 per cent of discharged men are reenlisting, and if more than 6,000 men, that the Navy called for in vain until 1912, have entered the Navy, may it not be that the cause is to

THE NEW NAVY PROGRAM.

"If the Navy itself is not as large as the experts recommend, it should be borne in mind that navies are not built in a day. For the first time in history I have caused the reports of the General Board to be made public, and any citizen may see for himself the Navy's growth from year to year. From 1903 to 1912 the recommendations of the General Board, with Admiral Dewey at its head, were disregarded steadily, and it was as a consequence of this continued disregard that Germany passed us as a naval power in 1909, several years before I became Secretary of the Navy.

as a navar power in 1905, several years before I became secretary of the Navy.

"Throughout those years the General Board urged a program of continuous building tather than a slipshod, annual affair, and had their advice been beeded there would have been no excuse for the hysterical activities of to-day. Of the 34 dreadnaughts recommended

15 were authorized; 40 cruisers were recommended and 5 were built. I found the Navy without a single seagoing submarine and just fur aviators; one mine-laying ship, an inadequate and outworn system of wireless, and on every hand a variety of lacks.

"I say this in no spirit of criticism. With the world at war to-day we are bending a new and more enthusiastic eye upon our Navy, while in years gone by peace seemed such a permanence that every Navy increase was attended by outcry. I mention it merely to show that this administration has been called upon to face tremendous naval problems and tremendous naval tasks.

"An appropriation of \$1,000,000 has already been made for aviation, we have 15 machines on hand, 15 are being constructed, 18 aviators are in the service, and the Pensacola school is turning out new batches as fast as the courses can be completed.

"Three new seagoing submarines, of the latest and largest model, have been authorized. A separate submarine flotilla has been organized, and assigned to the command of a rear admiral, and the establishment of submarine shore bases has changed the absurd condition that necessitated 1,928 men on 14 ships to care for 29 submarines carrying 831 men.

"We have had to design antiaircraft guns and manufacture them.

lishment of submarine shore bases has changed the absurd condition that necessitated 1,928 men on 14 ships to care for 29 submarines carrying 831 men.

"We have had to design antiaircraft guns and manufacture them, and the same course has had to be followed with nets and mines and entanglements. Radio has been installed on every submarine and 75 ships, and three new shore stations have been added to our chain; we now have three mine-laying ships, with more in view, and until construction can catch up I have equipped a fleet of seagoing tugs and a fleet of torpedo boats with mine-sweeping equipment.

"We have 31 mines to-day for every mine possessed two years ago; the supply of torpedoes has been more than doubled, and manufacture continues steadily; and my adoption of a continuous building program for the next five years, if authorized by Congress, will give the United States a strong, well-balanced Navy.

"It is true enough that gunnery efficiency had decreased, but under date of October, 1915, Admiral Fletcher made the cheering report that the scores made at long-range practice were the highest ever made in the open sea. Ninety per cent of the shots, at longest range, would have hit an enemy ship. Yet in spite of this report that uphoids the best traditions of the American Navy the report persists that our men are less than eager, less than able.

"I can understand the spirit of honest criticism, but I can not understand the vileness that revels in the slime of a base un-American detraction. In order to enlist the best thought of the Nation in science and invention, I asked Thomas A. Edison to serve as the head of an advisory board composed of two representatives from each of the 11 great engineering and scientific societies of the United States. Germany, France and England place major reliance upon such boards and provide great laboratories for their use. Mr. Edison and his associates serve without salary, paying their own expenses, yet even this devotion has not been able to protect them against slander. It

NO LIE TOO MALICIOUS.

"It is asserted that I have deprived the kin of an enlisted man of the customary death gratuity should he lose his life while on liberty. The law on this subject was passed in 1912, and states specifically that the only cause for withholding payment shall be when death is due to the misconduct of the deceased. We bought 8 searchlights from a German inventor and tendered him a second order for 12 more at \$3,960 apiece, as set down in his bid. The manufacturers did not desire the contract, requesting a new award at \$5,200 apiece, but I awarded the contract to the inventor, who, by reason of getting it, will be paid \$25,000 under his contract with the manufacturers. This transaction constitutes the base of the charge that the United States Navy robbed a stranger and took advantage of him. Nothing seems to be too low, too mean, or too vicious to be said; and the attacks do not stop at me, but soil Nation, Navy, and officials.

"I do not care about these petitinesses as far as I personally am concerned, but I do resent the extension of this enmity to others. The people are asked to believe, for instance, that I appointed some inefficient underling to be Chlef of the Bureau of Navigation. Victor Blue, the man attacked by inference, has his name in the Naval Register with the notation 'advanced for extraordinary heroism during the War with Spain.' His daring expeditions to locate the Spanish fleet at Santiago, however, were no less brilliant than his action in penetrating the Spanish gunboat blockade in an armed ship's boat, meeting Gen. Gomez, and then capturing two Spanish patrol sloops as he ran out of the harbor. He has filled every office on a modern man-of-war, served on Admiral Kempff's staff during the Philippine insurrection, and was a member of the first relicf expedition which marched from the sea to Tientsin. After that he was chief of staff of the Pacific Fleet, was appointed by Secretary Meyer to the General Board, and it was there I found him.

"The same malice has attempted to discredit the splendid me

"The same malice has attempted to discredit the splendid men gathered about me as heads of the various bureaus. Rear Admiral Griffin, Chief of the Bureau of Steam Engineering; Rear Admiral Strauss, of the Bureau of Ordnance; David Watson Taylor, of the Bureau of Construction and Repair; and Rear Admiral Benson, Chief of the Bureau of Naval Operations, were chosen for their preeminent ability, and their records should constitute an answer to base insinua-

NO ONE HAS BEEN MUZZLED.

"When I came into office I found a system of aides, each one standing as a buffer between the Secretary and his bureaus, a plan that resulted in delay, confusion, red tape, and a tremendous amount of correspondence carried on between men in adjoining rooms. This system had been refused sanction by Congress time and again.

"I ended the system, because it had no legal status, and because I desired direct contact with my bureaus. No doubt this aroused personal resentment, and likely enough the irritation has been fanned by

my insistent recommendations to Congress that promotion by seniority be discarded in favor of promotion by merit.

"I have been criticized also for refusing to permit naval officers to deliver public addresses and otherwise seek to influence legislation. This has been the unbroken policy of the Navy from time immemorial, and President Roosevelt; in 1902, and President Taft, in 1909, reenforced the rule by executive orders that established dismissal as a penalty for violation. But even while I did not make this regulation I gave it the usual enforcement. Congress has called before it many officers of the Navy regarded as authorities, and the testimony of these gentlemen has been available to the press, and, to supplement publicity, I have made public the reports of the General Board. No one has been muzzled; simply the law has been enforced that forbids officers from running about the country for purposes of propaganda, a practice in which 99 per cent had no desire to indulge.

"The people of the United States have never had cause to be ashamed of their Navy, and never more than to-day has there been cause for pride. Testifying before the House committee the other day, Capt. J. S. McKean said that we had made more progress in the last two years than in any previous five-year period, and that he had never known a time when everybody in the service was working as hard with their heads and hands.

"Two Hospital Corps training schools have been established; the Naval Pay Officers' School has been reopened; likewise the Fuel Oil School, where firemen, oliers, and water tenders are prepared for service on board the oil-burning vessels of the Navy. On every hand, in every department of the Navy, there is a generous enthusiasm that is finding effective expression in efficient and devoted service, and I say to you, and I say to the people of the United States, that even while we are urging the expenditure of \$500,000,000 in construction during the next five years, the Navy to-day is a finer, better balanced, and more eff

ONE MORE CAUSE OF HATE.

ONE MORE CAUSE OF HATE.

There is another matter that may be mentioned in explanation of the campaign of hate that is being waged against Josephus Daniels. In alliance with Secretary of the Treasury McAdoo, he is urging upon Congress a plan to build ships for commercial purposes, so constructed and manned as to constitute auxiliary craft for the Navy in time of war. During the War with Spain the United States paid out over \$21,000.000 for auxiliary craft, and had to sell them afterwards at an 80 per cent loss. The Daniels-McAdoo plan contemplates the formation of a private company, with the Government holding 51 per cent of the stock, or all of it if necessary, and the leasing of the ships for commercial purposes, or else Government operation of them. A twofold benefit would be secured by the commencement of a merchant marine and the provision

of the Navy with the auxiliary craft that are absolutely indispensable in time of war.

Taken from his entrance into office, viewed from every angle, and subjected to every scrutiny, Josephus Daniels shows bigger than any Secretary of the Navy in past years. He has not been content to be rubber stamp for the use of any Navy clique or coterie; he has kept greedy hands out of the people's money. Wherever he has violated tradition it has been in the interests of common sense and greater efficiency; he has fought for justice, and he has given the United States a great Navy and the high promise of a greater.

It is not our naval preparedness that is being attacked, but the honesty, sincerity, keen intelligence, splendid vision, and unfaltering courage that have enabled Josephus Daniels to smash rings and defeat graft and rapacity.

Burnett Immigration Bill.

EXTENSION OF REMARKS

HON. ISAAC SIEGEL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES.

Friday, April 14, 1916.

Mr. SIEGEL. Mr. Speaker, the city of New York has within its borders 5,047,221 residents, which is at least one-twentieth of the entire population of the United States. It is as lawabiding a community as can be found in this country. In my speech in opposition to the Burnett immigration bill I discussed this matter at length, and gave the figures of the number of arrests for each of our large cities.

I point with pride to the statistics of the manufactures of Greater New York, and insert the following from the World,

1916. Almanac:

Manufactures of Greater New York.

The Census Office in October, 1911, published the following tabular statement, giving aggregates regarding manufactures in Greater New York in 1909, compared with 1904:

	Boroughs of I	danhattan and Bronx.	Borough of	Borough of Brooklyn. Total, Greater New Y		
	1909	1904	1909	1904	1909	1904
Number of establishments Capital Cost of materials used. Salaries and wages. Miscellaneous expenses Value of products Value added by manufacture (products, less cost of materials). Employees: Number of salaried officials and clerks. A verage number wage earners employed during the year.	19, 769 \$\$22, 726, 000 \$725, 456, 000 \$332, 438, 000 \$206, 789, 000 \$1, 431, 089, 000 \$705, 633, 000 77, 849 399, 792	15, 975 \$620, 526, 000 \$507, 030, 000 \$238, 839, 000 \$160, 648, 000 \$1, 043, 252, 000 \$536, 222, 000 539, 221	5, 218 \$362,337,000 \$235,132,000 \$89,474,000 \$46,855,000 \$417,223,000 \$182,091,000 15,844 123,883	\$313, 452,000 \$230,809,000 \$38,056,000 \$38,470,000 \$373,443,000 \$142,654,000 9,932 104,995	25, 938 \$1,364,353,000 \$1,092,155,000 \$445,772,000 \$266,034,000 \$2,029,683,000 \$937,538,000 97,453 554,002	20, 839 \$1,042,946,000 \$118,029,000 \$221,156,000 \$206,825,000 \$1,526,523,000 \$708,494,000

1 Including also the Boroughs of Queens and Richmond.

Only establishments conducted under the factory system were included in the census. Those distinguished as neighborhood, hand, and building industries, and small establishments having an annual product of less than \$500 were excluded.

In 1915 New York City spent \$7.31 per capita for educational matters; \$3.08 per capita for health and sanitation; for protection of life and property, per capita \$5.40; for charitable purposes, per capita \$1.65; and for science and art, for each person, 58 cents.

This demonstrates beyond further discussion that New York

City is doing its duty in every line of endeavor.

Within its confines is the New York Navy Yard, which was established in 1801. It is the largest naval station the country

It is there that we have our largest dry docks. Yet, I regret to say, I have heard many of the gentlemen here, representing country constituencies, constantly reproaching the people of New York City because of the demand urged here that in the interest of preparedness, as well as commercial supremacy, the East River be deepened near the navy yard so that our warships may be able to enter the navy yard at all times. This bill gives to the State of New York as follows: New York Harbor, \$2,356,000, and for the upper Hudson River, \$1,250,000.

If the line of argument advanced here was to be followed to its logical conclusion, then the State of New York, with one-tenth of the whole population of the Nation, should receive a similar proportion of the whole appropriation, which in this case would be at least \$4,000,000.

The Representatives in this House from New York never raise the question of sectionalism in discussing legislation. To them every part of this Republic is just as important and on the same basis as all the other constituent parts. It is the welfare of the

whole Nation that we should discuss here in as broad a spirit as man can.

It has been said on the floor of the House that there is politics in making an appropriation this year for the East River project.

Then every Democrat and every Republican from the city of
New York in this House has played the game of politics in behalf of the best interests of the whole country and of the city of New York. We believed, and we still believe, that the appropriation for this project is more urgent and more necessary than the numerous small projects which have heretofore been commenced and which are more costly than economical management would have made them.

Every time either the State or city of New York asks an appropriation for some important project the expense of which should fairly, justly, and rightfully be borne by the National Government, we are told that the State or city of New York, as the case happens to be, is rich and should be able to raise its own money by taxes or otherwise and thus make the required and essential improvement,

The residents of the State and city of New York are contributing their just share toward the vast sums being expended for the running expenses of the large governmental machinery maintained here. It can not, however, be said that in return either the city or State of New York is receiving its proportionate share of the benefits.

Were the Treasury of the United States in normal condition I would urge the erection in the southern district of New York of a building devoted wholly to the Department of Justice. Several parts of the United States district courts are now holding sessions in the old post-office building and several other parts have their court rooms in the Woolworth Building. That such an arrangement does not serve the best interests of the Government and of litigants requires no affirmative argument. It would seem that at the city of New York, where strangers come from all over the world, that men would not question the advisability or importance of having a United States courthouse there commensurate with the dignity of a great Government like ours. The lack of proper facilities for naturalization results in fewer aliens becoming citizens. Were there more court rooms, more judges could be present and attend to the large and growing number of cases arising in New York. The necessity for such a new building has been repeatedly stated by former and present United States judges, yet some men who do not know conditions will say that New York should put up such a United States courthouse at its own expense.

Mr. Speaker, I shall look forward to the day in the near future when Congress will appropriate the money for a courthouse in Manhattan Borough and recognize the fact that the prosperity of the entire country is the foremost thought of every American citizen regardless of which State in the Union he calls his home.

The Mississippi River.

EXTENSION OF REMARKS

OF

HON. L. C. DYER,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1916.

Mr. DYER. Mr. Speaker, the Mississippi is our greatest river. It is our "Father of Waters." This river and its treatment by the Government is of vast concern to 30,000,000 and more people. We of the Mississippi Valley are interested in this river for two special reasons—for transporting commerce and building its levees so as to protect the land from overflows,

The money provided for in this bill for the Mississippi River amounts to over \$8,000,000. It is needed and is necessary for the protection of the people who live in the Mississippi Valley. This river has been, and will continue to be, a source of great concern. The Government has expended in the past probably \$150,000,000 for the same purposes for which this \$8,000,000 is provided. I heartily approve of this provision in the present bill and urge that this money be appropriated for the Mississippi work because of its absolute necessity. This annual appropriation will have to continue until Congress approves of a project that means the taking hold of and handling of this great Mississippi River question. I have urged for several years, in and out of Congress, that the engineers of the United States Army, with the assistance of the best engineers in the civil life, come to an agreement as to the best plan for building the levees so as to put an end to these periodical overflows. That is what ought to be done, and then we would know that in time this work would be completed. This would give stability to the con-sideration and cause the farmers to take an interest in making the swamp and overflowed land of the Mississippi Valley habitable and fit for cultivation. I have introduced bills to carry this scheme into effect. I hope that it will come about at an early date. Its enactment into a law means eventually the saving to this country of more than \$100,000,000. In addition to that, it will be worth several hundred millions of dollars to the people who live in the Mississippi Valley. A greater disaster than heretofore known threatens our people and their resources in the floods of the Mississippi. Lives and much property have already been destroyed by the overflows, and much danger still exists. The great and beautiful city of New Orleans is in possible danger of destruction from the waters of the Mississippi. Other towns, villages, and cities along the Mississippi either have been destroyed, damaged, or are in dire danger thereof. This is not the first time that your attention has been called to the great destruction rendered by the floods and overflows of the great Mississippi River. We go about appropriating money in piecemeal to repair the levees and to restore them as they were before the flood; we appropriate money to assist those who have been made homeless and to relieve the suffering. Having done that, we go on and apparently forget that the time will come when there will be a recurrence of the floods and overflows. Why not provide the money and the means to build and complete the

floods similar to those of the past? It can be done. We all know that. Why not proceed? I beg the Rivers and Harbors Committee to take up this matter at once and bring us a bill to authorize it.

Those who specially attack this provision for the Mississippi River give as a reason that there is no commerce upon the river. They urge that this river has lost over 90 per cent of its commerce during the past 40 years. They urge that from this standpoint there is no justification for more than nominal expenditures. This charge, made by the opponents of this item for the Mississippi River, is in the main well founded. There is practically no commerce upon the Mississippi River to-day. This is regrettable, and the fault lies very largely with the people of the cities and towns located upon the banks of the Mississippi. Years ago this river was one of the greatest highways of commerce. It must be and will be again.

St. Louis, the city I have the honor in part to represent here, has started in the right way to restore this commerce by building docks and river terminals. These are now under way, and will soon be ready for use. The business will follow and our commerce will then go to the Far East by water. New Orleans has done great work along this line of building docks and terminals. With commerce restored upon the Mississippi the people will gladly vote the money to make the levees safe. Then comes the great prosperity of the Mississippi Valley and its 30,000,000 and more people. There is no longer any doubt as to the feasibility that the levees can be raised and the swamp land reclaimed. This has been tried in many other places with success, and the cost of doing this work would be very small when we compare it with the results that would be realized. There are now some 77,000,000 acres of swamp and overflowed land in the Mississippi Valley which can be drained and made suitable for cultivation. The total cost, I have determined from careful calculation, would be about \$15 per acre.

The present value of these lands runs from \$2 to \$20 per acre. When they have been drained and made suitable for permanent cultivation the value will be anywhere from \$60 to \$100 per acre, and in many instances it could be sold as high as \$400 per acre. Consider these figures as an evidence of the importance of the project. These 77,000,000 acres, after drainage, with an average value of \$60 per acre, would have a total value of \$4,620,000,000. The present value of this land is only about \$8 per acre, which amounts to \$616,000,000.

The cost of draining this land, at \$15 per acre, would amount to \$1,155,000,000. The value of the land, plus the cost of draining, would be \$1,771,000,000. The amount therefore that the land would increase in value by reason of drainage would amount to \$2,849,000,000. This land would also provide homes for 1,925,000 families, and thus result in a real and substantial reduction in the cost of living by increasing production. Vegetables and provisions for the home and table could be raised on this rich and fertile land in the greatest abundance.

Mr. Speaker, let us do something for our own people and our own country. Reclaim this vast area of land in the Mississippi Valley. This land would be most suitable for agriculture, and rich and fertile. It would also increase in taxable value, and the getting rid of these swamp lands would tend to the health of the Nation; it would banish mosquitoes and malaria from this section of the country; it would aid in the construction of good roads and in many ways be of great benefit. We should not continue appropriating without some definite plan fixed and agreed upon, but we should get down to the real proposition at once, which is the raising of the levees, the deepening of the channel, and the reclaiming of this swamp and overflow land. The people of the city of St. Louis are anxious to see this brought about at the earliest practicable date. We of that city recognize that this will be the means of opening up new avenues of trade and commerce for our products, which we so abundantly manufacture, and of which we are capable of supplying the needs of the 30,000,000 of people in our trade territory.

Mr. Speaker, I know of nothing that this Congress could do

Mr. Speaker, I know of nothing that this Congress could do which would be of greater interest to my city than the enactment of a law that would mean the reclaiming of these swamps and overflowed lands of the Mississippi Valley. As stated, we need markets for our goods.

When we have additional markets we can increase our manufactured products. That will give additional employment to many men and women in the factories in our city and also provide markets for goods raised by the farmers, a greatly increased quantity of which we would need for our increased population and also for manufacturing purposes in the factories and mills.

provide the money and the means to build and complete the levee system of the Mississippi so that they will withstand to the people of my city by the carrying out of this project

would be to greatly assist in restoring commerce from St. Louis to New Orleans. In other words, we could load our manufactured products at St. Louis in ships, send the goods on down the Mississippi to New Orleans, thence on through the Panama Canal, and deliver them to the western coast of North and South America and the Far East at a greatly reduced expense to our manufacturers, and which will enable them to sell at a less price than now and thus meet competition from foreign

St. Louis and Missouri would benefit greatly by reason of this shorter route for its products. St. Louis is to-day exporting more than \$50,000,000 worth of goods annually to South American countries. St. Louis, by reason of the Panama Canal, is nearer the western coast of South America than any other manufacturing city. The export trade of St. Louis will greatly increase, and, as its manufacturing industries enlarge and its product becomes greater, so will the great agricultural sections of the Mississippi Valley feel this impulse, and greater prosperity come to it also.

Abraham Lincoln.

EXTENSION OF REMARKS

HON. MARTIN B. MADDEN,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 12, 1916.

Mr. MADDEN. Mr. Speaker, in a log cabin on the banks of the Sangamon River, a small stream emptying into the Illinois River, there lived about 83 years ago a long, lank, homely, sad-eyed rail splitter, unknown save only to his parents and a few scattering neighbors, who, like himself, were eking out by the hardest kind of labor a mere existence in a then wild and unpromising section of this the home of the free and the land of the brave. He was not employed by the hour, day, week, month, or year, nor did he receive a daily wage as compensation for his labor. He worked from sunup to sundown, and when he had piled up 400 rails he received from a poor widow in exchange therefor enough homespun cloth to make him or his father a pair of trousers.

He was a Kentuckian by birth, and moved, when a young man, with a worthless father, a carpenter by trade, to the State of Indiana, and after sojourning there for a short time came on to Illinois, where they built a log cabin on a bluff near the River Sangamon, when the young man soon became famous, not only as the champion rail splitter of his county, but also for his ability to dispatch hogs with lightninglike rapidity, and for which service he received the munificent sum of 30 cents per day.

His rail-splitting and hog-killing proclivities did not constitute all of the qualifications which this young man possessed and which made him the envy of his many rural competitors. He could run faster, jump farther, strike harder, and could throw down with great ease any man bold enough to question his physical superiority; and, although at this time his mental strength did not keep pace with his physical greatness, he could read, write, and cipher, and, above all, he could be relied upon and was absolutely honest, a characteristic which, like the rugged mountain peak, rises majestically above the clouds.

Young Lincoln gave up the rail-splitting industry to engage in the grocery business; but having an inborn dislike for business precision and indoor confinement, he speedily abandoned that avocation to engage in the more agreeable pastime of fighting Indians. He had himself elected captain of a military company in 1832, and proceeded to put his company in condition to end the Black Hawk War forthwith; and although it is not recorded that he ever saw an Indian during that engagement, it is a matter of record that his failure to meet the enemy was no

Having political ambition and being popular with his neighbors, who for the most part were a sorry lot of very poor people, he, in 1833, by such methods as are perfectly familiar to those who are in politics, and in the same way now employed-we have not improved much upon Lincoln's manner of doing politics-ingratiated himself into the good graces of his Congressman and was appointed postmaster, in which position he familiarized himself with current happenings by reading to his patrons newspapers, postal cards, and other publications which came into his official hands for distribution and delivery. His office, as can well be imagined, was a meeting place for all sorts

of quaint characters, who came in crowds to listen with admiration to the witty and wise sayings of their foremost fellow citizen. The official duties of this governmental dignitary were not arduous-in fact, it is said he carried the mail in his hat, and when transporting even his heaviest mail in this way there was ample room for a head destined in the near future to furnish intelligence enough to rule with matchless splendor and success

the greatest Nation on the face of the earth.

Lincoln at this time had, of course, no intimation of his ultimate greatness, and it is doubtful if he had ever dreamed of representing in an official capacity a greater number of his fellow citizens than were then residing in the little village over which he presided with great dignity as postmaster. of greatness were in him, however, and were being slowly developed by Almighty God to fit him, when the emergency should come, to grapple with and master the greatest and most complicated national problem that has ever fallen to the lot of man to solve. True, he was ambitious, and wisely seeing that his manly character and his native wit had given to him a place of political prominence among his fellow townsmen, it was perfectly natural that he should seek still higher ascendancy in the political firmament, and having natural inclination to orate he became a candidate for the State legislature in 1832 and took the stump. It is written down that his speeches were calculated more to amuse than edify, but with a persistency characteristic of all western men of ambition, and remembering the precept that "Where ignorance is bliss, 'tis folly to be wise,' he sailed in and told his rustic hearers all about the affairs of government and a lot more. The following was his maiden speech as a candidate for the legislature:

Fellow citizens, I am humble Abraham Lincoln. My politics are short and sweet, like the old woman's dance. I am in favor of a national bank, of internal improvements, and a high protective tariff. These are my sentiments. If elected, I shall be thankful; if not, it will be all the same.

He was defeated, but having taken on considerable knowledge by his experience and the persistent reading of books, he did not complain or cuss his successful competitor for this high office, but like a good American citizen he went to work and bided his time. Again he tried the grocery business, and again he failed. Somehow he seemed to be unfitted for the business of selling the products of the soil. Possibly the alluring smile of his customers when they saw the scales tip in their favor had something to do with it. Anyhow he falled. Anybody else, easily discouraged, would have, after so many adversities, gone back to the rail-splitting business. Not so with Lincoln. He took to the study of the law, and by so doing he hoped to add to his political success, and at the same time to fit himself so as to render competent legal services to some unfortunate fellow man after he should have mastered the intricacies of human jurisprudence. His great aim in life was to help his brother man, and to do this he was ever ready to give up his life. While studying law it became necessary to keep body and soul together; he became an assistant surveyor, and by hard study equipped himself to perform the services of such an employee in six weeks. About this time the sun began to shine through the dark clouds of despair which had hung over him, and Lincoln grew more optimistic—he never was a pessimist, but always seemed sad. He purchased a decent suit of clothes, the first he had ever had, made the acquaintance of prominent men, and profited by their acquaintance.

In 1834 the people of the State of Illinois elected a new legis-

lature, and Lincoln was one of the successful candidates. The State capital was then located at Vandalia, and Lincoln was prominent in having enacted into law a bill removing it to Springfield. Aside from this bit of wise legislation nothing was done in which he played a prominent part calculated to create an impression that he was soon to become in fame second only to Washington, but in the succeeding legislature, to which he also was elected, he and his colleague, Daniel Stone, the two members from Sangamon County, introduced the famous resolution declaring that the institution of slavery "was founded on

both injustice and bad policy."

In 1837 Lincoln was admitted to the bar and moved to Springfield, a village of some 1,500 people. In 1838, at the age of 29, he was again elected to the legislature, where he continued assiduously, by wise legislation, to better the condition of the people. He found time to carry on the practice of law and was reputed to be a good lawyer, although his services as such, being respectable, was not great.

Lincoln was a born politician. His heart was in the work, and it was in this prolific field that his great achievements were accomplished. He did not like the technicalities of the law, but rather preferred to make political speeches, in which particular occupation his genius shone with great brilliancy.

In 1840, during the Harrison presidential campaign, Lincoln stumped the State in behalf of the Whig cause, and it was during this canvass that he came in contact with the great scholar

and political debater, Stephen A. Douglas.

In 1843 Mr. Lincoln was defeated for Congress, to which high position he had long aspired. He was more successful in 1846, however, when he received a majority of the votes cast in the congressional contest and was elected to a seat in the National House of Representatives. As a Congressman Lincoln's record was but fair. He made some three or four speeches, devoted more to wit and humor than sound reasoning, although questions of great moment were during those days demanding the attention of leading statesmen.

Many biographers have given too much time and attention to Lincoln's domestic life, which was all but pleasant, as is well known to everybody. It is the public services of great men rather than their private affairs that receive and merit the attention of the public, and this incomparable man's public life is so filled with brilliant achievements that to deviate therefrom would avail nothing intellectual and would be doing that which,

to say the least, would be unwise.

As I have said before, Lincoln's ability as a lawyer did not shine with any particular brilliancy. He did not become famous through his practice of the law, as a State representative, or as a Congressman. Neither could be compare in eloquence with Webster, or Calhoun as a public speaker. It Douglas, Clay, was his matchless moral character, the prominent part he played in a great cause, and his marvelous leadership that will cause his name to be honored and revered throughout the ages.

His great political career really began in 1854, notwithstand-

ing he had served two years in Congress, 1847-1849.

It was the attempt of southern statesmen to compel Congress to extend slavery in the Territories that aroused the great indignation of Lincoln and which, indirectly, made him the leader of the opposition to the movement to establish slavery in territory belonging to the United States, an institution declared by

him to be "founded on both injustice and bad policy."

Henry Clay's great compromise bill succeeded in quieting for a time the bitterness that was engendered by this inhuman attempt. It was but the calm that precedes a storm, however, and was short lived. An attempt to pass the fugitivelaw was regarded as a national outrage by northern men, and the protest that was registered when man hunters seized trembling fugitives and took them back to a life infinitely worse than death was of a nature to cause public men to tremble. The whole North became alive with righteous indignation at this barbarous and unspeakable act of inhumanity. Newspapers protested, orators thundered, excitement exceeded all bounds. More fuel to the flames was added about this time by Stephen A. Douglas, a United States Senator from the State of Illinois, by the introduction of his famous Kansas-Nebraska bill, the purpose of which was to open up the vast territory of bill, the purpose of which the introduction of slavery, providing that the recole of these Territories should so favor. The South that the people of these Territories should so favor. needed this territory, and Douglas, who had presidential aspirations, was playing into their hands.

The attempt to put the bill on the statute book opened the eyes even of some Democratic leaders of the North and a united outcry of protestation from the press, the platform, and the pulpit was raised in one great scream of wrath, which no doubt could be distinctly heard south of Mason and Dixon's

It will not be necessary for me to recount the many crimes committed in the Territory of Kansas by armed rufflans from Missouri, who elected by fraud a legislature favorable to slav-ery in that Territory. Nor will it be necessary for me to dis-cuss the decision of the Supreme Court in the Dred Scott case. You are all familiar with these matters. Suffice it to say that these triumphs were exceedingly pleasing to the southern cause, and that the question now was, Shall slavery advance into new territory? The North said "no," the South said "yes,"

At this stage of the contest Lincoln came upon the scene and his career as a national character began. He crossed swords with Douglas, reputed to be the most powerful advocate of Democratic principles in the North. They were both candidates for the United States Senate-Lincoln the Republican candidate and Douglas the Democratic nominee. The debates which took place between these two giants became world famous. Lincoln, filled with indignation at the wrongs that had been perpetrated upon humanity, seemed to be inspired as he combated the arguments of the trained political debater Douglas. His battle cry was, "The Government can not endure half slave and half ' and that "a house divided against itself could not stand.' He did not go beyond the constitutional limits, however, but admitted that the South had a right to a fugitive-slave law, but | experiment of the kind ever attempted by man; it was given no

he never missed an opportunity to let it be known that he despised the institution of slavery. His speeches during this contest attracted such universal attention that he was invited to speak in Eastern States, which he did in such splendid style as to add increased glory to his fame as an orator.

Following his contest with Douglas, which attracted so much attention throughout the civilized world, the people of the North demanded the nomination of Lincoln as President. lican Party heeded the call, and in 1860 made him its standard bearer. After the election, which waged furiously in all sections of the country, Lincoln was elected. The North had triumphed over the South. Cannons roared, bells were rung, brave men cried with joy, and the prayers of the oppressed ascended to high heaven. Great was the victory and great was

The South immediately set up the cry that the election was "sectional and minority election," and between election day and the date when Lincoln was to be sworn into office several of the Southern States seceded from the Union and set up a government of their own at Montgomery, Ala. They seized Federal forts, arsenals, customhouses, post offices, and every-thing else they could appropriate which would aid them in a

war which was sure to follow.

On the 4th of March, 1861, Abraham Lincoln was inaugurated President of the United States. How I should love to have seen that ceremony and listened to the words of wisdom as they fell from his lips during his inaugural address. What a privilege it must have been to look into his sad and pensive face as he counseled his countrymen to remain cool during the pending crisis. His whole address was summed up in two short paragraphs:

The power confided in me will be used to hold, occupy, and possess the property and places belonging to the Government and to collect the duties and imports, but beyond what may be necessary for these objects there will be no invasion, no use of force, among the people

anywhere.

In your hands, my dissatisfied fellow countrymen, and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict without being yourself aggressors.

The South became the aggressors and inevitable war fol-The trials and tribulations of the great Lincoln were many during these dark and uncertain days; but out of his tribulations came patience, and out of patience came experience, and out of experience came hope, according to the Scriptures. His love for man seemed to grow in the very face of the fiercest war that has ever been waged. A war between father and son, brother and brother—a horrible, unthinkable war. Lincoln well knew, however, that the end justified the means, and realized that out of the awful slaughter of men and loss of treasure would come a reunited country and lasting peace; and, far more important than either reunion or peace, he knew that the shackles which bound in servitude a race of people would fall from bruised limbs and 4,000,000 souls would march erect into the bright sunlight of sweet freedom. Thank God, the great emancipator lived long enough to witness this, his crowning achievement.

Some writers hold that Lincoln's death was timely, in that

it prevented a possible political error during the reconstruction period, which might have sullied in some degree his illustrious services. I do not believe it, and I am sorry he did not live to know that even the most radical of southern sympathizers now rejoice in the delivery from bondage of a race of human beings into the glorious realm of liberty; and I am persuaded that had the fatal bullet never been fired from the pistol of the assassin, Booth, no public act of his, had he lived to this good day, would have resulted in anything but good to his fellow man. His great foresight and his inborn love for justice would have precluded such a result. The present universal admiration for his matchless services frowns upon the very intimation of such a thing. He was too great, too sympathetic, too far-seeing, too wise, and too just to enter into surpariette, too in seeing, too wise, and too just to enter into any arrangement whereby anything but the full measure of justice would result to all.

Commemoration of the Nation's heroes is not only proper,

but it is wise. It fosters patriotism, without which no country

can be great.

Lincoln's life was one of purest patriotism; it was devoted unselfishly to the promotion of the country's good. He was the friend of mankind; he believed in manhood; he wanted to see this a land of freedom in fact as well as in name. He worked to that end. He assumed a great burden when he took the Presidency; he met the responsibilities with courage and a heart full of charity, but he met them and overcame every difficulty: he conquered the foes of free government and made this a Government of manhood suffrage.

When this Government was formed it was the most gigantic

place in the political considerations of the world; it was thought to be but a passing illusion. No one believed the experiment would succeed; failure was freely predicted. A government by the people, it was said, was impossible. But Washington's Government still lives. It has grown and prospered. It has become a great world power. It thrills with potent life and exalted hopes, The Civil War was the one test needed to prove the ability of the people to govern themselves, and never was the Nation so full of life, so filled with courage, so encouraging to the friends of freedom, so menacing to the foes of the Republic as when the sun of Appomattox shone upon its banner and revealed within its azure ground the full galaxy of its stars.

Through the instrumentality of the martyred Lincoln and his patriotic followers were fought the battles for the preservation of the Union, and we of the present day are enabled to live in a land where every citizen is a sovereign and every man, woman, and child is free to worship God according to the dictates of his own conscience; a land whose inventions lead the world, where the printing press and the church follow close upon the march of empire, where caste is ignored, where the humblest child of poverty may aspire, unrebuked, to the highest place in the gift of the Nation.

It is fitting that the birthplace of this great man should be preserved as an evidence that lowly birth is no handicap to greatness. It should be preserved as an example to the youth of the land and as an encouragement to emulate the life of Lincoln and to keep constantly before the minds of the people that great though Lincoln was in his maturity, that after all if he had not been born there could have been no such history as is recorded through his life, his sacrifices, and his patriotic archievements.

Abraham Lincoln.

EXTENSION OF REMARKS

OF

HON. WILLIAM B. McKINLEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES, Saturday, April 15, 1916.

Mr. McKINLEY. Mr. Speaker, it has always seemed to me almost a blessing that, because of the necessities of Lincoln's parents, so many of us could have received inspiration and encouragement from a sort of neighborliness to the scenes of his early struggles. I have always been glad and proud that I was born within a mile of old Salem, where young Abraham Lincoln lived and worked and studied and loved. He went to central Illinois at the age of 21 without trade or profession, without money or influence, without a patron or friend, and there began his real career—a career not equaled in all history. There he began his first profitable work; there he began his political trend; there he began his earnest study of law and history and statecraft and men; there he gave his first love and met his first great sorrow. When the young and gracious Ann Rutledge was taken by death, brought on by a shadow of a former love, Lincoln's great heart went out in his own sadness and loss, and no doubt the sweet nature of his life found its birth where, as he himself said, his heart was buried. But deep as was his grief he set out with an indomitable will to master every ob-

History has recited the progress of our immortal statesman and you are ail familiar with the names of his associates, McClernand, Stuart, Hay, Ninian and Ben Edwards, Dr. Jayne, Judge Logan, and others to whose talk I listened when a boy. I need not say that all this is the fondest memory of my life, and I allude to it as an illustration of the wealth of aspiration ever possessed by the youth of our land in the wonderful and mighty example given us by young Lincoln as he fought the battles of early manhood. In all history there is no parallel to the greatness that came from such lowliness, save in the life of our Redeemer. No one could have had a more humble birth than Lincoln; no one could have had a more obscure childhood; no one could have had such early struggles of body, mind, and soul as did the Lincoln who afterward; become one of the most illustrious characters of all the ages.

Every monument and temple and highway dedicated to his name bears witness to his nature, his character, his courage, and his achievements. His life path, began in such simplicity, merged into a bravery that knew no disheartening and that carried him to sublime heights of glory. We do well, then, to continue to honor him and to keep fresh the memory of the various stages of his life's progress from birth to the grave.

By industry and honesty, through hardship and suffering, in peace and in war, Abraham Lincoln made for himself and for us the most glorious pattern of all humanity. His birthplace will now, more than ever, become a mecca of American youth and their elders, and we can rejoice, indeed, that in the wisdom of Providence there has been given us for example and recital such illustration of the possibilities of attainment from poverty and lowliness. With Lincoln as a guide there should be no failure, no discouragement, no giving up of purpose and attempt. All can not reach the same heights, but all can, as Lincoln did, try for the best that opportunity, diligence, and undaunted zeal afford. He was given to us not only for the performance of his tasks, not only for the results of his wondrous mind, but for the influence that must ever come from such an example of all that goes to make useful citizens, masterful men, and helpful comrades. In every element that goes toward the molding of the highest and best characteristics that serve in the mightiest purposes of life, Lincoln will ever stand out clear and distinct, not only as a foremost American but as a leader of all humanity.

Our eulogies and tributes, our memories and monuments, can never repay our debt to Abraham Lincoln. But they do and will serve to keep first in the minds and hearts of our people his sweet and tender nature, his sturdy, rugged will, his persistent and successful struggles, and the splendid example to each and all of us who love to turn to his life work and learn a devotion to duty and right that can well be emulated by all.

The Niagara Ship Canal.

EXTENSION OF REMARKS

HON. LUTHER W. MOTT,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1916.

Mr. MOTT. Mr. Speaker, during the present session of Congress much has been said on the subject of preparedness; that kind of preparedness that involves an increased Army, a greater Navy, and their equipment and maintenance; and with most of what has been said on the affirmative side I concur heartily.

I want to say a few words on another kind of preparedness, which may in time of war become a source of strength. I refer in general to a betterment of inland-waterways transportation on the Great Lakes, and in particular to one project, which, to my mind, is almost as great in importance as our recent commercial and engineering achievement—the construction of the Panama Canal. Like the latter, this particular project involves a canal, a waterway around Niagara Falls, connecting Lake Erie with Lake Ontario, and opening a navigable communication between the two, through which shall flow annually millions of dollars' worth of freight in cargoes in lake carriers of the greatest possible capacity that find shelter in the harbors of the Lakes.

This is not a new project. A survey for a canal of this type was made in 1784, and in 1798 a law was passed for this purpose, but no action was taken afterwards to put it into effect, although it had been demanded by the early settlers of the West desirous of linking together the two more eastern Lakes, which then, as now, were the natural pathways of commerce. It is unnecessary to repeat here the number of times since that time that efforts have been made to start the construction of this canal around Niagara Falls; it is sufficient to state that this project is still a principal source of earnest discussion wherever men interested in Lake commerce gather. Their pleas have fallen on deaf ears so far as the United States is concerned; we have been following a policy that is penny wise and pound foolish, and that policy is slowly and steadily leading to the ruin of our great commerce on the Lakes. We have been content to hear through commercial channels and the ordinary news sources of the freight congestion in the harbor and at the terminals of Buffalo, with dozens of Lake vessels waiting for days at a time to unload, and have flattered ourselves that this was prosperity in its highest form. But such is not the case. It is rather an evidence of our blindness and a symptom of danger to that commerce which means so much to us. To show where our policy is leading us we have only to scan hastily the pages of a history of 100 years of commerce on the Great Lakes.

Transportation is production. We never finish the production of anything until it is in the hands of the consumer; and at the same time transportation is a charge on production. Easy conveyance from place to place, whether on land or water, makes a nation great and prosperous; but without easy conveyance we

can have no prosperity worthy of the name. Our easy conveyance methods in this country have put the United States where it is to-day among the nations of the world. We should keep up that improvement of these channels of easy conveyance which

means so much to production and prosperity.

To start at the commencement, the Creator endowed the United States along its northern frontier with a natural chain of waterways, extending from Lake Superior in the west, to Lake Ontario and the St. Lawrence River in the cast, but the march of historical events preserved for Canada, our northern neighbor, that portion of the St. Lawrence River which reaches to the sea. We got the Great Lakes, or at least a major portion of them, but lost their outlet provided by nature, while our neighbors were permitted the equal use of the Lakes.

Under these conditions it is but natural to have as our competitors the Canadians, and it is but natural for these competitors to seek more than their equitable share of the business of the Lakes. We are neighbors in peace, but competitors in business, and competition is the life of trade. Too much is the death of trade. We have been used to boasting of our national prowess and commercial supremacy and to think of ourselves as unbeatable. We are careless in our assumptions of what we are and what we can do commercially and otherwise. History has been kind to us, as we have never faced a grave crisis involving others than ourselves, and it is but natural for a young and growing Nation to crow when it has never known defeat.

Yet while we crow we are facing defeat along our northern frontier; a defeat ruinous to the greatest commerce that this country knows. Greater tonnage goes east and west over the Great Lakes and their connecting links than any other route in this country. That is what is to be ruined for the United States and diverted to another country unless we have pre-

paredness and devise means for its protection.

Our merchant marine has been for years almost totally abolished on salt water. Our flag no longer flies from the mastheads of ships that frequent the great ports of the world. American built, owned, and operated ships have become almost as rare as the dodo. Other nations have stepped in and have taken the place we once so proudly held. We have been asleep, and our merchant marine was taken from us while we slept, and on awakening we find that alien ships under alien flags

carry our products destined for abroad.

Such a condition faces us on the Great Lakes. We must open our eyes and see; but more—act, and act at once. We have been blind and deaf as regards the Great Lakes and their commerce. We have been niggardly in what we have done to preserve the commerce which was handed to us from the start; that commerce which is slipping away because we act as if we do not care for it. We must cease looking through the wrong end of the telescope at the Lakes and their business opportunities, else in a few years, and a very few at that, we shall one day ask, "Why, where is our business?" The answer will come back, "Canada. You sent it there." Once it goes to Canadian shores it shall be "good-by business," for it will not come back. Canadians with caressing hands and coaxing manners give business a fondling attention which is such a contrast to our methods of scaring it off.

Canada has always been in competition commercially for the freight business of the northern frontier of our country. started to get it in 1800, when Canada was poor and just emerging from the woods. Then DeWitt Clinton dreamed a dream, which New Yorkers called a ditch. It in time became the Erie Canal, the greatest waterway of its time, and staved off tempothe Canadian competition which threatened. ada did not complacently watch business go through New York State. She canalized the St. Lawrence River, eliminating dangers of navigation, and while we were building a ditch for barges she made a waterway for ships. Then, not content, she built the Welland Canal. In the meantime the Erie Canal became almost useless through the coming of railroads and its inadequate capacity for barges of any size. We in New York pondered the question for two score or more years, made a little improvement, and finally expended what will this year and next total \$160,000,000 on a new barge canal. It is still a ditch; larger it is true, but still not capable of carrying ships. When the Welland was built ocean craft drew 121 feet of water. few years afterwards ships that were ocean carriers called for 20 feet of water or more. At that time Canada's population was about that of Massachusetis, and she had spent over \$60, 000,000 on canals. Not content with that she has started enlarging the Welland to a depth of 21 feet of water and with locks to carry 600-foot ships. She has mortgaged the future and has taken a chance which will be crowned with the greatest success to her and the greatest disaster to us, unless we hasten to defend ourselves. What happened to Canada when we built the Erie Canal is happening now to us in turn.

Down the north shore of Lake Ontario there runs during the season of navigation a constant stream of lake carriers of the size that may use the old Welland Canal. Night and day, week in and week out, they speed on their way 123 miles or more an hour, to have their cargoes transshipped at Montreal and have them go thence over seas to foreign markets. What is the condition on the American side? In Buffalo, the terminal for most of our eastern-bound commerce on the Lakes, dozens of freighters await their chance to reach docks and elevators; tied up in a complex mass of sailing craft and steamers congested by insufficient elevator service and unloading facilities, commerce is throttled. Thousands of dellars in demurrage slip away. Charterers curse and compare that condition with Canada's open, speedy waterway. The next time it does not happen, for necessity drives the charterer to seek relief in the Canadian route. and the cargo goes down the St. Lawrence in a Canadian ship, and Montreal has driven another nail in the coffin lid of American commerce.

NEW YORK'S SUPREMACY AND COMMERCE ENDANGERED.

We are all proud of the great port of New York. We gaze at the returns in millions of tons of freight and millions of dollars earned by it. We pat ourselves on the back and call on the world to see our prosperity. But that commerce of which we boast is doomed to wane and fade, for just as soon as Canada, through her enlarged Welland Canal, has opened a deep-waterway connection between the upper Lakes and Montreal, then shall we in sorrow see New York's supremacy pass and view the rise of Montreal as the queen of commerce of the Western Hemisphere. This is not idle conjecture; it is a fact based on Our boasted lake merchant marine will gasp and die, may perhaps die fighting, but will nevertheless die, and we shall be justly accused of murder. Canadians know this from past experience from which they have not been slow to learn. is why Canada, with hundreds of millions of dollars indebtedness incurred through her share in the world war, with thousands of her youngest and bravest and best fighting at the front, is still earnestly, steadily, and surely continuing work on the new Welland Canal so that she may reap the harvest. We are the ones who will pay back to Canada the sums she is spending on her canals. We have spent money-many millions of dollars-on the harbors of the Great Lakes; but we might just as well have thrown that money into the Lakes, for all the good it will be to us after communication in deep water is extended from Montreal to the upper Lakes. Our million-dollar breakwaters will shelter ships whose cargoes will seek the sea at Montreal. That is what we are facing; that is what we must prevent.

THE REMEDY-A NIAGARA SHIP CANAL TO START WITH.

We have in New York, as I have stated, a barge canal just nearing completion. Its western terminals are in Buffalo and Oswego, the former on Lake Erie and the latter on Lake Ontario. Buffalo is at the western extremity of the State; Oswego directly north of the center. The route from Oneida Lake west, on that canal, is in an artificial channel dug and blasted from the earth; that from Oswego to the Hudson along the Oswego River, inland lakes, and canalized rivers, including the Mohawk. The latter is an improved natural waterway, larger and with fewer locks than is the case west. This canal from Oswego to tidewater on the Hudson is ready for business. The rest of the canal may be ready in a year or two. Buffalo now has more business in rush seasons than it can handle. Its harbor is mammoth, its resources great, but commerce becomes congested and choked there by too much business concentrated in one place. Shippers in order to get service and keep their shipments in American territory demand an alternative route, and one that is quicker and more certain.

That alternative is offered in the Oswego and Eric Canals to tidewater. It may do for the present, but of that and the future time alone will show. But it needs something more, something greater, something more effective; it needs a Niagara ship canal, constructed and controlled by the United States. The influence of the Canadian shipper must be combated. Canada will have the Welland Canal large enough to accommodate the great ships that float on the Lakes, and much larger than many now doing duty on salt water, and the influence which will be exerted by Canada through the Welland Canal will be to have commerce

seek the sea by an all-Canadian route to Montreal.

Oswego is nearer to tidewater by 162 miles than Buffalo. Its harbor is being put into shape to handle the business which will be diverted from the Canadian channels, but we need more—we

need the Niagara ship canal.

We have no assurance how long Canada will permit the free use of the new Welland Canal by American bottoms destined for Oswego or another American port on Lake Ontario or the St. Lawrence River. If Canada does shut down on her new Welland, where will we be? We will be on the side lines watching business leave us by millions of tons and millions of dollars. That is what we must avoid; that is what we must take steps to prevent. We in New York State have been jealous of the growth of each city not our own and have permitted that jealousy and shortsightedness to interfere with and endanger the public good. Buffalo and New York have felt that theirs were the only routes for grain and other products from the Middle West and along the Lakes to the seaboard. Canada is demonstrated.

strating the opposite and doing it successfully.

Three-quarters of all the grain exported from Canada and the United States through eastern channels is handled and routed through the New York Produce Exchange. That amounts to millions of bushels a year, or rather the year of navigation, which is about seven or eight months. A difference of onequarter of a cent a bushel in freight charges determines what route a cargo shall take. The question of routing a cargo of grain now resolves itself into one of two things: Oswego and thence through the barge canal to New York, or Canada to Montreal, down the St. Lawrence River. Americans are patriotic, we boast, but members of the New York Produce Exchange can not afford to sacrifice thousands of dollars just to be patriotic and have their shipments go through American ports. In justice to themselves and to those for whom they act, they must select the most economic route for their shipments. route next year, or is now, for that matter, down through the St. Lawrence River. Americans prefer America for their business transactions, but they can not afford to do so long under conditions as they are coming to exist.

The need and demand for protection for the United States and for the Great Lakes commerce is apparent to every shipper. demand takes the form of the Niagara ship canal. The Rivers and Harbors Committee of this body has included in a list of surveys this year one for the Niagara canal. Its route is yet to be The engineers will have old surveys to go by largely, and it will just be a matter of revising figures to obtain an estimate of the total cost. That cost will be millions of dollars, probably thirty-five or forty million dollars. This is a large sum, but little in comparison with the worth of our Great Lakes business; a mere insignificant item compared with the worth of business to New York City. It is nothing in com-parison with the contemplated ruin of the maritime business of New York. It is the only solution offered to overcome Canadian competition and disaster. The future is likely to show, too, if the Niagara canal is built, and I and millions of men along the northern frontier hope and pray it will, that another canal will be necessary as an adjunct. That canal will of necessity be a ship canal to connect the Hudson with Lake Ontario at the most feasible point. But that is for future consideration. The Barge Canal will serve a present and temporary purpose, but it must have a Niagara ship canal to play its part in the conservation for the United States of business that is its own. want to state, too, that the Niagara ship canal will not be in my district; it is nearly 200 miles away from it.

WHAT CANADIAN CANALS ARE DOING;

The St. Lawrence canals—that is, the canals built along the St. Lawrence River to make navigation safer—are 35\(^2\) miles in length, and are made up of half a dozen short canals around rapids, and so forth. In 1913 these canals did a total business of 4,302,427 gross tons, of which the eastbound business amounted to 3,198,302 gross tons. In 1914 the total tonnage was but slightly increased, reaching the figures of 4,391,493 gross tons of freight which passed through this waterway, and of that the eastbound traffic, that with which we have chiefly to do, was 3,405,539 gross tons. There was an increase of over 200,000 gross tons in the business eastbound, and that increase has been just as marked for the past 10 years.

The Welland Canal is 26 miles long. In 1913 it did a total business of 3,570,714 gross tons, according to Canadian official figures, and of this total 3,484,651 tons was through business. In 1914 the total was 3,860,969 gross tons, and through business totaled 3,725,099 gross tons, with eastbound tonnage totaling 3,004,920, as compared with 2,565,611 gross tons in 1913, again showing the increase, which is felt also on the St. Lawrence

canals.

Stop for a moment and consider this increasing tonnage with that which is shown by the Erie Canal in New York State, which is the only artificial or natural waterway to compete with these two Canadian canals from an American standpoint, although for the sake of making it complete in every way and giving the United States the benefit of the doubt I have combined the business of the Champlain Canal with the returns from the Erie. Here are the figures for the past five years:

1910	761, 260 658, 256
1912 1918	518, 616 499, 359
1914	385, 696

Ten years ago the business done on the Hudson from its canal feeders was over 2,500,000 gross tons, 20 years ago it was over 3,500,000 tons, but it has been steadily declining since that time. It is true that of late years the new barge canal is being built, and that may interfere somewhat with navigation, but the new Welland Canal is also being built, and the Canadians do not interfere with business. Nothing interferes with business in Canada, not even present American competition.

Even while the present war is going on, and Canada, as a loyal Province of the British Empire, is nobly taking her part, spending billions, furnishing hundreds of thousands of men, she is continuing, even rushing, work on the new Welland Canal, which is to be 25 miles long, involving a construction of 8 new miles of canal, This enlarged Welland will be open for navigation in 1918, and will cost \$50,000,000 or more. It is to be 200 feet wide on bottom, 300 feet wide on top of the prism, and have a depth of 30 feet of water on the sills in the locks. Of the latter there are to be seven, each 800 by 80 feet, and these can be filled with water in eight minutes each, the supply of water being drawn from lakes 107 to 150 acres in extent.

Our Corps of Engineers of the Army point with pride to the Sault Ste. Marie Canals, yet most of us forget that Canada, too, has parallel waterways with them. These canals are about 7,500 feet long and 150 feet wide, with a little over 20 feet of water on the sills. In 1913 in the two American canals there 15,599 vessels, with a tonnage (registered) of over 32,062,619 gross tons, carried 37,022,201 gross tons of freight through the canals, while through the Canadian canal 8,285 vessels of about 25,000,000 gross tonnage carried 42,699,324 tons of freight. This was more than the American canals, but it is not a fair comparison as, generally speaking, the use of either canal is optional with captains of vessels, and the larger vessels use the Canadian waterway. In 1914 the total tonnage was 53,370,551 gross tons, a falling off of about 26,000,000 tons from the year previous, yet the business done was equal to twice the tonnage that goes through the Suez Canal in peaceful times. Yet we hear of the Suez Canal, thousands of miles away in another world, three times as often as we do of a canal that is in our own front yard. These figures but serve to show the decline of American commerce and the increase in Canadian commerce. It is due to the fact that Canada is fostering and aiding business while we are apparently doing everything we can, by laxity and shortsightedness, in driving it to Canada. But figures are obtainable which go still further. We shall always have more or less control of our iron and steel and coal business on the Great Lakes, even though it is carried sometimes in Canadian bottoms, but that is trading with ourselves, playing a game of commercial solitaire, so to speak, in which we win or lose, according as we desire. "Let not your right hand doing" might as well be our motto. "Let not your right hand know what your left hand is

THE DEADLY PARALLEL.

It is our grain business that is suffering, and that is the business that we should strive to keep, for with it in our possession we can dictate to others than ourselves. The price of a loaf of bread in England may be said to depend on the freight traffic on the Great Lakes, for it is over those channels that a great portion of the wheat supply of Europe goes, or that part of it that comes from the Plains of the North American Continent. We want that business, but where is it going? Figures seem to show that it is seeking the ocean for export at Montreal, in larger proportion than by the way we want it to go, via New York. The following figures will show something of what I mean. They are figures in bushels of wheat received in the ports of New York and Montreal by water for the past 15 years, and are taken from the reports of a concern that has reason to feel friendly to New York, the produce exchange of that city.

Bushels of wheat received in the ports of New York and Montreal by water for the past 15 years.

The state of the s	New York.	Montreal.
1900	11, 546, 506	34, 356, 468
1901	14, 427, 100	30, 156, 899
1902	11,900,350	30, 156, 899
1903	12,900,100 9,649,880	36, 967, 271 24, 288, 608
1905	9, 804, 675	31, 804, 504
1906	11,769,800	31, 965, 187
1907		42, 954, 386
1908	7, 228, 000 9, 676, 000	41,006,738 43,551,119
1910	11,000,700	45, 427, 290
1911	7,895,000	49, 325, 297
1912	3,530,600	59, 393, 707
1913	4,371,700 5,803,900	66,078,237 99,054,293

Those figures tell a story of our commercial decline, and it is all due to lack of proper water communication between the

Great Lakes and tidewater at New York. From 1891 up to and including 1914 there is an interesting comparison in the Great Lakes business done by Canada as viewed from the tonnage reports of the Sault Ste. Marie canals. In 1891 Canadian craft worth \$2,119,500 did just 4 per cent of the business, the American-owned vessels being worth \$31,947,300; in 1914 Canadian vessels worth \$17,420,700 were doing 9 per cent of the business through the canals. One company, the United States Steel Corporation, handled in 1915, 24,080,359 gross tons of ore, not counting other countless tons of material they shipped by water through this canal to their Duluth and near-by holdings. The Canadian business increase is in grain, and that is what we want to get back. We had a good share of its once, but we are losing

MORE COMMERCE-ENTICING CANALS FOR CANADA,

But Canada is not through yet on her constructive policy to get a firm grasp on the ocean-bound and overseas trade from She is about to start work on the Georgian Bay Ship Canal, the greatest project she has yet undertaken and one that if carried through without American competition of the successful sort will be the greatest canal in the world. This canal will extend from St. Lawrence River, at Riviere des Prairies, 25 miles from Montreal, along rivers and lakes and natural waterways, totaling 346 miles of free navigable channels, or 80 per cent of the distance to French River Harbor on Georgian Bay, Lake Huron. It will be 440 miles long, and of this only 28 miles will be through artificial canal and 66

through improved and enlarged channels.

The remainder will be through open water on which there will be no limit of speed of carriers. It will cost between \$93,000,000 and \$100,000,000, or a great deal less than the New York State Barge Canal, which is not going to be nearly as effective, even if the most sanguine hopes of its builders are verified. It is planned to have 22 feet of water in the canal, and when it is built Liverpool will be 809 miles nearer to the source of the grain supply on the Great Lakes by an all-water route than it is at present. There is a menace in the plans of the busy Canadians, and the commercial prosperity not alone of New York but of several States and many millions of people is threatened. If we as a Nation are to combat the Canadian commercial ascendency we must halt now and start reconstructive So much for Canada and Canada's business turn to the business of the Great Lakes, consider what it means, its present status, and a few other essential features.

A GLORIOUS PAST-AN UNPROMISING FUTURE.

The eight States of this country that border on the Great Lakes may well be considered the commercial heart of the Nation. They have a total population of over 30,000,000, not counting the city of New York, although as New York's commercial fate is interlocked with that of the interior, that, too, should

be considered, because of the business that seeks the ocean over lake channels to New York. In these eight States, according to the census, there are no less than 25,882 men who claim sailing or dock occupations as their business, and in addition there are on the Lakes 4,607 lake captains, mates, and pilots. In the State of Michigan alone there are 1,011 captains of vessels and 4,288 sailors, longshoremen, and so forth. In Greater New York, the heart of our marine business, there are 3,287 captains, mates, and pilots, and 21,908 sailors, longshoremen, and so forth, most of whom depend on lake business directly or indirectly for their livelihood. So, counting New York City there are 47,790 sailors and dock workers and 7,894 captains and deck officers in these eight States. No estimate is obtainable of the numbers of engineers, firemen, stokehold workers, and mechanics necessitated by the ships that ply those waters, but they are in equal proportion to the men that man other parts of the

On the Great Lakes there are registered and enrolled, according to the latest obtainable reports of the Commissioner of Navigation, 1,615 vessels, steam propelled, with a gross tennage of 2,478,043, and 733 gas-propelled vessels, with 9,902 gross tonnage. Compare this with the total tonnage of the 3,539 registered, enrolled, and documented vessels on the Atlantic coast, with 2,489,584 gross tons in steamships, and 5,126 gas-propelled vessels with 84,312 gross tonnage. Yet, in newspapers, merchant-marine reports, and discussions of the same, we hear much about the Atlantic trade and only a casual mention of the lake business, if it is mentioned at all. We hear a great deal about the Pacific business and how it is about to be ruined. The official figures show 1,036 vessels on that coast, with a total of 683,879 gross tons in steamships, and 2,178 gas-driven vessels with 50,478 gross tons in all. These are about one-fourth of the Lakes' business, which apparently is not important enough to be mentioned in the same connection. The business of the Lakes is restricted to five bodies of water, while the two seacoast traders have the whole world to do business with.

SOME SHIPBUILDING FIGURES.

Much the same attitude is taken on shipbuilding. Every time a United States battleship splashes into the water on the Atlantic seacoast we hear so much about our wonderful saltwater shipyards and the great business they are building up and have been building up for years. Everybody feels that the shipbuilding pulse of the Nation beats in these Atlantic coast shipyards. Perhaps so, yet figures show that these same ship-yards, well advertised though they may be by our national patronage in battleships, must step down to second place in comparison with the yards on the Great Lakes.

Here is what has been built in gross tons in the ship line in this country in the past 10 years, according to official reports:

	1903	1907	1908	1909	1910	1911	1912	1913	1914	1915	Total.
Great Lakes. Atlantic. Western rivers. Pacific	246, 025 42, 363 359 347	226, 722 96, 256 1, 914 8, 579	324, 203 96, 036 555 21, 831	88, 070 30, 270 452 4, 350	146, 683 85, 021 119 3, 165	82, 782 101, 803 1, 330 10, 049	75, 213 40, 882 393 2, 693	64,430 123,514 1,528 16,203	42, 196 129, 107 3, 341 11, 414	9, 249 104, 373 1, 259 14, 413	1, 305, 573 849, 625 11, 250 92, 774
Grand total	289, 094	333, 471	442, 625	123, 142	234, 988	195, 964	119, 181	205, 675	186,058	129, 024	2, 259, 222

Something has evidently been wrong on the Great Lakes in the shipbuilding business. Perhaps it is Canadian competition, for Canadlan shipyards are busy, so busy they turn work away, and once in a while come over and give American yards a big order or two to have a ship built in America to ply in direct competition with the United States and still keep within the law. Such vessels were those constructed by the Richelieu & Ontario Navigation Co., and they have the most powerful and wealthy combination of vessels in general trade on fresh water. For some years Newport News, Philadelphia, and other seaboard cities have been heralded as the shipbuilding cities of the country, yet they must stand back while Cleveland, Ohio, with 484,753 gross tons in steel steam-driven ships goes to the lead as the shipbuilding center of the country.

In January, 1915, not a single vessel was on the stocks for the bulk freight business in a shipyard on the Great Lakes, and last year not a single vessel worthy of mention was launched from an American yard. The general conditions in 1914 discouraged expansion but the war prosperity, so called, and the demand for carriers, due to the fact that many Canadian vossels were put into the service of the British Government, brought about a revival, which it is hoped will be more than temporary. Lake shipyards are working overtime, just as is the case on the sea-

coasts, and several of the orders for vessels are for the largest types that float on fresh water. Of course some of these are necessitated by the loss of several of the big carriers. property was good property last year, and already several sales have been reported which show that the value of vessels is on the increase still, but this is due mainly to war conditions on the ocean.

With an outlet from the Lakes for bulk freighters this business would grow and wax stronger. Many of the commodities which now go by rail to the seaboard and go from the East to the West by rail, would instead go by river, canal, and lake if the outlet was presented. We have talked much about lowering the high cost of living, and have let it go at that. One sensible way to lower the high cost of living is by lowering the high cost of transportation. We have the money and we ought to know how to utilize it, not waste it.

THE GRAIN TRADE-WHAT WE WANT AND MUST GET.

With the settlement of the Canadian Northwest, and the more acreage devoted to wheat and other grain growing, the business of the Lakes in carrying grain is increasing, and will increase from year to year. Grain as a bulk cargo is carried cheaper and better via a water route than by rail, and some means should be devised by the United States to permit bulk cargoes to reach

tidewater on American territory without breaking bulk more than 400 miles from New York, recognized to be the only available point for ocean and overseas shipments to clear from.

Last year, 1915, the grain trade of the Great Lakes was extremely heavy, so far as Lake Superior points were concerned, while Lake Michigan shipments fell off. The Lake Superior movement, where two big Canadian grain-shipping ports are located, amounted last year to 320,236,805 bushels, as against 218,622,167 bushels for 1914, a gain of 101,614,638 bushels, and 3,000,000 bushels or more over 1913. Chicago's shipments went down in 1915 to 44,428,000 bushels, as against 89,791,000 bushels in 1914, while Milwaukee shipped only 4,324,428 bushels last year, as against 10,875,683 bushels in 1914. Even though the movement was so heavy last year on the Lakes there were estimated to be some 380,000,000 bushels yet for eastern movement at the close of navigation, for last year was a banner grainraising year. It is estimated that not more than 30,000,000 bushels have been moved this winter by rail eastward. This will mean more congestion during the coming spring and early summer, not counting the fact that there will be a new crop coming into the market for eastern transport just at the time when the carriers are needed for other things. There is bound to be con-gestion under these conditions, and when the Canadians present an uninterrupted all-water, no-delay route to the ocean it is not hard to see which route will get the heavier patronage.

There are some more very significant figures to be considered in last year's grain movements. Canadian vessels carried 687 cargoes of grain, or 48 per cent of the entire movement. United States vessels carried 452 cargoes, or 52 per cent, and the United States cargoes were, therefore, much heavier. But there is a reason. The large carriers, and most of them are under American registry, can not use the Welland Canal because of while the Canadian carriers, being designed and built for that trade, do. Most of the Canadian carriers went right on to Montreal with their cargoes destined for the seaboard, while the American ships stopped at Buffalo. There they met delays and congestion and the other turmoil incidental to a needless breaking of bulk. Of course, that bulk-breaking process is needful under present conditions, but if the powers in control of this country had been wise 20 years ago it would be unnecessary to break bulk, as far as concerns grain and bulk freight destined for the ocean is concerned. Nature did not give us the means for open-water communication with the sea coast from the Lakes, but we can make it so, and we must, or perish commercially in the grain business.

I regret that the 1915 figures for the grain handled from Canadian ports on Lake Superior are not yet available, but the figures for 1913 and 1914 present an interesting study in comparison. Grain shipments from Fort William and Port Arthur, the two Canadian shipping centers on Lake Superior, for 1913 were as follows: To Canadian ports, which means down the St. Lawrence practically, 105,188,414; to American ports, 100,076,899; total, 205,265,303. That was a big year. In 1914 the total was only 128,379,363 bushels, but of that quantity only 37.591,110 bushels went to United States ports, the balance, or 90,788,253 bushels, going to Canadian ports. That does not count American-grown wheat which went down the St. Lawrence to Canadian ports or the rail shipments. It does not matter so much, as far as New York is concerned, what vessels as to national carry the grain, but where it goes and where it reaches tidewater is the big thing. Canada is getting the ocean-bound business and it must be stopped.

NIAGABA CANAL MEANS EFFECTIVE PREPAREDNESS.

There is another side to this proposition which should be presented and coming at a time when we are discussing preparedness for war, which we trust will never come, it is most timely. We have always accepted the fact that there will never again be war with Canada or what Canada stands for—England. We hope that shall always be the case, but contingencies arise always, and it is against the unusual that we need the most preparedness. Canada may never be conquered by a foreign foe from another continent, but if she is our entire nation is thrown open to the victor. We have no protection along the northern frontier—just a few antiquated old fortresses that serve as stations for a few regiments. They are old in history and without armament. But we have a means of protection in the Great Lakes and their connections. A crank with a bomb or two may at any time blow up the Welland Canal at a vital point. That is entirely possible, if not probable. The Welland Canal is, as I have stated, the only navigable channel connecting the lower two of the Great Lakes. With that cut off we can not send ships of war from the Atlantic seaboard to the Great Lakes farther than on Lake Ontario. What will be possible with a Niagara Canal is this: Torpedo-boat destroyers,

submarines, and smaller craft of war may use the barge canal as far as Oswego. That gets them to Lake Ontario, but unless they use the Welland Canal they can go no further. With the Welland Canal out of commission or its use refused, our naval preparedness on the Lakes stops suddenly. But with a Niagara Canal of our own, these vessels of war could range the five Great Lakes at will. The head of a division in the Navy Department when I was discussing this matter with him last week, expressed the wish that some day the Great Lakes would be open to Navy for the use of the torpedo boats, that is without being obliged to send them around the coast to enter the Lakes by means of the St. Lawrence River. The Lakes would offer to these small craft of war all of the advantages possessed on the ocean and have an added one, that of conservation. Steel ships deteriorate rapidly in salt water. On the Lakes their upkeep expense would be reduced to a minimum, in addition to affording a means of possible protection in time of necessity.

But this scheme of commercial and national preparedness goes still further. Should we be plunged into a condition of war that required the use of all our facilities, we would need most an effective means of transportation from West to East and East to West. Out of the West comes the greater portion of our raw materials for food. From there comes our wheat, our corn, our various grains, our iron-our products of a hundred varied natures but all intensely essential. Our railroads in 1907 could not handle that business. They have not been improved noticeably since 1907, and we would have to fall back on the most economical means of transporting bulky freight—the Lakes. Where would we be if the use of the Welland Canal was refused by its holders? This is another reason why we should have our own connecting waterway between the two lower lakes. If we delay and never construct it, we here to-day may live to regret our passive stand. Other nations have prepared themselves for emergencies by getting their water transportation routes in shape, why not the United States? Must we be relegated into the position of being imitators? Where is our boasted initiative; that initiative that gave us the first steamer, the first ironclad, the first clipper ship, the first submarine, the first flying machine, and many other things which have revolution-ized war and peace in the world? Our inventions are used by other nations more effectively than we use them ourselves. Other nations adopt and follow year after year a comprehensive plan for the development of their waterways. Why must we be the last in the procession?

Unless we do this, and do it scientifically, systemmatically, but above all do it immediately, we must suffer commercially. We must lose our commerce in the North, and our people will be poorer and as a Nation we will be poorer by millions of dollars a year. We must hasten and work while we have time, and of the latter we have but little. With the completion of the survey by the Chief of Engineers of the Army, and a submission to the Rivers and Harbors Committee of a favorable report and estimates on the Niagara ship canal I shall at the next session of Congress, providing I am here as a Member, offer a bill to provide an appropriation to start that great work. I have tried to show its importance, but there are many who can show its worth more ably than I, and when the proper time comes they will appear to plead for conservation of their commercial rights, to seek protection for that great commerce of the Lakes.

The National Guard a National Army Locally Raised.

EXTENSION OF REMARKS

OF

HON. JOHN J. ESCH,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

Mr. ESCH. Mr. Speaker, in view of the widespread interest now being manifested in and outside of Congress over the federalization of the National Guard and the powers granted to Congress by the Constitution in relation thereto I wish to submit the views of Gen. Orlando Holway, adjutant general of the Wisconsin National Guard.

Gen. Holway has had a military training, and for the last 30 years or more has beer connected with the National Guard of our State, serving in all official capacities from second lieutenant to adjutant general. The superiority of the Wisconsin

State troops in field maneuvers, target work, readiness to respond to calls, and general efficiency, as shown in official reports by Regular Army officers to the War Department, are in large these troops. His opinions, therefore, as expressed in the following article should have much weight and influence. He writes under the title "The National Guard a national army locally raised": measure due to Gen. Holway's long and efficient service with

THE NATIONAL GUARD A NATIONAL ARMY LOCALLY RAISED.

writes under the title "The National Guard a national army locally raised":

THE NATIONAL GUARD A NATIONAL ARMY LOCALLY RAISED.

The militian whether one body including all sub-ebdied ritizens of military age as originally provided by Congress, or organized and reserve, as later classified by the same authority, is the national force intended under the Constitution for use in every great national energy within its oorders, is limited to such minor particulars as will better enable the State to use these troops in time of peace to supply the place of those which it is otherwise forbidden to keep, adoption of the Polace of those which it is otherwise forbidden to keep, adoption of the place of those which it is otherwise forbidden to keep, adoption of the case of very lesser powers than those conferred upon the Congress over the militia, and with essentially the same particulars of peace-time control reserved to their respective Cantons and Provinces as to the States of the Union, have created trained clitzen armies which are now up-lifed as models.

The Congress shall have power—

"The Congress when have power—

"To raise and support armies: to make rules for the government and regulation of the last the laws of the Union, suppress insurrections, and repel invasions; to provide for organizing, arming, and disciplining the militia, and off or governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers, and states and regulation of the last the laws of the Union, suppress insurrections, and repel invasions; to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers, and states when congress in the exercise of the suppress of the Union suppress insurrections, and repel invasions; to provide for organize the militia, and the suppress of the Union suppress i

he says:
"To render a (standing) army unnecessary will be a more certain method of preventing its existence than a thousand prohibitions on

method of preventing its existence than a thousand prohibitions on paper."

In the same article he advocated the organizing and disciplining by Congress under the Constitution of selected corps of militia, first, because of the futility of attempting to organize all citizens, and further, on account of the hardship, then at least considered unnecessary, and the financial loss that would be occasioned if Congress required from the whole citizenry the amount of training necessary to make them well-disciplined soldiers.

Patrick tienry before the Virginia convention of 1788 said:

"Your militia is given up to Congress; all power will be in their own possession."

And, quoting the Constitution:

"By this, sir, you see that their control over our last and best defense is unlimited."

In other forms the like uncontradicted assertions appear in the records of debates of every State convention of the time.

George Washington in a presidential message to Congress in 1795

stated:

George Washington in a presidential message to Congress in 1795 stated:

"In my opinion, Congress has power by the proper organization, disciplining, equipment, and development of the militia to make it a national force, capable of meeting every military exigency of the United States."

President Madison recommended to Congress the calling to field training at public expense of commissioned and noncommissioned officers of the militia.

President Monroè in a message to Congress in 1823 said:

"As the defense and even the liberties of the country must depend in time of imminent danger on the militia, it is of the highest importance that it be well organized, armed, and disciplined throughout the Nation."

These doubted neither the constitutional status of the militia as the principal National Army, nor the constitutional power of Congress to require of the militia all things that are necessary to make it efficient as such national force, nor did they doubt the power of Congress to enforce whatever requirement necessary for this efficiency it might prescribe.

There is another and legally more authoritative interpreter of the Constitution—the Supreme Court of the United States.

There is another and legally more authoritative interpreter of the Constitution—the Supreme Court of the United States.

Every decision of this court which treats of the militia provisions of the Constitution is directly or by inference favorable to the broad and effective interpretation given to them by their makers and in part quoted above.

The case of Houston and Management of the Constitution is directly or by inference favorable to the broad and effective interpretation given to them by their makers and in part quoted above.

of the Constitution is directly or by inference favorable to the broad and effective interpretation given to them by their makers and in part quoted above.

The case of Houston v. Moore (5 Wheaton) fully upholds the right of Congress to organize, arm, and discipline the militia in such manner and to such extent as it shall deem best calculated to promote the general welfare and to provide for national defense, and holds further that Congress through its agent, the President, for purposes enumerated in the Constitution, may call forth all or any unit of the militia and may punish, as adjudged by a court-martial, any militiaman who falls to respond to such call.

The opinion rendered for the court by Mr. Justice Story in the leading case of Martin r. Mott (12 Whrat, 29), rendering nucatory an earlier and contrary decision of the Supreme Court of Massachusetts, deserves the serious attention of every American citizen.

In part, Justice Story says:

"It has not been denied here that Congress may not lawfully provide for cases of imminent danger of invasion as well as for cases where an invasion has actually taken place. In our opinion, there is no ground for a doubt on this point, even if it has been relied on, for the power to provide for repelling invasions includes the power to provide against the attempt and danger of invasion, as the necessary and proper means to effectuate the object. One of the best means to repel invasion is to provide the requisite force for action before the invader himself has reached the soil. * * We are all of opinion that the authority to decide whether the exigency (for calling forth the militia) has arisen belongs exclusively to the President, and that his decision is conclusive upon all other persons. We think that this construction necessarily results from the nature of the power itself and from the manifest object contemplated by the act of Congress."

Under the interpretation and ruling established by this decision, high power and grave responsibility rest with the President.

I

the United States."

The power to organize all citizens, if so great an Army is deemed necessary, the power to require and direct the training that is needed to make this Army well disciplined, and the power to command its services in every great national emergency save a war of aggression, and in this also if, in the judgment of the President, the enemy threatens invasion—what greater or other power have the ruler of any civilized nation over their citizen armies?

Even lesser powers, as has been stated, have enabled Switzerland and Australia to provide amply for security, and the German Emperor in reality has no greater over the federated armies of the German Emperor in reality has no greater over the federated armies of the German Empire.

That the militia army of the United States is not now the well organized, well disciplined force, commensurate in size with the requirements for national defense, which is contemplated by the Constitution, is due to the failure of Congress to adequately exercise its sweeping powers for the purpose.

For the Congress has not only the power to organize, arm, and discipline the militia, but also to make all laws that are necessary and proper to carry this power into execution.

If, in its judgment, national security is so best conserved, the Congress may require of the militia all things that are required of the Regular Army save routine service in peace and war service initially for aggression.

The United States has suffered much from lack of trained

aggression.

The United States has suffered much from lack of trained armies. It has suffered as well from a multiplicity of armies, Regular, Volunteer, and Militia—the one in many particulars directly antagonistic to the others.

As the Regular and the Volunteer Armies, when coexistent, detracted the one from the strength and efficiency of the other, so will all three—Regular, Militia, and Volunteer—react against each other if the third army is now created, whether for training or for actual service.

Unity of form and organization, like terms of enlistment and conditions of service, are at least desirable military features.

The Constitution, in the intent of its makers, provided for but two armies, a standing army ample for all the occasions of peace and the great national army of the militia.

Volunteer armies were the creation of a later time, necessitated only by the failure to organize, arm, and discipline the militia, and if this failure be now remedied, will be justifiable hereafter only in a war of aggression.

aggression.

What at this juncture is most serious and even vital is this: The Organized Militla has endured for years against misrepresentation and popular misconception of its true status and appointed purpose. Their own belief that they were national troops and for national service has kept its members steadfast and increasingly earnest to become well disciplined.

disciplined.

Nothing has so tended to keep down their number as the popular impression, industriously fostered, that they were not available for such service nor could be made fit for it—that they were soldiers for passing show whose possible gravest duty was to quell internal disorders.

The disastros effect can well be surmised if there is now attempted to be organized within every district from which the militia draws its recruits, a separate and rival force which, in popular opinion at least, will have precedence for national use.

It may not always be wise to exercise in profound peace a right justified by custom only in extreme crises. The Imperial Constitution of Germany does not permit the German Emperor even in war to so raise troops in any confederated State of the Empire save, his own Kingdom

Kingdom

If, with the execution of this project, the Organized Militia is also required to more than double its present strength, the very probable result will be two weak organizations, where the Organized Militia, unhampered and granted the aid proposed for both, would have procured all the recruits that could have been secured by both: and division and discord will become rife where unity is the prime military consideration.

cured all the recruits that could have been secured by both; and division and discord will become rife where unity is the prime military consideration.

The States of the Union, by express irrevocable constitutional contract, are held to the militia system as to no other.

This system provides for their own military requirements in peace. Their departments of military administration are subservient to the lawful orders of Federal authority.

That class of the militia known as organized, measurably the selected corps advised by Hamilton, forms no inconsiderable nucleus of troops, organized, and at least partially trained.

Its units have the advantages of definite permanent station and strong affiliation with their respective States and local communities, the basic characteristics of every national army that has ever been successfully recruited and maintained.

The Congress has over the militia, organized or unorganized, in all essentials, the same powers of organizing, arming, disciplining, and developing that it has over any volunteer army.

If the great national army of defense, disciplined by training for its purposes, is to be had by voluntary enlistment, it will be had most certainly, most quickly, and most economically by exclusively developing the militia, as recommended by Washington, and especially the Organized Militia, the selected corps originally advised by Hamilton and later recommended, after an exhaustive investigation, by a committee of the Nineteenth Congress.

In all that has been written there is no word meant in opposition to or detraction from the Regular Army of the United States.

The calling forth of the militia army, or any part of it, is limited by the Constitution to national exigencies. The nature of that army is such, and the responsibility of calling it forth so heavy, that the exigency preceding such a call should not only be national but also very grave.

The Regular Army should not only be constantly maintained at a strength sufficient to care for all the military concerns of p

is such, and the responsibility of calling it forth so heavy, that the exigency preceding such a call should not only be national but also very grave.

The Regular Army should not only be constantly maintained at a strength sufficient to care for all the military concerns of peace, but this strength should be such as to render the Army reasonably capable of meeting minor exigencies of the character which unrepressed would necessitate the calling forth of the militia army.

Whether it will prove possible to procure by voluntary enlistment these greater Armies, both Regular and Organized Militia, depends upon a better understanding by American citizens in general, and consequently by the legislators whom they elect, of the true effect and merit of such enlistment. Their thought is now so perverted or heedless, as to cause grave injustice to those who are enlisted, whether as Regulars or as militia.

Upon injustice and unfairness nothing may have enduring foundation and growth.

The law is that every able-bodied male citizen of this land, 18 to 45 years of age, owes it military service. It was and is equally within the power of the law to impose this service upon whatever citizen, however feeble.

Had there been no provision for a Regular Army, or if none enlisted therein, the turmoil attendant upon the levy of citizens to preserve public order, peace, and security would have been incessant and a very present apprehension at all times in the mind of every man.

He who does so enlist helps to relieve all citizens from this burden of trouble and anxiety. That this fact is well-nigh forgotten is but strong proof of the good service that has been rendered by the men of the Regular Army.

But their common, reward too often has been slight and even disdainful regard; and their wage for perilling body and life in a soldier's hazards and to possible war is far less than that of those of like ability and circumstance whom their enlistment permits to follow uninterruptedly the gainful pursuits of peace.

When the exigency h

Yet in great degree the same slight regard is put upon the militia-man as on the Regular. The parent too often withholds consent and approval of enlistment, the employer discriminates either by refusing the leave necessary for training or by discharge and nonemployment of militiamen.

The public and their legislators overlook that in any nation where compulsory service is not enforced, while the soldier is paid, the greater part of his maintenance cost represents merely the necessary cost of his equipment and training. Such annual cost per soldier in

England, for instance, is above \$500 and in Germany, under compulsory service, most economically administered, well above \$200.

As the militiaman approaches a like standard of equipment and proficiency there has been spent in time, effort, or money the like value. His oath of service puts his body and life in peril of possible war in the interest of his fellow citizens. He should not, as now, be expected to spend from his own time and money the major share of his necessary training.

If these things may be comprehended by the people of American communities and the injustice and unfairness substantially remedied, it may well be possible to raise sufficient armies without compulsory service, but otherwise not.

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. FRANK PARK,

OF GEORGIA,

· IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

Mr. PARK. Mr. Speaker, under leave to extend my remarks, I wish to discuss briefly some features connected with the important and increasing industry for manufacturing table sirup from sugar cane.

According to the 1909 census report—the last report I can find on the subject—the total number of farms in the United States growing sugar cane for sirup making was 268,454, making a total of 21,633,579 gallons, valued at \$9,642,312.

The States in which sirup making from sugar cane is an important industry are Alabama, Florida, Georgia, Louisiana, Mississippi, South Carolina, and Texas. Other States that are producing some sugar-cane sirup are Arizona, New Mexico, North Carolina, and Oklahoma.

In the sirup-producing localities and over an extensive area farther north the sirup constitutes an important article in the diet of the masses. It is common for the individual families on the sirup-producing farms to consume 1 or 2 barrels of sirup per year. It is not unusual for poor people in some sections of the South to do a year's farm work subsisting the while upon

bread made of corn meal along with sirup and a few vegetables.

This sirup is a staple food. It is as much a staple article of diet in the sirup-producing sections as the white or Irish potato is in other sections. One of the greatest difficulties confronting the producers is to make an article that will not sugar or ferment. If the cane juice is boiled too long, it becomes thick and turns to sugar, and if boiled too short a time it ferments and sours, and in either case is rendered inferior and unsuited for table use.

From governmental experiments during the last two years, in which the Department of Agriculture is experimenting under the provisions of a bill which I introduced, these two problems have been practically solved. The method of transforming part of the ordinary sugar to invert sugar has been applied with very encouraging results. The method was applied on farms near Cairo, Ga.; Sterling, La.; and Pinellas Park, Fla., and sirup was produced which, after standing in an open barrel in a warm room for several months, neither crystallized nor fermented. If the results so far accomplished by the department with the appropriations authorized by my efforts have accomplished that alone, the value of the results is worth many thou-

sand times the amount of money expended.

Mr. Speaker, my efforts in Congress for the short time I have been here have been directed along lines to make living easier for the people who toil and "earn their living by the sweat of their brow." If the experiments so ably conducted by the Department of Agriculture should progress from this splendid beginning which has been made toward standardization of table sirup, to the end that will enable our farmers to place on the market a sirup that will bring to them 60 cents per gallon, we will have solved a great economic problem and will have encouraged another great industry which will add untold wealth

to the sirup producers of the country.

Mr. Speaker, if our Government would put more steam behind the effort to assist the farming classes by teaching them better methods of preserving what they produce and a broader and better method of marketing their surplus crop; if we will put into effect a real system of rural credits that will help the debtoppressed farmer to lift the mortgage from his farm and will enable the tenant farmer to become a landowner, we shall then have solved the greatest of all problems of "preparedness.

I insert here an extract from a letter received from Dr. William A. Taylor, Chief of Bureau of Plant Industry, along the line of these remarks:

FARM OUTFITS FOR SIRUP MAKING.

The sirup-making outfits at present in general use are very inefficient in several ways, especially with reference to the extraction of the juice, the utilization of the fuel to evaporate the juice, and the securing of a uniform product. To study questions along these lines and to afford us a means of making the crop from our experiment plats into sirup we installed a small sirup-making outfit and provided therefor a temporary shelter.

THE EXPERIMENTAL SIRUP PLANT INSTALLED.

A 40-horsepower boiler has been installed; also a 15-horsepower boiler and a new apparatus was designed and built. In this apparatus it is aimed to combine certain advantages of steam evaporators or vats with those of the shallow evaporators used over direct fire in the hearth. Steam offers advantages in fuel economy and in more nearly perfect control of the boiling, and therefore conducive to greater unformity of product. The shallow evaporators commonly used have the advantage of more quickly finishing the sirup and better clearing it by skimming, thereby securing a better-flavored, clearer, and lighter-colored product. The new evaporator combines these advantages. It was built at the Naval Gun Factory and used last fall in all our sirup making.

built at the Naval Gun Factory and used last fall in all our sirup making.

To further assist in securing greater uniformity of product an instrument was designed to indicate, in plain view of the operator at all times, the density of the sirup flowing out. A special device to control the inflow automatically has also been devised. These two pieces of apparatus are not yet installed.

These new pieces of apparatus are deemed to emody features of commercial value; therefore it is expected to take out patents in the name of the Department of Agriculture, and thus to give the United States public the free use of the features. Application for a patent on the evaporator has already been made for the department.

I insert at this point opinions expressed in two letters from prominent large cane growers in Grady County, Ga., where a greater part of the experimentation in growing and cultural tests, as well as a large part of manufacturing tests, are now carried on:

CAIRO, GA., December 15, 1915.

Hon. FRANK PARK, M. C., Washington, D. C.

Washington, D. C.

Dear Sir in reference to the results from the experiments in sugar cane being conducted at this place by the Department of Agriculture, beg to say that the work has not been pursued long enough to give definite results, but the work that is being pursued should, and no doubt will, solve some of the problems in sugar-cane culture in this section of Georgia, Florida, and Alabama, particularly the question of the best varieties to plant. The best way to save seed cane, and also some manufacturing problems, such as better clarification of sirup and the reducing of granulation and fermentation of sirup.

These are only some of the lines that are being followed in this work, and I think it would be a calamity to stop the work just in its inciplency. To stop now would be wasting the amounts appropriated for the past two years and would leave many important problems unsolved.

I therefore urge that the work be continued.

Yours, truly,

W. B. Roddenberg.

CAIRO, GA., December 17, 1915.

Hon. FRANK PARK, M. C., Washington, D. C.

Washington, D. C.

Dear Sir: As Congress has met and thinking possibly that appropriations might soon be considered. I wish to write you a few lines asking that you please be kind enough to do all you can to get necessary appropriation for continuing the stup experiment station here. It is true this work has not been under way long enough for us to realize the great good we expect from this movement to our sirup-growing and manufacturing industry in this county. It will be necessary, in my opinion, to continue this work, and the sirup dealers and farmers, I honestly believe, are a unit on wanting the experiment continued by the Government. I think it would be money uselessly spent by the Government to discontinue this work this early in the game, before the people in charge have had an opportunity to prove its real, genuine worth, which we feel will certainly result by continuing the experiment; furthermore, I believe the work is in competent hands and is receiving hearty cooperation from our people. I, of course, will depend upon you to do all you can along lines indicated above.

Really, I beg the privilege of adding, marked pressure from you is expected, if necessary, to continue this all-important work, throwing more light and help upon one of our greatest sources of revenue to our people in this section. We need more help and information.

Yours, very truly,

W. H. Robinson.

And now, as a brief résumé of what has been done and what is contemplated in the future, I insert a letter from our distinguished Secretary of Agriculture:

DEPARTMENT OF AGRICULTURE, Washington, April 13, 1916.

Hon. Frank Park,

House of Representatives.

Dear Mr. Park: In answer to your telephone request of yesterday, the following is a concise statement of the progress of the cane-sirup investigation under the appropriation, "General Expenses, Bureau of Plant Industry, 1916 (table sirup)," which has been carried out under the portion allotted to the Bureau of Chemistry:

Experiments have been carried out at Golden, Miss.; Cairo, Ga.; Pinellas Park. Fla.; Largo, Fla.; Evergiade, Fla.; and in the laboratory of the Bureau of Chemistry.

We have succeeded in making sirups that have kept in perfect condition for several months, whereas sirups made by the methods now generally in use have deteriorated to a marked degree, and in many cases have become unfit for food.

The method we have adopted involves some change in the present methods of evaporating the cane juice, and also the use of a substance called "invertase," obtained from yeast. We have as yet been able to apply the results we have obtained only on a small scale, but there seems to be no reason why this method can not be put on a commercial basis.

The contemplated future work on this subject involves the applica-tion of the method we have worked out on a scale comparable to that which is in use by the farmers of Georgia, Alabama, Louisiana, Florida, and other Southern States.

and other Southern States.

We plan to set up evaporators at Cairo, Ga.; Sterling, La.; and Pinellas Park, Fla., where our method can be given a thorough testing out. Our contemplated work also involves experiments to determine the best and cheapest method of manufacturing invertase from yeast.

We also plan to carry out a number of experiments on the clarification of cane sirups, making the product clearer and brighter.

If our experiments at Cairo, Ga.; Sterling, La.; and Pinellas Park, Fla., are successful, we also plan to find new uses for the sirup and to bring it to the attention of the trade in the various sections of this country, with a view to increase the demand for it. At present the demand for cane sirup is limited on account of the readiness with which it deteriorates and the difficulty of securing a uniform product. Our experiments have shown that it is possible to make a uniform strup which will keep indefinitely. It remains to apply our knowledge under actual manufacturing conditions.

Yours, very truly,

D. F. Houston, Secretary.

If by the simple and inexpensive methods proposed the farmers of the second district can make their sirup, put it up in barrels and cans, with the satisfying knowledge that it will neither turn to sugar, crystallize, or ferment and sour, and that it will be as palatable in 12 months as when at first manufactured, we will have saved to the farmers producing sirup a staple article of food that will be a substitute even for meat, if the meat supply should run short during the year.

If the sirup produced on our numerous farms is standardized, as it surely will be in the near future, so that the farmer when planting will know that he can not plant too much or produce too much cane sirup for the reason that there will be a ready market, he will have added to his other assets a source of revenue that

will be unfailing and very valuable as a farm asset.

As I see it, Mr. Speaker, the Congress can not engage in more useful work than that of devising means and providing plans to

within the past 20 years the price of meats, including poultry, has doubled, and in some instances trebled. The price of other commodities has increased almost in the same ratio. The purchasing power of a dollar is not much more than that of a half dollar 20 years ago, and efforts along legislative lines must be educational if we shall hope to reduce this ever-increasing cost of living. The poorer classes of people of the United States are to-day not so much concerned about luxuries as they are the bare necessities.

I wish to propose to the Congress the enactment of legislation along another line that would encourage another great and growing industry, which is the proper preservation and marketing of the sweet potato crop of the United States. With sweet potatoes all the year round, and good wholesome table sirup all the year round, and vegetables from the garden, and meat and poultry and milk and butter, such as any farmer can produce on a one-horse farm, the problem of the high cost of living ought to be practically solved, at least for those who live on the farm.

Needs of Baltimore Harbor.

EXTENSION OF REMARKS

HON. J. CHARLES LINTHICUM.

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tucsday, April 11, 1916.

Mr. LINTHICUM. Mr. Speaker, the people of Maryland have the deepest interest in the improvement of the rivers and harbors of this country. They feel that one of the great assets of the United States is the harbors of the various cities along the These ports are not alone useful to the cities themselves but they are gateways for the imports from abroad which enter the country and reach the remotest sections.

They likewise are the centers from which the great export shipments, now amounting to millions of dollars, are loaded and sent to the markets of the world. My people do not believe that money wisely expended in the improvement of the water-ways can be put to better use. They feel that the meritorious propositions should be taken care of, and that those cities from whose ports the great export and import business is conducted

should be taken care of at the earliest possible time.

They realize also that by virtue of the many things which have occurred since the beginning of the war in Europe Congress has from lack of the usual revenue been prevented from doing many things which it would like to do, and among them the greater improvement of the rivers and harbors of the land, and

particularly the harbor of Baltimore,

Baltimore, situated nearest to the great wheat-producing section of the country, has become a great shipping center for cereals of all kinds. In the year 1915 the grain receipts for 10 months including October were as follows:

40, 062, 976 22, 159, 361 45, 549, 559 Corn_. Oats_.

which, with other cereals, made a grand total of 123,976,875 bushels, and of this vast amount more than 110,000,000 bushels were shipped to the markets of other countries.

My city has likewise greatly increased as a manufacturing and distributing center, having over 1,000 wholesale and jobbing houses, 200 of which carry over 300,000 accounts in the South alone and have invested in that section below the Potomac more than two hundred millions of dollars, in addition to vast

sums in other sections of the land. Baltimore has three great trunk lines bringing the products of the farm and factory to Baltimore for transshipment to other sections and to other countries.

She is increasing in population at a rapid rate, developing her manufactures more speedily, and conducting a commerce which has placed her as the fourth commercial city of the land. We have grown to such extent that our harbor and channels will soon be insufficient to carry on the great business which comes to us, and it is extremely necessary for Congress to take action toward widening, deepening, and constructing more adequate channels in accordance with the Engineer's recommenda-

Our commerce, according to statistics for the year 1914, was as follows:

SUMMARY.

	Amount.	Value.
Foreign: Imports Exports Canadian articles exported Coastwise and domestic	Tons. 1,676,844 2,569,282 186,879 8,992,180	\$30, 317, 891 106, 822, 295 6, 440, 706 239, 820, 844
Grand total	13, 425, 185	383, 401, 736

And from this commerce the National Government has received the following revenue:

SUMMARY OF DUTIES COLLECTED IN 1914

Duties and miscellaneous customs receipts	\$2, 971, 866 82, 590 11, 432
---	-------------------------------------

Total ____ 3, 065, 388

EARLY NEED FOR IMPROVEMENT.

The terminal facilities at the port, while not exactly inadequate for present traffic, the Army engineers contend that unless the work outlined by them is promptly undertaken by the United States Government there is grave danger that the growth of the harbor will be restrained and the commerce of a large section of the country hampered, because the influence of the port reaches to the center of the United States and affects the prices of all commodities. These engineers further state:

of the port reaches to the center of the United States and affects the prices of all commodities. These engineers further state:

That it is not a fair criterion to judge the future commerce of Baltimore Harbor from the past, for, owing to various influences and causes which have existed, but are now being pushed aside or removed, and the awakening which has occurred to the city's great natural advantages as a port, and the extensive terminal improvements now in progress or in plan by every one of the railway systems of the port, there is reason to confidently expect that the harbor will soon see a movement of freight through it greater and much larger than has ever yet taken place and which will give the city the place to which it is naturally entitled but not heretofore tried to attain. There is no reason why Baltimore, with proper utilization of its advantages, should not be at lowest the third port of the country in point of tonnage, and the Government should promptly begin the work of providing the channels of proper dimensions and suitable anchorage areas to serve the terminals already planned and others that there is every reason to believe will before long be constructed. As an industrial harbor it promises soon to be second only to New York.

All the work by the Government in the Patapsco and its tributaries should be embraced under one project, as it now becomes the project for Baitimore Harbor itself. All the channels, except probably those portions at the upper ends where development may not yet have taken place, should have a depth of 35 feet. For many portions of the harbor a depth of 36 feet will be sufficient for many years to come. In order to avoid undue expense to the General Government it is believed that the development should be gradual, keeping pace with the growth of the harbor. This will permit work to be done most economically and advantageously, and if a definite project is adopted all plans for terminals, all constructions, and all work in the harbor can be made to accord.

The devel

wide and 27 feet deep—that is, of dimensions entirely inadequate to serve the vessels which will desire access to the Western Maryland piers. The location of this channel is also extremely bad, this location having been necessary on account of the existence of the Light Street Bridge and the peninsula at Ferry Bar. This bridge is to be removed, probably within the next year or 18 months, following the completion of the new Hanover Street Bridge by the State of Maryland, and the Western Maryland has voluntarily offered to relinquish its title to the outer 500 feet of the peninsula of Ferry Bar in order that a properly located channel can be provided to the upper portion of this arm of the harbor. In relinquishing this 500 feet the railroad had to run of the harbor. In relinquishing this 500 feet the railroad had to run of the harbor. The railroad believed that an elevator to which vessels would have access on both sides could be most advantageously located at this point, but upon explanation to the president and chief engineer of that road of the necessity for a better channel to Spring Garden, it took the broad public policy of aiding as far as it could in the harbor improvement, and has offered to relinquish the outer end of the tar without any compensation whatever. The channel through the Middle Branch of the Patapsco should have a width of not less than 400 feet and a depth of not less than 35 feet as far as the Hanover Street Bridge. Above that point the channel should be 400 feet wide, with a depth one side of these channels, so as to permit beats to lie in reasonable proximity to the wharves while waiting their turn to load or unload. One such anchorage basin should be provided north of the proposed 35-foot channel leading to the Western Maryland terminals, and one should later be provided to the south of this channel.

"BALTIMORE SOON TO BE SECOND INDUSTRIAL HARBOR.

It will be seen from these statements that the Army engineers believe that Baltimore will ere long, as an industrial harbor, become second to New York alone.

For the information of the committee I will insert here a report from the War Department. United States Engineer's Office, Baltimore, Md., December 2, 1915, showing what the Engineer's Office have recommended for the Baltimore Harbor and giving details as to the amount of soil to be removed in order to se cure the proper depth.

SURVEY OF BALTIMORE HARBOR, MD.

WAR DEPARTMENT, UNITED STATES ENGINEER OFFICE, Baltimore, Md., December 2, 1915.

From: The district Engineer officer.
To: The Chief of Engineers, United States Army
(Through the Division Engineer).
Subject: Survey of Baltimore Harbor, Md., and approaches thereto.

(Through the Division Engineer).

Subject: Survey of Baltimore Harbor, Md., and approaches thereto.

1. In compliance with department letter of October 6, 1915, the following report is submitted, with plan and estimates of cost of improving "Baltimore Harbor, Md., and approaches thereto."

2. It is proposed to include all Government river and harbor works in the Patapsco River and its tributaries and the approaches thereto in one project for Baltimore Harbor, Md., to read as follows:

"For a channel 35 feet deep and 1,000 feet wide between the curves of 35-foot depth in Chesapeake Ray opposite York Spit; 35 feet deep and 600 feet wide from the 35-foot curve below the mouth of the Patapsco River, to and in that river as far as Fort McHenry, with a branch channel 35 feet deep and 250 feet wide into Curtis Bay to head of bay; and one 35 feet deep and 250 feet wide into Curtis Bay to head of bay; and one 35 feet deep and 400 feet wide into the Southwest Branch of the Patapsco River to a point hear Ferry Bar, and 27 feet deep and 250 feet wide to the Western Maryland Raliway bridge, wickened at the approaches and bends, and with anchorage and turning basins, as shown approximately on the map accompanying this report."

3. For purposes only of estimation and recommendation, the above proposed project is divided into six parts, viz:

"First. The channel 35 feet deep and 600 feet wide and between 35-foot contours opposite York Spit, which has been completed.

"Second. The channel 35 feet deep and 600 feet wide from the curve of 35 feet deepth in Chesapeake Bay, below the mouth of Patapsco River, to and in that river to Fort McHenry, with an anchorage basin 600 feet wide and 3,500 feet long below the entrance to Curtis Bay, which has been completed.

"Third. The branch channel into Curtis Bay, which it is proposed to

to and in that river to Fort McHenry, with an anchorage basin 600 feet wide and 3.500 feet long below the entrance to Curtis Bay, which has been completed.

"Third. The branch channel into Curtis Bay, which it is proposed to deepen to 35 feet with its present width of 250 feet by removing 1.124,600 cubic yards of material, seow measure, at 10 cents per cubic yard, amounting, with about 10 per cent for contingencies, to \$123,700. This item is one that was recommended in House Document No. 7, Sixty-third Congress, first session.

"Fourth. A branch channel into Southwest Baltimore Harbor as far as Ferry Bar, 35 feet deep and 400 feet wide, which would require the removal of 3,700,000 cubic yards of material, scow measure, at 10 cents per cubic yard, amounting, with 10 per cent for contingencies, to \$407,000.

"Fifth. A channel 27 feet deep and 250 feet wide from Ferry Bar to the Western Maryland Railway bridge, with an anchorage and turning basin, as shown on accompanying map, requiring the removal of 1,740,000 cubic yards of material, scow measure, at 10 cents per cubic yard, amounting, with 10 per cent for contingencies, to \$191,460.

"Sixth. Widening to 1,000 feet the anchorage on the south side of the channel to Baltimore, below the intersection of the Southwest Baltimore Channel, requiring the removal of 1,400,000 cubic yards of material, scow measure, at 10 cents per cubic yard, amounting, with 10 per cent for contingencies to \$154,000."

Summary.

First part, completed. First part, completed.
Second part, completed.
Third part, 1,124,600 cubic yards, scow measure, at 10 cents, plus about 10 per cent.
Fourth part, 3,700,000 cubic yards, scow measure, at 10 cents, plus about 10 per cent.
Fifth part, 1,740,000 cubic yards, scow measure, at 10 cents, plus about 10 per cent.
Sixth part, 1,400,000 cubic yards, scow measure, at 10 cents, plus about 10 per cent. \$123, 700 407,000 191, 400 154,000 Total, 7,964,600 cubic yards, scow measure, at 10 cents, plus about 10 per cent_____

876, 100

34,000

4. The material encountered in dredging on previous projects (excepting in the York Spit section, where it consisted of compact sand) was generally clay, varying in consistency from soft to stiff. A short section of rock was encountered in the cut-off channel and a short section of hard material in the Fort McHenry section. The estimated price of 10 cents is believed, however, to be sufficient to cover the whole work.

5. The cost of maintenance of the projects in Baltimore Harbor has been relatively small, and it is not believed that an increase in the dimensions or depth of any of the present improvements or the adoption of new ones, as outlined above, will greatly increase it. From available information, it is estimated that the annual cost of upkeep for the various separate parts will be as follows:

First part (completed) \$12,000
Second part (completed) \$0,000
Third part 4,000
Fourth part 4,000
Fifth part 4,500

8, 000 4, 000 4, 000 4, 500 1, 500 Fifth part.

were extended in 1915, so as to permit larger docks. It is believed with the improvement as indicated that large commercial development will follow.

8. As to the Southwest Harbor, the existing channel, 27 feet deep, is very crooked and narrow, and is often complained of. The Western Maryland Railway has a large terminal, covering the land east of Light Street and south of McComas Street, and is developing rapidly its terminal and the strended in 1915, so as to permit piers of greater length, and accommodation is sought for the largest ocean steamers; that is commodation is sought for the largest ocean steamers; that is commodation is sought for the largest ocean steamers; that is the strended in 1915, so as to permit piers of greater either than the strended in 1915, so as to permit piers of greater of 35 feet and a width of 400 feet to Ferry Bar is considered essential on account of the length of the channel and the extent of the development, past and prospective. The necessity of dredging by private parties from the channel of the extended and is now constructing a new bridge at Hanover Street, and will remove the present bridge at Light Street. The new bridge provides a clear opening of 150 feet. That the peninsula termed 'Ferry Bar' shall be cut back to low-water deepth for a distance of 500 feet from the present end of the point of land.

"That the 500 feet of land lack from the point of Ferry Bar shall be deeded to the United States, and made available for waterway purposes prior to the completion of the bridge.

"That all portlonsers the present Light Street bridge shall be removed from the new bridge provides a clear opening of 150 feet. That all portlonsers the present Light Street or small be deeded to the United States, and made available for waterway purposes prior to the completion of the bridge.

"That all portlonsers the present development, except for small locks, is not great, although one firm which manufactures bricks has found it advisable to take advantage at one of this offer.

10. Above

ports.

12. As to the anchorage basin, there is demand for anchorage basins at various localities. It would seem best to obtain one good anchorage ground, so situated as to be convenient for the largest amount of vessels. This location, near the junction of the Northwest and Southwest Harbors and not far from Canton, will fulfill these conditions. A width of 1,000 feet would seem to be necessary to allow for vessels swinging with the tide. This location is to-day largely used as an anchorage, but has a width of only 400 feet.

13. It is recommended—

"(1) To include all Government river and harbor works in Patapsco River and its tributaries, and the approaches thereto, in one project, to be known as 'Baltimore Harbor, Md., and approaches thereto.

"(2) That funds for the deepening of the Curtis Bay Channel in accordance with the recommendation in House Document No. 7, Sixtythird Congress, first session, be provided at once.

"(3) That funds, amounting to \$752,400, for the channel 35 feet deep at mean low water and 400 feet wide from the main ship channel to Ferry Bar and 27 feet deep and 250 feet wide from that point to the Western Maryland Railway bridge, with a turning basin at the upper end and the enlargement of the anchorage basin near the entrance to this branch channel, be provided at once.

"(4) That with the exception of the improvement mentioned in the second recommendation above, the work of improvement by the United States be made conditional upon local interests previding, whenever required by the Chief of Engineers, free of cost to the United States, suitable areas behind bulkheads or other revetment, satisfactory to the district engineer officer, in which the dredged material may be deposited. "(5) The city of Baltimore is about completing a sewerage system costing over \$20,000,000. One of the resultant conditions of this is the cessation of the deposit of a large amount of sewage into that part of the harbor inside of Fort McHenry, and which has been maintained by annual dredging by the city, which is also now extending the 35-foot depth from the head of the United States channel about 1½ miles to the large terminals in the harbor. It is recommended that as the city at its own expense extends the 35-foot depth into the inner harbor or basin, the United States take over the maintenance of such extension."

JOHN BIDDLE, Colonel, Corps of Engineers.

Now, Mr. Speaker, while we have no desire to complain about the bill before the committee, because we realize the great demand upon the Treasury of the United States in order to bring our country up to the proper standard of preparedness, we also realize that by virtue of the war in Europe revenues formerly obtained have been greatly reduced, but we do feet that, as soon as Congress can have the money to appropriate for any further river and harbor matters, Baltimore and its interests should be looked out for. We feel, further, that if it is possible to include any appropriation in the present bill to start the work in the Baltimore Harbor, it should be done,

We have spent a great deal of money ourselves in the inner harbor and are now dredging a channel 35 feet deep to the docks and piers. Our railroad companies have spent vast sums of money in the enlargement of their terminal facilities and in procuring deeper water to their wharves. Baltimore has done its part. We wish to impress upon Congress that it is unfair for it to do more. Baltimore, being one of the great scaports and one of the few cities of the world having a 35-foot channel, is entitled to early consideration from the National Government in the widening and deepening of its channels so that it may not be hampered in the great commercial enterprises in which its people are engaged. Give us what we are entitled to and we will ere long reach our coveted goal as an industrial harbor second to New York alone.

The Gasoline Situation.

EXTENSION OF REMARKS

HON. J. M. C. SMITH,

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 17, 1916.

Mr. SMITH of Michigan. Mr. Speaker, under the leave of the House I wish to make a few observations relative to the recent and rapid rise of gasoline. I doubt whether there has been any one thing that has recently awakened more universal interest in the minds of the public generally than the sudden advance in the prices of gasoline. The industry is highly It involves an immense investment of capital. efficient. covers a large field. It employs a large amount of labor, Many millions of our citizens are consumers of its product. Complaints are general and, while information is meager, it is thought that any facts tending to give or throw any light on the subject will be of much interest to all.

INVESTIGATIONS BEING NOW MADE.

So general and widespread is the complaint and the desire to learn the causes for the increase in price that the subject to learn the causes for the increase in price that the subject is now being investigated by the Senate of the United States, by the Federal Trade Commission, by the Department of Justice of the United States, and by the Department of Commerce, as well as through private sources. With these great bodies looking into the question, we may in due course understand the true cause. Of course, it is well known that I am not an expert on the production of oil. I have never had that experience; but, like the great majority, I am a consumer. The Federal Trade Commission, in its report, makes mention of the magnitude of the oil industry on page 7, which states:

267, 216, 413 246, 845, 341 209, 088, 169 175, 430, 444 159, 199, 755 152, 512, 278

3,717,726 3,507,094 3,122,967 2,822,250

2,978,578 3,317,354

MAGNITUDE OF THE INDUSTRY.

MAGNITUDE OF THE INDUSTRY.

The oil industry, moreover, is an unusually complex one. The prospecting for oil, the purchase or lease of oil lands, the drilling of wells, and the provision of tanks for crude storage in the field, form more or less distinct branches of the crude-oil industry. The crude oil must be gathered through a network of pipes to some central point for shipping, and then it must be transported by trunk pipe line or tank car to the refinery. Millions of barrels are carried by pipe line from Oklahoma even as far as the Atlantic seaboard. At the refinery large supplies must be stored to provide a stock of crude oil which will insure continuous operation. In refining, the different crudes yield different products, and refineries vary from the "skimming plant" which takes off gasoline and sells the balance largely as fuel, to the "complete run" plant that gets not only naphtha and gasoline, but also kerosene, lubricating oils and greases, parafin, floor oils, road oils, gas oil, fuel oil, tar, asphalt, and coke. Then the refined products are marketed, and the larger companies own and operate tank cars and ships, tank stations, and tank wagons. Any thorough investigation of even the gasoline situation alone involves a consideration of the entire petroleum industry from the production of the crude petroleum to the consumption of the refined products.

In looking over the various branches of this vast industry

In looking over the various branches of this vast industry the question naturally arises as to just what changes have occurred to warrant the increase in price? This is the leading and important fact in which we are interested. The companies have the same old pipe lines. They have the same old tanks for storage. They have the same distributing agencies; the same field and means of operation. It is not seen that wages were increased. In fact, it does not appear that there were any changes in the field of operation that would warrant a rise in the price from 9.86 cents a gallon in August, 1915, to 16.28 cents a gallon in December, 1915, as is shown by the report of the Trade Commission in its table No. 10, as follows:

Table 10.—Comparison of average monthly tank-wagen prices of gaso-line (58°-60°) in the East (Pennsylvania) with those in the West (North Central States), by months, 1915.

	East (Penn- sylavania), Atlantie Refining Co. (Standard).	West (North Central States).		
		Standard companies.	Other companies.	
January February March April: May June July August September October November December	10.00 9.86 9.86 9.86 9.86 9.86 10.38 12.23	11. 09 10. 95 10. 57 10. 57 10. 57 9. 84 9. 61 10. 21 11. 85 13. 45	11, 15 16, 92 10, 64 10, 43 10, 38 9, 72 9, 50 9, 50 10, 35 11, 93 13, 64 15, 62	

The "tank-wagon prices" referred to in Table 10 are the wholesale prices charged dealers for gasoline delivered in bulk by tank wagon. They are computed for gasoline having the same gravity according to the Baumé test (58°-60°). As freight and marketing costs are included, the figures are not comparabble on an absolute basis, but are chiefly valuable as indicating the movement of prices.

Neither do we see any reason shown why the prices of gasoline has since risen to 20 and as high as 24 cents a gallon. The following table, taken from a letter written by the Secretary of the Interior relative to the price; of gasoline, dated February 2, 1916, shows more nearly the consumers' price paid for gascline:

	prices per	Crude oil prices per barrel.			Crude oil prices per barrel.
1915. Jan. F. Feb. I. Mar. I. Apr. I. May J. June I. July I. Aug. I.	Cents. 13 12 12 12 12 12 12 12 12 12 12 12	\$1.45 1.50 1.50 1.40 1.35 1.35 1.35	1915. Sept. 1	Cents. 14 16 17 19	\$1.70 1.80 2.00 2.00

This table is taken from Senate Document 310, page 21, and shows that the price remained steady at 12 cents a gallon until the month of September, 1915, when it went up to 14 cents, and to 21 cents by January 1, 1916, an increase of 33½ per cent in both crude and gasoline.

It is but fair to state that the output of some of the producing companies has diminished during the last year, notably the Cushing pool, which is one of the largest of the companies or association of companies. It is said that at one time this pool produced upwards of 1,000,000 barrels a day, and at the present time is only producing one-third as much. But notwithstanding

this, the output of all the producing companies during the year 1915 continually increased, as is shown by the report of the Federal Trade Commission in Table 6, page 12:

TABLE 6 .- Quantities of gasoline produced and stocks on hand the 1st of the month.

				Produ	ection.
				Standard.	Other.

	Refin	iers.	Jol t	ners.	Total stocks on hand (refiners and jobbers).
	Standard.	Other.	Standard.	Other.	Jobours).

From Senate Document No. 310, page 20, I also quote the following extract to show that the increase in price is not due to the lack of supply:

14, 903, 028 13, 795, 622 14, 908, 848 15, 281, 999 14, 328, 596 16, 659, 496

30,714,128 26,859,626 22,189,934 17,835,655 19,192,970 20,631,394

217, 881, 531 217, 881, 531 202, 682, 999 168, 866, 420 139, 490, 540 122, 699, 611 111, 904, 034

the lack of supply:

(d) Decreased production of crude containing a large percentage of gasoline, as in the Cushing pool of Oklahoma, the daily production of which declined from more than 300,000 barrels in April, 1915, to less than 100,000 barrels in January, 1916. The decline of the Cushing pool was partially compensated for by an increased production of crude from other pools, the gasoline content of which production, however, was from 5 to 7 per cent less than that of the Cushing crude, The stocks of Cushing crude, while from 10,000,000 to 15,000,000 barrels larger at the end of 1915 than at the beginning of that year, reached their maximum in July. This surplus is now being drawn on to supply the shortage represented by the difference between daily production and existing transportation and refining capacity, and thus until exhausted this surplus tends to steady the oil market. These stocks, however, are controlled by the stronger companies, and have been withdrawn from the open market. Thus, while there is a market shortage of Cushing crude, which is directly responsible for some of the independent refiners paying a premium of from 20 to 50 cents a barrel above the quoted market price, other companies have not exhausted their 1915 surplus of Cushing crude. Since these larger companies have, in fact, larger stocks than a year ago, it follows that with them the shortage of gasoline-rich crude is at most only threatened and to the extent that these companies are using their 1915 surplus, the threatened shortage is not yet a factor in increasing the cost of gasoline production.

EXPORT TRADE.

In England the price of gasoline is said to be 40 to 45 cents a gallon. There is a vital reason for the high prices prevailing in the European countries which does not obtain in this country. Prices of all commodities are abnormally high in European countries on account of the war. But as the war was in progress last year when the price was steady at 12 cents a gallon throughout the country, the rise in price can not be attributed solely to the war. In fact during the month of January, 1916, when the price of gasoline was near the high point the foreign export was the least. I give the table of the Trade Commission, which is

TABLE 7 .- Exports of gasoline, naphtha, and benzine (combined), by

Per cent of total gasoline content of 1915 crude exported during 1915	
CONSUMPTION AND SUPPLY.	

Increased consumption would naturally be followed by increase in prices, according to the law of supply and demand. In 1915 there were issued 2,100,000 automobile licenses in the United States. It is estimated that this number will be increased to 2,750,000 in 1916. Figuring 500 gallons for each automobile, which is the estimate, automobiles will require 1,375,000,000 gallons for 1916 against 1,025,000,000 gallons for 1915. But the fact remains that the increased number of cars or autos for 1916 has not yet taken place, while the rise in the price of gasoline has already occurred far in advance. So that the rise can not be laid to the increase in the number of autos.

Mr. Speaker, not being an expert on the production or the prices of gasoline, I have at some length shown by the tables and proof of those high in authority that there is no just reason for the sudden rise in the price of gasoline. Let me, however, at the risk of being a little prolix, give the letters received by me in making some inquiry and efforts to find out the true cause,

if any. The letters are self-explanatory: DEPARTMENT OF AGRICULTURE, Washington, March 27, 1916.

Washington, March 27, 1916.

House of Representatives.

Dear Mr. Smith: Receipt is acknowledged of your letter of March 25, 1916, relative to the high cost of gasoline and the possibility of using kerosene for automobile power.

In reply you are advised that this department has no available information in the matter and your inquiry has been referred to the Bureau of Mines, Department of the Interior, for consideration, since that bureau is conducting special investigations on the subject.

Very truly, yours,

D. F. Houston, Secretary.

D. F. Houston, Secretary.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE DIRECTOR BUREAU OF MINES,
Washington, March 39, 1916.

Washington, March 39, 1916.

Hons. J. M. C. Smith,

House of Representatives, Washington, D. C.

My Dear Mr. Smith: Your letter of March 25, addressed to the Secretary of Agriculture, has been referred to this bureau.

Inclosed please find a copy of Senate Document 310, which is the report of the Secretary of the Interior on the gasoline situation.

With regard to the use of kerosene, the general consensus of opinion among automobile engineers is that to date there has not been developed a kerosene-burning carburetor which is entirely satisfactory for automobile use. There are, however, kerosene-burning carburetors, such as that of the Kerosene Burning Carburetor Co., of Detroit; the Deppe carburetor; and the Harroun carburetor, which have proven satisfactory for stationary and marine work and which are claimed by the manufacturers to be satisfactory for automobile use, basing their claims on reports of demonstrations which have been made.

Very truly, yours,

VAN. H. MANNING, Director.

VAN. H. MANNING, Director,

FEDERAL TRADE COMMISSION, Washington, April 10, 1916.

Hon. J. M. C. Smith. M. C.,

Washington, D. C.

My Dear Congressman: This will acknowledge receipt of your letter bearing date of April, 1916, requesting a copy of the reported probe by this commission into the increased price of gasoline.

I am handing vou herewith a copy of the preliminary report on this subject, which was to-day submitted to both Houses of Congress. It is not known definitely just when the gasoline report itself will be ready for publication.

Very respectfully,

Ferenal Trade Commission, By L. L. Bracken, Secretary.

FERERAL TRADE COMMISSION, By L. L. BRACKEN, Secretary.

It should not be difficult to determine whether or not the rise in price is a legitimate one. If it is not, then prompt and vigorous action should be taken against the offenders and the full penalties imposed. But, from experience already had, we should now fortify ourselves and the country against the possibility of any organization, corporation, or trust manipulating prices. We should adopt every known substitute for gasoline as motor power. We should discover new substitutes and devices if possible. Kerosene, which can be and is now being successfully used for motor power, in time, if generally used, will greatly reduce and steady the price. It will increase the supply of an-

other product for motor power.

I again quote from Senate Document 310, at page 25, the sum-

mary of the letter of the Interior Department, as follows:

OTHER INFORMATION WHICH MAY BE USEFUL OR BENEFICIAL IN THE
CONSIDERATION OF THE SUBJECT OF PRODUCTION AND CONSUMPTION OF GASOLINE.

The situation may be summed as follows:
The consumption of gasoline is rapidly increasing.
The production of crude has been generally regarded as near its maximum.

Some immediate relief may be afforded by means of the following:

(a) The use in internal-combustion engines of heavier distillates approaching kerosene.

(b) An acceptable kerosene carburctor would at once go a long way toward relieving the present shortage of gasoline.

(c) General use of cracking processes, whereby gasoline is made from kerosene and other less valuable petroleum oils. Such cracking processes are being rapidly developed, and promise near relief. It is practicable to produce gasoline from kerosene, gas oil, fuel oil, residuums, and heavy crudes by present-day cracking processes, and no oil should be used for fuel that has not been so treated.

(d) Increasing the production of crude to furnish the necessary supplies of gasoline; but this is not to be recommended if it increases the output of distillates, for which there is no market.

It may be of interest to note that the United States produces two-thirds of the entire oil production of the world. The following table is taken from Senate Document No. 310, page 16, showing the whole production:

Year.	United States.	Entire world.	Year.	United States.	Entire world.
1900	63, 600, 000 69, 400, 000 88, 800, 000 100, 500, 000 117, 100, 000 134, 700, 000 126, 500, 000 166, 100, 000	149, 100, 000 167, 400, 000 182, 000, 000 194, 800, 000 218, 300, 000 215, 400, 000 214, 000, 000 264, 900, 000	1908	178, 500, 000 183, 200, 000 209, 600, 000 220, 400, 000 222, 900, 000 248, 400, 000 265, 800, 000 1 267, 400, 000	285, 100, 000 298, 400, 000 327, 600, 000 345, 700, 000 352, 500, 000 384, 700, 000 400, 500, 000 (2)

1 Estimated.

2 No figures available.

Keeping in mind that the sudden rise in price was in the month of September, 1915, and the succeeding months, let us look at Table 12 of the letter of the Secretary of the Interior, found on page 20, and it will be observed that the exports for the months of September and October were much less than the exports were for the months of May, June, July, and August preceding the rise:

Month.	1913	1914	1915
	Barrels.	Barrels.	Barrels.
January	160,000	150,000	325,000
February	325,000	280,000	550,000
March	350,000	320,000	525,000
March April	550,000	550,000	480,000
May	450,000	540,000	600,000
June	320,000	430,000	680,000
July	380,000	650,000	550,000
August	590,000	270,000	700,000
September	490,000	550,000	490,000
October	510,000	£60,000	430,000
November	280,000	400,000	640,000
November	250,000	800,000	530,000
Total	4,455,000	5,000,000	6,500,000

So that, from whatever angle we view the cause, it does not seem that the rise was due to increased consumption, or to shortage of production, or to diminished stock on hand, or to additional exports, or to increased cost of production, the only legitimate conclusion being that the increase in price was an legitimate conclusion being that the increase in price was an arbitrary one. It would be presumptuous to hazard a remedy, but with the undeveloped millions of acres of oil lands in the United States which have already been surveyed, in the States of California, Minnesota, Wyoming, Montana, Colorado, Utah, Arizona, North Dakota, Louisiana, and Texas, there ought to be no question of an abundant supply for years to come. Alaska, that has yielded so bountifully of her mineral wealth, also is known to contain large oil districts. Besides, there are boundless areas of oil lands in the Mexican Republic, in South America, China, and Russia. One other thing that is expected to reduce the price of gasoline is perfecting a carburetor for the use of kerosene for motor power. use of kerosene for motor power.

In due course of time, no doubt, other oil fields, other methods of operating motor power, and substitutes for gasoline will be found. Personally I have thought denatured alcohol might be found a good substitute. It can be manufactured from a number of by-products of the farm, but the cost of the reducing plant is prohibitive to any individual farming opera-

The investigations by the departments of the Government and the United States Senate are not yet completed, but enough has already been shown to raise the presumption that the increased price of gasoline was not a legitimate one; that it was arbitrary and mercenary and unwarranted. The reports of the Government departments and of the Senate will contain valuable information. If found to be illegal and unjust, the penalty should be imposed upon those responsible for any violation of the law.

Bridge Across the Missouri River at Chamberlain, S. Dak.

EXTENSION OF REMARKS

HON. CHARLES H. DILLON.

OF SOUTH DAKOTA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 12, 1916.

Mr. DILLON. Mr. Speaker, this bill (H. R. 9909) seeks to require the Chicago, Milwaukee & St. Paul Railway Co. to construct and maintain a permanent bridge across the Missouri River at Chamberlain, S. Dak.

On February 9, 1905. Congress authorized the White River Valley Railway Co., its successors and assigns, to construct and operate a pontoon and pile bridge across the Missouri River at Chamberlain, S. Dak. The Chicago, Milwaukee & St. Paul Railway Co. became the successors of the White River Valley Railway Co., and has during the greater part of the time operated and maintained a pontoon bridge across the river, as provided in the act.

This bill grants to the Chicago, Milwaukee & St. Paul Railway Co., its successors and assigns, authority to maintain and operate a permanent bridge across the said river and repeals the former act of Congress. It grants permission to such company to maintain the pontoon and pile bridge for one year from the passage of this act, and provides that if within one year it is shown to the satisfaction of the Secretary of War that actual construction of the permanent bridge has commenced, then permission is given to operate the pontoon bridge during the construction of the bridge, but in no case for more than three years from the passage of this act. The bill has the approval of the War Department

The line of road extends west from Chamberlain to Rapid City, a distance of about 220 miles. The maintenance of the pontoon and pile bridge has been unsatisfactory to the traveling and shipping public ever since its construction. From two to four times a year the bridge has been carried away by high water. Whenever the ice broke up in the early spring it rarely failed to carry out the bridge. The rise in June usually took out the bridge, and likewise in the fall of the year it was usually carried away, to the great annoyance of passenger traffic and the shipment of freight. On such occasions traffic has been thoroughly demoralized by the inadequate service on the line of These conditions render it unsafe and dangerous for the traveling public to attempt crossing the river on such inadequate facilities.

The State Railroad Commission of South Dakota in various ways sought to require the construction of a bridge, and at one time brought a mandamus suit against the railway company, but for want of jurisdiction the commission was unable to compel the construction of a bridge. The towns and cities west of the river have for years been urging the construction of a permanent bridge across the river at Chamberlain, and the State legislature has memorialized Congress to compel the construction of a bridge at said place.

The railway company claims that the line of road is not paying a fair return on the investment, and claims that the income on the line of road would not justify the construction of a permanent bridge at said place at this time; that in view of improvements now under construction it ought not to commence the construction of such bridge short of three years from the passage of the act, but that in order to avoid any conflict the company would consent to commence the construction within the period of two years and finish it within four years if the bill was amended accordingly.

In order to reach the sentiment of the people in my district, telegrams were sent to Chamberlain, Kimball, Mitchell, and the State railroad commission, asking their views on this question, and I now present the replies as a part of my remarks.

Having conferred with a number of the members of the Committee on Interstate and Foreign Commerce and the author of the bill, and knowing that consideration of the bill would be postponed on the unanimous-consent call by objection, and in view of the doubt of securing the passage of the bill in its original form and the delay likely to occur, I deem it wise not to oppose the amendment and thus secure the immediate passage of the bill.

KIMBALL, S. DAK., April 13, 1916.

C. H. Dillon,
Care House of Representatives, Washington, D. C.: Have taken the matter of bridge at Chamberlain up generally with the citizens of Kimball. The sentiment here is for the original Gandy bill.

DR. H. GALBRAITH, - President Commercial Club.

CHAMBERLAIN, S. DAK., April 12, 1916.

CHAMBERLAIN, S. DAK., April 12, 1916.

Congress Hall Hotel, Washington, D. C.:

The people of Chamberlain want a bridge, but are not unreasonable.

Make date of commencement two years, if possible; if nothing better in sight, accept their proposition.

Scerctary.

PIERRE, S. DAK., April 12, 1916.

Congressman Charles H. Dillon, Congress Hall Hotel, Washington, D. C.:

Milwaukee has been promising to build bridge at Chamberlain ever since 1909. I am directed to say it is opinion of this board it could have constructed this bridge several years ago if it desired. We think bridge is a necessity.

H. A. USTRUD,
Sceretary State Railroad Commissioner.

MITCHELL COMMERCIAL CLUB, Mitchell, 8. Dak., April 13, 1916.

C. Hall Dillon, Congressman, Washington, D. C.

Congressman, Washington, D. C.

My Dear Sin: Your message arrived late last night, and the writer was absent from the city and did not get same until this morning, and immediately upon receipt of same made a canvass of many people, then called together our traffic department, and was instructed to wire you as per copy inclosed.

We trust you will use your best efforts in getting this bill to stand at one year for commencing and three years for finishing. The railroad company is taking a great risk of life and property, operating at a very heavy expense under present bridge they have at Chamberlain, owing to the fact that several times each year when the bridge is out they have to route their trains via Wolsey, and I understand pay \$400 the train to pull same from Wolsey to Rapid City, and then have to back haul and distribute from Rapid City to Missouri River.

There are a great number of our people, and especially traveling men, who have to go into the hills country, will not go over the bridge at Chamberlain and make the hills via Wolsey.

We trust you will use your best efforts in passing bill as it now reads, and are, we assure you,

Yours, very truly,

T. J. Mongan.

Secretary.

Rivers and Harbors Appropriation Bill.

EXTENSION OF REMARKS

HON. CHARLES В. TIMBERLAKE,

OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Tucsdan, April 11, 1916.

Mr. TIMBERLAKE. Mr. Speaker, although in the district which it is my privilege to represent there are but few harbors or navigable inland waterways on which it is either advisable or necessary to expend public money, I am none the less interested in the bill making provision for a continuance of work of this character already begun and for new undertakings of similar kind judged to be necessary.

That improvements to our harbors and water highways are highly important to the best interests of the Nation, and that the Congress should be liberal in providing the means necessary to carry plans which are both practicable and of real merit into effect are self-evident. But in appropriations of magnitude such as are proposed in the bill now under discussion it is but natural that despite the utmost care many items should be included, amounting in the aggregate to a very large sum, intended to effect so-called improvements the merit and expediency of which could safely be considered doubtful.

That many of the projects, provision for the continuance of work in which mention is made in the bill, are without merit sufficient to justify the expenditure of the public funds.

The bill, as reported by the committee, appropriates no less a sum than \$37,898,410 in cash and authorizations of \$1,710,000, making, as stated in the report, a total of cash and authorizations of \$39,608,410—a stupendous sum, indeed, when it be considered that this represents the proposed outlay of one branch of one department of the Government for one year. It is thought that were the moneys thus proposed to be expended those of a corporation instead of being Government funds some way would be found of very materially reducing the total of the proposed expenditure without in any way interfering with or hindering the work and development of those really essential and meritorious enterprises with which it is indispensable to proceed with proper

regard of the public good.

There seems to be a grave danger, judging from the minority report submitted by the gentleman from Wisconsin [Mr. Frear], of expending money from the Federal Treasury on some projects which will result mainly in benefits to private interests and private individuals, which projects, it is stated, "have a very distant relation to navigation." Such abuse of public funds should, of course, at all costs, be avoided. Only those proposed works which are of essential importance, not to the few but to the many, should be provided for in a bill of this kind, and only for those plans, economically sound and of demonstrated public importance, should an attempt be made to undertake or to continue.

We are told that one authority on these matters has openly recommended the suspension of work on some 58 of the projects on which millions have already been spent and to continue the development of which the bill now being considered provides further appropriations. This recommendation, it is presumed, was made simply because, in the judgment of the authority referred to, it is no longer indispensably necessary to continue work on such projects. River and canal traffic is becoming yearly of less and less importance, both in this country and Europe, owing to the quicker transportation offered by the railways, and it would seem to be the height of folly to authorize the expenditure of millions of dollars to increase the navigability of streams the traffic on which, after the improvements shall have been completed, would not be sufficient to justify the proposed expenditure of time, money, and effort.

Considering river navigation alone, and apart from projected improvements to harbors, the information on the subject available would seem to indicate that many of the items included in the bill could be expitted with the could be expitted. cluded in the bill could be omitted without halting the progress of the work on such improvements as the Secretary of War. in consultation with the Chief of Engineers of the Army, might

consider imperative.

If the facts are as stated in the minority report, to which reference has already been made, viz, that approximately \$75,000,000 has been expended on the Mississippi River alone within the past 12 years without adding anything to its com-merce it is high time to demand a rigid accounting as to what the people are getting for their money, and, failing a conclusively satisfactory response, to call a definite halt on additional appropriations for this purpose.

Similarly, the Ohio River, we are told, has swallowed up over \$50,000,000 to date, while the traffic has steadily decreased. To complete a 6-foot channel in the Missouri, in order to save shippers some \$200,000 annually, will cost \$14,000,000 more, or a net loss to the Government of \$1,100,000 per annum. Com-

ment is superfluous.

It is further shown that the very large sum of money which has been expended on the Tennessee River has benefited chiefly a private power company; and that the improvements and maintenance charges on the Cumberland River are growing rapidly with a small and decreasing commerce as a result of the expenditure.

Valuable privileges, it is claimed, have resulted to a private corporation by Government expenditure of some two and a half millions on the Coosa River, which, instead of helping to develop traffic has, apparently, had an opposite result, its com-merce having fallen off 45 per cent between 1912 and 1914.

One lock canalization project, it is learned, is likely to cost the United States \$10,000,000 before it is completed, although there is no actual commerce on the river and although it may take a century, at the present rate of progress, to complete it.

These illustrations could, it seems, be increased ad libitum, and if such statements contained in the minority report on this bill are founded on fact, as it is presumed, of course, they are, certainly there is ample reason to hesitate before appropriating the very large sum authorized in the bill itself, and should rather serve to the passage of legislation which would tend to stop injudicious and useless expenditure, by curtailing siderably the appropriations asked for.

A very striking statement is made in the minority report heretofore alluded to, with regard to the late form of canal which has passed from popular favor, and the commercial value of which, in consequence, has materially decreased. The statement in question, which is well worthy of being called to the attention of Members of this House, is to the effect that while "our Government has spent \$4,455,000 for navigation on the 26 miles of Muscle Shoals Canal, two freight trains could easily have hauled all the commerce passing through the locks in 1913.

It is beyond dispute that the enormous sum of money which the United States has spent in waterways has not brought anything like the return which it should have brought, certainly not sufficient to justify continuing to appropriate money in like ratio for the same purpose.

In view of the development of our railroads, the main carriers of freight, the same reasons no longer exist for the improvements of canals and navigable streams as was the case years ago. No matter to what point river improvements can be developed, they will, according to all authorities, yield less and less return, and less and less good will consequently result to the community from the furtherance of such projects.

It is also established that the improvement of rivers and canals, so as to be available for the carriage of freight thereon, has no effect whatever upon railroad freight rates; consequently from this point of view, contrary to the general belief, the community is not benefited by money expended for the purpose of making streams and canals navigable.

While, sir, I am heartily in favor of the liberal appropriation of the public money for all practicable and worthy purposes, am unalterably opposed to sanctioning the sinking of practically unlimited funds into projects which can do little or no good to the people at large, and which do not and can not in the very nature of modern conditions yield a proper return.

For these reasons, therefore, I felt constrained to support the amendment offered in which it is sought to appropriate a lump sum of \$15,000,000, to be expended by the Secretary of War for the maintenance and improvement of rivers and harbors for

the next fiscal year.

It is, of course, natural, and from one point of view com-mendable, for each Member of this House to do his utmost to secure as liberal an appropriation as is consistent for the development of the rivers and harbors situation in or even near his own district; and this regardless at times of the real necessity for and the advisability, from the broader outlook of the whole country, of the proposed expenditure and work. It would seem, therefore, the part of wisdom to err, if err we must, on the side of economy, rather than to be too lavish in the expenditure by the people of the sums called for, and consequently my vote will be cast against the bill.

Philadelphia and the Delaware River.

EXTENSION OF REMARKS

HON. PETER E. COSTELLO. OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, April 11, 1916.

Mr. COSTELLO. Mr. Speaker, in addition to the remarks made by me under the five-minute rule, I wish to say in extension thereof that the appropriation carried in the rivers and harbors bill for the Delaware River, leading up to the city of Philadelphia and beyond, is in line with the original recommendations of the United States Army engineers. It is the largest appropriation that has yet been made to further the 35-foot channel project, and if it remains in the bill will not only hasten the work on the Delaware River but will save the Government deterioration and waste which result from inadequate appropriations to complete the project.

As one of the Representatives from Philadelphia, I have a natural pride in the Delaware River and am glad the Rivers and Harbors Committee, of which I have the honor to be a member, and the House have finally put us in a fair way to advance the port to an equality with other great ports along the seaboard. We have the population, and we have the business to justify a full channel depth of 35 feet, and it is only fair that our river should be promptly brought up to a point where it can fully serve the great commercial and industrial interests which abound in the vicinity. The city of Philadelphia has a population in excess of 1,700,000, while the State of Pennsylvania has a population of more than 8,000,000. The vast mineral resources and the tremendous industrial activities of these people all contribute to the wealth of the United States.

THE SHIPPING DAYS OF STEPHEN GIRARD.

From Philadelphia, in the early days of our country, came men who sailed ships to trade with all the other countries of It was they who were largely instrumental in carrying the American flag to foreign ports where now in trade it is hardly known.

These were men of the type of Stephen Girard, who himself came to our great country poor, friendless, and unknown, and, taking advantage of the possibilities of our country, became one

of the foremost traders and shippers of his day. He made the port of Philadelphia known in all parts of the world. By means of his shipping and trading he amassed a tremendous fortune, and dying endowed with all his wealth one of the greatest charities that the world has ever known—an institution where orphan boys are educated and from which they go forth each year full of the American spirit to add to the glory of our country and its institutions.

PHILADELPHIA A CITY OF HOMES.

The city of Philadelphia, for which I have the honor to speak, has a population of 1,700,000. There are within its boundaries between 300,000 and 400,000 separate dwellings constructed of durable material and with an assessed valuation of about \$1,000,000,000. Of these homes 156,000 are owned by the people who occupy them, who are therefore directly interested in the success of the city and the Nation. Our city contains manufacturing plants that give employment to 300,000 skilled laborers, plants that have a value of over a billion dollars, that add annually over a billion dollars to the wealth of our country.

SKILLED LABOR AT PHILADELPHIA.

This splendid body of skilled labor whose ability is unexcelled, represents not only a creating value but is an important factor as an investment force. In one of our saving-fund institutions we have an account for every fourth man, woman, and child within the limits of the city, there being in this institution alone over 300,000 separate accounts, and its total deposits amount to over \$127,000,000. This immense sum in one institution represents part of the savings of the men and women of our great industrial and commercial city, and the money is invested in securities of the corporations serving the city of Philadelphia. This you can see shows that there is no hard and fast line between capital and labor in Philadelphia, but we have a real democracy, in which happiness is the cornerstone, and home life, along the American lines, is our characteristic feature.

BRINGING THE PORT UP TO DATE.

Thus, I am pleading for recognition for the port of Philadelphia, asking for what we are entitled. Why should the port of Philadelphia follow in the rear of other ports that have been granted waterways deeper than we are allowed? We get a survey for a 35-foot channel, others get one for a 40-foot channel; hence, Philadelphia is behind with a channel of 5 feet less depth in meeting the commerce that is seeking our port and consequently, to that extent, is at a disadvantage.

I am sure that you will agree with me that past Congresses have not dealt justly with us, and you will appreciate my statement more fully when I tell you that in the last 50 years we have been assisted by the Government of the United States to the extent of only \$11.000,000. Why, in the corresponding period our import taxes alone at the port of Philadelphia have amounted to over \$\$00,000,000.

LOCAL COOPERATION EXTENSIVE.

In closing I desire to say that in the future Philadelphia expects the recognition of its port to which it is entitled. We expect support to enable us to conduct our commerce in a satisfactory manner and to make the port of Philadelphia attractive to the shipping of the world; we expect the Government to help us by developing our channel for its own use as well as for our city, whose expenditures on wharves, docks, and terminal facilities will have cost \$30,000,000 on the completion of the present development.

Federal Trade Commission.

EXTENSION OF REMARKS

OF

HON. KENNETH D. McKELLAR,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 18, 1916.

Mr. McKELLAR. Mr. Speaker, recently the Hon; W. J. Harris, a member of the Federal Trade Commission, made a speech in Atlanta, Ga., upon the powers and work of the Federal Trade Commission. It is such an excellent speech, and so clearly and comprehensively sets forth the work of this commission, that I ask unanimous consent to put it in the Record as a part of my remarks.

The speech is as follows:

THE WORK OF THE FEDERAL TRADE COMMISSION.

Address of William J. Harris, Federal Trade Commissioner, before the American Cotton Manufacturers' Association, Atlanta, Ga., April 4, 1916.]

I feel highly honored by your invitation to address you on this occasion. It is a source of gratification to me to have this opportunity of coming into contact with the members of the American Cotton Manufacturers' Association, because you are a group of men who have been doing great things individually and collectively for the development of this country.

VALUE OF COLLECTIVE EFFORT.

Most of the large problems of business with which your association is concerned have to do with the improvement of conditions in your industry, and to that extent with the industrial welfare of our country.

A great deal can be accomplished by collective efforts on the part of those engaged in like enterprises, and by cooperating you can accomplish wonders in many ways in improving conditions under which your business is conducted.

Concerns engaged in the same industry have much in common in improving processes of manufacture, standardizing products, establishing systems of cost accounting, obtaining credit information, and promoting the welfare of employees.

By exchanging ideas you broaden your outlook of business as a whole, and your combined knowledge and experience helps to solve many difficult problems, such as, for example, the extension of your foreign trade.

GERMANY'S POLICY OF COOPERATION.

Germany's success as a commercial world power is due very largely to the policy of organizing and cooperating. Her business men have worked together. They have established communities of interest among themselves for the mutual purpose of promoting trade at home and abroad. They have organized in every important industry trade associations, and into these are gathered 85 per cent of the manufacturers engaged in the respective industries. This has proven to be the very backbone of Germany's industrial and commercial achievements. More than 600 associations of manufacturers, producers, and merchants exist in Germany to-day, and in addition to these there are about 5,000 subsidiary business organizations. The German Government not only sanctions these industrial organizations, but assists them in many ways.

COTTON MEN AND THE CENSUS.

Of the various investigations conducted by me while I was Director of the Census, I naturally was greatly interested in the statistics concerning the production and consumption of cotton. With these you are familiar.

cotton. With these you are familiar.

In my effort to improve these data I consulted with the members of your association and with the cotton producers. On account of the valuable suggestions received, many changes were made in the conduct of the work.

One of the most important changes, for example, made under my direction was the separation of the statistics for the quantity of linters obtained. Linters are not used for the same purpose as lint cotton and should not be included in the same totals. The number of bales of linters produced annually has constantly increased, until last year it amounted to more than 881,000 bales. It was misleading to include linters when comparing the annual crops. Except for the separation of the statistics of linters from lint cotton, the crop of 1915 would have been regarded as a 12,000,000-bale crop instead of 11,000,000.

The constantly increasing amount of cotton manufactured in our own country has had its effect on the price of cotton, and benefits directly or indirectly every person engaged in its production.

Cotton is the second largest crop of the United States, the principal crop of the Southern States, and ranks first in exports of the United States. Without cotton the balance of the export trade would have been against the United States until the absence of the second states of the second states.

normal conditions of the past two years.

If the cotton produced in this country were manufactured here into as fine a grade of products as is now produced from it in foreign countries, there would be created annually from the lint obtained from the cotton crop a total of \$2,155,000,000 instead of \$665,000,000. Taking into consideration the number of persons employed in the 25,000 ginneries required to gin the cotton from an average crop, the number of persons employed in the cottonseed-oil mills, in the cottonseed-oil refineries, in the manufacture of cotton goods, and in the production of hosiery and knit goods, as well as in the planting of the crop, its cultivation, care, and picking, I am satisfied that there is no other agricultural crop of the world from which such a large number of persons, directly or indirectly, obtain a liyelihood.

At the time of the organization of the Federal Trade Commission business conditions on account of the war were completely demoralized. In the South, where the cotton you manufacture is produced, business was paralyzed. Though across the ocean from the countries at war, the financial interests of the South suffered more than that of any country except Belgium.

Those engaged in the production and manufacture of cotton suffered more than any other class of business. The energetic and able manner in which the producers and manufacturers of cotton handled this serious situation is an index to what they can do to develop this industry in the future when conditions are again normal. This leads me to hope and believe that before many years the manufacturers of the United States will consume practically all instead of only one-third of the cotton produced in our country.

The census of manufactures was the last important investigation conducted by me before leaving the Census Bureau. I pursued the policy of conferring with you and other manufacturers in regard to the schedules, and the investigation was made in a cooperative and friendly spirit.

The manufacturers, appreciating my spirit toward them, realized that instead of the Government interfering with their business they would reap great benefit from the investigation.

The friendly spirit shown by me while I was Director of the Census in dealing with the manufacturers and producers in securing without delay statistics which were really useful I think influenced the President in naming me a member of the Federal Trade Commission.

GOVERNMENT COOPERATION IN OTHER ECONOMIC FIELDS.

Your association is interested in business efficiency, the conditions which make business prosperous, and the relation of government to business. Government and business are had should continue to be mutually helpful. Our Government and been gradually extending its assistance to different groups upon whose prosperity depends to a large degree the prosperity of the country.

The Interstate Commerce Commission, for example, was organized to adjust and determine questions arising between shippers and carriers. Farmers, fruit growers, and various producers' associations of the country also receive advice and rulings in matters affecting them from the Department of Agriculture. The Federal Reserve Board likewise gives to the bankers information as to their powers and duties. These groups have received assistance. Why should not the business men in industry be aided also?

MEETING NEEDS OF BUSINESS MEN IN INDUSTRY.

Realizing that general business had no such Government agency, the President recommended to Congress that a board with such duties and powers be established, and the Federal Trade Commission was created. In his message to Congress the President used the following language which explains clearly the reasons for the establishment of this commission:

the reasons for the establishment of this commission:

The business of the country awaits also, and has long awaited and has suffered because it could not obtain further and more explicit legislative definition of the policy and meaning of the existing antitrust law. Nothing hampers like uncertainty, and the business men of the country desire something more than that the menace of legal process in these matters be made explicit and intelligible. They desire the advice, definition, and guidance and information which can be supplied by an administrative body, an interstate trade commission. The opinion of the country would instantly approve of such a commission, it demands such a commission as an indispensable instrument of information and publicity, as a clearing house for the facts by which both the public mind and the managers of great business undertakings should be guided, and as an instrumentality for doing justice to business where the processes of the courts, or the natural forces of correction outside of the courts, are inadequate to adjust and remedy the wrong in a way that will meet the equities and circumstances of the case.

To direct the newly established board, the President appointed Joseph E. Davies, of Wisconsin; Edward N. Hurley, of Illinois; Will H. Parry, of Washington; George Rublee, of New Hampshire; and myself, and the commission was organized March 16, 1915. Never have I come in contact with men more anxious than my associates to be constructively helpful to the legitimate business interests of the country.

POWERS AND WORK OF COMMISSION.

The Federal Trade Commission has been in existence a year. We have found among business men a rather vague idea as to the power of the commission. I propose in this address to outline the various duties and powers of the commission and to give a brief account of how the law is actually working in practice.

When the commission was created the impression was general that it was to be an inquisitorial body which would be ever searching the field of business like a detective for evildoers. This is a very one-sided conception. The commission is an

agency of public service—service to the whole people. Its duty is quite as much to bring to light what is sound and serviceable in business as what is sinister; to give the Government and the public a correct knowledge of the facts of business so that the laws and their administration may promote and not, through misunderstanding, hinder the interest of us all. More and more the importance of the constructive side of the commission's work will be perceived.

The commission is of especial interest to business men. As practical business men you are interested in knowing how the Federal Trade Commission may affect you and your business. What have you as business men to hope for from the commission or to fear?

POWER TO INVESTIGATE.

The powers of the commission, as outlined in the act creating it, are of three kinds. In the first place, the commission has a general power of investigating corporations engaged in interstate commerce. It may require such corporations to make special or annual reports to the commission, furnishing such information as the commission may require as to the organization, business, conduct, practice, and management. It is hoped that the information to be gathered by these general investigations or by these reports may be of aid and benefit, not merely to Congress as a basis for future legislation regulating interstate commerce, but to business men.

INFORMATION HELPFUL TO BUSINESS.

The Federal Trade Commission, no matter how anxious it is to be helpful to the business interests of the country is confronted at the outset with a lack of adequate information on industrial conditions.

In spite of all the attention that has been given to business during the last decade it is remarkable that to-day there is no comprehensive data available, no constructive material at hand to furnish to a manufacturer, merchant, or trade association desiring to improve unsatisfactory conditions in their industry. This need we seek to meet. What the Government is doing for the farmers, the railroads, and the bankers, we are trying to do for business men engaged in industry. Is not this as legitimate a field of Government activity as any of those already tried and found desirable? Should not manufacturers and merchants who are merchandising the farmers' product, shipping their goods over the railroads, depositing their money in the banks, and meeting the payroll of thousands of employees, be furnished with data and information vitally important to them?

In order to cooperate intelligently with the manufacturers and merchants of the country we must have comprehensive data. Realizing this, we recently mailed to every corporation in the United States a form in which we asked a few simple questions about their industries. This information embraces the products which they manufacture, their annual sales, the capital invested, and other principal items such as depreciation, and so forth. These data will be compiled by industries and a summary of results sent to each company in that particular line. indicate to each and every man in the business whether or not the industry he is engaged in is in a healthy condition. industry is showing no earning power, that industry either is not well managed or the production exceeds the demand. Knowledge of existing conditions will prevent others from entering the business or unprofitably investing additional capital where overproduction already exists. The industry in which conditions are unsatisfactory will receive particular attention and the real cause of the conditions will be ascertained,

These facts are not to be asked for in any inquisitorial spirit, and the hearty cooperation which the Trade Commission has so far received from the business men of the country indicates their appreciation of the need of such definite facts.

ACCOUNTING METHODS.

When business was done on a large percentage of profit, questions of accurate cost and of operating efficiency were not so important, but in most lines of industry to-day profits are comparatively small and manufacturers must, therefore, know what their goods cost. Unreliable methods of arriving at cost of production must be eliminated.

A manufacturer who does not know with a close degree of accuracy what it costs him to produce the different articles he manufactures and what it costs him to sell them is not in a position to meet intelligently competition and invites business disaster.

Many of the larger manufacturers have thorough cost-accounting systems, which they recognize as necessary in order to give them the information essential to successful management. On the contrary, the number of small manufacturers who have no adequate cost-accounting system and who price their goods arbitrarily is amazing.

Proper accounting for the small manufacturer is most essential. It is necessary for his success that he know on what particular article he is making a fair profit and on what he is making only a narrow margin of profit or losing money. If he has this information, he can concentrate on the manufacture and sale of the product on which the profits are satisfac-

Whole industries, in many instances, are suffering from a general lack of intelligent knowledge of cost,

WAY COMMISSION CAN HELP.

How can the Federal Trade Commission help to improve this situation?

The commission has no intention and no desire to use compulsory methods; but it does hope to reach the desired end by encouraging improvements in accounting practice, by indorsing standard systems of bookkeeping and cost accounting, and by assisting in devising standard systems, either at the request of individual merchants and manufacturers or through the association that represents the industry.

It is recognized that no one standard system of accounting is applicable to all classes of business, but that special systems are required for each group or class of commerce and industry.

The commission, however, while recognizing the commercial advantages to be derived from uniformity of systems, does not advise making a change where systems already installed give adequate information and are economically operated.

ADVISORY POWERS.

The commission, in the second place, is especially authorized to make investigations at the request of the President or either House of Congress, or the Attorney General, as to alleged violations of the antitrust law; also to investigate the manner in which decrees entered at the suit of the United States to restrain violations of the antitrust laws are being carried out. commission is also authorized, at the request of the Federal courts, to suggest appropriate decrees in suits brought by the United States under the antitrust laws.

The decrees of the court in some Sherman-law cases have not, in fact, brought about the beneficial results intended. No court trying a great variety of cases can have the expert, intimate knowledge of an industry necessary to formulate effective It is expected that a commission, composed of business men with a permanent expert staff, can render real assistance to the Federal courts in their difficult and important tasks.

PIPE-LINE INVESTIGATION.

In connection with the duty of instituting investigations at the direction of Congress, it may be noted that the commission, pursuant to a resolution of the Senate, has made an investigation into the subject of pipe-line transportation in the mid-continent field. A summary of the commission's report has already been issued.

The report shows the amount of investment in such pipe lines, the cost of carrying the oil, the profits, the charges, and other conditions imposed on shippers, and various other matters which show the true situation and significance of the present conditions of pipe-line transportation.

The purpose of these special investigations is to render aid and assistance to the Government in the enforcement of the law against restraint of trade and monopolies.

INVESTIGATION INTO POREIGN TRADE.

The commission is also specifically authorized to investigate trade conditions in and with foreign countries where associations, combinations, or practices of manufacturers, merchants or traders, or other conditions may affect the foreign trade of

Under the authority granted by this section, the commission is conducting a thorough investigation into competitive conditions in foreign trade, and methods adopted by foreign manufacturers and exporters in the distribution of their goods. It has held hearings in different sections of the United States. considered the views of thousands of prominent manufacturers and exporters in this country, received special reports from United States consuls abroad, and sent its agents to foreign markets to obtain first-hand information.

I take pleasure in stating that in this work the commission has received the hearty cooperation of the business men, and, as a result of the investigation, the commission has obtained a vast amount of valuable information. The commission expects to submit the results of its work to Congress in the immediate future, with the hope that legislation will be enacted which will place our business on an equal footing with our foreign competitors.

DUMPING.

Acting with the Secretary of Commerce, the commission has recommended to the President that legislation to prevent unfair

"dumping" be enacted. It has been the practice of some European manufacturers, who control in their line a large part of the world market, to destroy competition abroad by reducing prices in the markets of their competitors to a point below the cost of production. While not necessarily contrary to business ethics, this practice usually is unfair. Competition to-day is international in character, and the American manufacturer is entitled to the same degree of protection from unfair methods, sought to be perpetrated by foreign rivals, as it receives from unfair competition from domestic competitors.

Some countries are already protecting their industries against this form of unfair competition. England following their example is considering the enactment of such a law to protect its newly established dye industry. This country, too, in the judgment of the commission, should declare dumping in foreign trade to be an unfair method of competition and subject to the same restrictions as are placed upon similar practices in

domestic trade.

FOREIGN TRADE.

If our business men are to be factors in the world's markets, they must receive encouragement to do as our foreign rivals are doing

We have reached the point under normal conditions where we must have foreign markets for our surplus manufactured prod-The American people, and particularly business large and small, are heartily in favor of the Government giving immediate relief that will make it possible for us to obtain our share of foreign business, so that our factories may run continuously and keep our labor permanently employed.

Germany's success as a commercial and industrial world power, as I have already said, is due very largely to the policy of organizing and cooperating, of the working together of its leaders of industry, of establishing communities of interest between the small and the big business men for the mutual purpose of promoting trade at home and abroad. Cooperation has proven to be the backbone of Germany's industrial and commercial achievements, efficiency, and strength.

In foreign trade men think in terms of national competition. In many foreign markets the contest is not so much between individual corporations as it is between national industries. For example, the contest in South America is not between two steel manufacturers in Germany or two steel manufacturers in England, but it is between the German steel industry, the English steel industry, and the American steel industry.

In South America we hear not of the actual or potential competition of European individual corporations or houses, but of German, French, American, or English competition. By means of cartels or trade associations the leading industries in those countries have organized, and when they move forward into foreign markets they move forward united against competitors from other nations. Countries like England and Germany have built up a permanent export market in the countries of the world through the earnest cooperative efforts on the part of those interested in the particular industry in question.

REGULATIVE POWERS.

The Federal Trade Commission, in the third place, has certain regulative power over interstate commerce. This power of the commission affects vitally men engaged in interstate commerce and is the one in which you, as business men, ought to be most interested.

The regulative powers of the commission are conferred not alone by the trade-commission act, but by certain sections of the Clayton Act. Section 2 of the Clayton Act declares discrimination in price between different purchasers of commodities to be unlawful under certain conditions. This section is especially interesting to manufacturers. It does not mean that the same price must be made to all customers, but it does mean that a manufacturer or dealer shall not make low prices in the places where he has competition for the purpose of putting the competitor out of business. This kind of price cutting was one of the favorite clubs of certain powerful monopolies.

Undoubtedly there is much less price warfare than formerly, but the commission has had its attention called to quite a number of instances.

Numerous complaints respecting alleged discrimination in the sale of gasoline led me to move the commission to authorize an investigation to determine whether this section of the law was being violated. This suggestion was adopted and the investigation has been vigorously prosecuted under my immediate supervision. The scope of the work has, however, been extended to include an investigation into the causes for the prevailing high price of gasoline, and the commission will submit a preliminary report on this phase of the investigation in the immediate future.

You will be interested in knowing that some of the most serious cases were settled by the commission without formal proceedings. As soon as the commission investigated the facts

the unlawful practice ceased.

Section 3 of the same act makes exclusive purchase and sale arrangements unlawful under certain conditions. This section prohibits exclusive or "tying" contracts, whereby a lessee or purchaser agrees not to use or deal in the machinery or merchandise of a competitor when the effect may be to substantially lessen competition or tend to create a monopoly in any line

Some of the most important cases now before the commission involve the legality of these so-called "tying contracts."

It may be noted that similar agreements with respect to patented articles have in recent years been prohibited by the laws of

England, Australia, and New Zealand.

Section 7 declares it unlawful for a corporation engaged in interstate commerce to purchase the stock of a competing corporation where the effect of such purchase may be to substantially lessen competition between the two corporations or to restrain commerce in any section or commodity or tend to create a monopoly in any line of commerce, Section 7 also makes it unlawful for a holding company to acquire stock in two or more corporations where the effect of such acquisition may be to substantially lessen competition between such corporations or to restrain commerce in any section or commodity or tend to create a monopoly in any line of commerce.

Section 8 makes it unlawful for corporations with more than a million dollars capital to have common directors if elimination of competition by agreement between the two would restrain This provision does not become effective until October 15, 1916, two years after the passage of the Clayton Act, consequently the commission has not as yet had anything to do

in the enforcement thereof,

Section 5 of the Federal trade act makes the general declaration that unfair methods of competition in commerce are unlawful, and authorizes the commission to enforce this provision in all cases where the commission is of the opinion that the public interest is sufficient to require action by the Federal Government.

None of these provisions, either in the Clayton Act or the Federal trade act, are criminal provisions. There is no penalty of any kind provided. The method provided for their enforcement is entirely new. The commission is authorized, whenever it has reason to believe that any of these laws are being violated, to file complaint, stating its charges, notifying the person or corporation complained of to appear before the commission and show cause why an order should not be issued by the commission directing the person or corporation complained of to cease and desist from the illegal practice. If a hearing is considered desirable by either the commission or the party complained against in the circuit court of appeals, the court must accept the facts found by the commission if there is any evidence in the record upon which such findings can be based.

HOW COMMISSION HANDLES UNFAIR PRACTICES.

You will be interested in knowing how the commission actually handles complaints for violations of these various sections of the Clayton and Federal Trade Commission Acts. It has been the purpose of the commission to make the preliminary work as informal and expeditious as possible. Any person may apply to the commission and call its attention to the use of unfair methods of competition or to the violation of any of the sections of the Clayton Act. The commission, if it considers the facts as stated a probable violation of law, conducts a thorough investigation into the facts before any formal proceedings are instituted. In all cases it notifies the party complained of of the charges and gives him a full opportunity to state the facts from his point of view, and to explain or deny the charges that have been made. The person complained of is also given an opportunity voluntarily to cease and desist.

If, as a result of this investigation, the commission is satisfied

that the complaint is unfounded in fact, or if the practice com-plained of is voluntarily discontinued, the commission files no

formal complaint of any kind.

On the other hand, if the commission has reason to believe that the law is being violated, and the persons complained of refuse to discontinue them, the commission issues a formal complaint and holds a hearing.

As a usual thing in practice the commission does not disclose, either publicly or to the persons complained of, the name of the person who filed the application with the commission. There are two reasons for this practice:

First, it is desirable that everyone should feel free to call the

attention of the commission to the practices which are unlawful without incurring the hostility of powerful interests, and, sec-

ond, the commission in filing any formal complaint acts for the public interests and makes its charges in its own name.

You will be interested in knowing how this practice of the

commission in relation to the enforcement of law is working out in practice. During the first year of the commission's work there have been filed with it nearly 200 applications or com-plaints for violations of those provisions of law the commission

is authorized to enforce.

Many of these complaints gave rise to conference rulings, which the commission published for the information of business men and others interested in the work of the commission. These are not decisions in formal proceedings, but merely expressions of the opinion of the commission on applications for the issuance of complaints and informal inquiries with regard to particular facts which involve the interpretation and con-struction of the Federal Trade Commission act and of those sections of the Clayton Act with the enforcement of which the commission is charged. Copies of these rulings may be obtained

from the commission.

It appeared, for example, on application for the issuance of a complaint, that a manufacturer engaged in interstate commerce issued a publication which, under the guise of trade news, conveyed misinformation of a character unfair and detrimental to the applicant's business. Upon investigation by the commission the applicant advised that the use of the alleged unfair method had been discontinued, and the party complained of assured the commission that its policy had changed with a change of management and no such practice would in the future be engaged in either against the applicant or any other competitor. Under these circumstances the commission held that a formal proceeding would not be in interest of the public.

As it was to be expected with a new law, the provisions of which were not generally well understood, many of these applications were trivial or relating to matters clearly outside the

jurisdiction of the commission.

HON.

On the contrary, many of the complaints were of a substantial nature and most of them were adjusted or settled without any formal proceedings or litigation. The informal investigations conducted by the commission have resulted either in proving clearly the facts as charged were not true or the person or corporation complained of has, at the suggestion of the commission, voluntarily ceased to use methods of business which were illegal or doubtful.

CONCLUSION.

The work of the Federal Trade Commission, then, is, first, preventive, and, second, constructive. We have found from experience that the number of business men who intend to violate the law is negligible. The great majority of them are conducting their business honestly and desire to continue to do so. We have found them willing to cooperate with us to eliminate unfair methods from their own industry—methods which they individually disapprove, but which they lack the collective power to destroy.

But our work, as you have seen, is more than negative. It is constructive. While real success in business depends on the men in it, it is our purpose to do everything that we possibly can to help the business interests of the country—not only the large concerns but the small and medium-sized concerns as well. Business men will find us willing to cooperate heartily with them in increasing the efficiency of their industries, in improving the methods of trade, and in developing markets abroad for American goods.

Democratic Achievement.

EXTENSION OF REMARKS

WILLIAM R. SMITH, OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1916.

Mr. SMITH of Texas. Mr. Speaker, availing myself of the special order of the House already made courteously granting me the privilege of extending my remarks in the Record, I shall summarize briefly the more important things the Democratic Party since coming into power has done for the country. I do this for the purpose of putting the record of Democratic achievement into compact form, in order that the people may have the opportunity to inform themselves in regard thereto without having to search through many volumes of the Congressional RECORD.

My entry in Congress was at the time when the influence of the Democratic Party was just beginning to be effective in pushing forward the great movement of reform for which it I well remember the first day of my service in this House. at the beginning of the Fifty-eighth Congress. The Republican Party, then in the majority, proposed the adoption of the socalled Cannon rules, which gave the Speaker absolute and arbitrary control over the proceedings of the House and the power of life and death over all legislation. The Democrats lined up solidly against these rules, but were defeated; but we thereafter continued to wage the fight against them as opportunity afforded, until they were finally overthrown and a set of rules substituted in their place making possible the restoration of popular government and the enactment of laws for the benefit of the people. Since then I have seen the reform movement go forward. have seen the force of Democratic influence and power beat back the Republican machine step by step, finally overthrow it, and take charge of this Government. And then I have seen the birth of a new freedom. I have seen the special interests driven from the committee rooms and from the Capitol and made to take their hands off legislation in order that we might have government by, of, and for the people.

During this period the Democratic Party has made a record for achievement in beneficial legislation without parallel in our history, and, in my opinion, deserving of the approbation of every American patriot. This record is soon to be judged by the American people, and as one who helped to make it I want to say I am proud of it and I am willing that the Democratic Party

may be judged by it.

Now let me call attention briefly to this splendid record:

UNITED STATES SENATORS.

To further clear the way to reform and for the purification of our political life measures have been passed providing for the election of United States Senators by direct vote of the people instead of by vote of the legislatures.

PUBLICITY OF CAMPAIGN FUNDS AND EXPENDITURES.

We have passed laws limiting the amount of campaign funds and expenditures and requiring the publication thereof both before and after election, thus eliminating corruption from our political life.

TARIFF.

We have repealed the Payne-Aldrich tariff law, the highest and most unjust, burdensome, and oppressive tariff tax law ever enacted in the history of the world, and have provided in its place the Underwood tariff law greatly reducing taxes on the necessaries of life and indeed placing many articles of necessity on the free list.

INCOME TAX.

We have passed measures providing for a tax on incomes, from which we now derive revenue to the amount of about \$100.000.000, thus requiring the wealth of the country to bear its just share of the burdens of government.

REGULATION OF RAILROADS.

We supported the law giving the Interstate Commerce Commission power to fix rates for transportation by railroads, to prevent extortion, discrimination, and unfair practices by them, and to require them to furnish ample facilities for prompt and effective service to the public.

FEDERAL RESERVE ACT.

We have passed the Federal reserve act, which put an end to Wall Street control of currency and credit and equipped the country's legitimate business and financial institutions to meet panics and weather the severest storms. It has received the praise of business and financial authorities everywhere and by common consent is pronounced the best piece of constructive legislation of modern times.

TRUSTS.

We have passed the Clayton antitrust law, which defines and expands the prohibitions of the Sherman Antitrust Act, puts an end to interlocking directorates, suppresses monopoly, modifies the power of the Federal courts to issue injunctions in labor disputes, provides for trial by jury in cases of indirect contempt, and strikes out a number of other abuses of long standing.

FEDERAL TRADE COMMISSION.

We created the Federal Trade Commission, a tribunal with power to investigate and expose illegal practices by industrial corporations, to arbitrate between disputants in commerce, and do justice between the public and such corporations.

DEPARTMENT OF LABOR.

We created the Department of Labor and placed a representative of Labor in the President's Cabinet, in order that labor might have a voice in the highest executive councils of the Nation. LABOR LEGISLATION.

The Democrats have supported every measure for establishing an eight-hour working-day for men on all national public works which is now the law, and we have enacted a law whereby farmers and laboring men are protected from punishment for organizing for mutual benefit, as persons of other vocations are permitted to do, and we have passed many other laws in the interest of labor.

AGRICULTURAL EDUCATION.

We passed the Lever Agricultural Extension Act establishing agricultural extension departments under the direction of the agricultural and mechanical colleges of the various States to aid in carrying to the people useful and practical information relating to agriculture and home economics through field instruction, demonstration, publications, and otherwise.

COTTON FUTURES.

We have passed a law prohibiting operations upon cotton exchanges injurious to the cotton growers.

CHILDREN'S WELFARE.

We have created a Children's Bureau charged with the duty of looking after the welfare of children by making timely investigations of infant mortality, the birth rate, orphanage, juvenile courts, desertions, dangerous occupations, accidents, and diseases of children, and by making publication of the result of such investigations.

TRUST AND LOBBY EXPOSURES.

We have authorized investigations which have laid bare and exposed to the lashing scorn of an outraged people the unfair and oppressive methods of the Steel Trust, the Sugar Trust, the Shipping Trust, and the Money Trust, and the Mulhall system of corrupting and intimidating the national lawmakers.

PUBLICITY OF NEWSPAPER CONTROL.

We have placed upon the statute books a law which compels all newspapers and other periodicals to publish the names of their owners, editors, and lien holders in order that the people may know what influence, if any, pro:npts the editorial advice they read.

GOOD ROADS.

We have twice passed in the House a good-roads bill, providing for Government aid for improving all roads in the United States over which mail is carried by giving both financial and expert assistance. The bill is now before the Senate, and if it passes that body it will be the beginning of a policy which will result in untold benefit to all, but more especially to the people who live on the farm.

PHYSICAL VALUATION OF RAILROADS.

We have passed a law providing for the physical valuation of all the railroads in the United States, and the work of making such valuation is now going forward, and when completed it will serve as a basis for squeezing the water out of railroad stocks and bonds and for compelling fair, just, and reasonable rates for transportation.

INTOXICATING LIQUOR.

We passed the Webb-Kenyon bill, which gives the various States complete jurisdiction over all intoxicating liquors immediately upon coming within their territorial limits, thereby removing all obstructions to the enforcement of State prohibition laws.

IMMIGRATION.

We have twice passed the Burnett immigration bill, excluding undesirable immigrants from this country, but both times it has been vetoed. We have again passed it through the House and it is now pending in the Senate.

MERCHANT MARINE.

In order that the producers of this country might have adequate means for transporting their products to foreign markets at reasonable rates we passed a bill in the last Congress providing for an American merchant marine, but it failed on account of Republican opposition in the Senate. I have no doubt we will pass a similar bill in this Congress. The merchant ships thus provided for will secure our commerce in time of peace and may be used as an auxiliary to our Navy in time of war.

CONSERVATION.

We hope the conservation measures now pending will be placed upon the statute books before the close of this session. They have already been passed by this body. Their purpose is to put an end to the waste of our national resources, such as land, timber, water power, coal, oil, and other minerals, and to bring about their development in such way as will best serve the public and bring adequate returns to the people as a whole who own them.

WAREHOUSES.

During the last Congress we passed a bill for the licensing of warehouses by the Federal Government, but it did not become a law. Such a bill is now pending on the calendar of this body, and I have no doubt it will be again passed and become a law. It will be of vast benefit to the producers of staple agricultural products in that it will enable them to standardize their security and obtain loans with much greater facility and on better terms than they can now do.

PREPAREDNESS FOR NATIONAL DEFENSE.

We are now taking the necessary steps to provide for the national defense. We are not for so-called militarism, and do not favor burdening ourselves with the heavy expense of keeping the Nation in a state of readiness for war, but we do believe it our duty to so form and strengthen our Military Establishment as to make it readily capable of expansion in time of war and enable us to meet and discharge all the duties and responsibilities resting upon us as a Nation.

RURAL CREDITS.

We have made the subject of rural credits a part of our program, and before this session ends will enact a law by means of which farmers may find ready access to the investment capital of the country. Land security is the safest in the world, and we shall make such provision as will enable farmers to utilize it for securing money on long time at a low rate of interest and payable on the amortization plan. Such a law will greatly aid tenants to acquire homes and afford to landowners means for improving their farms and finance their crops. Rural credit measures were passed by both houses in the last Congress, but failed in conference.

PHILIPPINE INDEPENDENCE.

We are making rapid progress toward redeeming our pledge to give the Philippines independence. A measure looking to that end will at an early date receive the final sanction of Congress and be approved by the President. And thus we shall again proclaim to the world that we oppose imperialism and still adhere to the fundamental principle that governments derive their just powers from the consent of the governed.

CHILD LABOR.

During the last Congress and at this session recently we passed in the House of Representatives a bill for the protection of child labor. In the past thousands of children of tender years have been worked in the mines, factories, and sweatshops of this country dwarfing both their minds and bodies, and putting them into their graves prematurely. It is hoped this humanitarian measure will soon become a law.

PARCEL POST.

We have enlarged the usefulness of the parcel-post system. The weight limits have been increased and the fees for the service have been reduced. The parcel post is now being used at low cost for the shipment of farm products direct to city consumers, thus bringing producers and consumers closer together for their mutual profit. As a result extortionate express rates have been forced down all along the line, and markets have been extended for the products of the farm and factory and for merchandise.

AGRICULTURAL APPROPRIATIONS.

We have from year to year made adequate appropriations to carry on the work of eradicating boll weevil, cattle-fever ticks, scabies in cattle and sheep, hog cholera, black leg, and for destroying depredating animals in order that the farmers and stock growers of the country might as for as possible be protected from damage by these pests and diseases.

PEACE.

While we recognize the possibilities of war and are providing the necessary military force to meet it should it come, we have abundantly demonstrated our ardor for peace. The masterful mind now directing the foreign relations of this country—Democracy's superb gift to the world, Woodrow Wilson—has thus far brought us safely through many dangerous and complex crises. Had it not been for this deep passion for peace, his rare tact and skill in diplomacy we might have long ago been tossed upon the storms of war. But he has led us through it all with safety and honor and has thereby earned the everlasting gratitude of mankind. This Democratic administration has negotiated 30 treaties with foreign countries which greatly lessens the possibilities of war. The treaties provide that all disputes of every kind shall be investigated by an international tribunal before any declaration of war or commencement of hostilities.

before any declaration of war or commencement of hostilities.

Mr. Speaker, the foregoing is a brief summary of the more important achievements for which the Democrate Party is entitled to credit. What a record! What a faithful redemption of pledges to the American people! I make the assertion

without the least fear of successful contradiction that in the brief period of time the Democratic Party has been in control more has been done for the benefit of the masses than was accomplished under Republican rule in 50 years. In speaking of the "men who have so honorably shared in these distinguished labors," President Wilson has said, "I doubt if there has ever been a finer exhibition of teamwork or of unhesitating devotion to the fulfillment of party pledges." And we shall not yet rest from our labors. With faces toward the rising sun we are still carrying the work forward, determined not only to complete that which I have said has already been begun, but we shall also undertake other great things. The program of Democracy is to completely destroy every vestige of special privilege in this country and restore to the people of every class, calling, and condition equal rights and equal opportunities; and this program will be carried out.

Among the new things of prime importance which, I have no doubt, we shall soon take up is a law which will effectively suppress usury, and also a law which will authorize Federal reserve banks to loan money direct to borrowers when local member banks fail or refuse to do so at reasonable rates of interest. I have already introduced bills embodying these proposals, and they are under consideration by the committee. It passed, the perplexing question of financing and marketing the cotton and grain crops from year to year upon reasonable and satisfactory terms will be solved.

With the splendid record it has made, the Democratic Party will go before the people this year with confidence. The usual Republican "calamity howl" will not be in evidence. That has been silenced by the presence of a prosperity throughout the country without a parallel in our history.

Republican leaders to-day stand helpless. They dare not attack the splendid record we have made, and the record of their own party is a "body of death" to them. They are trying to forget it. What could they promise the American people if returned to power? Would they propose a return to Cannonism in the House and Aldrichism in the Senate? Would they propose to repeal the new banking and currency act and reenact the old financial system they created and maintained so long, under which a few special interests dominated and controlled all the business of the country? Would they declare in favor of their old system of protection in the interest of trusts and monopolies, again exempt wealth from its just share of taxation, and replace all the burdens of government upon those least able to bear them? In short, will they go back to their same old reactionary stand-pat program? These are pertinent questions they will be called upon to answer.

If it shall be claimed that the Republican Party has cast off

If it shall be claimed that the Republican Party has cast off its old clothes and now stands for better things, what evidence can be offered of the genuineness of its repentance and regeneration? What assurance can it give that it will not again betray the people and return to its old alliance with crooked business and crooked politics? If I mistake not, the Republican Party, in order to again secure the favor of the American people, will have to convince them that it has absolutely and completely turned its back upon its own record and also show that it has undergone a radical change; that it is now imbued with an entirely new spirit; that it has new aspirations and ideals and higher patriotism; that it has freed itself from the old corrupt and corrupting influences which formerly dominated it; and that it now has the intent, ability, wisdom, and good faith to serve the people as a whole better than the Democratic Party is now serving them. But this the Republicans will be unable to do.

River and Harbor Bill.

EXTENSION OF REMARKS

HON. JOSEPH B. THOMPSON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1916.

Mr. THOMPSON. Mr. Speaker, I desire to place in the Record the reasons that controlled my votes, first, in opposition to taking up this bill for consideration; second, in favoring the motion to recommit it with instructions to reduce the amount of the appropriation from \$39,608,410 to \$20,000,000; and third, when this motion to recommit was defeated, why I voted against, the passage of the bill.

I am not antagonistic to proper, fair, and adequate river and harbor legislation. I am, however, very earnestly opposed to "pork-barrel" legislation. The Government of the United States should and does provide ample funds for the improvement of our harbors located on the oceans, the gulfs, and the lakes. The Government should and does provide ample funds for the improvement and keeping in repair of the rivers of the country that have a sufficient water supply for navigation purposes. Twenty million dollars would have been amply suffi-cient—yes; extravagant—for all necessary and proper purposes. Inasmuch as the bill carried twice that amount, I voted in each instance in a manner that would defeat the bill if the size of the appropriation were not reduced to a legitimate and proper sum. In my judgment every dollar carried in this bill beyond \$20,000,000 is just that much of the people's money thrown away. There never will be any return on the investment, either to the Government or to any of the citizens of the United States. Indeed, no return is expected. The millions required to make improvements on the very large number of projects reported in this bill is not warranted by the merits of the different propositions, but the appropriations are made in order to secure a sufficient number of votes to insure the bill's passage. New York Harbor, Boston Harbor, Philadelphia Harbor, Buffalo Harbor, Cleveland Harbor, Chicago Harbor, Superior-Duluth Harbor, Galveston Harbor, and many others of the same character located on the ocean, gulf, and lake coasts, over which is transported many millions of tons of freight annually, should be provided for, and that liberally. There are, perhaps, a few rivers that should receive appropriations, but the great majority of projects provided for in this bill justifies the opinion entertained by the people of the country generally, that the river and harbor bill has come to be "pork-barrel legislation" of the rankest sort.

In the interest of economy the Government could well afford to purchase every ton of freight carried on practically every river in the country, and, when purchased at a fair market value, destroy it, provided appropriations for river improvements were discontinued. The engineers' reports disclose that the cost to the Government for moving freight on some of the big rivers—those that we have been taught in our geography to believe were navigable, and which are taken care of in this bill—is:

Ohio River (excluding soft coal, \$50 to \$70 per ton)	
Upper Mississippi	
Lower Mississippi	
Arkansas	-
Missouri	ş
Muscle Shoals	j
Arkansas Pass Canal	ij
Brazos	ij
Red	3
Muscle Shoals (proposed)	į
Big Sandy, Ky	ð

Now, if it costs the taxpayers of the United States \$5 for every ton of freight transported over the Ohio River and \$12 for every ton transported over the Mississippi above St. Louis, and \$35 for every ton below St. Louis, and \$40 for every ton transported over the Missouri, and \$80 for every ton transported over the Brazos, and \$350 for every ton transported over the Brazos, and \$350 for every ton transported over the Big Sandy in Kentucky, it would require the services of an expert mathematician to figure the cost to the people of the United States of transporting freight over some of the creeks and ponds provided for in this bill. I submit just a few of the projects appropriated for in the bill and call your attention to the manner in which the people's money has been squandered. The figures I give are taken from the report of the majority of the Committee on Rivers and Harbors, and certainly they do not disclose a worse condition than that which really exists, but they do disclose a condition in river and harbor legislation which is quite as well known to the people of the country generally as to the Members of the House.

THE BRAZOS RIVER FROM ITS MOUTH TO WACO, DISTANCE 424 MILES.

There has already been spent on this project \$1,393,180.98, and during the year 1913, 1,080 short tons of freight, of the value of \$81,000, was transported on this stream. In 1914 this small tonnage had entirely disappeared, and so little was carried that no record was kept of it. The people of the United States would have been ahead more than \$1,300,000 if that \$81,000 worth of freight had been purchased and burned. No Member of this House, in conducting his own private affairs, would have squandered this amount of money for the purpose of transporting 1,080 short tons of freight, the greater part of which, perhaps, consisted of logs, that could have been rafted downstream during any freshet period. Notwithstanding this condition, and with an available balance from previous appropriations of \$347,765.31, this bill carries an additional appropriations of \$347,765.31, this bill carries an additional appro-

priation for the Brazos project of \$215,000. Is there any wonder, and can there be any, that the people all over the United States, when the river and harbor bill is mentioned, instantly cry, "Pork"?

TRINITY RIVER, GALVESTON BAY TO DALLAS, DISTANCE 5124 MILES.

Heretofore there has been expended on this project \$2,060,262,42, and the commerce transported on the river during the year 1914 was 12,610 short tons, valued at \$102,394, consisting chiefly of logs and timber. Notwithstanding this the bill appropriates an additional \$300,000 for further improving this Trinity joke. Many people living in my district often cross the Trinity as they go by rail into Fort Worth, and I dare say not a single one of them, though they have crossed the stream many times, was ever aware that he was passing over such an important body of navigable water. This Trinity project is so notorious that at the end of the prohibition campaign carried on in Texas some years ago it was said that the Trinity was the only dry territory in the State. The Trinity is the project that the engineers recommended should be supplied with water secured by sinking artesian wells.

I have quite a number of very important streams in my district that are navigable on the same theory. There is Wild Horse, Rush Creek, Sandy, Peavine, Walnut, Little River, Cottonwood, Deer Creek, and Otter Creek. They are all navigable streams provided, of course, the Government will straighten, widen, and deepen the channels, and sink a sufficient number of artesian wells to fill them with water. I have not included in this list of navigable streams in my district the Washita, the North and South Canadians, and the Cimmarron, because these streams have real water in them.

RED RIVER FROM FULTON, ARK., TO MOUTH OF WASHITA-RIVER, OKLA.—DISTANCE 292 MILES.

Prior to June 30, 1915, there had been expended on this project \$444,783.53, and there was a balance available from previous appropriations amounting to \$41,190.

The committee in its report—page 250—speaking of the commerce transported over this stretch of Red River, said:

The navigation of Red River above Fulton has practically ceased. No steamboats are now in operation and the rafting of logs has been reduced to an almost negligible quantity.

In the face, Mr. Speaker, of all these facts the committee provided an additional appropriation of \$25,000 for this project. This is not "pork." No; you could not call a project like this "pork." It is the "whole hog."

Next we have this item.

THE ARKANSAS RIVER, ARK. AND OKLA.

This is the only place in the entire bill where the name of Oklahoma is mentioned. Of course everybody knows that there never has been—it is not intended out of this appropriation that there shall be—and there never will be a dollar spent by the Federal Government for the purpose of making the Arkansas River in Oklahoma a navigable stream; but in a bill of this kind, where votes are needed, it is not a bad idea, to name as many States as possible whether it is intended to benefit the streams of the States mentioned or not. The committee's report discloses that \$3,402,929.55 had been spent on the Arkansas River prior to June 30, 1915, and there was a balance available on that date from previous appropriations amounting to \$182,757.06. The tonnage transported over this stream for the years 1912–1914 is as follows:

(s	Tonnage hort tons).
1912	71, 516
1913	55, 228
1914	75, 169

And 60 per cent of this tonnage was logs and forest products, all of which could have been carried without any improvement whatever and transported just as safely and effectively. These figures disclose that there was less than 30,000 short tons of miscellaneous freight, farm products, supplies, and so forth, carried over this stream during any one of these years. The people of the United States could have afforded—and they would have saved much money by doing so—to pay the railroad freight on every pound of miscellaneous freight transported on this river. Now, in the face of these facts this bill carries an additional appropriation of \$209,700 for the Arkansas River.

I am not selecting these projects—the Brazos, the Trinity, Red River, and the Arkansas River—because they are any worse than nine-tenths of the other projects appropriated for in this bill. In fact if this bill is going to pass, these rivers ought to remain in it because they have merits superior and far beyond those possessed by the greater number of other projects in the bill. Legislation of this kind may get through the Congress this session, a similar bill may be passed next session, but

the people of the country are becoming aroused over these river and harbor bills, and they do not propose that money that is wrung from them by taxation shall go into the improvement of

dry creeks and waterless rivers.

Then we have what is known as the intercoastal canal. It is now made up of different links. The Chesapeake & Delaware Canal is one link, the Norfolk & Beaufort Canal project is another link. The Atlantic Intercoastal Waterway Association is an organization perfected for the purpose of promoting the construction of this canal from Portland, Me., to Brownsville, Tex., and I have received, I suspect, 25 pounds of literature from this association "boosting" this project. Heretofore the burden of their song has been the safety of vessels,

They have set forth in glowing detail how dangerous it was for a ship in rough water to go out in the ocean around Hatteras, how apt it was to be destroyed, what an awful crime the people of the United States were committing against the sailors and humanity in general by permitting them to sail in the open sen, whereas if this canal were completed they could sail though it without fear of danger, and the result would be a great saving in life and property. It is, indeed, very easy to present imaginary reasons—and this scheme is purely imaginary—but they have got it started, and they have already spent millions of dollars on it.

The Atlantic Intercoastal Waterway publication reports that the engineers have recommended the projects at the estimated cost, as follows:

St. Johns River, Fla., to Fernandina, Fla., 7 feet depth. \$251,726.75;

work under way.
Fernandina, Fla., to Savannah River, Ga., 7 feet depth, work under-

work work way.

Formadina, Fla., to Savannah River, Ga., 7 feet depth, work underway, \$195,000.

Savannah River, Ga., to Charieston Harbor, S. C., 7 feet depth, \$427,400; work partly under way.

Charleston Harbor, S. C., to Winyah Bay, S. C., 7 feet depth, construction recommended, \$1,227,800;

Winyah Bay to Lattle River, S. C., 7 feet depth, \$5,677,800; construction recommended.

Little River, S. C., to Cape Fear, N. C., 7 feet depth, \$3,724,219; construction recommended.

Cape Fear, N. C., to Beaufort, N. C., 7 feet depth, construction recommended, \$2,872,111.

Total, southern section, Atlantic intercoastal waterway, St. Johns River, Fla., to Heaufort Inlet, N. C., in round numbers, \$14,400,000.

Beaufort Inct, N. C., to Norfolk, Va., 12 feet depth, \$5,400,000.

Project approved by Concress, Work partly completed. Chesapeake & Albermaric Canal purchased. Much of the route lies in Pamico and Albemarle Sounds, natural waterways, requiring no improvement.

Norfolk, Va., to head of Chesapeake Bay, Md., \$10,514,290. Recommeded for immediate action, including purchase or condemnation of existing Chesapeake & Delaware Canal, This is the project that was in this bill.

Delaware River, for which present depth is sufficient over entire distance, assuming a 12 foot project. \$20,000,000; which also includes. I think, Bordentown, N. J., to New York Bay, and thence to Hudson River and Long Island Sound natural waterway, requiring no improvement for a 12-foot project.

Total, northern section, Atlantic intercoastal waterway, Beaufort Inlet, N. C., to New York Bay, in round numbers, \$36,000.000.

Total cost, as recommended by the Army Engineers, \$50,400,000.

Then the pamphlet goes on to set out the postponed projects. The following sections of the intercoastal waterway route have been surveyed by the Army Engin-ers; and, while not adversely reported, consideration is postponed until more progress has been made on the foregoing sections:

Key West, Fla., to Indian River, Fla., 7 feet depth, \$2,127.950.

Indian River, Fla., to St. Johns River, Fla., 7 feet depth, \$2,491,-056.02.

Fishers Island Sound, Conn., to Narragansett Bay, R. I., 18 feet depth, \$12,322,000.

Narragansett Bay, R. I., to Boston Harbor, Mass, 18 feet depth, \$29,590,000.

Or a total for projects named of \$96,931,006, 03.

It will be noticed that these links when connected up only extend from Boston, Mass., to St. Johns River, Fin-not half the length of the proposed canal. It will also be noticed that the depth of this canal, as recommended by the engineers, is 7 feet practically throughout its entire length. A vessel that could sail in 7 feet of water would carry very little freight. Those sailing vessels that are wrecked off Cape Hatteras in rough weather and storms and for which many tears have been shed, and for which it is proposed to construct this canal in order that they may avoid that terrible danger, would never be able to go into that canal. They draw more water than 7 feet. But a little thing like that does not interest the advocates of this canal. What they are after is spending the people's money. The fact that no freight will be carried over this canal after it is completed does not worry them.

The cost of this half of the canal, according to the estimates

given by the engineers, is practically \$100,000,000 to construct it to a depth of 7 feet. If the engineers are as far off in the estimate of the cost of this canal as they were in the estimate of the cost of the Panama Canal, then it will cost twice \$100,-000,000 to construct it from Boston to Florida. The engineers

estimated that the Panama Canal would cost \$200,000,000. The fact is that it cost nearly \$400,000,000 to complete it. If it costs \$200,000,000 to construct a 7-foot canal one-half the distance from Portland, Me., to Brownsville, Tex., it will cost \$400,-000,000 to construct it for the entire distance, and what will we have when it is completed? A 7-foot canal running from Portland, Me., to Brownsville, Tex., along the seacoast parallel with two of the finest bodies of water in the world, the Atlantic Ocean and the Gulf of Mexico.

Every sensible man knows that this canal would not be used except by pleasure craft and to float a few logs. The shipping of the country could not be carried on vessels that did not draw more than 7 feet of water; the great ocean steamers that draw from 30 to 40 feet of water could not enter the canal. Those who are advocating the construction of this canal know that it will not be of any value whatever for commercial purposes, but its construction will result in the expenditure of many hundreds of millions of dollars wrung from the hard-working taxpayers of this country in the particular localities through which the canal passes—and this includes many congressional districts in its meanderings from Maine to Texas. So without regard to the burdens imposed upon the already overburdened and highly taxed people this additional "pork

is to be charged up to them.

Heretofore the argument for the construction of this canal has been safety, but during the course of the debate on this bill an entirely new argument has been sprung. It has been discovered that the construction of this canal is an absolute necessity for "Preparedness!" "Preparedness!" "Oh, Pre-paredness!" How many crimes have been committed in they name? It has been suggested that they need this canal so that our warships-in case the navy of some other country should get after them-could run in, take refuge in this canal behind the land, and thereby escape destruction. Just how a warship that draws 30 to 40 feet of water is going to take refuge in a .- foot canal they do not try to explain. That is a little matter. Of course, when once they construct this canal from Florida to Boston to a depth of 7 feet, an agitation will immediately begin to increase it to a depth of 35 or 40 feet, so that battleship, can sail up it without any danger o' being destroyed while the coast is being shelled by the ships of a foreign country. Now, of course, to build a canal 40 feet deep from Maine to Mexico instead of costing \$400,000,000 would cost \$4,000,000.000,

THE DEMOCRATIC PARTY IS NOT RESPONSIBLE FOR THIS BILL.

Some partisan newspapers have attempted to make it appear that the Democratic Party is responsible for this appropriation. I deny this. Let us analyze the three roll calls. First, the one by which the bill was taken up for consideration; second, the roll call on the motion to recommit, with instructions to re duce the appropriation to \$20,000,000; and, finally, the roll call

on the passage of the bill. What do we find?

On March 31 the chairman of the Committee on Rivers and Harbors, the gentleman from Florida [Mr. Sparkman], moved that the House go into the Committee of the Whole for the consideration of this bill. There was a roll call on this motion, and it was shown on page 5991 of the RECORD. On this roll call 61 Republicans veted to take the bill up for consideration and 97 voted against. There is not much politics in that kind of a division. Political parties do not split up that way when a political question is involved. No Member of Congress claimed during the debate, and it never has been charged on this floor, that this was a political measure. Such intimations came from beyond these walls and are actuated by a desire to charge the Democratic Party with the enactment of this grossly extravagant piece of legislation. The truth is, had this bill been made a party measure, it could not have gotten started on its legislative course. In order to insure its passage those behind the bill were compelled to include appropriations that would catch the votes of Members without regard to their politics,

On the motion to recommit the bill with instructions to re duce the appropriation from \$39,608,410 to \$20,000,000, 31 Democrats voted to recommit, and 50 Republicans voted against the motion to recommit. This does not indicate that the bill was a political measure. This vote is shown on page 5916 of the Congressional Record of April 11. Seventy Republicans voted for the passage of the bill, and 39 Democrats voted against its passage. There is not much politics in that vote. But one of the political parties represented in Congress voted its entire strength for the bill in all of its legislative stages first, to take it up for consideration; next, against reducing the appropriation from \$39,608,410 to \$20,000,000; and, finally, to pass it, notwithstanding all the dry creeks and mud-pond projects it carried—and that was the Socialist Party. The gentleman from New York [Mr, London], the representative of the Socialist Party in the House, voted for the bill in all of its stages.

There has been appropriated, as shown by the report of the Secretary of War to the Speaker of the House, on January 12, 1915, commencing with the first appropriation of April 6, 1802, to the following States and Territories for the improvement and maintenance of their rivers, canals, and harbors, the following sums of money, to wit:

Alabama	en		nna	00

And in addition to these sums appropriated for river and harbor improvement in the States listed an additional sum aggregating \$409,947,557.97 has been appropriated for miscellaneous purposes and not charged up to any particular State or Territory. The aggregate amount of the appropriations ending with the fiscal year June 30, 1915, was \$850,551,708.25. Twenty-five million was appropriated as a lump sum for river and harbor legislation for the fiscal year 1916, with five millions additional to be used under certain conditions.

It can be safely asserted that at least half of this more than \$880,000,000 has been wasted on projects that will never be completed or, if completed, will never carry any considerable part of the commerce of the country. Had this half, squandered on these dry creeks, waterless ponds, and artesian-fed rivers, been invested in the construction of Government railway lines or in the building of good dirt roads, the people would have had something to show for their money. Ten thousand miles of railroad, over which practically all of the commerce of our country is transported, could have been built and equipped. These lines of railroad, when constructed, would have resulted in the development of our country and compelled privately owned railroads to reduce their freight rates, and, moreover, they would still be the property of the people and subject to their control and operation for all time at a profit and greatly to the welfare and convenience of the entire country.

Had it been expended in the construction of good dirt roads, over which practically every pound of the freight of the country is transported, there would scarcely be a neighborhood in the United States over which the farmer could not, in any kind of weather, haul to his railroad station a reasonable amount of freight without injuring his team and destroying his wagon as is the case now when he makes such an attempt over the

dirt roads in a large part of our country.

I have prepared a table showing the amount of corporation and individual-income tax paid by the people of a number of States and the amount of the appropriations carried in this bill to improve the so-called rivers and harbors of those States. The corporation and individual-income tax collected by the Government is the only direct tax levied against the people of the different States. All other taxes collected by the Federal Government are collected either through the Internal-Revenue office in the nature of a consumption tax on beer, liquor, cigars, and so forth, or at the customshouses of the country on foreign goods imported. These taxes necessarily can not be charged up

to the people of any particular State because it can never be known where the article that pays the tax will finally be consumed.

The table which I have prepared is as follows:

State.	Amount of corporation and individual income tax collected during the fiscal year 1915.	Amount appriated in this bill for the river and harbor projects.	Amount drawa out of the Treas- ury for rivers and harbors alone in excess of the amount paid in on in- comes of indi- viduals an 1 corporations for the fiscal year 1915.
Arkansas. Florida Georgia Louisiana North Carolina South Carolina Texas.	\$127, 328, 61 229, 509, 82 440, 601, 13 526, 177, 94 381, 379, 34 161, 401, 95 1,048, 277, 73	\$560,000.00 956,500.00 873,750.00 295,000.00 279,850.00 259,250.00 2,861,500.00	\$432,673.39 726,990.18 433,148.87 97,848.05 1,813,222.27

Oklahoma paid into the Treasury for the fiscal year ending June 30, 1915, as individual income tax and corporation tax the sum of \$406,889.02, and when we had up for consideration, during the month of January, the proposition to appropriate money out of the Federal Treasury for the improvement of the dirt roads of the country there were none who protested more loudly or vociferously against such legislation as being unconstitutional, and there were none who ridiculed with more contempt the improvement of "cow trails" leading from the railroad stations to the farmers' homes than the gentlemen along the Atlantic seaboard who now want to absorb the amount of taxes paid into the Treasury (\$406,889.02) by the people of Oklahoma for the purpose of improving their rivers and harbors. They have inverted the wise saying that has come down to us through the ages, "It is more blessed to give than to receive," and the motto emblazoned on their banner is, "It is more blessed to receive than to give"; and they are, therefore, in favor of taking everything in sight and giving nothing in return.

The proponents of this measure, while making these words of the Master convey a meaning opposite to that spoken, are critically careful that the taxpayers of the country should adhere strictly to that other bit of Scripture, "Give to him that asketh thee," and with faces of flint they are not satisfied with "pork" merely; they want the "whole hog."

For these reasons, Mr. Speaker, I voted, when the opportunity presented itself to defeat this rivers and harbors bill. The

For these reasons, Mr. Speaker, I voted, when the opportunity presented itself, to defeat this rivers and harbors bill. The money of the people, wrung from their toll by taxation, should be spent by public officials and appropriated by Congress with the same scrupulous regard for efficiency and economy as a good business man would exercise in conducting his own private affairs. If this rule were applied to this bill, I have no hesitancy in saying that it never would have passed.

Demonstration Work in North Carolina.

EXTENSION OF REMARKS

HON. HANNIBAL L. GODWIN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 18, 1916.

Mr. GODWIN of North Carolina. Mr. Speaker, I desire to make a statement showing the marvelous growth and the vast amount of good the farm demonstration work has done in my State.

Demonstration work was started in North Carolina in the fall of 1907 with the appointment of a State agent and the assignment of \$8,000, contributed by the general education board of New York through the Department of Agriculture. In the beginning there was no cooperation between the department's work and that of the State department of agriculture and the Agricultural and Mechanical College. No funds were required from the counties to help carry on the work, the idea being to establish demonstrations and get definite results before asking for local financial assistance. Fight counties were organized in 1908. In 1909 the funds were in-

creased to \$16.000 and the work extended to 16 counties. In 1910, 24 counties were covered, and for the first time small amounts of local funds were contributed by some of the counties to help carry on the work. In 1911, 30 counties were worked, all of which made small contributions to help finance the agents' salaries. In 1912 the State agent's office was moved from Statesville to Raleigh and two district agents appointed to assist in the supervision of the work. This year the cooperative arrangement was established between the State department of agriculture and the Agricultural and Mechanical College to put on an extension agent to be in charge of the boys' club work.

Since 1912, practically every county having demonstration work has helped to finance it. At first these local contributions were small, but they have gradually increased until they now average about \$600 per county. In 1911 the Girls' Canning Club work was started in 10 counties. In 1913 cooperative arrangements between the United States Department of Agriculture and the State department of agriculture were made, and since that time the State department of agriculture has been contributing to the finances of the work. A closer cooperation with the Agriculture and Mechanic Arts College was also established this year.

Since July, 1914, after the passage by Congress of the Smith-Lever bill, all of the extension work of the State has been carried on cooperatively between the United States Department of Agriculture and the State department of agriculture and the North Carolina Agriculture and Mechanic Arts College.

At first the work of the agents was confined to securing a few definite concrete demonstrations with corn and cotton on farms distributed throughout the county. The agent visited these farms once a month to give instruction as to proper methods of handling the crop; the farmers did the work, kept complete records of all results, and reported to the agent at the end of the year. These demonstrations were intended as community centers, from which the information and the instruction of the agent would reach out to neighboring farmers, and in that way assist from five to ten times as many as were listed as real demonstrations. The records show that all crops grown by demonstration methods about doubled in yield over the similar lands by old methods.

The agents' duties have gradually increased until they are conducting demonstrations with every crop of importance that is grown in the State, and their services extend practically to every phase and feature of farm life outside of the home. Combined with the home-economics work with women and girls, the whole field of rural life is being reached in such a way as never before. From the small beginning of 1907 has grown the present field organization in demonstration extension work, which comprises the following force: One State agent; 1 assistant State agent, in charge of the boys' club work, with 3 assistants; 3 district agents; 72 county agents in the men's work. In addition, there is the organization for home-demonstration work for women and girls, with a State agent, assistant, and 40 county agents.

All the extension work of the State is cooperative, and is under the supervision of the director, who has charge not only of the demonstration field work, as outlined above, but the work of the specialists, whose first duties are to assist the county agents and the farmers throughout the State with the various problems that require a more specialized and specific training than is usually found in the county agent.

Some idea of the growth in finances may be seen by contrasting the \$8,000, which was contributed in 1907, with the contributions from all sources for 1915-16 extension work in North Carolina:

Federal Smith-Lever	\$32, 952, 65
State Smith-Lever	22, 952, 65
State department of agriculture	16, 424, 35
County appropriations	62, 715, 00
Federal farm-demonstration work	41, 000, 00
Bureau of Animal Industry	
	The second secon

this amount the following goes into the different branches

Of this amount the following goes into the different branches of the agents' work:

	County agents.	Home economics.	Boys' clubs.
Federa: demonstration funds	\$33, 150, 00 2, 059, 65 14, 025, 65 6, 634, 35 35, 664, 75	\$8,000.00 8,020.00 5,530.00 6,712.34	\$1,850.00 3,775.00 1,900.00
Total	91, 534. 40	27, 262, 34	7, 525, 00

The following briefly summarizes some of the most important things that have been accomplished through the county agents' influence:

influence:

The most striking piece of work done by the agents was in getting the farmers to plant winter cover crops, such as crimson clover, rye, red clover, and vetch; the total being 147.649 acres. This item alone, at nominal estimate of \$10 per acre, has added \$1,476,490 to the resources of the State.

Miscellaneous work of State, district, and club agents is as

One of the most popular features of the extension work in North Carolina, as well as all of the other States, is the boys' corn clubs, which has been associated with the work almost from the beginning. The county agent is required to assist the club specialist in this work. Where the teachers and the county superintendent will cooperate in the schools the results have been exceedingly satisfactory. In the beginning the club work was confined to corn clubs alone. It has now been extended to include pig clubs and poultry clubs, and a few peanut, cotton, and crop rotation clubs.

The pig club, being a lately organized work, the membership was not so numerous, but there has been some splendid work done under the supervision of the specialist in charge of the work; valuable instructions were given in the selection and care of pigs and the boys were urged to secure pure-bred stock, and in some cases they are making a specialty of growing good hogs for sale as breeding stock.

\$0, 051 \$10, 076, 77

This is the second year of poultry-club work. A great deal has been done in the way of giving instruction to the young people and women on the farm in the handling of poultry, especially as to the matter of feeding and housing, with a view of baying beginners are also as a second poultry. of having beginners procure good stock and to tend them so as to get eggs during the season to command fancy prices. There was enrolled in this club 1,000 members during 1915.

One feature of the club work is the organization of negro boys' farm clubs in cooperation with the Agricultural and Me-chanical College for the Colored Race at Greensboro. An agent has been appointed to look after these negro clubs and work

out from the college at Greensboro.

The home-demonstration work was organized in North Carolina in 1911 with 10 agents, working in as many counties with \$1,000 from the Department of Agriculture and \$4,000 or \$5,000 local funds. This work has made a remarkable growth and has become very popular in the State. In 1915 there were 37 counties organized with a total enrollment of 2,914 members. The girls are enrolled in 200 clubs with 173 supervisors. Out of 37 counties organized, all made complete reports on the work. During the first two years of the organization the work was confined almost entirely to the canning of tomatoes, but it is now extended to include beans, soup mixtures, peaches, berries, and many kinds of fancy preserves and jams. The quality of these goods has become so well established that there is quite a demand for them and there has been no difficulty in disposing of the output of last year. A number of girls have made quite a little profit on growing their crops and the State agent reports that in 16 counties in which this work has been carried on there are 109 girls paying their tuition in school, wholly or in part, from the profits in their canning-club work. A brief summary of last year's results is as follows:

Total number of products canned in tin or glass.
Value of products sold, fresh, and used at home...
Total value of products...
Total cost of products...
Total profit...
Average cost per member...
Average profit per member... \$6, 025, 61 104, 241, 89 28, 985, 46 75, 256, 43

My term in Congress began March 4, 1907. The above, in the interest of farming, has been accomplished in my State dur-ing my service in this House. I am proud of the record made in the farm-demonstration work. I performed my part during the making of this record.

Flood Control on Nonnavigable Streams.

SPEECH

HON. STEPHEN M. SPARKMAN, OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 3, 1916.

The House had under consideration House resolution 122, as follows:

"Resolved, That the standing rules of the House of Representatives be, and they are hereby, amended in the following manner, to wit:

"In Rule X insert a new paragraph to read as follows:

"54b. On flood control, to consist of 15 members."

"In Rule XI insert a new paragraph to read as follows:

"54b. To flood control, other than appropriations therefor, to the Committee on Flood Control."

Mr. SPARKMAN. Mr. Speaker, I am always sorry when I can not agree with the action of a committee of this House, and I especially regret that I am unable to agree with the Committee on Rules as to this measure and that I am compelled to oppose the gentleman who I understand is its author. But the passage

of this resolution and the appointment of the committee for which it provides will likely have such far-reaching results that I ask the indulgence of the House for a few minutes while I state my objections to the same.

In the first place, Mr. Speaker, if it is the purpose of this resolution to deal alone with navigable waters, then it is not necessary, because the Committee on Rivers and Harbors has, and exercises, jurisdiction over the matter of flood control in navigable waters in so far as navigation may be affected, as it usually is. Especially is that true with reference to the stream that is always prominent in the minds of everyone when the subject of flood control is under discussion, which, of course, is the great Mississippi River. The Committee on Rivers and Harbors has jurisdiction of, and has been caring for, that river for several years. To such an extent have its activities gone along that line that the country lying contiguous to that stream is practically safe from any flood that does not exceed in volume that of 1912. I have this information from Col. Townsend, one of the most prominent engineers in the country, and who, as the head of the Mississippi River Commission, is in charge of that great work. He says that while the work has not gone as far as it should go, nor as far as we intend, yet it is in a condition even now to protect against the flood at present sweeping down the lower reaches of that river, which is not expected to reach in volume that of 1912.

Only a few days ago I submitted to him a request for information as to how much of an expenditure would yet be required on that stream in order to place it in a condition to protect the property along its banks from these recurring floods. His estimate was about \$45,000,000. I presume, of course, that under any proper system or arrangement with the people in the levee districts adjacent to the river they would furnish at least onehalf of what would be needed, so that the Federal Government would not be expected to expend more than \$22,000,000 or \$23,000,000 toward this work of flood control. I may say that the people there have heretofore been furnishing more than

one-half of the money expended for that purpose.

We have been going ahead quite rapidly during the past four years in taking care of that stream and in the work necessary to control against disastrous overflows. And, Mr. Speaker, I wish to say that I am in entire accord with the view that it is the proper function of the Federal Government to undertake a large part of this work. I yield to no one in my feeling of sympathy for the people there who suffer so greatly from these recurring floods, and my sympathy and views have been reflected in my action during the past two decades in advocating and assisting in the appropriation of large sums of money for the purpose of carrying on this great work of flood protection, a work so well done that it is now sufficient to protect against any ordinary flood; in fact, against all floods except the greatest.

Mr. OGLESBY. Mr. Speaker, will the gentleman yield for a

question?

The SPEAKER pro tempore. Does the gentleman yield?

Mr. SPARKMAN. Certainly.
Mr. OGLESBY. I am not inclined to favor this resolution if it is going to take away any proper jurisdiction from the Committee on Rivers and Harbors. I would like to ask for informa-tion whether, in the opinion of the chairman of the Committee on Rivers and Harbors, there are any rivers which will require expenditures for work for flood control which do not come under the jurisdiction of the Committee on Rivers and Harbors? if not, whether there are any rivers which may be navigable, upon which work is required to be done to control the floods, where no work would be done on these rivers in the way of deepening or widening or otherwise making them navigable for

Mr. SPARKMAN. Well, I was coming to that point presently. I suppose the gentleman refers to navigable streamsstreams that are navigable?

Mr. OGLESBY. Yes; streams that are navigable, but which are not navigated.

Mr. SPARKMAN. This resolution is broad enough, I take It, to cover any stream that is subject to overflow, whether it is navigable or nonnavigable.

Mr. McKENZIE. Mr. Speaker, will the gentleman yield for question?

Mr. SPARKMAN. With pleasure.
Mr. McKENZIE. Is it the judgment of the gentleman from Florida that this would include streams lying wholly within a State?

Mr. SPARKMAN. I think so. In fact, I fancy that is one of the objects the authors of the resolution have in view. Of course, some constitutional questions may be raised whenever an effort is made to legislate under this rule; but that is something I do not care to go into now.

Mr. MOORE of Pennsylvania. Mr. Speaker, will the gentleman yield there?

Mr. SPARKMAN. Certainly.

Mr. MOORE of Pennsylvania. Can the gentleman tell, under the rule, just what matters this new committee would have jurisdiction of? It says, "To flood control, other than appro-priations therefor."

Mr. SPARKMAN. No; I can not. I tried by questioning the gentleman in charge of the bill to ascertain if it was the intention to confine the work to streams over which the Committee on Rivers and Harbors had no jurisdiction, and, as I understood him, that is the intention of those responsible for the resolution

Mr. MOORE of Pennsylvania. Does not the resolution confer rather new powers upon the committee, excepting the making

of actual appropriations?

Mr. SPARKMAN. It would seem so. Wherever a stream is accustomed to overflow its banks, and by such overflow causes injury to adjacent property, it seems to me this new committee would have some kind of jurisdiction over it. Just what or just where the lines circumscribing its jurisdiction should be

drawn is hard to say.

Now, Mr. Speaker, continuing the observation I was making regarding the Mississippi River, the stream, as I said, that is always most prominent when we begin to talk about flood control, the work of levee building, a part of the system of flood control in the interest of navigation devised by the Government engineers, is well under way and perhaps more than half done. But there have been efforts made from time to time to extend this work of flood control to other streams. This sentiment, however, has not as yet acquired sufficient strength to induce Congress to go much beyond the Mississippi River, but I want to say in all frankness and candor that there is no more reason, except one based upon the magnitude of the floods and their resultant effects, for taking care of the property along the banks of the Mississippi River than for the protection by similar means and methods of the property along the banks of any other navigable stream where property is destroyed by reason of periodical overflows.

Now, there is another matter to which I wish to address myself, and that is the question of the jurisdiction of the committee for which this rule provides. The rule is silent as to whether it is intended to give this new committee jurisdiction over nonnavigable streams, or whether it is to be confined alone to navigable streams. Its very silence, however, on the subject would seem to indicate an intention to cover both classes of streams. In that view, or in any view, you enter a field of governmental activity which the River and Harbor Committee, knowing the dangers and difficulties involved, have been striving for years to avoid. But the moment this committee is appointed you will find that schemes and plans from all parts of the country, for every creek and river, whether navigable or unnavigable, whose banks are subject to overflow, will be presented to Congress by interested parties demanding protection. I sympathize with the gentleman who I understand is slated for the chairmanship of this committee. He is a good man for such a position and will strive as best he can to circumscribe the activities of the committee and to guard the Treasury, but I fear without avail, for once the field is entered there is no sure stopping place until all streams subject to overflow are fully treated.

The committee can not appropriate money, to be sure, but it can adopt projects which when adopted will not, I infer, come to the Committee on Rivers and Harbors, but will likely go to the Committee on Appropriations, as other authorizations do. When they go there they will go with the indorsement of Congress, and the Committee on Appropriations will be compelled to take care of them. I say compelled, because that committee usually regards the estimates for work authorized by Congress as being in the nature of a mandate. Now, I am not saying that I am

going to vote against this resolution.

I am only offering suggestions and calling attention to the dangers and difficulties which lie ahead if this committee, with

its proposed powers, is created.

In speaking of dangers, I refer to the probable demands upon the Treasury, for whoever the chairman of that committee may be, and whoever the members may be, he and they will not, I fear, be able very long to withstand the pressure that will be brought to bear upon them. And what will be the expense to the country? One of our Army engineers told me a short time ago—and I repeated the remark here at least on one occasion—that it would require billions of dollars to do the work it is expected this committee will have to do. Of course an effort will be made to stop short of this, but where are you going to stop? No one can tell. We can tell something about what future river and harbor work is likely to cost, because since we began river

and harbor improvements, about 100 years ago, the total cost has been only about \$800,000,000, with the result that about three-fourths of the work necessary to put all our rivers and harbors in good condition has been done or is under way, so that not more than \$300,000,000 will likely be needed to take care of the new work of that character necessary to be under-

Mr. Speaker, I do not say that private property along the banks of streams subject to overflow should not be protected by Congress, even when that protection is disconnected from all questions of navigation; but I doubt if it is constitutional to give this protection unless it comes as one of the incidents of the improvement of the rivers or other waterways in the interest of navigation. I am not going into that matter, however, any further than to suggest the constitutional difficulty. The Rivers and Harbors Committee has jurisdiction under the commerce clause of the Constitution to deal with all matters pertaining to the improvement of rivers for the purposes of navigation. The Good Roads Committee has jurisdiction of the construction and care of roads under another clause of the Constitution. But where do you find the warrant for appropriating money for the protection of private property? Some say it is to be found under the general-welfare clause, but high authority has held that no warrant can be found under that provision of the Constitution for doing such work.

Mr. LONGWORTH. Will the gentleman yield?
Mr. SPARKMAN. Certainly.
Mr. LONGWORTH. Do I understand the gentleman to say that any recommendations of this committee which involved an appropriation would be referred to the Committee on Appropriations?

Mr. SPARKMAN. I am not the parliamentarian of the House, but I am under the impression that when Congress authorizes a work to be done without making an appropriation at the time it will be sent to the Committee on Appropriations to furnish the money. I have had but little opportunity to give thought to this question, which is an important one and ought to receive more attention and discussion here than it is receiving. I am under the impression, however, that an authorization for work coming from this committee, like the authorization for a public building or river and harbor work, would be sent to the Committee on Appropriations to furnish the money.

Mr. LONGWORTH. I was only asking the gentleman for information. It occurred to me that any appropriation which dealt with a navigable or nonnavigable river on which there was any commerce would of necessity go to the committee of which the gentleman is the chairman—the Committee on Rivers and

Harbors

Mr. SPARKMAN. That ought to be the case, but I am not certain that it will under the rule as amended by this resolution. It had occurred to me that under the rules of the House whenever a piece of work is authorized by this new committee it will go automatically to the Committee on Appropriations to provide the money. That is my view, hastily formed, and yet I may be mistaken about it. As I say, I am not the parliamentarian of the House, and do not know what his views or those of the House may be.

Mr. MOORE of Pennsylvania. Mr. Speaker, will the gentle-

man yield?

Mr. SPARKMAN. Certainly.
Mr. MOORE of Pennsylvania. Following the question proposed by the gentleman from Ohio [Mr. Longworth], suppose the new Committee on Flood Prevention should bring in a bill which included a comprehensive plan for conservation and flood prevention, calling for the expenditure of \$25,000,000, more or less; does the gentleman think that would detract from the ability of the Rivers and Harbors Committee to put through the House appropriations for legitimate navigable streams, demanding improvement for commerce and navigation?

Mr. MOORE of Pennsylvania. It would deduct from the appropriations made heretofore by the Rivers and Harbors Committee for the Mississippi River, would it not?

Mr. SPARKMAN. In answer to a question propounded a little while ago to the gentleman who has charge of this resolution, he expressed the opinion that it would not interfere with the right of the Rivers and Harbors Committee to make appro-

mriations for the Mississippi River.

Mr. MOORE of Pennsylvania. Then the situation would be this: In the event of our having two committees, the Committee on Flood Prevention would bring in a systematic plan for flood prevention, including revetments and the building of levees along the Mississippi River or any other stream, calling for the expenditure of so much money, and the Committee on Rivers and Harbors would bring in a bill calling for the ex-

penditure of so much money to improve and maintain the navigation of that river. Is that correct?
Mr. SPARKMAN. It would seem so; yes.

Mr. MOORE of Pennsylvania. Then there would be a dual object to appropriate for, as to those streams that happened to have occasional floods.

Mr. SPARKMAN. Just where the line should be drawn between the jurisdiction of the two committees it is hard to determine: but I should think that whenever the main object of levee building or revetment work is to improve the navigation of a stream or protect the banks against erosion, in the interest of navigation, that the Rivers and Harbors Committee would have jurisdiction.

Mr. LONGWORTH. If the gentleman from Pennsylvania [Mr. Moore] will pardon me, there is this difference: That this committee could not bring in any appropriations at all, but only a mere recommendation; and if it applied to any navigable or nonnavigable stream on which there was commerce, that would immediately go under the jurisdiction of the Committee on

Appropriations to make that appropriation.

Mr. MOORE of Pennsylvania. That is correct, but the gentleman from Florida has just explained that when an authorization is made by a committee it has all the sanction of law

Mr. SPARKMAN. Heretofore, as the gentleman from Ohio knows, whenever a committee has authorized a piece of work, and that committee has no power to appropriate money-or even when the Rivers and Harbors Committee, which has the power to appropriate money, authorizes a piece of work to be done under what is known as a continuing contract—then the matter goes automatically to the Committee on Appropriations to furnish the money. I mean, of concommittee is ratified by Congress. I mean, of course, when the action of the

Mr. MOORE of Pennsylvania. The Committee on Rivers and Harbors has been making appropriations for the purposes of the Mississippi River Commission; it has made appropriations for the construction of levees and some revetment work?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. Is it the judgment of the gentleman that the work of that commission would be separated as between the two committees—the Rivers and Harbors Committee and the Committee on Flood Control-and would have to go to both hereafter?

Mr. SPARKMAN. That is a hard question to answer. should think that the committee now having jurisdiction of the improvement of the Mississippi River, or any other river where revetment work is to be done, which is the Rivers and Harbors Committee, should have jurisdiction, notwithstanding the creation of this committee.

Mr. MOORE of Pennsylvania. In normal times, when we have no flood control, the work on the Mississippi River would go to the Rivers and Harbors Committee, but in time of flood it would have this committee to go to for an emergency appropriation?

Mr. SPARKMAN. I think it ought still to go to the Committee on Rivers and Harbors.

Mr. FESS. Will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. FESS. Following the suggestion if the recommendation would carry an appropriation, some one suggests that it might go to the River and Harbor Committee. Suppose this committee should recommend a project that carries an appropriation and come to your committee, you would not feel estopped

from reporting against it, would you?

Mr. SPARKMAN. No; and if such a contingency should arise, the proposition would receive careful consideration, but ordinarily I should feel very much like carrying out the views

of the Committee on Flood Control,

Mr. LENROOT. If the gentleman will pardon me, in response to the gentleman from Ohio, I will say that it would not go to the Rivers and Harbors Committee until Congress authorized the appropriation, and then the gentleman's committee would be called upon to follow the will of Congress.

Mr. COOPER of Wisconsin. Will the gentleman yield? Mr. SPARKMAN. I will.

Mr. COOPER of Wisconsin. As I understand it, the Committee on Rivers and Harbors have studied the question of flood control in navigable streams, studied it in conjunction with the question of maintaining and improving the navigable streams. That being so, would the proposed new committee, having up for consideration legitimately the question of flood control, study that question of flood control without any regard to the

navigability of the stream or improving it?

Mr. SPARKMAN. It would have no jurisdiction over a stream except as to flood control.

Mr. COOPER of Wisconsin. They could bring in an elaborate scheme without any consideration of the navigability of the stream or improving it.

Mr. SPARKMAN. Yes; that might be done. The River and Harbor Committee has heretofore been dealing with those questions. Propositions are frequently presented for the coordination of plans for the drainage or reclamation of land, or the protection of lands against floods with improvements in the interest of navigation. A number of these have been recommended by the Committee on Rivers and Harbors for adoption,

which has been done.

Now, Mr. Speaker, I desire to do nothing more than call attention to what I consider the bad features of this resolution. am not so much concerned with its effect, if any, upon the jurisdiction of the Committee on Rivers and Harbors as I am with the opportunities the establishment of this new committee will present for embarking upon plans and works of land reclamation with which the Federal Government should have nothing to do, and which should be left to private enterprise or to the States; works that will cost, unless greatly restricted, many hundreds of millions of dollars. Nor do I believe it will be possible, without showing great partiality, to restrict the work that will be demanded of the committee and of Congress. As I have already said, when we once embark upon that class of work there is no place to draw the line short of the protection and reclamation of all lands subject to overflow from floods or surplus waters. This I do not believe we are ready to do. Indeed, I doubt if Congress should ever undertake to protect private property against floods save in extreme and exceptional cases, and then only along navigable waters where the work is wholly or in part in the interest of

Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER pro tempore (Mr. CLINE). The gentleman from Florida asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The Late Representative Brown, of West Virginia.

MEMORIAL ADDRESS

HON. EDWARD COOPER, OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, April 16, 1916.

The House had under consideration House resolution (H. Res. 204), as follows:

"Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. WILLIAM G. BROWN, Jr., late a Member of this House from the State of West Virginia

"Resolved, That as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career the House, at the conclusion of these exercises, shall stand adjourned.
"Resolved, That the Clerk communicate these resolutions to the

Senate.

"Resolved, That the Clerk communicate these resolutions to the family of the deceased."

Mr. COOPER of West Virginia. Mr. Speaker, in the measurement of time I knew the Hon, WILLIAM G. BROWN, Jr., but a

scant four months In the measurement of a friendship offered at once without reserve and accepted with an open-hearted desire, it seems to me incredible that we knew each other and were on such friendly

terms for so brief a space of time. This illustrates to my mind a prominent and important characteristic of the man which contributed largely to his remarkable success as a politician and in other channels in which the currents of his life flowed: His nature was such that he promptly accepted an acquaintance as a friend, without suspicion or reserve, and left it to time and events to write their judgment

upon his trust in his fellow man. It is given to comparatively few men to meet their fellows with a geniality, an interest, and an affection such as our departed colleague's personality radiated.

It was a natural gift bestowed upon him.

There was no strained effort, no pose, no artificiality about him in his relations with others. Happiness seemed ever to be singing its joyous song in his heart, and in his smiling eyes, hearty handclasp, and cheery greeting others could catch the strain and echoes of its music and feel the happier therefor.

Add to these traits of sunny disposition the sterling quali-tics of a strong character and it is plain to be seen why it was that in the counties of the second district, in a part of West Virginia where our civilization and enlightenment in the mass attain their highest perfection, William G. Brown was held in such great esteem and affection that, although a large majority of the people opposed his political principles and his political party, they waived aside their opposition time and again and honored him with election to this House.

There is no tribute to his memory, however beautifully it may be written or however eloquently it may be spoken, that

can equal the bare statement of that fact.

In the death of our colleague we on this side of the House have no revision to make at his tomb of our opinions of him as a friend and coworker.

There are no estimates of him to change and no regrets to express over judgments we held of him when he was living.

What we are here saying to-day in memory of him we could have said and did say to others of and about him when he was here in the flesh.

Although our political ways lay along different routes, there was not petty and narrow-minded partisan feeling between us. Such as that never entered in the relations of Congressman

Brown with either his Republican colleagues here in this Chamber or in his relations with his Republican constituents.

Many of his views on public questions, but by no means all

of them, were opposite to ours. We did not question his sincerity, no more than he doubted the

honesty of our convictions.

He was too broad-minded a statesman, too honorable a gen-

tleman, and too devoted a friend for that.

On the contrary, it was no uncommon occurrence for some of us to seek discussion for the purpose of getting his viewpoint, frequently his counsel and advice, and it is a tribute to his high qualities of mind and heart that he could and did rise above all thought of partisan association and advantage and. placing himself in our position, gave us the benefit of his ripened judgment and greater congressional experience.

Mr. Speaker, I leave it to others more competent than and more familiar with the events involved to take up step by step the progress of this man as shown in the biography of

his successful and well-lived life.

Under the circumstance of an all too brief friendship it is appropriate for me to weave my wreath to lay upon the altar of his beloved memory out of the impressions he made upon my heart and upon my mind.

They were everlasting impressions. I shall never forget them. They have helped me here in my short time as a Member, and I am sure that they will help me and be ever a pleasant and an inspiring memory till the end of my time upon earth.

TO WILLIAM GAY BROWN time is no more; it is eternity.

There is no calendar there; no days, no nights; no season coming and going; no reckoning by months and years.

The sun goes no more down, but is ever in meridian.

It is one infinite now-one eternal consciousness

While yet in love with life and raptured with the world he passed to silence and pathetic dust.

House Resolution 137.

EXTENSION OF REMARKS OF

HON. J. CHARLES LINTHICUM. OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 19, 1916.

Mr. LINTHICUM. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from James W. Helme, of Lansing, Mich., and my reply thereto on House resolution 137.

The letter is as follows:

MICHIGAN DAIRY AND FOOD DEPARTMENT, Lansing, Mich., April 8, 1916.

Hon. J. CHARLES LINTHICUM, House of Representatives, Washington, D. C.

Dear Sir: I am in receipt of your recent letter inclosing copy of resolution that you have introduced in the House; also note your inquiries in such letter and have also received copy of a speech made by you upon this resolution.

In reply to same I would make the following statements:

The introduction of this resolution and the characteristic manner of your speech reminds me of the old Biblical story in which it was said that "the voice is Jacob's voice, but the hands are the hands of Esau."

This resolution is clearly introduced in the interests of about 30 manufacturers who control the manufacture of oleomargarine in this country and who have been endeavoring for years to boost their industry by misrepresenting the dairy industry of the country and at the same time trying to sell their products as dairy products.

For the last five years I have had under my personal supervision the creameries of Michigan—and Michigan is the fifth State in the Union in the production of butter and the third State in the production of cheese. Your resolution states that 94 per cent of the creameries of the country are insanitary. So far as Michigan is concerned, I will guarantee that over 90 per cent of the creameries of Michigan, and I believe a much larger proportion, are strictly sanitary in their conditions and surroundings.

are insanitary. So far as Michigan is concerned, I will guarantee that over 90 per cent of the creameries of Michigan, and I believe a much larger proportion, are strictly sanitary in their conditions and surroundings.

The statement that 72 per cent of cream is not pasteurized is not so as regards Michigan, as over 90 per cent of the butter made in Michigan in creameries is pasteurized, and the percentage is constantly increasing. It is not a fact that a large per cent of dairy cattle is affected with tuberculosis, but, on the contrary, a very small percentage is affected with that disease, and it is not a fact that infected dairy products "are among the most active agents in the spread of tuberculosis, typhoid fever, and other diseases." The reason is that a large proportion of our creamery butter is made frem pasteurized cream in which all such geems, if any there exist, are killed, and a large proportion of the milk consumed in our cities is likewise pasteurized.

Recently I made separate tests of milk from a large number of individual cows and in none was able to detect a germ of disease.

You state in your speech that "The most stupendous frauds against the revenues of the Government" are perpetrated by the dairy interests. As neither butter, cheese, nor milk is subjected to any tax by the Federal Government nor are dealers therein, it would be most pleasing to me to understand where these great frauds are committed. I do know that millions of dollars worth of frauds have been committed by oleo manufacturers in this country, but they should not use their crimes to blacken the dairy interests of the country.

You also state that "filthy cream, often in a putrid state, is frequently shipped great distances to creameries to be made into butter." This is sometimes so and an explanation of it is in order. Formerly in Michigan, as in other dairy States, local creameries were operated generally on the cooperative plan by farmers. Big business saw an opportunity to develop a business shipped from a large number o

Indictment of "putrid cream."

The really laughable thing about it is that these centralizers are generally connected with the oleo-manufacturing industry. The largest centralizer in Michigan operates over 100 cream stations, and is a Chicago packer who is also a very large manufacturer of oleo. It seems to me highly ridiculous that an oleo manufacturer should use his own bad practices to attack an industry in which he is engaged in order to help his main business of manufacturing steer butter.

In these centralizer plants alone is found the use of neutralizer used by these.

He mentions only one-

He mentions only one—
same oleo manufacturers, and yet as oleo manufacturers they complain of their own practices in making butter in order to give butter makers who do not use neutralizer a black eye for their product.

Moreover these same oleo manufacturers who are now engaged in endeavoring to give the dairy industry of the country a black eye, are persistent law violators. The State of Michigan has a law prohibiting the coloring of oleo yellow in order to prevent its fraudulent sale as butter to the consumer. In a dry county when some liquor interest wishes to establish a "blind pig," the first think they do is to take out a Federal license to sell liquor, so as to get rid of the Federal authorities. It is the same in Michigan. Those oleo dealers who desire to sell colored oleo in defiance to Michigan law proceed to the collector's office in the city of Detroit and take out a Federal license to seil colored oleo. They are simply the "blind pigs" of the oleo business. In November, 1914, inspectors of this department visited 12 of these blind pigs in the city of Detroit, called for a pound of butter, for which they paid 30 cents, and got a pound of colored oleo which could have been purchased of like quality for 20 cents under its own name. Prosecutions were begun against these defendants in 1914. The manufacturers hired skilled counsel to defend oleo law violators, This colored eleomargarine law had been passed on by the Supreme Court of Michigan as constitutional, yet these skilled oleo lawyers raised a constitutionality question about the law that was submitted to the courts, and a question which should have been decided in 10 minutes by a court is still undecided. The oleo blind pigs are still defying the laws of this State, justice is blocked, all by the clever lawyers of oleo manufacturers who are so tender about what might be in butter but who care nothing about blocking the sovereign laws of the State. I have no objection to the sale or use of oleo provided it is sold as oleo and the consumer knows it

ever tried to masquerade their product under the name and form of butter.

I note also in your speech that the charge is made that the annual report of the Secretary of the Treasury shows that one butter factory had defrauded the Government out of \$1.503.203.30. You state further that "all the product in this case, while not butter, was placed on the market as butter without the payment of any tax." Such a statement is most absurd. No butter factory could defraud the Government out of one dollar, let alone a million. Nothing but an eleo factory could do this. Such statements are evidently made to deceive the ignorant although I can not imagine that anyone would be so ignorant as to soak up a statement that a butter factory defrauded the Government of a million dollars.

The statement also made by you that butter factories are able to get into their factories oils and "thereby greatly increase their output" is also highly ridiculous. In my five years as dairy and food commissioner I have never yet heard of an instance of the mixing of oils or fats into butter by any butter maker, and you say "thus they defraud the Government of its taxes." No one but eleo manufacturers are taxed. Butter is not taxed by the Federal Government, so it must be that it is again your friends, the eleo manufacturers, who are engaged in these fraudulent practices.

A great many manufacturers of eleo defy and evade the laws of this State and other States in regard to the sale of eleo. Not only that, but when I commenced a vigorius crusade to make them obey the

law, an olco dealer promptly sued me for \$25,000 for libel in order, as I believe, to decrease my activities.

It is not necessary in my mind to have Federal inspection of dairy products. I know that in Michigau we are straining every effort to give the public a pure product and we are doing it in 90 per cent of the product. No Federal inspection could do the work that we are doing in Michigau, and I believe the other dairy interests are equally as diligent as we are in this matter.

I note from your letterhead that you live in the State of Maryland. Last fall I visited New York City and discovered there that a large number of Michigan beans had spolled in storage owing to the wet weather. I was also informed that these were shipped to Baltimore for canning purposes. I have before me the annual report of the food and drug commissioner of Maryland for the year ending December 31, 1914.

Maryland is a great canning State. It is one of her prides and boasts, and certainly if we need anything we need clean canned goods as well as clean dairies, yet on page 32 of this report I find that out of 398 canning establishments in your State, 57 of them, being over 14 per cent, have no tollet facilities whatever connected with them. It would seem that the Maryland canning factories have not all as yet progressed out of the primitive stage of mankind. The idea of food establishments without toilet facilities would not be tolerated in Michigan for a single hour.

I also note in this report on page 30 the following statement by one of your officials:

"Of the slaughterhouses visited, I found 95 per cent in a very insanitary condition. Floors, walls, and ceilings were dirty; offal was on the ground, both inside and outside the house, some of the men depending on dogs to eat the offal; also dirty utensils and surroundings."

This seems to be a much worse condition than that that you allege against the dairy interests, and I would suggest that when your resolution comes up for hearing before the House that you amend the same in o

remain. Very truly, yours,

J. W. HELME, State Dairy and Food Commissioner.

House of Representatives, Washington, April 18, 1916.

Mr. James W. Helme, Commissioner, Michigan Dairy and Food Department, Lansing, Mich.

Mr. James W. Helme: I am in receipt of your letter of the Sth instant and have carefully considered the statements you make.

Your first statement is that my resolution, H. Res. 137, "is clearly introduced in the interest of about 30 manufacturers, who control the manufacture of oleomargarine." That statement is both untrue and insulting. I wrote you in good faith, supposing that you would offer objection or approval in like good faith. It appears that I was in error when I assumed that every man connected with any branch of pure-food work would gladly cooperate with me in the work I have undertaken. Let me here advise you that, out of over 400 replies, yours is the only one questioning my motives. Let the record speak for itself. Be good enough to observe a few of the glaring errors in your statement.

You state that over 90 per cent of the Michigan creameries are entirely sanitary in their conditions and surroundings. This is certainly interesting, if true, and I congratulate you and the people of the State. My resolution states that 94 per cent of the creameries are insanitary, and this statement is taken from the annual report of the Department of Agriculture for 1912. In discussing this report Dr. A. E. Melvin, Chief of the Bureau of Animal Industry, of that department, stated on the stand on April 11, 1916, before the Committee on Rules of the House of Representatives, that he believed the statement in the report of 1912 represented a fair estimate of conditions at that time; that the conditions were somewhat improved now, but that there was room for further improvement, and that he would regard my proposed investigation as very helpful.

You second statement, in regard to the per cent of pasteurized cream, is likewise shown by the departmental reports to be entirely incorrect, as far as the whole country is concerned. If you pasteurized poet provential michigan, you might have cause to hold your State up as perfect, not otherwise.

You state that it is not a fact that a large per cent of dairy cattle is

as a "small per cent"? Do you wish to be on record as defending the reputations of these tubercular cows as against the lives of thousands of babies?

You say you have examined milk from a large number of individual cows and in none was able to detect a germ of disease. I shall again give you the benefit of the doubt and assume that you are a competent bacteriologist. Your cows certainly should be a pride to your State. There are other cows which are a disgrace to any State. No denials and no amount of negative evidence can down the fact that these diseased cows transmit tuberculosis to children. Are you willing they should continue pouring a diseased stream into the life of the Nation? You ask how it is possible for a butter man to defraud the Government. The facts are that the revenue frauds are committed by men who hold themselves out to the public as butter dealers or makers and who secretly introduce oleomargarine into butter and sell the combination as butter. Dr. Melvin says all the oleomargarine factories are inspected by the Government, and that such frauds could not occur therein. It is immaterial to me whether the criminal is called an oleomargarine dealer or a butter dealer. If we had Federal inspection of butter going into interstate commerce, such frauds could not be practiced on the Government and the public. Do you know the facts in the fraud case referred to in the annual report of the Secretary of the Treasury to which you refer on page 3 of your letter? That plant was in New York City. The owner was a butter dealer, wholesale, and had an immense business. He nad a secret room on the fourth floor of his factory—had it there for years—admitting only fellow criminals. There they mixed butter with oleomargarine and then sold the combination as butter. This butter dealer did defraud the Government out of \$1,503,203.30. I

care not what you call him, he was supposed to deal in butter. His wares were going into interstate commerce, and had there been in force a law requiring inspection of butter as there is of meat, that gross fraud could not have been perpetrated.

You say it is "sometimes so" that filthy cream, often in a putrid state, is frequently shipped great distances to creameries to be made into butter. Why should we endure such a rotten condition, even a part of the time, is enough to justify every word I or the dairy and pure-food and farm journals have said about the depicrable condition, even a part of the time, is enough to justify every word I or the dairy and pure-food and farm journals have said about the depicrable condition, and the same part of the time, is enough to justify every word I or the dairy and pure-food and farm journals have said about the depicrable condition, and the same part of the same part of

Expatriation Under the Act of March 2, 1907.

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET. OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 18, 1916.

Mr. BENNET. Mr. Speaker, under leave of the House, I insert in the Record a letter from John H. Claus and an opinion of Judge Hough, of New York, on expatriation under the act of March 2, 1907:

UNITED STATES DEPARTMENT OF LABOR, IMMIGRATION SERVICE, Montreal, Canada, April 10, 1916.

Hon. WILLIAM S. BENNET,
House of Representatives, Washington, D. C.

House of Representatives, Washington, D. C.

Dear Sir: My attention has been directed to the Congressional Record for March 30, wherein, on pages 5943 and 5944, in the debate preceding passage of the new immigration bill, you are credited with certain reference to the writer in connection with the decision rendered in the case of an American citizen who had subscribed to the Canadian mil'tary oath in consequence of which he was refused admission to the United States at Port fluron, filch., on August 22, 1915.

As your aliusions to me in the comment referred to were thoroughly misleading as to my connection with the above matter. I feel that I will be pardored for asking your attention to the subjoined, which it is hoped may dispet the very erroneous impressions which you are shown to now entertain:

Frank Caswell, aged 39, single, woodworker, born at Harrison, Me., in 1876, at the age of 37 migrated to Canada. August 13, 1914, Mr. Caswell enlisted in the Canadian military service, subscribing to the usual oath in connection therewith. April 7, 1915, he was discharged from the service at Salisbury Plains, England, on account of illness. On August 22, 1915, Mr. Caswell applied for admission to the United

States at Port Huron, Mich., stating that he was proceeding to Detroit for the purpose of taking employment with the Detroit Cabinet Co., Mr. Caswell having displayed a letter from the firm mentioned, making him in offer of a position. The applicant was carefully questioned by the board of special inquiry at Port Huron as to his birth in the United States residence, and enlistment in Canada, and at the conclusion of his examination the board of special inquiry acted as follows:

"Inspector Wiggin. I move to reject the alien before the board as a contract laborer. In my opinion, Mr. Caswell has expatriated himself by taking the oath of allegiance to a foreign state, under the terms of section 2 of the act of March 2, 1907, and that he is therefore an alien; and in view of the fact, as shown by the record, that he is proceeding to the United States under promise of employment, that he is an alien contract laborer.

"Inspector Goden. I second the motion to reject.

"Chairman Hoppe. I make the motion to reject unanimous."

Having been regarded as an alien and excluded as a contract laborer, Mr. Caswell was accorded the right of appeal, and in mailing the record to this office for transmission to the Commissioner General of Immigration our inspector in charge at Port Huron commented as follows:

"Event Caswell claims to have been been at Harrison Me. in 1878.

Immigration our inspector in charge at Port Huron commented as follows:

"Frank Caswell claims to have been born at Harrison, Me., in 1876. He resided continuously in the United States until December, 1912, when he went to Canada, and has remained there practically ever since, his absence from that country being for a brief period while he was in millitary service in Engiand. He returned to Canada from Engiand on April 3, 1915. This case hinges upon the question of whether or not Mr. Caswell continues to be a citizen of this country. It is the unanimous opinion of the board that he expatrated himself by taking oath of allegiance to a foreign state, as advised under terms of section 2 of the act of March 2, 1907, of our naturalization laws. If the board correctly interprets section 2 of our naturalization laws, I feel that its action was proper, as Caswell is undoubtedly induced to come to the United States under a promise of employment. The case is a technical one, and is therefore submitted for a decision."

In forwarding the record in this case to the Commissioner General of Immigration. under date of August 27, the following comment was indulged in by the writer:

"I have the honor to submit herewith record on appeal in the case of Frank Caswell, aged 39, male, single, a native of the United States, excluded at Port Huron, Mich., on August 22 as a contract laborer.

"It will be observed that the board was of the opinion that Mr. Caswell by join ng the Canadian Army had expatriated himself; but this question appears to have been decided otherwise by the Department of Justice in the Esther Berryman case, covered by bureau file No. 53983/136.

"If my understanding in this regard is correct. I would respectfully

well by join in the Canadian Army had expatriated himself; but this question appears to have been decided otherwise by the Department of Justice in the Esther Berryman case, covered by bureau file No. 53983/136.

"If my understanding in this regard is correct, I would respectfully request that I be furnished with the bureau's views in the premises, in order that a general letter for the instruction of officers in this jurisdiction may be prepared, as the question is sure to arise in connection with many cases in the future, and that the department's decision in this particular case, if favorable to Mr. Caswell, be wired to our Port Huron office direct."

Under date of September 15, 1915, file No. 54003/431, the Commissioner General of Immigration wrote me as follows:

"Referring to your No. 11035/395 of the 13th Instant, relating to the case on appeal of one Frank Caswell, excluded at Port Huron, Mich., on the 22d ultimo as a contract laborer, you are advised that the case has been referred to the Attorney General for his opinion as to whether Caswell had expatriated himself by taking the oath of allegiance or of enlistment in joining the expeditionary force from Canada to Great Britain.

"As soon as report is had from the office of the Attorney General, you will be advised."

Under date of O tober 9, the same bureau file number as above, the Commissioner General of Immigration again wrote me as follows:

"Referring to the Frank Caswell case (your 11035/395), you are advised that the board should reconsider his application for admission without relation to the lact he enlisted in the expeditionary force from Canada to Great Britain.

"Instructions should be issued by you to the end that hereafter the boards will not question the American citizenship of an applicant because of the fact he took the oath of allegiance and enlisted in the Canadian forces."

These instructions were very naturally communicated to all inspectors under my control in a general letter bearing date of October 11, 1915.

The foregoing is t

These instructions were very maturally communicated to at the spectors under my control in a general letter bearing date of October 11, 1915.

The foregoing is the correct history of the case to which you were pleased to make reference in the House on March 30, and I believe you will find little justification therein for the remark: "The commissioner of immigration in Canada ought not to have presumed to have passed on a question of citizenship, but have referred it to the Department of Labor at Washington."

Absolutely no instructions in advance of those received from the Commissioner General of Immigration to which I have alluded above, were ever promulgated by me to the inspectors in this immigration district, with a view to in any way controlling their action in dealing with applicants for admission to the United States from Canada, who might be shown to have been citizens of the United States when enlisting in the Canadian military service and subscribing to the oath in connection therewith.

Considering all the circumstances, for immigration purposes, I know of no method, other than the one pursued, by which the status of Mr. Caswell could have been determined and instructions for the guidance of officers under my control secured, and as the decision rendered appears not to have met your concurrence, it would seem that your criticism should have been addressed to the Attorney General of the United States, rather than against the writer. I am tempted further to suggest that you will find the files of our department strongly supporting the claim that I am not in the habit of attempting usurpartion of the prerogatives of the honorable Secretary, by attempting to rule upon such important questions as the one mentioned above, in advance of instructions from those higher in authority.

My friends, who have the pleasure of your acquaintance, represent you as being an emimently fair man, and as your criticism of the writer gained much publicity by reason of the time and place selected for your remarks, is it too

JOHN H. CLARK, Commissioner.

DISTRICT COURT OF THE UNITED STATES, SOUTHERN DISTRICT OF NEW YORK.

UNITED STATES EX REL CARL EDWARD ANDERSON V. FREDERICK C. HOWE, COMMISSIONER, ETC.

Hearing on habeas corpus.

Hearing on habeas corpus.

Anderson is a Swede who came to the United States in 1891 and appears to have remained here continuously until 1906. He left a wife and children in Sweden and never brought them to America. In 1905 he was duly naturalized and in the year following returned to Sweden. There is no disinterested evidence as to his intent to remain or return, at the time of his departure from the United States.

He did continuously remain in Sweden, tilling a farm which he held under a 20-year lease, and owning the house wherein he lived upon said farm, and also paying taxes, until 1915, during which time he took no steps to register himself as an American citizen with any diplomatic or consular officer of this country.

He did not bring with him on returning to America any member of his family. The farm he left in charge of his children. On arrival in New York the immigration authorities found him insane, also nearly penniless, and, so far as discoverable, without relatives or friends in this country. After detention at Ellis Island for a considerable time he so far recovered his sanity as to testify before a board of special inquiry, and substantially admitted the truth of all the foregoing facts, adding, however (in substance), that it had been his intention on returning to the United States to utimately bring his family with him, because he was "scared by the war." He denied any intention of abandoning his American citizenship, and asserted that he had always had an Intention to return at some time.

Having been held as an alien of the prohibited classes and ordered deported by the Secretary of Labor, this writ was taken.

Olav J. Schultz de Brun, for the relator; Harold A. Content, assistant United States attorney, opposed.

deported by the Secretary of Labor, this writ was taken.

Olav J. Schultz de Brun. for the relator; Haroid A. Content, assistant United States attorney, opposed.

Hough, D. J.:

The questions raised by this proceeding are whether under section 2 of the act of March 2, 1907 (U. S. Comp. Stat., see, 3859), or under the treaty between the United States and Sweden and Norway of May 26, 1869 (Mailoy's Treaties, Conventions, etc., between United States and Other Powers, Vol. 2, pp. 1758-1761), Anderson is, after more than 10 years' residence in Sweden, an allen or a citizen. The question of expatriation—the question whether one zains or loses citizenship by residence in or away from a country—is one that has been discussed as long as courts in the United States have spoken.

There is no doubt that a man may throw off his allegiance if he desires, and the right so to do is declared to be a natural and inherent one by United States Revised Statutes, page 1999, which statute is no more than the legislative expression of the doctrine laid down by Marshall, C. J., in The Venus (8 Cranch, 280). On the other hand, it has been held with almost complete uniformity that mere residence in a foreign country, even by a naturalized American, has no effect upon anch person's citizenship. (Young v. Peck, 21 Wend., 389; 26 Wend., 613. See also Ware v. Wisner, 50 Fed. Rep., 310; State v. Adams, 45 Iowa, 99; and Brown v. United States, 5 Court of Claims, 571.)

When the law was in such a state as to hold that a man could change his citizenship or allegiance at will, and yet foreign residence, no matter how long continued did not per se affect the status of citizenship, a matter as to which presumptions are needed if any certainty is to be introduced into decisions.

Accordingly the act of June 29, 1906 (see, 15, U. S. Comp, Stat., 4374), makes a return to the native country of a naturalized citizen when any "naturalized citizen shall have resided for two years in the foreign State from which be came," it shall be presumed that he has c

considered in the decision) is no more than a statutory affirmance of the common law, but the court's opinion rests upon the statute and not on tradition.)

This decision also does away with all arguments that might have been founded upon the fact that the act was passed after Anderson left the finited States for Sweden, for if the statute may conclusively hold a female citizen to have elected alienage by marriage it is obvious that it may also hold a nonresident naturalized citizen to have elected alienage by his nonresidence. If there is no deprivation of liberty or property by one act under the statute, there is none by the other.

This is thought to be the first litigation of its kind under this statute, although the law has been upon the books for upwards of eight years. This is because of an opinion of the Attorney General rendered in 1910 and found in volume 28 of Opinions, at page 504.

By referring to the history of the act as it passed through the Houses of Congress and depending for interpretation upon the speeches of Members the conclusion was reached that the statute referred only to the status of naturalized citizens abroad "when the conditions are apparently such as to Indicate that they have no bona fide intention to return and reside in the United States. When a citizen returns to the United States the necessity for such protection no longer exists, and it is fair to assume that with the cessation of the necessity the presumption created by the act also ceases."

There is no such limitation in the act itself, and no obscurity in the language of the section in question. The same style of interpretation was urged upon the Supreme Court in the Mackenzie case and there rejected, and the action of the Department of Labor in respect of Anderson is the result of a belief that the Attorney General's opinion has been overruled by the decision of the Supreme Court. I share that view.

It follows that by force of the statute Anderson lately presented himself at the door of this country with a statutory presumption against him that he had ceased to be an American citizen by reason of his long-continued residence in the land of his birth.

I think this is a rebuttable presumption, but am clearly of opinion that there is nothing in the evidence to sustain the rebutter. It follows that Anderson is an alien, and as such plainly to be excluded upon the facts duly found and shown in the return to the writ.

While the statute is sufficient to dispose of this case, the treaty of consideration. By the naturalization convention of 1860, supra, it was agreed "that if a Swede or Norweglan who has become a naturalized citizen of the United States renews his residence in Sweden or Norway without the intent to return to America he shall be held by the Government of the United States to have renounced his American citizenship.

"The intent not to return to America may be held to exist when a person so naturalized resides more than two years in Sweden or Norway"

Norway"

It is said that this treaty is not now in force because of the separation between those Kingdoms, which occurred in 1905. This is wholly erroneous. The collection of treaties above referred to is official, having been compiled under a resolution of the Senate of January 18, 1909, and the documents which continued in force as to each Kingdom, the treaties made by the United Kingdom may be seen as to Norway at page 1300 and as to Sweden at page 1724 of volume 2 of Malloy's Compendium.

treaties made by the United Kingdom may be seen as to Norway at page 1300 and as to Sweden at page 1724 of volume 2 of Malloy's Compendium.

Thus the treaty raises the same kind of presumption as does the statute. It is, however further urged that upon the construction of the statute contended for by the relator and justified by the opinion of the Attorney General the act of Congress overrides the treaty. As above set forth, I can not agree with this interpretation of the act; but, even if it were otherwise, the admission of aliens and the regulation of citizenship as distinct from allenage is peculiarly a matter of national concern. As to such matters there can be no doubt that treaties are the supreme law of the land, a subject treated of with great force in the address of Hon. F. B. Kellogg before the American Bar Association in 1913 (A. B. A. Repts., vol. 38).

The writ is discharged and the relator remanded.

March 31, 1916.

Oration on William McKinley.

EXTENSION OF REMARKS

HON. HENRY I. EMERSON.

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 20, 1916.

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an oration on William McKinley by Hon, John J. Sullivan, former United States attorney, at the Tippecanoe Club banquet.

The oration is as follows:

ORATION ON WILLIAM M'KINLEY.

[By Hon. John J. Sullivan, former United States attorney, at the Tippe-canoe Club banquet.]

Here, near his beloved home, near the silent shadows where he sleeps in peace, in the bosom of a people he cherished dear, where live the sunny memories that lightened his labors and his life, where the applauding multitudes worshiped at his shrine, where lived and lies, embosomed in fragrant flowers, the gentle woman he adored, near where he paid his fond adieus, and said his last farewell, we meet to-night to cherish the memory and to pay deserving tribute to the imperishable name of William McKinley.

He was a rare student, a brave soldier, an able lawyer, a gifted statesman, a born diplomatist, an eloquent orator, the leader of the American Congress, a distinguished governor, a people's President, and a royal man. He was gifted with genius and gentleness, and take him all in all, he was incomparable among the mighty men of those eventful days. when by one stroke of his pen, one empire ended, and another was begun; and where a foreign flag went down and his own flag went up, floating forever over the grave of despotic power in the Western Hemisphere.

The crown of his rich and royal life was gemmed and jeweled with the joy of service to his fellow men; and in the firmament

of fame his golden memory is as radiant as a blazing star.

He was an optimist. With unfaltering steps he walked through the bush and bramble, along the way, and plucked the fairest flower that grows in the fragrant field of life. He was gentle, and like the quiet moon in midnight's sky, his chaste memory is a rich serenity and a supreme calm. The golden pages of American history are emblazoned with the glory and genius of his gifted life. At the shrine of our dead chieftain is burning the flaming fire of love and adoration. Under his magic statesmanship the mouths of the hungry were fed, the shivering bodies of the naked were clothed, and the gaunt and

ghastly specter of unemployment cowered and fled before the gave flaming torch to the toiler on his pathway to his happy home. He made the full dinner pail the shining and protecting shield of American labor, and the famous emblem of the Repub-lican Party. He fired the furnaces, gave busy hands to idle toil, and made the sunshine of industry light up the dark, dead places of Democracy.

The mills that were closed by the Democrats were opened by the Republicans, and the doors of public charity that were opened by a Democratic administration were closed by the administration of William McKinley. They were opened again by the administration of Woodrow Wilson, and 4,000,000 unemployed men and women are at the entrance "watching and waiting"—for work and wages. Democratic administrations are the rests in sheet music of American history. Silence in the shops seem to be "the music of the Union," to which the Democratic Party marks time instead of keeping step. As a coiner and creator of crushing chaos the present the administration makes the administration of Grover Cleveland a bright and shining light and a thing of joy forever. The two Democratic administrations of Cleveland and Wilson are the twin lights on the shore that flickered and flashed out when the ship of state, dancing on the Democratic rocks of incapacity, flew the flag of distress from its shivering mast. In the last national campaign the Democratic Party was handicapped by the prosperity of the country. In less than six months of Wilson's administration the country was handicapped by the prosperity of the Democratic Party. And why? Wilson has his Bryan and his Daniels, but William McKinley had his Elihu Root and his John Hay and the experience of his own true, tried, and tested statesmanship.

In every Democratic administration of this country there has always been a miscarriage in the conduct of national affairs. One would think in the face of these recurring disasters that the Democratic Party would flee in its necessity to the scientific experiment of "the twilight sleep." The President says we haven't had a new idea in 30 years. We give him this

Secession and slavery were new ideas, but they were not given birth by the Republican Party. So was greenbackism and free and unlimited coinage of silver, but they were not born in the breast of Republicans. The \$100,000,000 war tax in time of peace is the newest idea, but a stranger to Republican doctrine. Four million idle men is a new idea, but a

stranger to Republican administration.

The Democratic Party never gave birth to a new or an old idea that ever lasted longer than the next election. idea in 30 years! Who is the father of the rural-credit system? There is more hope in the heart of every farmer in the world since that idea was born in the breast of ex-Ambassador Her-This distinguished Republican has flashed the only star that shines to-day in the crown of American diplomacy. In the archives of our foreign affairs this Republican has written the purest and the brightest page. Its heroic luster will shine as long as the stars of night. The earth of Paris trembled with the giant tread of approaching armies, but the only protecting flag that flew in the sky was the glorious banner of the Stars and Stripes; and under its precious waving folds, representing the power, majesty, and humanity of the United States, stood that matchless Republican patriot from Ohio, Myron T. Herrick, the bosom companion of our fallen chieftain. Compare the humiliation to the flag in Vera Cruz to the glory of the flag in Paris. In Vera Cruz the idea was new, but Democratic; in Paris the idea was as old as the spirit of American valor, but Republican. Oh, that we could blot the history of our flag in Mexico from the pages of American history! But in 1916 we will redeem it and place it in the hands of an Ohio man to carry it to glory and victory for the party of William McKinley. It may be Theodore Burton, that soul and sage of statesmanship; it may be Warren G. Harding, the lord of logic, the oracle of oratory; it may be Frank B. Willis, that classic champion of the power of the people; and it may be the civil hero of the world's great war, Myron T. Herrick. Whoever of the four it may be, he will stand for those great principles of protection to American labor and industry that placed William McKinley among the immortals

In the bright lexicon of Republicanism William McKinley believed there was no such clause as "the Nation's unemployed." He believed that there was no cresural pause in the eloquence of industry. To him bad times was a disease in the body politic and prosperity was the normal condition of the country. He diagnosed the disease, revealed the remedy, and gave hope and heart and health to his countrymen. He taught

the world that under his policies of protection that men get work and wages, and that under Democratic policies they lose them both.

The Republican Party has always been a job giver, the Democratic a job loser. He gave the home markets to his own country, and in his last speech, gave us the golden key of reciprocity for the markets of the world. He loved his country, his

party, and his people.

As a lad of 17 he joined the Union Army, and served until 1865 as sergeant, second lieutenant, first lieutenant, and captain of his company. He was promoted on the field of battle for gallantry. As commissary sergeant he had charge of supplies for his company. With such a duty he had no weapon for defense or attack. At Antietam, the bloodiest battle of the war, he carried coffee to the soldiers on the battle line in the midst of a fiery rain of hissing bullets. His valor was witnessed by the colonel of his regiment, R. B. Hayes, another future President of the United States, and was immediately recognized by appointment to the staff of that brave man. He came home and was admitted to the bar, and soon was elected prosecuting attorney of Stark County. After 10 years' practice he proved his fitness for the bar, and in 1876 he was elected to Congress for the eighteenth district of Ohio. In Congress he made his way to the top, and after 14 years of service, having served as chairman of the most important committee, and having become the author of the famous McKinley tariff bill, he

In the hour of defeat he stood staunch and steady in his fight for the principles of protection, and soon was elected governor of Ohio, where he served two terms with great distinction as an able executive. In two national conventions, as a leader of the Sherman and Harrison forces, he was besieged by clamoring hosts to desert his candidate and accede to the insistent call of himself for the Presidency, but each time he turned aside the tempter, and on each occasion he grew nearer and dearer to the great American heart. In 1896 he was the nominee of the Republicans, and after one of the flercest battles in political history he was elected to the highest office in the gift of the people. He guided the destinies of the country during the Spanish-American War, and the victories on sea and land made us a world empire and struck the flag of despotism forever from the western seas.

He was reelected to the Presidential chair by an overwhelming vote, and while delivering a message in golden thought and language, was stricken down by the hand of anarchy, and the whole world wept, and paid his life the homage of its faith

and love.

From prosecutor to President—the mountain top of earthly hope, the limit of human ambition, the brightest gem that glit-

ters in the jewel of human glory.

He had the classic face of Cæsar, but dimpled with manhood's happy smile. In every lineament, his shining countenance was Napoleonic in its grace and grandeur. His life was as pure and clear as the sparkling brook or the golden streams of the dawning sun. In stalwart mind, gentle grace, and courteous word, he summoned from the spirit land the very form and front of Washington himself. His golden voice was music to the eager ear, and his wondrous oratory thrilled the hearts of multitudes. His countrymen came to his hearth and home, from every spot between the oceans, and they were inspired by his matchless presence and princely personality.

His clearness of conception often concluded argument. He

saw clear through the darkness into the hopeful horizon of the light. His thoughts and words were as pure as a mother's love, and his friendships as deep as the ocean. He and Mark Hanna were as Jonathan and David. He and Myrcn Herrick,

as Damon and Pythias.

He loved the birds flying through God's air, throwing rich music from their throats and filling the world with the rapturous melody of song. He loved the sun, the moon, and stars, the gold and silver triune of the sky. His devotion to his sainted wife raised him to heights sublime, and to the women of America he was the idol of the home.

He loved nature. So does every real man. It inspires. In the last sad hour, his eyes turned toward the window, and he saw the sun shining on the foliage of the waving trees. He requested the nurse to move his pillow. She did. "How beauti-

ful," said he, "are the trees."

He loved the Republican Party, he gloried in its triumphant history, and we who love his memory, and revere his shining deeds, will never falter in our fight to restore to the American people, through the party he led and loved, the humane and beneficent principles that foster American labor and protect American industries.

Legislation and Legislative Proposals.

EXTENSION OF REMARKS

HON. CALEB POWERS.

OF KENTUCKY.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 19, 1916.

Mr. POWERS. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I am going to insert an article bearing date of April 3, 1916, and written by Rev. John A. Ryan, D. D., professor of economics in the Catholic University of Washington, D. C., and entitled "Recent trend of immigration legislation and restriction." This article is a refutation of the charge made by certain Members here, notably Messrs, CHAN-DLEE and BENNET, of New York, and Mr. Gallivan, of Massachusetts, that the Burnett immigration bill is largely the result of religious prejudice. The article written by Dr. Ryan appeared in the weekly press service of the American Federation of Catholic Societies, of which Rev. Peter E. Dietz is the editor. The article is as follows:

LEGISLATION AND LEGISLATIVE PROPOSALS.

In 1819 a law was passed regulating conditions of steerage passengers, and providing for collection of statistics.

As a result of the "Know-nothing" movement, a bill was introduced in Congress in 1838 to exclude idiots, lunatics, and incurables, and persons convicted of infamous crimes, but the bill was not even considered. In consequence of the revived "Know-nothing" agitation following the great immigration after 1848, bills were introduced in Congress in the fifties requiring 21 years' residence for naturalization, and excluding foreign paupers and criminals. They did not become laws.

In 1864 Congress passed a law providing for a Commissioner of Immigration, and contract by which the immigrant could assign his wages for not to exceed one year in payment of his passage. Repealed in 1868.

In 1882 after several State (missioner)

in 1868.

In 1882, after several State immigration laws had been declared unconstitutional, Congress formally assumed exclusive control over immigration. Enacted law imposing head tax of 50 cents, excluding those convicted of crime, except for political offenses, and excluding lunatics, lidiots, and those likely to become public charges. State laws mostly had required steamship companies to give bonds to provide for improper immigrants. In 1885 Congress enacted law forbidding immigration of contract laborers.

In 1891 victims of loathsome and contagious diseases and polygamists were added to the excluded classes, and steamship companies were forbidden to solicit or encourage immigration.

In 1892 a bill containing the literacy test was vetoed by President Cleveland.

In 1903 a bill was passed raising the head tax to \$2, and excluding

Cleveland.

In 1903 a bill was passed raising the head tax to \$2, and excluding anarchists.

In 1907 a law was passed raising the head tax to \$4, and adding to the excluded classes imbectles, feeble-minded, and those whose physical or metal defects might affect their ability to earn a living; and it also required the stramship companies to make better provision for steerage passengers. And the Immigration Commission was created.

In 1913 a bill containing the literacy test was vetoed by President Taft, In 1914 an immigration bill was vetoed by President Wilson on account of the literacy test.

By treaty with China in 1880, supplemented by legislation in 1882, Chinese laborers were excluded for a period of 10 years. A renewal of treaty in 1892 continued this exclusion for another 10 years. By legislation in 1902 and 1904 this exclusion was extended indefinitely.

In 1907 an understanding was reached with Japan by which that country refused passports to Japanese laborers seeking embarkation for the United States.

Laws at present in force may be summarized thus: Chinese and Japanese laborers are excluded. A head tax of \$4 is imposed on immigrants. Convicted criminals, except in cases of political offenses; persons afflicted with loathsome and contagious diseases; persons likely to become public charges and those whose physical and mental defects might affect their ability to earn a living; and lunatics, idiots, maniacs, epileptics, imbeciles, feeble-minded, polygamists, and anarchists are excluded.

Bill of 1916 raises head tax to \$8, but exempts children under 16; adds to the liter of excluded releases "nersons of constitutional rescu

excluded.

Bill of 1916 raises head tax to \$8, but exempts children under 16; adds to the list of excluded classes "persons of constitutional psycopathic inferiority"—the near mental incompetents; vagrants; persons suffering from tuberculosis in any form; persons advocating the unlawful destruction of property; Hindus; persons ineligible to citizenship, which means Chinese and Japanese; and those over 16 years of age who can not read some language; certain relatives of admissible allens being exempt from this restriction—namely, father or grandfather over 55, and mother, grandmother, wife, and unmarried or widowed daughter. Besides the bill strengthens considerably the administrative features of our immigration laws, something which was badly needed.

OBJECTS OF LEGISLATION.

Evidently the aim of such laws is primarily the welfare of the United States, and, secondarily, the welfare of the immigrant. All legislation has aimed at improving the quality of immigration as to physique, efficiency, character, and intelligence, and one proposed legislative article also aims to improving the quantity—i. e., lessening it. The only laws affecting the welfare of the immigrant are those providing for better accommodations on vessels, the division of information, the requirement that steamship companies should carry back persons not eligible to admission, and the efforts of some State laws to encourage immigration. immigration.

Despite the best possible methods of improving the quality there may be too many immigrants for one of three reasons—delinquency and dependence, retarded assimilation, and lowered standard of living. Delinquency and dependence do not seem to be sufficiently great to warrant restriction, and while assimilation is considerably slower among the new than the old immigrants, on account of differences of quality, the difficulty is not so great as to warrant restriction of their numbers on the sole ground of assimilation. The change in manners, outlook, and ideals in the second generation is so great that the difficulty is only temporary.

The lowered standard of living is the main justification for restriction, and it is probably the reason behind the greater part of the agitation. Between two-thirds and four-fifths of the adult males of the country received less than \$750 a year, and real wages have declined from 10 to 15 per cent since 1890. The great majority of the new immigrants go into the unskilled industries, thereby overstocking the market for that kind of labor and bringing down the wages. They do not become farmers, as so considerably occurred with the old immigration. The supply of unskilled labor should be reduced. The Immigration Commission was unanimons on this point.

Among methods of restriction suggested are: The requirement of a contract enabling the immigrant to command living wages; the restriction of the arrivals from any country to a certain per cent of the average emigration from that country during the preceding period of 10 years; the division of the immigrant to command living wages; the restriction, it would exclude about one-third.

The opposition to restriction is sentimental, or superficial, or selfish. The sentimentalists want America to be kept a haven for the oppressed, but charity begins at bome, and we want to keep it a genuine haven, instead of developing a proletariat; and we want to keep it an example of genuine democracy and of a better distribution of wealth than exists in Eur

CONCLUSION.

With the Burnett bill passed we shall have sufficient legislation to improve the quality, provide for assimilation, and protect the standard of life that is required for decent living. The religious-persecution exemption from the literacy test is unfair and unnecessary.

Naval Stores.

EXTENSION OF REMARKS

HON. FRANK PARK, OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 20, 1916.

Mr. PARK. Mr. Speaker, if there be any class of citizens of the United States who have been "hard hit" by reason of conditions brought about by the European war, it is the naval-stores operators in the pine belt of the South. The results of a lifetime's effort which had carried many of them to pros-perity have been swept away within a space of 18 months. While their naval-stores operations were conducted on broad lines, some of them having 40 and 50 mules, wagons, and expensive equipment and plants for the manufacture of spirits and rosin from the crude gum, the sudden depression of prices brought about by the cutting off of the foreign market has reduced, I would say, 90 per cent of the operators to bankruptcy or to the verge of bankruptcy.

In many instances the laborers at the naval-stores plants

have been compelled to work without wages and simply for the bare necessities of life and a place to live. The operators have seen their leases on timber expire without realizing a cent's profit; have had their splendid mules, that cost from \$450 to \$600 a pair, sold at sheriff's sales; have had their outfits put up at auction and sold by the sheriff because of circumstances beyond their control and by reason of the closed markets for the products of their business.

If any class of our citizens deserves help along the lines of their business, and who will be grateful for assistance on the line of conserving the timber, of standardizing the product of

that timber, of making better products that will bring better prices, it is the naval-stores operators of the pine belt. While the appropriation is small, at the same time it will go a long way in solving methods of conservation and standardization that is much needed by these people.

It has been shown that when worn-out fields are protected from fire that a crop of pine timber will be produced in 20 years, that is very lucrative when worked by naval-stores operators. And above all, there should be some consideration for the young and growing timber before this industry shall be

blotted out from the industries of the pine belt.

The cotton producers and the tobacco producers have griev-ously and greatly suffered, but I dare say that no class, not even those classes, have been placed in such dire straits as rapidly and with such destruction to all the resources upon which they were dependent, as the naval-stores operators have in the last two years.

Congress can not do better work or investigate along more important lines than to provide a means that will help this class of citizens. The appropriation should not only remain in this bill, but should be increased.

An Open Letter to the Antisaloon League of Oregon.

EXTENSION OF REMARKS

HON. CLIFTON N. MCARTHUR. OF OREGON.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 21, 1916.

Mr. McARTHUR. Mr. Speaker, under leave granted me to extend my remarks in the Record, I desire to print a copy of a letter which I have this day mailed to the Antisaloon League of Oregon, in answer to certain false and libelous charges made against me by that organization. The letter is as follows:

> HOUSE OF REPRESENTATIVES, Washington, D. C., April 21, 1916.

ANTISALOON LEAGUE OF OREGON,

Stock Exchange Building, Portland, Oreg.

GENTLEMEN: My attention has been called to a circular recently published by the Antisaloon League of Oregon which is not only false and libelous, but which contains matter that seriously reflects upon my rights, reputation, and conduct as a Member of Congress. This circular charges me with bad faith Member of Congress. This circular charges me with had faith because of my refusal to support the proposed prohibition amendment to the Federal Constitution and seeks to convey the impression that I am in league with criminals and am opposed to law enforcement. It is true that I have made the statement that I shall vote against the national prohibition amendment, but my attitude in this matter is the result of the vote on State-wide prohibition in my district on the day of my election to Congress. On that day the people of Oregon adopted State-wide prohibition, but my district rejected it, and, as I had previously agreed to regard the district vote on State-wide prohibition as an instruction to me upon the national question, I feel it, honor bound to fulfill my piedge. I shall, therefore, oppose national prohibition until the people of my district direct me otherwise or until it becomes evident that they have changed their minds.

Under the initiative power vested in them by the constitution of the State the people have the right to vote on this question at any regular election or to pass a directory law asking their Congressman to vote in a specific way upon any question before Congress. I have no prejudice on this question and am animated only by a desire to represent the views of the majority of my constituents. I do not intend, however, to disregard a campaign pledge, which I made in good faith, in order to please any group or faction who may undertake to deliver my vote to a measure with which the people of my district are no: in sympathy. I shall take my orders from the people—not from carpetbag leaders or self-appointed political bosses.

HUTTON PROPOSES SECRET AGREEMENT.

My attitude in this matter is satisfactory to a large majority of my constituents, but a little group of professional politi-cians who have been imported from other States to fill highsalaried positions in your organization have vainly attempted to induce me to change my position, and thereby stultify myself. Mr. R. P. Hutton, your superintendent, has even sought to induce me to enter into a secret agreement with Dr. E. C. Dinwiddie, representative of the Antisaloon League here at Washington, to the effect that I disregard my campaign pledges and vote to submit the national prohibition amendment. sideration for this proposed secret compact Mr. Hutton held out the promise that Mr. E. V. Littlefield, my principal opponent in the coming primary election, would not enter the race. It is needless to say that this proposal was ignored by me.

CIRCULAR IS LIBELOUS.

The circular which your organization has distributed throughout my district is libelous, in that it reflects on my character and integrity. Among other things, it says:

"PAT" MCARTHUR gives license to California booze-boosting, home-destroying defiers of Oregon laws.

This statement is not only false in every particular but is libelous under section 3519 of Lord's Oregon Laws. You know that I have nothing whatever to do with the California liquor dealers who are shipping their goods into Oregon. You know full well that liquor shipments into Oregon are made under authority of a law which you yourselves proposed at the last session of the Oregon Legislature, and which your candidate for Congress, Mr. E. V. Littlefield, supported as a member of that legislature. You know in your hearts that your charge that I give license to California dealers is willfully false. Your circular is replete with false and libelous statements, and contains a nauseating cartoon that should be enough to disgust all decent people with your methods. I blush with shame to think that houses of worship have been defiled by the circulation of these filthy, libelous circulars and that they have been widely distributed among Sunday-school children. A decent regard for the house of God and the innocence of childhood would prevent the circulation of these disreputable publications in such places. Under the section of Lord's Oregon Laws above referred to you are chargeable with political criminal libel, which is punishable by imprisonment in the penitentiary for not less than two nor more than five years.

VOTERS URGED TO COMMIT PERJURY.

The circular in question is also a criminal publication in that it seeks to induce the electors of the third congressional district of Oregon to commit the crime of perjury. Among other things the circular says:

We are not Republicans. We are dry Independents. We go where the fight is. Since the only chance to crack booze is in the Republican primary, we are registered as Republicans and shall vote for the nomination of Judge E. V. Littlefield and submission of national prohibition on May 19. Will you spoil a good fight by keeping out of it? Register Republican before April 19 and vote for Judge Littlefield in the Republican primary on May 19.

Section 2 of chapter 225 of the Laws of Oregon for 1915 provides that an elector in registering must swear that he is a member in good faith of the party in which he seeks to register, and section 19 of the same act provides that any person who shall swear falsely to any affidavit required by said act shall be deemed guilty of perjury. You admit your own perjury in connection with your registration as Republicans and you show further evidences of your criminality by seeking to suborn others to swear falsely. The penalty for perjury or suborna-tion of perjury under the laws of Oregon is imprisonment in the penitentiary for not less than two nor more than five years.

BOAST OF LARGE CAMPAIGN FUND.

I mention these acts of libel, perjury, and subornation of perjury in order to show your thoroughly disreputable methods. I have been told on good authority that you boast of a fund of \$50,000 which will be spent to accomplish my defeat at the coming primaries. You have stated that you intend to make an example of me in order that Congressmen in general will not dare to oppose your program. The public is entitled to know of your corrupt methods and of the brazen boast that a fund of \$50,000 is available to bring about the defeat of a Member of Congress who has announced his determination to fulfill his campaign pledges and keep faith with his constituents.

DOES MR. LITTLEFIELD APPROVE?

In addition to its printed libel, its efforts to suborn perjury, and its disgusting cartoon, your circular contains a picture of Mr. E. V. Littlefield. It is evidently published and circulated in the interests of his candidacy. It is hard for me to believe that Mr. Littlefield approves of your action in printing and dis-tributing your disreputable circular, but his failure to repudiate it and his continued silence upon the subject indicates his acquiescence.

DISTRICT ATTORNEY ASKED TO INVESTIGATE.

I have called the attention of the district attorney of Multnomah County to your circular and have requested him to investigate all facts and circumstances surrounding its author-

ship and publication and to prosecute all guilty parties.

I am certain that the rank and file of the honest and sincere people of which the Antisaloon League of Oregon is composed

had nothing to do with the publication of the circular in question and do not sanction it. The guilty parties are undoubtedly the professional politicians who are on the pay roll of your organization.

Yours very truly.

C. N. MCARTHUR.

South Side Waterways of Long Island.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. HICKS.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 4, 1916.

Mr. HICKS. Mr. Speaker, of the many problems which confront a nation, few are of greater importance than those per-taining to transportation. Production and consumption are linked together by communication. Each is dependent upon the other, and the three working in harmony form the basis of our domestic and industrial welfare. Our prosperity in times of peace and our safety in times of war to a very large extent rest upon an efficiently managed, well-regulated, and economically

operated system of transportation.

Much has been said and written about the part played by our much has been said and written about the part played by our railroads in developing our resources—achievements indicative of the virility, energy, and faith of the Nation. Let me say a word in reference to our neglected canals, once potent factors of commerce, and which, in my opinion, are destined in the not distant future to regain the favor they once enjoyed and the importance they formerly possessed. Our forefathers, realizing the value of canals and improved waterways in the development of the country, planned and carried forward to completion in the latter part of the eighteenth and the early part of the nineteenth century many enterprises of this character. With the advent and rapid expansion of the railroad, however, interest in water-ways lagged, and this important aid to our industrial growth was neglected.

Within the past few years the congestion of traffic on our railroads caused by the enormous growth of our population with its increased power of consumption—a corollary of the Nation's material prosperity—has made us realize the need of additional facilities for the transportation of the products of

our industries.

The importance of a well-devised and judiciously located canal system as a factor in the material development and substantial progress of a country is apt to be underestimated by most men in these days of multiplied railway communication.

This quotation from the pen of A. Barton Hepburn, Esq., is worthy of serious thought and consideration. While water routes may in certain classes of freight rival transit by land, canal and river borne traffic primarily supplements rather than

competes with the railroads.

Previous to the introduction of the steam engine, less than 100 ears ago, mankind was dependent upon the slow and costly method of transportation by animal power, supplemented by canals and waterways. Canals are among the most ancient of man's works. Far back in the twilight of antiquity, in those remote ages when authentic history emerges from the mists of tradition and legend, we find those old civilizations of China, along the Euphrates, and in the Valley of the Nile utilizing manmade waterways to transport their products from place to place.

Europe began her great canal systems in the twelfth century, under the lead of the Dutch, whose lands were peculiarly adapted to canalization. For centuries Holland pushed forward the work, until to-day cargoes can be shipped by barges to every part of the country. With an area of 12,741 square miles, this little part of the country. With an area of 12,741 square miles, this little Kingdom has 2,400 miles of canals. Belgium, the most densely populated nation in the world, probably has the most complete waterway system of any country. With 2,600 miles of railways this great industrial and agricultural nation has 1,400 miles of navigable waterways, costing over \$100,000,000, upon which it depends as the principal means of transportation. France has 10,500 miles of waterways, of which over 3,000 are canals, the system penetrating into all the districts, furnishing cheap transportation between the interior and the seacoast. In the past 100 years France has spent nearly \$500,000,000 upon these public waterways

Following the Franco-German War Prince Bismarck undertook the extension and modernizing of the German waterways, by which her water-borne traffic has been increased to enormous proportions. Cleap water transportation has been a potent factor in the industrial development of the Empire and of inestimable value in the handling of her military forces.

In Great Britain there are 4.673 miles of inland canals, nearly

all of which are privately owned and operated, upon which over a third of the domestic trade of England is carried.

Austria-Hungary in the past 50 years has by an expenditure of \$100,000,000 on waterway improvements more than doubled her water tonnage.

In Russia the construction of canals, inaugurated by Peter the Great, has been pushed forward at the cost of many millions of

In 1893 Greece completed the Corinth Canal, 4 miles in length, between the Gulf of Corinth and the Saronic Gulf, which shortens the distance between the Ægean Sea and Adriatic by 200 miles. Owing to the narrowness of the channel-70 feetand the strong tidal currents this canal has not proved a success. Norway, Sweden, Denmark, and Italy have all entered extensively into the work of canal construction, which has proved most efficacious in developing their resources and stimulating their commerce. Canada has completed many extensive canal projects and has expended \$110,000,000 upon artificial The Dominion is now contemplating the construcwaterways. tion of another great canal to parallel the Welland, connecting Lakes Ontario and Erie. In China canals for ages have been the principal means for transportation, constituting a vast network of waterways connecting the principal cities of that vast nation. The world's most famous canal is the Suez, projected by De Lesseps and opened to commerce in 1869. This canai, which is about 90 miles in length, is carried on the company's books at a valuation of \$136,000,000. Its high record of tonnage in a single year stands at 25,775,000 tons, and of passengers passing through 282,235, producing a revenue of nearly \$27,000,000. Under the skill, determination, and foresight of America the Panama Canal, the greatest engineering feat of the ages, will add to the commerce of the world another trade route. This great lock canal, 50 miles in length from deep water to deep water, having a minimum depth of 41 feet and a width of 300 feet, cost the United States, including all charges, over \$375,000,000.

I have briefly outlined the attitude of other nations in regard to this subject to show its importance in their development. We annually appropriate vast sums for the improvement of our own rivers and harbors, a policy essential for the promotion of our trade and commerce. I believe we should give greater consideration to our canals than we have done, for the time has arrived when we can profit by their construction. We have done but little comparatively; and, while we possess 4,479 miles of canals and 48,000 miles of other waterways, our canals, with but few exceptions, are so antiquated as to be of little commercial

Mr. Speaker, I desire to lay before this House a project which merits the favorable consideration of the Government; it is meritorious, feasible, and certain in its reward. I refer to the South Side waterways of Long Island, and desire as briefly as I can to mention its most salient features. Long Island, known in the Algonquin tongue as Sewanahaka, is undoubtedly of glacial origin. Stretching along its northern side in slightly converging lines, is a series of hills-the deposit of ancient terminal moraines, with elevations of from 150 to 384 feet above The south side consists of an unbroken plain of stratified drift flanked by a chain of shallow bays and narrow channels, separated from the ocean by a fringe of sandy beach. This protecting bar extends in nearly a straight line from the west end of the Island at New York Harbor eastward a distance of about 70 miles. The project, which has been discussed and advocated for many years, proposes to connect by a continuous channel this series of inland bays, of which all but two are already confluent, and thus open up a great water route from New York to all the towns situated on the south side and eastern end of the Island. The present water connection between these communities and the city is through the tide-swept inlets and thence along the coast on the ocean side of the bar. For vessels of small tonnage and light draft this is at all times dangerous.

The most important of these bays, commencing at the west, are Jamaica, Hempstead, South Oyster, Great South, Moriches, Shinnecock, and Peconic. They vary in width from a few hundred yards to as much as 5 miles. Jamaica Bay is connected with the Atlantic Ocean by Rockaway Inlet, and also with Sheepshead Bay. This latter bay was formerly connected with Gravesend Bay, a part of New York Harbor, by Coney Island Creek. Hempstead Bay is connected with the ocean by two inlets—East Rockaway and Jones—while the Great South Bay, the largest of all, has an outlet through Fire Island Inlet. Moriches and Shinnecock Bays have no direct connection with

A channel, part natural, part artificial, connects the Great South Bay with the bays to the eastward and by means of a canal, between Shinnecock Bay and Peconic, built 25 years ago by the State at a cost of \$200,000, it is possible to operate a small boat through the greater part of these waters.

The upland along the northern shore of these bays consists of a series of low promontories separated from each other by creeks and tide-swept meadows. In close proximity to the shore a great highway extends the entire length of the Island, passing through many large and prosperous villages, including Inwood, Lawrence, Cedarhurst, Woodmere, Lynnbrook, Rockville Center, Freeport, Massapequa, Amityville, Babylon, Bay Shore, Islip, Sayville, Bayport, Patchogue, Bellport, the Moriches, Eastport, Westhampton, Quogue, and Good Ground. Bordering on Jamaica Bay are the Rockaways, part of the city of New York. To the eastward of the canal route are the Hamptons, Wainscott, Watermill, and Amagansett. All these towns extend along the shore line and are as accessible by water as by railroad. In fact, in most cases water communication will be the most convenient. The communities nearest New York have developed so rapidly within the past few years that to-day they form a continuous stretch of residences and business blocks. system of protected inland bays lies practically fallow, due to the absence of connecting canals. The project presents no serious problem of engineering and offers no difficulties that can not be easily overcome. The work consists of deepening and widening a few channels, cutting a short canal, and building a few bridges. Before summarizing the advantages to be derived by the construction of this waterway let me refer to the development which is now going forward in Jamaica Bay, one of the links in the chain, having as its objective the increase of the harbor facilities of New York and the construction of one of the world's greatest terminal harbors

From the report of the Chief of Engineers:

From the report of the Chief of Engineers:

Jamaica Bay is an indentation in the south shore of Long Island, the entrance being about 8 miles east of the Narrows, New York Harbor. The bay includes a total area of about 18½ square miles, and is separated from the Atlantic Ocean by Rockaway Beach. The project for the improvement of this bay is a cooperative one, for making a general harbor in Jamaica Bay by dredging an entrance channel and protecting it by one or two jettles, as may prove necessary, and by dredging a main interior channel along the west and north side of the bay, at the expense of the United States, the city of New York to make these channels of service by predging basins, bulkheading the water front, and making suitable highway and rail connections with the upland. It provides for making and maintaining a channel with width of 500 feet and depth of 18 feet 16 oc increased as the needs of commerce require and as may be further authorized by Congress to a width of 1,500 feet for the entrance channel and 1 000 reet for the interior channel, and to a maximum depth throughout of 30 feet. The tength of channel included in the project is 12 miles; tidal variations 4½ feet. Approved estimate of cost to the United States for original work not to exceed \$7,430,000 in any event; to the city of New York, from \$13,500,000 to \$70,000,000, according to the extent of works undertaken.

ABGUMENTS IN FAVOR OF THE PROJECT.

ARGUMENTS IN FAVOR OF THE PROJECT.

Long Island, with a length of 123 miles and an area of 1,365 square miles, has a total population of 2,432,115, of which the major portion live along the line of the proposed waterway. This vast aggregation of people demands increased facilities of transportation. In the development of the villages on the shores of the bays great quantities of building material are annually consumed. Brick, lumber, cement, and tiling, as well as much of the hardware, naturally belong to water traffic. Coal and material for road construction can be transported far more cheaply by boat than by cars. Several of the large oil companies now operate supply boats in the delivery of gasoline, an item of vast importance to the automobile owners and baymen of Long Island. This canal would enable boats to discharge their cargoes in the very center of the towns. Traffic would operate both ways, for the farmers could deliver their products at the docks built on the canal laterals, to be shipped to the markets in New York at less expense than by rail. the baymen engaged in fishing or the dredging of oysters this canal would be of inestimable value, for in their own boats, without the expense of reshipping, they could carry their catch direct to the dealers in the city. With the development of the gasoline marine engine, water transportation has undergone a vast change in the past few years and is destined to revolutionize our system of distribution. In addition to giving us increased freight facilities, and thereby lowering the rates of transportation, this canal would stimulate business and commercial development along its entire length. By placing the dredged material upon the marshes new areas would be created for cultivation, which would add greatly to the assessed valuation of the State as well as providing additional land for homeseekers.

It may be asked, and properly so, what help will Long Island give to the undertaking; what cooperation will the State of New York lend to the enterprise? Mr. Speaker, permit me to say in behalf of the district whose commission I hold as Member of this House that in the full conviction of its merit we stand ready to give not merely our enthusiasm but are ready to support our faith with our gold. For every dollar which the Federal Government appropriates for the project we will

expend an equal amount.

Another project worthy of favorable consideration is the construction of a canal from Jamaica Bay to Flushing Bay across the Island, a development which will be of utmost importance to the industrial expansion of the Borough of Queens, which is fast becoming a great manufacturing center. Here in the great city of New York, with a constant demand for factory sites and transit facilities, an opportunity is afforded of adding tremendously to the resources of the State and increasing the industrial growth of the Nation.

Mr. Speaker, for the purpose of increasing the commerce of the Nation and augmenting the prosperity of a large number of the citizens of the Empire State, Long Island, which contributes its full quota to the revenues of the Government, which stands now and always for the development of the country and which responds to every impulse in the great forward movement of our civilization, submits its claim for consideration to Congress and appeals to every gentleman of this House to

support the South Side Waterways Improvement.

BRIEF HISTORY OF THE PROJECT.

By the River and Harbor act of March 2, 1907, a preliminary examination was authorized of a proposed inland route on the southern shore of Long Island from Jamaica Bay to Peconic Bay, through the Great South Bay and adjacent waters, with a view of obtaining a channel 100 feet wide and 6 feet deep with lateral canals.

The proposition embraced 84 miles, of which 76 miles were for

the direct route and 8 for laterals.
On July 17, 1907, Col. Knight reported adversely to the

project

In 1908 the case was reopened by the House Committee on Rivers and Harbors, and the Board of Engineers reported that they had "reached the conclusion that the interests involved are now sufficient to warrant a full investigation." A survey was duly authorized in 1909 with Col. Knight in charge of the work. A report on the undertaking, through pressure of other work, was delayed until 1914, when Col. Roessler, of the Corps of Engineers, rendered an unfavorable report which was concurred in by Gen. Plack. curred in by Gen. Black. As a result of this report an appeal was taken and hearings were held in Washington on April 22 and May 19. 1914, at which time many gentlemen interested in the enterprise appeared and strongly advocated the undertaking. It was then intimated that there would be extensive cooperation, both from the towns and the State, and as a result the board recommended that the matter be reconsidered. Carrying out this recommendation, Maj. Dent, of the Corps of Engineers, held a meeting in New York on January 18, 1915, at which time interested parties again urged the importance of the canal. It was suggested at this meeting that local interests cooperate by providing the following:

(A) Right of way sufficient for the proposed canal and sufficient to ultimately increase the cross section to 100 feet wide

and 12 feet deep.

(B) All bridges over the canal.

(C) Disposal area for the proposed canal, for its enlargement as above, and for materials to be dredged during maintenance operations for 20 years.

(D) Lateral canals connecting with the main channel.

At this conference a proposed bill authorizing the appropria-tion of \$995,000 by the State of New York to further the work was approved, and in discussing it Maj. Dent said:

was approved, and in discussing it Maj. Dent said:

As I understand the intent of this bill, it is that the State of New York shall furnish the right of way for the proposed waterway, leaving all dredging to be done by the United States. Now, in connection with the right of way, there has, of course, to be considered the subject of bridges to centinue the rights of way across the proposed canal, and this bill proposes to take care of those, also. There is one other subject in which the localities are able to materially cooperate with the United States, and that is by provision for areas for the disposition of the dredged material. In most cases this becomes a matter of filling in swamp lands, and while the bill does not contemplate the purchase of swamp lands for that purpose, in my report I shall include as one of the requirements that the localities furnish areas for the disposal of material for constructing a G-foot canal, as originally projected, and for enlarging that to a 10-foot canal, a subject on which I am not allowed to report at the present time, and for the disposal of material in course of maintenance of this canal for a period of 20 years.

After several gentlemen had spoken in reference to the subject, Maj. Dent requested that the matter of disposal areas be considered. Supervisors Smith, of Hempstead, and Cocks, of Oyster Bay, both stated that in their opinion their respective towns would furnish facilities for the disposition of dredged material. It was also stated that other towns along the route would cooperate in this matter.

Maj. Dent, continuing, said:

Before it is possible that any work can be done on this canal, the matter will have to pass through the hands of Congress, and for that reason a considerable delay in months from now is absolutely to be expected. The usual form to follow under these conditions is that money shall not become available until these rights of way and lands for other purposes have been set aside. I do not think that the matter is in sufficiently definite form to get definite relinquishments at the present time.

On January 30, 1915, Maj. Dent made a favorable report on the subject, with the proviso that the State of New York lend its cooperation as outlined in the proposed bill. This report has not yet been acted upon by the board, the matter being held in abeyance pending the action of the State authorities.

In pursuance of an act passed by the legislature soon after this hearing, calling upon the State engineer to investigate and report his findings, Mr. Williams, the State engineer, reported

as follows:

as follows:

I believe that a majority of the people of the south shore of Long Island desire the construction of this canal; that if properly constructed and of the proper dimensions such a canal would form a continuation of the Barge Canal system and would afford an opportunity for commercial development on certain sections of Long Island; that it would form part of the national intercoastal system, the completion of which is to be much desired; that I have been informed and believe that such a canal would serve as part of the national-defense scheme; that as to the cost of the necessary right of way, including the erection of necessary structures, bridges, etc., I have formed no opinion for the reason set forth above, but that if the cost of the right of way does not prove to be excessive and the United States Government will build a channel of a size and type conforming to Barge Canal dimensions, it would seem to me as though there might be an opportunity to add to the commercial waterways of the State an important link.

Respectfully submitted.

Respectfully submitted.

FRANK M. WILLIAMS, State Engineer and Surveyor.

In the session of 1916 a bill, having the indorsement of Senator Thompson and Assemblymen McWhinney, Murphy, and Talmage, was introduced appropriating \$995,000 "to provide for securing lands and rights of way for a proposed canal and appurtenances, to be constructed by the Federal Government on Long Island, and for aiding such construction, and making an appropriation therefor."

This bill is still being considered by the legislature.

ROUTE.

The route of the canal is naturally divided into four sections, as follows:

First, The Far Rockaway section, which traverses the uplands and salt marshes between Jamaica Bay and Hempstead Bay.

Second. The Hempstead and South Oyster Bay section. Third. The Great South Bay section, traversing the open bay between Babylon and Bellport.

Fourth. The Moriches-Shinnecock section, extending from

Bellport to Peconic Bay.

Section No. 1 offers the most difficulties and will be the most expensive to construct, as it cuts the high ridge of ground which connects Far Rockaway with the main part of the Island, upon which are many costly buildings. Any route across this strip will cost in the purchase of the right of way and the construction of the necessary bridges four or five times as much as the excavation work of the canal.

Estimates of cost:

Section No. 1: Land Excavation 4 bridges	\$600, 000 297, 000 290, 000	
Section No. 2: Excavation (main canal) Excavation (laterals)	153, 000 115, 000	\$1, 187, 000
Section No. 3, nominal. Section No. : Excavation	202, 000	268, 000
2 bridgesPeconic jetties	100, 000 62, 000	364, 000
Contingencies		75, 000 1, 894, 000

To make this canal of the greatest benefit and prevent a monopoly of terminal facilities a lateral canal from the trunk line should be constructed to every village, terminating in a large basin, along which warehouses and landings should be built for public use.

Maj. Dent, in support of his recommendation, summarized the

arguments in favor of the canal as follows:

(a) Due to its proximity to New York City and to its location on the water, the shores of Great South Bay are being rapidly developed for residential use.

(b) In the course of this development large quantities of building materials, paving materials, etc., are required, and such materials can be most economically transported by water.

(c) In the larger communities there is an opportunity for the establishment of depots for the supply of coal, ice, etc., which can also

be most economically transported by water. This traffic should rapidly increase as the communities grow in size.

(d) In the process of the development of water-front property channels from the bay inland can be dredged by local interests. A through channel connecting these side channels is an essential feature before they can be fully utilized.

(e) Barge traffic between New York City and the waters to be reached by the proposed channel is under present conditions subject to many interruptions, due to weather conditions, and is regarded as extra hazardous. The proposed channel would make such traffic safe at all times.

(f) The proposed channel will provide a right of way for a channel of larger dimensions should the necessity for such larger dimensions become apparent. The cost of such right of way will be less if it is obtained now than if its purchase is delayed.

(g) A constant increase in traffic is to be expected.

I regret that time does not permit me to review the many arguments advanced by gentlemen of influence, whose opinions are worthy of the most serious consideration. I will, however, give the views of three experts on shipping matters.

J. H. Williams, of the Williams Line of towboats, New York:

There is not the slightest doubt but what such a canal would be of great benefit to all shipping interests.

E. Platt Stratton, noted shipping expert:

The value of deep inland waterways has been demonstrated in France, Germany, and recently in England on the Manchester Canal. There is more to be gained by such systems in this country on account of the greater length of haul to and about our seaboard.

Mr. B. W. King, of the King's Transportation & Supply Co.,

There is no question about the practicability or the profitable business and benefits that would be derived on the realization of such a water route on the south side and east end of Long Island.

The project has been indorsed by and received the hearty support of the New York Waterways Association, town and county boards, chambers of commerce, boards of trade, civic organizations, public officials, and men of standing from all sections of Long Island, to whom sincere thanks are due from all of us who are interested in this important enterprise. To show the urgent need of the canal let me cite the growth of Long Island in recent years and that of the State from the first census.

The old Erie Canal, conceived by Gov. Clinton, as originally built had a depth of 3½ feet and cost about \$7,000,000. Its successful operation gave a great impetus to inland transportation, and in 1850 the canals of New York were carrying 81 per cent of all traffic handled. Before 1837 the canal, which by that time had cost \$10,000,000, had earned \$15,000,000 in tolls. Then with the development and rapid extension of the railroads the tide turned, and by 1875 water-bound traffic had fallen to 34 per cent, and by 1908 to less than 4 per cent. In 1862 the canal was enlarged both in depth and width. In 1905 the State of New York began the construction of the Erie Barge Canal, the route in the main following the old Erie Canal from Buffalo to Albany. This canal will have a depth of 12 feet and will cost with terminals about \$137,000,000. A project which is receiving favorable consideration is the proposed canal on American soil connecting lakes Ontario and Erie.

The Great "Soo" Canal of Michigan has been improved from

time to time to meet the demands of the ever increasing traffic. Taken in conjunction with the Canadian canal at the same falls, the tonnage of this short canal is the largest of any artificial waterway in the world.

The Philippine Question.

EXTENSION OF REMARKS

HON. THOMAS D. SCHALL, OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 22, 1916.

Mr. SCHALL. Mr. Speaker, our position in regard to holding the Philippines is a good deal like the fellow who got hold of the bear. It is as dangerous to let go as it is to hang on.

Before we set the Filipinos adrift to paddle their own canoes they must be capable of self-government. A grant of independence will not convey the power of self-government. Let us move slowly and prevent. It will be hard to restore after the harm has been done. The natives are not in the clutches of a rapaclous, nonresident, taxing government, tyrannous and oppressive. The question is whether they shall remain a little longer in their The question is whether they shall remain a little longer in their progress to ultimate independence under the tutelage of the United States, protected from elements of destruction within and from enemies without. If a general knowledge of the people, the country, and the conditions in the Philippines prevailed, there would not be such differences of opinion as to our duties there. Ex-President Taft; Dean Worcester, late secretary of the interior of the Philippine Islands; Prof. Thomas Blaney, of Texas, commissioned by the Review of Reviews to go to the islands and get a true report; and perhaps best informed of all, Representative Miller, of Minnesota, all agree that there is a thoughtful and serious mass of natives to be considered there is a thoughtful and serious mass of natives to be considered who do not want independence. This viewpoint the Filipinos are reticent of delivering, except to those they trust, for should the "politicos" prevail such a statement would put a period to their usefulness. They would be marked for slaughter in the day when the bolo usurps the constitution. They hold that revolution will have forthere the statement would be the United Statement. lution will burst forth once the strong hand of the United States is withdrawn. The mutual hatred of native tribes and Filipinos will flame into deadly strife, and near at hand is an avid power which will not be slow to avail itself of their extremity. Already, at the suggestion that the islands be set free, there is a state of industrial panic.

We hardly regard the Mexicans as ready for self-government. But there is even greater diversity from the top to the bottom of humanity in the Philippine Islands. From the Fili-pino to the countless wild tribes, each with his dialect, unintelligible to the others, there is such animosity that they can not be called a people nor appealed to as a whole. Though the Filipinos are in the majority, they can not rule this inchoate mass. At the one extreme is the lowest depth of savageryhead-hunting, belief in witchcraft, charms, and miracle healers. These mistake liberty for license, and imagine it some magic thing that will relieve them of the burden of taxes and jail and work. Prof. Blaney says that the big error of this present administration has been "a nervous zeal to please the native Filipino, with a resultant Filipinizing of the service that is for meaching in the had affect."

Filipino, with a resultant Filipinizing of the service that is far-reaching in its bad effect."

A native Filipino, who dare not give his name for fear of the lively bolo, says that the legacy of the United States to the Philippine Islands will be remembered as "a splendid educational system, an excellent judicial system, and an all-pervading system of petty Tammany politics, which the present administration has fostered, and which, unfortunately, will far outshadow the other two." In the years of tenure there gathered in the islands man who underground how to handle these spoiled shadow the other two." In the years of tenure there gathered in the islands men who understood how to handle these spoiled children of nature. Straightway the new administration, spurred by their wonderful policy of economy, on which they expected to make a record, and forgetting that other equally important word efficiency, proceeded to undo what had been accomplished. Instead of standing back of those officials who were in touch with the situation, on one pretext or another they caused the "resignation" of these men, supplanting them with new material. These new officials were out of sympathy with the natives. They did not realize that it was necessary to stand firm for the hard-won principles worked out by their predecessors. They lacked the imagination to perceive that office changing with change of administration was an incomprehensible thing to the native mind. They tried to excuse their mistakes by vilifying the preceding administration. The native

mind was further bewildered. They lost respect entirely as a result of our methods being held up to scorn.

Realizing that they were losing their hold on the people, though evading the true solution, they sought to remedy their blunders by currying favor with the natives. Matters degenerated into a mad chase for a job. The presidency of the university fell to a Filipino "to whom no other position was open and whose friends insisted that he be taken care of." The work done by these native appointees is the best evidence of their unfitness for self-government. Since Capt. Sleeper "resigned" from the land office and it was consigned to the hands of a Filipino the work slumped. Another had to be appointed. The result was no better. Since the bureau of agriculture is in the hands of Filipinos there has been an increase of rinderpest. In the native assembly they seem to be too busy assigning jobs

to do any lawmaking.

In the Outlook of September 15 ex-President Taft is quoted as saying that "the Filipinos would not be ready for self-govern-ment for two generations of American-educated children. And self-government must come before independence can be dreamed about." Who should know better than our ex-President and former governor of the islands? He speaks of his own knowledge that they have no self-control, and counsels the danger of giving them self-government too quickly. The percentage of illiteracy in the islands is 79.8 per cent. And those are counted as literate who can manage a few words in their own dialect. The native press stands as a veil between the people—such of them as can read—and the United States Government, and deliberately falsifies facts and misrepresents our motives. tries to stir up the people to rebel by holding up as oppressive the efforts of the United States to maintain sanitation and establish schools. It hinders the Government in its efforts to stamp out cattle plague and human contagious diseases

Our duty is to teach the Filipinos how to prosper. We must give them right standards of living. They must be given time to assimilate our methods, our efficiency, our administration. We must maintain justice for them and keep their nationality until it is able to stand by its own strength. We must not limit ship shall terminate on such and such a day. We must leave a self-sustaining people or else not assume responsibility for their actions when we shall have no power to say what they shall do. our power for use by saying that, whether or not our guardian-

If we turned these islands loose and did not guarantee their independence, England would not stand for it. We could never take on us the responsibility of guaranteeing their independence. From the island of Formosa, the southmost of the Japanese group, once China-owned, now owned by Japan, the Philippine Islands stretch is a broken line eleven hundred miles across the front of China. The trans-Pacific trade routes must pass through these islands to reach Hongkong, Singapore, New Zealand, Sumatra, and Australia. Trade coming from Australia to the English ports of Hongkong and Singapore is routed through these islands. All trade from the Suez Canal to Australia and the trans-Pacific coasts passes through these islands. Should we turn them loose without guaranteeing their

independence, they would fall into the hands of Japan, and to this England would never consent.

When Spain in the treaty of Paris ceded to the United States the "archipelago known as the Philippine Islands" there was no mention of the length of our tenure, no question of the termination of our obligation. We agreed to guard the property rights of all, whether native or foreign; we promised to preserve religious freedom. We supplanted the Spanish Government, such as it was, and it is our business to maintain government in its stead, not abandon the place to anarchy. On the basis of our assumption many firms invested capital which otherwise they would not have invested. People from this country took up their residence on the islands. Our own citizens have a right to have their property safeguarded. We are under moral obligations to remain on this account if for no other—a perpetual, not a short-lived obligation. To turn back now would be criminal. It is not American to give up, to quit because a thing is difficult. To do so would make of our name and fame a byword, place our statesmanship in jeopardy, and leave our wards in danger, and I am therefore opposed to "scuttling."

The Services Rendered in War to the Nation by the Mother and the Wife.

EXTENSION OF REMARKS

HON. LOUIS C. CRAMTON,

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 22, 1916.

Mr. CRAMTON. Mr. Speaker, under the leave granted me, I desire to extend my remarks in the RECORD by inserting the following correspondence between the Pennsylvania Association Opposed to Woman Suffrage and myself relative to suffrage and the part borne by women in time of war:

PENNSYLVANIA ASSOCIATION OPPOSED TO WOMAN SUFFRAGE, Philadelphia, Pa., January 28, 1916.

Hon. Louis C. Cramton, House of Representatives, Washington, D. C.

DEAR SIR: Maj. Gen. Leonard Wood is reported in the Philadelphia newspapers as having testified before the Senate Committee on Mili-tary Affairs that with the right of suffrage goes an obligation for mili-

tary Affairs that with the right of suiriage goes in domestic that you tary service.

This is the contention of all antisuffragists, and we trust that you will not vote for the woman suffrage amendment to the Constitution, which would divide our electorate into responsible and irresponsible voters—the males being responsible for national defense on the battle-field and the females necessarily exempted from such service.

Those who in the last analysis must risk their lives for their country should be solely responsible for its policies.

Respectfully, yours.

D. W. Brock, President.

Mrs. Horace Brock,

President Pennsylvania Association

Opposed to Woman Suffrage,

1126 South Penn Square, Philadelphia, Pa.

Mr Dear Madam: I am in receipt of yours of the 28th instant referring to the statement of Gen. Wood to the effect that with the right of suffrage goes an obligation for military service. I note especially your conclusion:

"Those who in the last analysis must risk their lives for their country should be solely responsible for its policies."

From this statement, much to my surprise, I find that you draw the conclusion that suffrage should not be extended to women. I am willing to place my support of suffrage for women on the very clause in your letter which I have quoted. Using your own test, I do not deem women irresponsible voters. Waiving those classes of women who "risk their lives for their country" at other times than in military crisis, as in childbirth, I do not agree with you that women piay no part in the salvation of their country in times of military crisis. Waiving even those cases of heroism on the part of women on every European battlefield, I insist that the woman at home who sends forth to war her husband and her sons has, in yielding up to the service of her country the all of her happiness, perhaps robbing all her future of everything but mourning, and who remains at home and keeps running the machinery of civilization, her day filled with dread of what the news from the front may bring or with tears for the news that has come, such play their parts in the welfare of their Nation just as truly as the men that go into line of battle. Lincoln thought so, and penned his eloquent tribute to the services of womanhood in his world-famous letter to Mrs. Bixby, extending to that poor woman the thanks of the Republic her five sons died to save. What man has sacrificed more for his country?

Sometimes men smaller than Lincoln have seemed loathe to appreciate the sacrifices of womanhood, but it is to me a distinct shock that he inevitable trend toward universal suffrage can be s

The Late Representative Witherspoon.

MEMORIAL ADDRESS

OF

HON. CLAUDE KITCHIN, OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, March 5, 1916.

The House had under consideration the following resolutions (H.

The House had under consideration the following resolutions (H. Res. 157):

"Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. Samuel A. Witherspoon, late a Member of this House from the State of Mississippil.

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate. "Resolved, That the Clerk send a copy of these resolution to the family of the deceased."

Mr. KITCHIN. Mr. Speaker, it is a genuine pleasure to join with his friends in honoring to-day the memory of a man whom I admired and loved. I knew our deceased friend perhaps as well as any man in Congress did. During his entire service as a member of Congress we lived at the same hotel. I knew him in his private room; I knew him in the assembly room, in the smoking room of the hotel, where every night a half dozen or more Members would gather for a social exchange of views. I knew him in the cloakroom, in his office, in my office; I knew him on the floor of the House. I have been a Member now 15 years, and presume that during that time I have served with from fifteen hundred to two thousand Members of Congress. Of all that number Sam Witherspoon stands out in my mind as one of the rare, marked men. I am going to say here when he is dead what I have often said while he was living, that in many respects he was the superior of any man with whom I WITHERSPOON had more courage have ever served in Congress. of conviction than any Member whom I have known. His conscience and judgment blazed and marked out for him the path of duty, and down that path he would walk more steadfastly and with less swerving than any man with whom I have served. He had the most analytical mind of any man in the His perceptions and conceptions of the different principles involved in every question were clearer, he could set out the lines of demarcation with more definiteness and accuracy than any man with whom I have served. Witherspoon was a man of unusual ability. He was a thinker, a profound thinker, a student, a diligent student. He was a philosopher, wise and interesting; he was a logician, unexcelled. He measured up fully to the standard of statesman.

As has been indicated here, he sometimes voted quite differently from many of his colleagues, from myself, from his colleagues from Mississippi. Often, in the evenings in the smoking room of the hotel, I would hear gentlemen discussing with him why he voted this way or that way. While I have sometimes thought he voted wrong, I have never heard anyone give as good reason why he was wrong as Witherspoon could why he was right. I have discussed his vote with him sometimes, and had to quietly confess to myself that he had a better reason for voting the way he did than I could give why he should have voted the other way. He had as little of the demagogue in him as any man I ever knew-he had none at all; he had no hypocrisy about him; he was not a courtier; he was not a bellboy of any man's opinions; he took orders from no man. His convictions were his own, and they were formed only after the most mature study and thought. He never jumped to conclusions. He never asked with respect to a single vote he cast in this House, Will it hurt or help me in my district? He never asked with respect to any measure, Will it pay? The only question he ever asked was, Is it right? And when WITHERSPOON was convinced that it was right, he so stood, and he so voted, absolutely regardless of consequences.

He was not an orator in the sophomorical sense, but he was a real orator, because he always had something to say, and he knew how to say it; he always enlightened the audience; he was always master of any subject he undertook to discuss. He never discussed any proposition upon this floor when he did not have the undivided attention of every man, Republican or Democrat, because everyone knew that Witherspoon had some-

thing to say worth hearing.

He made no play at rhetoric; he made no attempt at cloquent periods. He held attention and asked for judgment, not by appeals to prejudice, or passion, or sentiment, but by appeals to the cold, calm reason of those who heard him. And

yet I heard him make the most eloquent, the most delightful, the most charming 10-minute speech that I ever heard on this floor. He spoke in favor of an appropriation of \$30,000 for the repair and preservation of 136 old flags captured by the American Navy in conflicts with other navies. There some opposition. Witherspoon, standing just where Mr. Harrison now sits-I was sitting by him-seemingly without effort or premeditation, and altogether impromptu, delivered that most charming speech, which we, who were fortunate enough to hear it, will never forget. When he concluded practically every man on the floor on both sides of the aisle gathered about him, with words and handshakes of congratulations and commendations. For several minutes he was given an ovation. Some minutes afterwards, when the enthusiasm of the House had subsided and other business had begun, the ex-Speaker of the House, Mr. Cannon, of Illinois, came over here and, looking around, came up to me and said, "I am looking for that Mississippi man who made that speech a moment ago. I just want to shake his hand, for that was one of the most delightful talks I ever heard in this House." I told Mr. Cannon that he had gone out into the Speaker's lobby. Mr. Cannon walked out to the lobby. I saw him shaking hands and congratulating WITHERSPOON. He told me afterwards that Mr. Cannon's seeking him out to congratulate him and what he said to him was the greatest compliment he had ever had paid him since he had been a Member of the House.

I was with Judge Witherspoon a part of the time almost every day while he was in Washington. I never heard him utter one sentiment or one word that could not with propriety be uttered in the presence of a lady. He was a clean and pure man. He never had a low thought or a little sentiment; all of his thoughts and all of his sentiments were big and high and ennobling. He was a Christian gentleman, clean in word, in thought, in conduct. Some of us will live a long time, and some of you will be Members of the House many years, but it will be a long time before you will see again in this House or elsewhere his like. He was a typical man, a typical Representative, of character, of integrity, of courage, of sincerity, of ability, of patriotism. He possessed every virtue of a well-rounded gentle-

man, Christian, and statesman.

My friends, it has been a real, genuine pleasure to speak these simple words of tribute to a man whose friendship, confidence, and esteem I shall always be happy to know I possessed. Hail, once more, SAM WITHERSPOON, my friend, good and true, loved and admired, and farewell forever 'till we meet again on the farther shore

The Late Representative Witherspoon.

MEMORIAL ADDRESS

HON. OSCAR CALLAWAY, OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, March 5, 1916.

The House had under consideration the following resolutions (H. Res. 157):
"Resolved, That the business of the House be now suspended that opportunity may be given for tribute to the memory of Hon. Samuel A. Witherstoon, late a Member of this House from the State of Mississipation.

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate.
"Resolved, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. CALLAWAY. Mr. Speaker, I have tried upon various occasions since I was notified that we were going to have these memorial services to-day to write something respecting our departed friend, but I have not yet been able to do it. I may never be able to do it. On one other occasion I was unable to write anything about a deceased friend. He had stood by me and supported my ideals and policies from the time I was a boy. He died while I was away from home. I tried to write a letter to his wife, but I was never able to do it. And so it has been with respect to Judge WITHERSPOON.

When I first met him in the Sixty-second Congress I was not so very much impressed by his general appearance and bearing. The only noticeable and striking thing about him on first meeting was the frankness, openness, sincerity, and tenderness that gleamed in his eyes. There was nothing in his general bearing

or appearance other than the beauty of expression in his face that made you realize on first meeting that you were in the presence of one of the purest, noblest, tenderest, and sweetest characters that it is ever the good fortune of any mortal to

come in contact with in this life.

He was as pure as a woman and as tender as a child. This was one side of this admirable and pure man; but there was another side which, when I knew him better, when I had seen him tried, and had worked with him, aroused in me the supremest admiration. He was fixed in his principles as the eternal hills, never questioning what the advantages or disadvantages of his position were to him politically; he was unyielding as adamant when a fundamental question was at stake, fearless as the immortal Cæsar in his stand for the right. He demonstrated conclusively his deathless faith in the ultimate triumph of right and justice by his unwavering stand on public questions, regardless of how unpopular that stand might seem to be. The question with him was always, "How will this matter affect the future of this Republic and the welfare of the masses, who ask nothing but the usufruct of their endeavor, who eat their bread in the sweat of their faces?

He was a real man. What he said was what he thought, what he acted were his convictions. He had neither sympathy nor tolerance for sham, hypocrisy, and make-believe. The patent saying of so many Representatives, "What the people do not know will hurt them not," aroused him to righteous indignation. He believed in a democratic, representative form of government, responsive to the will and interests of the masses, but he knew the checks and balances provided in the Constitution of the United States by the forefathers of this Republic were necessary to prevent hasty and ill-considered action in times of upheaval or excitement. He stood an impregnable barrier against popular prejudice or passion when it threatened

to overturn reason or dethrone justice.

He knew human nature, he knew how subject it was to in-fluence by interest, how it might be swayed by passions, how it might be blinded by prejudices and momentarily swept from its moorings and carried far afield by false statements of facts, false logic, and shortsightedness; but he had an abiding faith in the common judgment and the common conscience, and he knew the masses of mankind would act right, if left free and unhampered in their actions, when the facts were all in and the conscience

appealed to

He was truly a great man with a mind that saw through the sham and seeming of things—the real things themselves—with a soul that understood. Never in the history of our country was the need so urgent for men fearless as he was fearless, learned as he was learned, logical as he was logical, and forceful as he was forceful, to hold back the onrushing hordes seeking to break down the principles of this democratic Republic by taking advantage of the feverish state of the public mind and persuading the people unwittingly to accept a policy of militarism before all the facts can be obtained and considered. By the clamor of the press, by the organized effort of the powerful pecuniary interests, by the excitement and fright of many in the nervous, uncertain, and feverish state of the public mind, the average Representative is driven like chaff before the wind to accept what temporarily seems to be the popular demand, lest he pay with his political life for his devotion to the best interests of his country before the settled and sober judgment can be obtained. SAMUEL A. Witherspoon was not made of such stuff. He accepted public office with its responsibilities and administered it conscious of the rectitude of his own purpose without regard to the political consequences to himself. Public office to him did not mean emoluments spelled with capitals, it meant opportunity to serve humanity. Emoluments of office and the honors attendant were incidents, the purpose for which he held office was to serve his country and his kind. He knew there was only one way a Representative could render such service and that was by knowing the questions he was called to pass upon and then exercising his honest judgment in passing on them. He knew he could not exercise the judgment of someone else, he knew he could not exercise the popular judgment of his district except as reflected in himself.

The public could not know the subject as he knew it. It had neither the time nor the opportunity to understand it that he had; it had not put the thought to it that he had. He repre-sented their sentiments as in his heart of hearts he felt they ought to be, and he trusted they would see the correctness of his position as he saw it when he had argued it out with them. He was not awed by place and power. Fame did not appeal to him; he recognized that it was but the ephemeral dew on character's everlasting gold. He followed no man because that man was much esteemed by his fellows. The attitude on public questions of the man high up influenced him as much as-and no more than-the attitude of the humblest citizen. His mind was guided by the reasons given by each so far as their reasons appealed to his judgment; so far was he influenced and no

He knew his own motives and his own purposes, and he did not allow himself to be stopped short of the basic facts. He had perfect confidence in his ability to reason to right conclusions, and when he had reached a final judgment he had faith in it and held to it with a tenacity and fixedness of purpose

rarely met with.

Mr. Speaker, many here have spoken of the splendid culture of this great soul, of his ability as a lawyer, of the unerring logic of his mind and the eloquence of his tongue. show if I can the brightest jewel in his crown of jewels-the key to his real character, to the steadfastness of it, the unpretentiousness of it. In my judgment that key is revealed in these words from a speech delivered May 4, 1914, on the death of Elzie C. Fisher, who lost his life at Vera Cruz the 23d of April, 1914:

Mr. Speaker, learning and intellect and eloquence and courage do not make the noblest acts of human beings. It is self-sacrifice that raises the act of a man to its highest point. He who gives his life for his country makes the nearest approach to the fulfillment of the divine command, "Thou shalt love thy neighbor as thyself"; and the death of this ordinary seaman, by its very contrast with the magnitude of his sacrifice, emphasizes and increases the nobility of his act.

"Honor and shame from no condition rise; Act well your part, there all the honor lies,"

It is self-sacrifice that raises the act of a man to its highest point. An average man never does that which raises his acts to the highest point. It takes greater than an average man to do that. Judge Witherspoon's whole service in the American Congress evidenced his willingness and readiness to sacrifice self for the public weal. What a rare man was he! The greatest character I have ever known.

The Late Representative Brown, of West Virginia.

MEMORIAL ADDRESS

HON. JAMES S. DAVENPORT.

OF OKLAHOMA.

IN THE HOUSE OF REPRESENTATIVES,

Sunday, April 16, 1916.

The House had under consideration House resolution 204, as follows: "Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. William G. Brown, Jr., late a Member of this House from the State of West

G. Brown, Jr., late a Member of this House from the State of West Virginia.

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the

"Resolved, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. DAVENPORT. Mr. Speaker, we have assembled to-day to pay our last respects and to do honor to the memory of a comrade who has fallen on the battle field of life's uncertain and great struggle; we mourn his loss and cherish his memory; we delight and love the recollection of his kindness and friendship; and we honor the high character, the sterling courage, and the purity of purpose which were so eminently portrayed in the life of our departed colleague. I ask no higher privilege and find no sweeter duty than the right to express my pleasant remembrance of our departed colleague, William G. Brown, Jr. He was born in Virginia, in that section of the State that afterwards became a part of West Virginia, and grew to manhood in the county of his birth.

When he reached the years of maturity he selected as his profession and life's calling, the law, and in his chosen profession rose to a high standing amongst the members of the bar of his native State. Not only was he a lawyer of renown and prominence, but he became a first-class, successful business man, and so demeaned himself among the people with whom he transacted business that they imposed implicit confidence in his business ability, honesty, and integrity that he was honored by his people to represent them in this Hall, where he made them a useful and honest representative to the hour of

WILLIAM G. BROWN, Jr., or JUNIOR BROWN, as he was known by his friends, came to the House at the beginning of the extra session of the Sixty-second Congress. It was my pleasure to meet him shortly after the session began. We lived in the same hotel the greater part of the time, and I was with him in the lobby and around the hotel, where I had the opportunity to see his real character and the true nature of the man. He was kind, affable, polite, and gentle, having for everyone a pleasant smile, a kind word, and a gentle and happy greeting. In the committee room, in the House, or in private life, he possessed self-control, and exhibited that kindly spirit which made him a lovable companion, a wise coenselor, and a dangerous antagonist. His friends loved him, and his acquaintances sought his company.

It was also my pleasure to be with him and his wife for eight weeks last year, on a trip to the Hawaiian Islands, and while on that trip I had the opportunity to see him, the real man, and study his character. Many happy hours we spent together, and it was on that trip that I saw the true nature and lovable spirit of our departed colleague displayed. He was always ready and willing to accede to the wishes of others and make any self-sacrifice that would tend to make others happy. I learned him as he was, and having learned him as I did, I learned to love him. He was a devoted husband and father, always ready and willing to grant the request of his dear wife and children and to do all in his power to make them enjoy themselves to the fullest extent.

In the House he was universally liked, and in every relation of life he was honored and respected. He was in the truest sense a patriot, loving his country and its institutions, and devoted to the happiness and welfare of all classes of its people. He extended friendship to the needy and never oppressed anyone. He was broad-minded and incapable of a meanness, and filled with love and kindness for his neighbor and friend. Truly, such a life as he lived did not end when death came. Let us believe that it was the beginning of a higher and broader existence in the world beyond, and that the earthly activities of our departed colleague and friend were but the prelude to a life of greater beauty, of grander aspirations, and of nobler achievements. He died at his post of duty; his character was strong; his standard lofty. He left us the good example of his life, and to his family he left the heritage of a good name.

When Earth's last picture is painted.
And the tubes are twisted and dried.
When the oldest colors have faded,
And the youngest critic has died.
We shall rest, and, faith, we shall need it—
Lie down for an zeon or two;
Till the Master of all good workmen
Shall set us to work anew.
And only the Master shall praise us,
And no one shall work for money.
And no one shall work for money.
And no one shall work for fame;
But each for the joy of the working,
And each in his separate star
Shall draw the Thing as he sees it
For the God of Things as They are!

The Great Need of the Farming Industry in New York.

EXTENSION OF REMARKS

HON. GEORGE W. FAIRCHILD,

OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 12, 1916.

Mr. FAIRCHILD. Mr. Speaker, it is especially important at this time to give attention to the agricultural interests of New York. The State is so well known for its manufactures that the importance of its agriculture is often overlooked. But the agricultural resources of the State are very great, and our farmers have been devoting their best skill and labor to securing a good yield of agricultural products. The circumstances of the present time emphasize the importance of abundant production in all fields of industry. It is therefore our duty to consider carefully the requirements of such production; and as agriculture is the fundamental industry, especial considera-

tion must be given to its condition and its needs.

It is because agriculture is the fundamental industry that we can not do better for our State than by aiding to advance the welfare of our farmers. It is our farmers who by their constant labor and care bring forth from the soil the products whereby all of our people must live. It is in this way that the beginnings of prosperity and wealth are obtained. Whatever we do to advance the welfare of our farmers is really done, therefore, for all the people.

GREATER PRODUCTION POSSIBLE AND DESIRABLE.

I have for a long time been convinced that a greater production from agriculture in our State could readily be obtained. I have been impressed by the fact that we have acres upon acres of good land which is either not used at al. or not fully used. It is clear that all such land should be used and made to produce as much as possible, for the product would be so much additional wealth for the farmers and the rest of the people of the State, It would be in every way to our advantage if we could produce here at home more of the farm products which our population consumes and send more of such products to the people of neighboring States.

It is true of agriculture, as it is true of manufactures, mining, and, in fact, every productive industry, that the great thing to be obtained is more abundant production. This is the great object to be achieved, for in this is the secret of real prosperity, and it is well worth our best efforts to obtain it. We all know that everyone engaged in agriculture or manufactures is always anxious to produce as much as possible. Everyone, farmers as well as others, will cheerfully produce all they can from the resources at hand, provided they can dispose of the product to some advantage; that is, at a price which will include a living margin of profit over the cost of production.

HOW GREATER PRODUCTION MUST BE MAINTAINED.

Whether or not they can so dispose of the product depends altogether on the state of the market for it. No matter how efficiently the work of production may have been carried on—no matter how much painstaking labor and skill may have been applied to it—if the article produced does not find a satisfactory market, the return for all the labor and skill will be loss instead of gain. It is for this reason that the market is by far the most important factor in agriculture or any other productive industry; and when we are working to increase or maintain our production, we must first be sure of our market.

If the market be satisfactory, the sale of the product yields a sufficient return to more than meet the cost of production, and this encourages and provides for further production. If the market be not sufficient for such return, further production of the article is discouraged and prevented. A satisfactory market is therefore the necessary condition which we must have

in order to continue and increase production.

The condition of the market is made up from the condition of the country and from the circumstances of the trading carried on between our country and foreign countries. And the condition of our own country, whether prosperous or the reverse, depends chiefly on the condition of its international trade. Our producers, therefore, are really dependent for the requirements of their production upon the state of our trade with foreign countries. Any market can at any given time absorb just about so much of such and such a product at such and such a price. And so if the markets of our country are receiving from foreign countries extraordinary quantities of commodities which can be produced abroad more cheaply than our people can produce the same or similar commodities here, the sale of our own products in our home market is necessarily affected thereby, either through a less quantity going at a satisfactory price or the same quantity at a less satisfactory price, or through both of these ways, as is usually the case.

THE ONLY WAY TO MAINTAIN A FAIR MARKET.

It is clear that the condition of our home market and the preservation of our opportunities to dispose of our products there at prices which will enable us to live and thrive and go on producing, is of direct personal interest to every farmer, and to every farmer's wife and child, just as it is to every man engaged in any other productive industry and to those dependent on him. How can fair conditions in the home market be maintained? There is only one way. This is the way which has been used and found successful during most of our history as a Nation. Ever since the foundation of our National Government duties imposed on articles brought to our shores from foreign countries have been used as the best means of providing revenue for the Government and at the same time equalizing as may be needed the conditions of production at home and abroad, so that our own people might have a fair chance to sell the products of their labor in their own country, which means a fair chance for them to live and prosper, and by continued production be useful to their fellow countrymen.

Under this common-sense policy, which has been indorsed and used by a greater part of the civilized world—by all nations, in fact, which have at home large productive resources—our people have lived and prospered greatly, and whenever the conditions maintained by this policy have been interfered with the people have ceased to prosper and have fallen into distress. Such has been the unvarying experience of our

people. So that if anything is ever proven by sound reason and long experience, the success of this policy and our need of it have been proven.

A MATTER OF NATIONAL POLICY.

The matter of having or not having satisfactory duties on imports is a national affair and therefore depends necessarily upon the attitude of our National Government toward this subject. And to-day, as for a great many years past, the great issue or division between the two great political parties which are con-tending for control has to do with this matter of import duties. The Republican Party has from the beginning of its history steadfastly maintained the principle and practice of sufficient duties on imports to give our own producers a reasonable advantage in their own home market, in order to encourage and enable them to keep on producing in large and increasing quantity. This is the protective tariff. The Republican Party recognizes that it is for the real and lasting welfare of all our people that we should produce as much as possible fron. our own resources, and that as a people and a Nation we are prosperous and strong in proportion to such production of our own and our consequent independence of foreign production. The Democratic Party, on the contrary, has throughout its history opposed this policy and proceeded to upset it whenever it could get the opportunity.

THE EXISTING DEMOCRATIC TARIFF.

It happened that the Democratic Party came into power in March, 1913. True to its habit, it lost no time in upsetting the Republican protective tariff system and substituting its Democratic low tariff, more extreme than before. This Democratic tariff became a law on October 3, 1913. This tariff made a large number of manufactured articles absolutely free of duty and made heavy reductions of duties on such articles. And it was even more severe with agricultural products than it was with manufactured articles, for it at once made practically all the important farm products entirely free of duty. This tariff is so radically low with respect to farm products that it amounts to a special attack upon the tariff rates which had protected the farming industry. In fact, such was the deliberate intention of this Democratic tariff, for the Democratic Party had maintained that the people of the cities had been suffering from the "high cost of living," and that the remedy for this was to invite abundant importation of foreign farm products and thereby reduce the prices of American farm products.

This Democratic tariff continues to be the law of the land and must necessarily remain so until the Republican tariff policy can be restored through the success of the Republican Party. Because this Democratic tariff still prevails and if not soon repealed will again in normal times control our lives and industries, it is of especial importance to farmers to consider carefully the effects which it produced upon their industry and which continued and grew worse until an unexpected and unprecedented event, far beyond the calculation of any of our political leaders, nullified these effects for the time being, and practically suspended the operation of this tariff law.

THE EFFECT OF THE GREAT WAR.

This event is, of course, the great European war, which broke upon the world with startling suddenness about the 1st of August, 1914. At once the former conditions of international trade were upset. The imports from European and other countries which had been crowding into our markets under the advantages to them of our Democratic tariff were very largely cut off. The warring nations ceased to be exporters and became, as far as they could be, importers of foodstuffs. Other countries in various parts of the world, which had been pouring foodstuffs in great quantities into the American market, found that Europe had become, for the time being, the real market, and extraordinary quantities began promptly to be shipped there, including a great deal from the United States. In a word, the market conditions in the United States, in foodstuffs as in other commodities, were practically reversed by the war from the situation which had been made by the Democratic tariff.

This substantial reversal of our market conditions has made. as is well known, a very considerable change for the time being in the industrial and commercial situation among us, and in the agricultural conditions. All of this illustrates the economic truth about which I am speaking, that our prosperity or the absence of it depends upon the condition of our markets, and that this condition in turn depends upon the conditions affect-The essence of this truth is that as production is encouraged we prosper and progress, and that as production is discouraged we suffer adversity:

ditions which the war has brought us. They seek now to attribute the improvement in the condition of the country in 1915 over that in 1914 to something in connection with the Demo-This forlorn attempt is made in the hope of winning to their cause some measure of the public confidence which is now wholly lost to it. But the situation is so clear that there can be no misunderstanding of it by the people. latest official reports of the National Government under the Democratic administration will be found, when closely studied. to give explicit evidence of the real situation. All the imports of commodities entering the United States are under the jurisdiction of the Treasury Department at Washington and the official figures relating to them are collected and reported by the Division of Customs in that department. The official report by the chief of this division for the fiscal year 1915, after stating the great decreases in the amount of merchandise imported and in the collection of duties therefrom, tonnage taxes, and so forth, states that "all of these decreases are directly attributed to the European war."

THE EFFECT OF THE DEMOCRATIC POLICY.

As everyone knows, the effect of the Democratic policy is found in the conditions which prevailed under that policy before the war broke out. It is well worth our while to give some attention at this time to these conditions, rather than to dwell with too much satisfaction upon the temporary market condi-tions now prevailing as an incident of the deplorable war. For, as I have stated, this Democratic policy is still written into our There it is now. The war has not set aside or altered this policy of our Government. It has merely interrupted its effects for the time being. With the approach of peace between the nations now at war—and peace is inevitable before long— the war conditions and their effects must end. In fact, peace may come at almost any moment and just as unexpectedly as the war came. And then the conditions under the Democratic policy must come upon us again, unless we can change this policy in the meantime. In fact, with peace restored and the Democratic policy in effect, the market conditions in this country will be worse than they were just before the war began, for reasons which I shall refer to further on.

There were just 10 months which elapsed between the enactment of the Democratic tariff at the beginning of October, 1913, and the outbreak of the war at the beginning of August, 1914, It is in these 10 months that the Democratic policy was tested and found so destructive to the welfare of the country. months are so recent and so fresh in our memories that everyone can recall the great industrial and commercial depression that then prevailed. Discontent was general. There is an abundance of authoritative and official evidence of the extent of the calamity. I find a good example of such evidence in the latest annual report of the Secretary of the Treasury. This is certainly unquestioned Democratic authority. In this report the Secretary refers with approval to a statement concerning business conditions which was submitted to him at his request by one of the greatest commercial agencies in the country. In their statement this agency—R. G. Dun & Co., of New York writing in November, 1915, says:

It seems strange, in viewing the present financial, commercial, and industrial situation, to recall the fact that little more than a year ago the United States was passing through nearly every possible experience of adversity except that of complete disaster.

SELF-PRESERVATION UNDER THE AMERICAN STANDARD OF LIVING.

I refer to these unfortunate conditions which preceded the war, not in any spirit of partisanship, but solely in order to consider fairly the situation which will confront us upon the return of peace in Europe. The situation of our farmers and other producers in this imminent event, while it has been brought about by a purely partisan policy forced upon the country by the Democratic Party, is not really a partisan matter to any producer or to the average man. It is strictly a matter of livelihood, a matter of bread and butter, of the support and com-fort of those dependent on us. It is really nothing more than a simple matter of business, in the best sense of that term. Certainly when we are face to face with a matter vitally affecting the occupation of our lives—a purely economic matter—we ought to be able to lay partisanship aside and consider the matter upon the fundamental principles of self-preservation.

It is such consideration which is especially needed by the farmers, in their own interest, because of the tremendous effect upon the domestic market for farm products which the Democratic tariff was exerting when the war broke out. time when this tariff went into effect, a great increase in our imports began, and there was an actual decrease in our ex-Strange to say, the Democratic Party, through its administration at Washington, is endeavoring to take credit to itself in various public announcements for this reversal of market conver the world. They came not only from countries near us, such as Canada, but from the great areas of South America. They came also from the very remote countries—from Siberia and Australia and from China. From practically every country in the world where great quantities of farm products are produced from cheap lands and by the use of cheap labor such products came abundantly into our American market.

And as these products came in they necessarily displaced and depreciated similar products grown on American soil. All of these foreign farm products which came in could have been produced from our own soil. But our own farmers who raise such products form a great part of our American civilization. They labor and produce under the higher standard of living which is characteristic of American life, and hence all that they produce must come from more highly priced lands and more highly paid labor than are found in the countries whose products are so freely admitted under the Democratic policy into the American farmers' home market. In order to convey some idea of the great extent to which the foreign farm products were occupying the American market at the time the war began, I will give in round numbers the figures, taken from the official reports, concerning a few of the more important items of agricultural production in New York.

LAIRY PRODUCTS.

Our State ranks high in dairy farming. To this important branch of agriculture our farmers have devoted much skill and attention and very considerable resources. The Democratic tariff treated these products very severely. On butter the Republican tariff had maintained a duty of 6 cents per pound. The Democratic tariff made a 60 per cent reduction, putting down the rate to only 2½ cents per pound. The statistics of the imports under this very low rate show how our American butter market was thereby thrown wide open to the butter from Canada, Siberia, Argentina, and other countries.

As I have stated, the Democratic tariff had been in effect just about 10 months before the war broke out; that is, from October 3, 1913, to July 31, 1914. During the corresponding 10 months one year prior to this time—that is, from October 1, 1912, to July 31, 1913—during which time the Republican tariff was in effect, the imports of butter and substitutes therefor amounted to 1,000,000 pounds and were valued at \$272,000, But during the 10 months when the Democratic tariff was in effect—the corresponding 10 months one year later—the imports in question grew to as much as 7,685,000 pounds, which were valued at \$1,700,000. The increase in these imports was not less than 608 per cent, and this was the result of a reduction of 60 per cent in the rate of duty. It was during the winter months of 1913–14 that the greater part of this increase took place, and our domestic butter market was being seriously affected by the prospect of even greater imports j.... before the war began.

On cheese also the Democratic tariff made a great reduction—equivalent to about 40 per cent—in the rate of duty. As a result the imports under the low rate, in the first 10 months of that rate, increased by 12,500,000 pounds. It was the war, and nothing but the war, which prevented an even greater increase.

The Republican tariff dealt fairly with milk and cream also. The Republican rate on cream was 5 cents per gallon. The Democratic tariff removed all of this and made cream absolutely free of duty. The result of this free trade in cream in the 10 Democratic months before the war was an increase in imports of 482,000 gallons.

Milk was also made entirely free of duty—both fresh and condensed milk. This action was followed by a tremendous increase in imports. During the 10 months from October, 1912, to July, 1913, under the Republican tariff, the imports of fresh and condensed milk were \$134,000 in value; but during the corresponding 10 months one year afterwards, with the Democratic free-trade policy prevailing in these items, the imports grew to the amount of \$1,264,000 in value.

As a consequence of the great importations of condensed milk, our American manufacturers of this article were obliged to lower the prices at which they were buying milk for condensation from American dairymen. And still greater importations of condensed milk were being expected by the trade, for additional arrangements for such imports were then being made. As to fresh milk, Canada was sending it into the United States in tank cars at the time the war began. Everything will be ready for the resumption of such imports of farm products—and in greater quantities—when the war is ended. This is the prospect which the American dairymen have to face.

POTATOES.

The State of New York is greatly interested in potatoes. Here again the Democratic tariff applied severe treatment. The Republican duty on potatoes was 25 cents per bushel, Under the Democratic tariff potatoes are absolutely free of duty when imported from countries which impose no duties on potatoes imported from us, and otherwise the rate of duty is only 10 cents per bushel. This is, for the most part, a free-trade tariff in potatoes. At the time the war began the effects of it were only beginning to be felt.

During a great deal of the time in which the Democratic tariff was effective before the war the Agricultural Department at Washington was obliged to maintain a quarantine against potato diseases. By this large quantities of potatoes intended for the American market were kept away. Nevertheless, during the 10 months of the Democratic tariff no less than 3,630,000 bushels of potatoes were imported, and these were valued at \$1,752,000. Most of these great imports were free of duty. Under the corresponding 10 months of Republican tariff a year before the potato imports were only 314,000 bushels, valued at \$283,000. Under conditions of peace and in the absence of quarantine it is certain that very many millions of bushels of foreign potatoes will be brought into our home market.

EGGS.

Every farmer in New York realizes the importance of eggs and poultry in the economy of farm life, and the wives and daughters on the farms, who give so much attention to the poultry, are keenly interested in getting a fair return for their work. The Democratic tariff took away all of the Republican duty of 5 cents per dozen on eggs and established free trade in this article. Then enormous importations began, and in the 10 months under this free trade, prior to the war, 6,000,000 dozens of foreign eggs were brought into our home market. This was an increase of five times the quantity imported in the corresponding 10 months one year before under the Republican rate.

It is worthy of note that of these new importations a great many thousands of dozens came from the great Asiatic countries—China and Japan. In these countries the wages of labor are extremely low, farm laborers receiving only about 42 cents a week, and hence their farm products, which these Asiatic people raise in great abundance by intensive cultivation, are sold at remarkably low prices. Moreover, the Chinese have developed great skill in preserving eggs, and because of this and because of the improved systems of refrigeration which have been in recent years installed on ocean steamers, eggs and other farm products can readily be brought to our shores from the most distant countries. The official reports which are made by our consuls in foreign countries state that during the fiscal year which ended June 30, 1914, and which included nine months of Democratic free trade in eggs, there were shipped from the port of Shanghai alone, in China, not less than 3,600,000 dozen Chinese eggs, which went to the western seaboard of the United States.

In recent months, and since the war began, such shipments of Chinese eggs to this country have been much less than expected. This is because the war has made a very great and unusual demand for eggs in Europe and also because many vessels have been withdrawn from the service of merchant traffic and engaged in war traffic. During the winter of 1914-15 a ship from China. passed through the Panama Canal and went to New York City with a large cargo of frozen Chinese eggs. In a time of peace these eggs would have been landed in the New York market, but because of the war they were sent on for consumption in Europe. I noticed, however, that during the same season there was landed at San Francisco a great cargo of such Chinese eggs, notwithstanding the war. Our people in New York must always remember that, since the opening of the Panama Canal, eggs or almost any farm product can be sent directly from China and Japan to ports all along the Atlantic seaboard. It has been announced that eggs from China, so shipped, can be laid down in the port of New York at an average cost of only 12 cents per

VEGETABLES AND FRUITS.

In every part of our State our farmers are devoting their best efforts to the production of vegetables for the home markets in the neighboring cities. They are producing in great abundance a large variety of vegetables and fruits, and as a result of this great production canning and preserving establishments have been built up in many parts of the State. Wherever such industries are established they are of advantage to our own farmers by extending the market for their products and they also create additional opportunities for the employment of our labor and bring additional wealth into the State to the benefit of all our people.

Through these useful industries a great many fruits and vegetables, such as our State by its soil resources is very well fitted to produce, are taken into all parts of the country. It is therefore of especial importance to New York farmers that these industries be encouraged and developed. There are similar re-

sources in a great many of the other States which can be and should be developed further, and all of this would be of great benefit to the whole American people. But such development depends upon having the market to take the products. The development of such production all over the country would be just as great a service to the consumers as to the producers, for what the consumers most need is a much greater production.

So great are the resources in our own country for such increased production that there is no good reason for encouraging the importation of foreign vegetables and fruits, whether fresh or canned. It is well known that under the protective tariff a really great production of fruits has been developed in this country. Formerly we produced here merely such fruits as apples, peaches, pears, quinces, and berries, but imported practically all other fruits. But at the present time we produce also great quantities of oranges, lemons, and grapefruit, from great areas which have been developed to the production of such fruit in Florida, California, and elsewhere, under the Republican It is universally admitted that this development has added to the wealth and prosperity of the whole country.

But when the Democratic tariff was framed vegetables were subjected to very severe reductions in the rates of duty, and on fruits such as are raised by New York and other northern farmers even more severe treatment was inflicted. This is true both of fruits in their natural condition and when prepared or preserved. Under the Republican tariff, which was set aside by the Democratic Party in 1913, apples, peaches, pears, plums, quinces, and cherries, in their natural condition, were dutiable, when imported, at the rate of 25 cents per bushel. This rate was cut down by the Democratic tariff to only 10 cents per bushel, which was a reduction of 60 per cent. Edible berries in their natural condition paid duty under the Republican tariff at the rate of 1 cent per quart. The Democratic tariff cut this rate to only one-half cent per quart. On edible fruits and berries, when prepared or preserved, the Republican rate was 2 cents per pound. The Democratic tariff cut this down to only 1 cent per

The reductions in the rates on vegetables were, in general, almost as severe, and, as they affect the New York farmers, were practically just as drastic as the reductions on fruits. On vegetables generally, in their natural state, the Democratic tariff made a reduction of 40 per cent in the duties, and almost as much on prepared and preserved vegetables. The celery and asparagus which our State produces in such excellence and abundance are included in this classification. The reduction on beans was 40 per cent of the former rate, and on peas 60 per On other favorite products of our State unusually heavy reductions were made. For example, on onions the reduction was 50 per cent. These heavy reductions have injured New York farmers more than those of most of the other States, because we are so close to the competition of Bermuda, as well as Canada. From this fertile island of Bermuda, where crops are raised practically all the year round, and which is only about 48 hours' sail from our shores, there comes in normal times a very serious competition with our farmers in their home market, particularly in onions and potatoes.

SECTIONAL FAVORITISM.

The farm products which I have mentioned are the most important ones in which our farmers are interested, and the situation with respect to them is typical of the situation with all farm products. If I were to discuss hay or sheep or buckwheat, for example, it would merely be, in substance, a repetition of what I have already said about other products. The items which I have spoken of are sufficient to show how the industry of the farmers has been treated by the Democratic tariff and the situa-tion which must be faced by the farmers when the settlement of the war brings again to our shores the products to which this tariff has opened our doors.

While referring to these farm products, however, there is a feature of the Democratic tariff which the people of New York, in common with the people of all the Northern States, in justice to themselves, ought to keep in mind. This feature is the spirit of sectional favoritism which the Democratic Party displayed in its tariff work. The Democratic Party is controlled for the most part, as we know, by Representatives in Congress from the Southern States. These men, although they profess the theory of free trade as a principle to be applied generally, nevertheless took good care in framing their tariff that their own agricultural constituents should not be hurt as severely as the farmers of the Northern States.

The grains such as are raised by the northern farmers were either made entirely free of duty or cut down to extremely low rates, but rice, a great product of southern farmers, was permitted to continue to enjoy a protective duty. Potatoes, which northern farmers produce, are practically on the free list, while

peanuts, which the farmers of Virginia, North Carolina, and other Southern States produce, have the benefit of a protective The wool produced by northern farmers is on the free list, but the hair of the Angora goat, which is produced in Texas, has a protective duty. The fruits of the Northern States were made to suffer heavy reductions of duty, but the lemons and oranges produced in Florida are allowed a substantial protective duty.

THE ADVANTAGES OF GENERAL PROSPERITY.

Our northern farmers are not narrow in their views, and are not dissatisfied that southern farmers enjoy the benefits of protective duties such as they themselves do not now enjoy. Our farmers realize that any development of industry in this country is a benefit to all, and that this is true whether the industry be agricultural or manufacturing. But they realize also that the policy of the southern Democrats in Congress was a narrow one in not giving just consideration to the needs of agriculture in all sections, and that it could also be criticized as unfair to the sections discriminated against.

Our northern farmers are also of more liberal views in recognizing that the continued development of manufacturing enterprises and general business activities is necessary for the welfare of the farmers and of the public at large. It is well understood by our farmers that such industries produce genuine wealth, just as the farming industry does, and that all wealth so produced adds to the working capital of our people and is used to produce more and more wealth in different lines. Experience has repeatedly shown to our farmers that, in the absence of general industrial activity and the general prosperity that goes with it, the consumption of farm products declines, with decline of prices and smaller returns to the farmers for all their work and their expenditures.

THE FARMERS NEEDLESSLY INJURED.

The excuse given by the Democratic Party for destroying the protective tariff of the farmers was that this would be to the advantage of the consumers of farm products in the cities, by bringing in great quantities of such products from foreign countries, whereby prices would be reduced for the consumers in the cities. But the complete failure of this plan was admitted long before the war began. The prices of food products to the consumers were not reduced and the consumers were not benefited at all by the Democratic policy. There was no reduction of the cost of living in the cities, and Democratic leaders finally had to admit that no such reduction was to be expected from their policy. The real effect of their policy was to injure the home market of the American farmers, but it turned out that what was lost by the farmers had apparently gone to the advantage of speculators and middlemen only and had disappeared in the course of the distribution of farm products before they reached the consumers.

THE REPUBLICAN POLICY HELPS BOTH PRODUCERS AND CONSUMERS.

Long before the war began this situation was clearly recog-The real way by which to benefit the consumers and improve the condition of living in the cities was well known to the best economists who had studied agricultural affairs and to the Republican leaders. This way is to increase the production and improve the distribution of our farm products. Nothing else can really help the consumers. It is folly to suppose that they can be genuinely benefited by a discouragement of our American producers. The truth is that all the difficulties incident to the cost of living in the cities can readily be overcome by improved methods of distribution. Such methods were being successfully developed by associations of farmers and otherwise under the Republican policy of encouraging home production. Methods of cheaper and better distribution to the consumers can not be applied successfully to floods of foreign importations, but they can be applied with entire success to the steady, gradual growth of domestic production.

The Republican policy is and always has been to encourage production, and it is a proper and necessary part of this policy to give especial attention to securing better facilities of distribution. The most important field for this work is that of agriculture, the original and basic source of wealth. A great deal can be done in the way of constructive work in this field, all of which will be of great permanent advantage to all, and our leaders in Republican statesmanship must make such work a principal feature of their program. It is just as important for the people of the cities to cooperate in this as for the people in the country, and I am confident that there will be an awakening of interest in the cities in response to such work.

OUR GREAT RESOURCES.

We have abundant natural resources in our own State and in . the other States, which are calling for better development. It has for a long time been recognized that the great need of agriculture in the United States is greater and better production from our own soil. The Department of Agriculture of the United States has often called attention to this need, and under Democratic as well as under Republican management. In fact, in a recent report the present Secretary of Agriculture at Washington, a Democrat, declared that, according to his estimate, less than 40 per cent of our total arable land is reasonably well cultivated and that less than 12 per cent is yielding fairly full returns. He also said:

There is no ground for thinking that we have yet approximated the limit of our output from the soil. As a matter of fact, we have just begun to attack the problem; we have not even reached the end of the pioneering stage, and have only in a few localities developed conditions where reasonably full returns are secured.

This existing need of proper agricultural development is in all sections, North, South, East, and West. Many people in the cities suppose that it is only in some of the great Western States like North Dakota and Montana that there are considerable quantities of good farming land awaiting development. Of course there are great areas of such land in these and other Western States, but it is also true that in a number of the older States of the East there are many thousands of acres of fertile land which are not being properly used or normally developed. This fact is openly proclaimed by some of our best authorities in agriculture. In a recent official report the commissioner of agriculture in the State of Maine said:

There are thousands of acres of land located near our cities and yielding only light crops that might be made to produce abundant and profitable harvests of fruits, vegetables, grains, and potatoes.

One of the greatest agricultural authorities in the country is Prof. Liberty H. Balley, who was formerly director of our New York State College of Agriculture. He said in a recent

Speaking broadly, we are now in the rough and crude stage of our agricultural development, but the situation will develop only as it pays and satisfies persons to live in the country. * * New York is undeveloped agriculturally. The same is true of New England and Pennsylvania and the great regions southward.

NEW YORK'S REQUIREMENTS.

We in New York are naturally anxious to do our whole duty to ourselves and our country by producing from our own land all that it really ought to produce. We believe that a much larger part of the food products consumed in New York cities can be and should be produced on New York farms. By so doing unnecessary transportation and unnecessary waste will be saved, and there will be more original wealth created in New York, the benefits of which will flow through and remain in New York, adding to the prosperity of all the people of New York.

This can be done with satisfactory conditions in the home markets for New York's agricultural products-that is, in the neighboring cities in the State and in adjoining States. The right sort of a home market is the fundamental requirement of such home development of agriculture. Such a development will be to the advantage of all our towns and cities, for it means more abundant and better food products. Such development is also dependent upon the industrial conditions in our towns and cities, for only as such conditions are prosperous can the workers in the cities take the abundant farm production.

Thus the two great divisions of useful industry-agriculture and manufactures-must prosper and progress together. Our recent experience, like every other experience, shows that in order to have real welfare for one we must have it also for the When manufacturing industry is depressed, factories closed down or on part time, wages reduced, many men out of work, the local markets for farm products are seriously in-But when factories are working on full time and paying good wages, new factories being started and additional workers employed, and merchants doing good business, then there is an active and continuous demand for plenty of farm products and at good prices. In fact it is only at such times that a really satisfactory market is found for such products as celery and asparagus, peaches and other fine fruits, and certain other products which are not strictly necessities but refinements and luxuries. All the city people should remember also that with more and better farm products raised within easy distance of their local markets there is created not only an addition to their food supply, but also an increased power among the farmers to buy the goods manufactured in the cities. For these reasons both the farmers and the city people are interested, as the brother of one family, in maintaining and increasing the production both of agriculture and of manufactures,

MAINTAINING THE FERTILITY OF THE SOIL.

The fertility of our soil must be constantly maintained. To this end it is necessary to emphasize the fact that as many cattle as possible should be kept in New York. Those who are

skilled in agriculture know that no artificial fertilizers can really take the place of cattle. If farming is to be really profitable there must be a sufficient number of cattle on the farms. For this reason, among others, the agricultural welfare of the State positively requires the prosperity of our dairy farming. The injury which the Democratic tariff has inflicted on our dairy farming, and which I have already referred to, has hurt not only the production of milk, cream, butter, and cheese, but also all other agricultural production.

MAKING FARM LIFE MORE ATTRACTIVE.

Too many young people have left the farms for the cities. By so doing they give up a most important productive work, in which they are needed, and add to the intense competition among those who are seeking employment in the cities. young people leave the farms because farm life seems to them often unattractive. It is important for the general welfare that farm life should be made just as attractive and com-fortable as possible. The conditions of life on the farms fortable as possible. The conditions of life on the farms should be improved by every possible improvement that can be afforded, by better roads and improved methods of transportation and communication, by more conveniences and luxuries in the homes, and by the opportunity to achieve greater prosperity.

This last-mentioned factor is the key to all the rest and is the first requirement for such improved farm conditions. Farmers know how to provide themselves with what is needed to make the farm life all that it ought to be, but it is impossible for them to make progress in this direction unless farming is actually and steadily profitable. It is therefore for greater prosperity that the farmers should strive. It is simply their duty to themselves and their children to demand much more than a bare living as a result of their hard work.

THE COMPETITION THAT WILL COME AFTER THE WAR,

In all their work and plans to maintain and increase their prosperity their most serious concern must be with reference to the invasion of our home market by foreign farm products after the conclusion of the war. They have seen how serious the competition of such foreign products was under the Democratic tariff before the war began, and how it was nothing but the war which interrupted the foreign flood and gave them temporarily the command of their home market. They know that the war must end before very long, and that the flood of foreign farm products entering our markets will then be resumed.

But it is not yet fully realized either by the farmers or the general public that because of the economic conditions which the war has brought there are likely to be, if the Democratic tariff is allowed to continue, much greater imports of farm products than before the war and a competition in our markets which will be a more serious affair for our farmers than they have ever experienced or contemplated. The warring nations of Europe have suffered enormous losses, financially and industrially. Manufacturing and commercial industries have been swept away throughout a great part of There have been unprecedented losses of capital and general impoverishment.

This is the situation there while the war lasts, but as soon as peace comes all the energy and resources of these peoples and their Governments will be strenuously devoted to building up their industry and commerce again. Extraordinary efforts will be made to secure a greatly increased production of wealth. To do so they will have to utilize to the utmost the original source of wealth-agriculture. It is the agricultural industry, as we know, that lies at the base of all others, and this industry has not been and can not be destroyed by the war. All the agricultural land is there as before and just as fertile as before, and it will all be put to the fullest possible use with the most improved tools, for it will be very largely through the sale of the products of agriculture that new capital will be obtained for the needed reestablishment of other industries.

POREIGN AGRICULTURAL PRODUCTION INCREASED.

While the war has been going on there has been practically no decline in the volume of agricultural production in the nations at war. In fact, there has been and is a forced agricultural production. Everything possible has been done by the Governments and the people of Europe to increase the yield of food products. In Germany, Austria-Hungary, and other countries every bit of available land has been forced into cultivation, and every assistance that intense labor, great skill, and advanced science can afford has been pressed into service to wrest the greatest possible yield from the soil.

It is very easy to keep on with such work after it has been once started, and the necessities of these peoples will drive them to keep on with it. They will then have an extraordinary output of farm products, and hence will not be buyers of such products to the same extent as before, but, on the contrary, sellers to a much greater extent than ever before. Moreover, in all the great agricultural countries throughout the world where vast areas of cheap land abound—those countries from which came into our American market before the war the great quantities of farm products which I have referred to-in all these countries there has been an extraordinary increase in agricultural production, stimulated by the great war demands and the war prices. The same stimulation has produced similar increases in this country, and the natural tendency in all places is to keep on with such increased yield when it has once been obtained unless and until there is a positive check by falling prices.

WHAT AMERICAN FARMERS MUST DO.

This is the serious situation which American farmers will face when the war is over. What are they to do? It is not really safe for them to rest content with the present war conditions, for the end of the war may come at any moment, and then surplus farm products from everywhere will be rushing into the markets of the United States. The Democratic tariff policy, as long as it lasts, will be inviting such imports by providing free and easy entry. American farmers will have no advantage in their home market against such extraordinary and forced competition. They will have to see their own products displaced and depreciated to a greater extent than ever before in their lives. The result will be a most unfortunate discouragement of production in New York and throughout the United States,

Our manufacturing industries will be in the same situation as soon as the industries of Europe can be started up again. It is stated that preparations are even now being made for a program by certain of the European powers whereby the products of agriculture and manufactures will be poured into the American market, no matter what the prices may be. The supreme neces-sity of these foreign powers is a great extension of their foreign commerce; the profits whereof are to repair their economic ex-

This danger to us is so serious and so certain to come that the Democratic administration at Washington is obliged to officially recognize it. The Democratic Secretary of Commerce speaks of it in his latest annual report and has mentioned it in several public addresses. He admits that this "dumping," as it is called, threatens us with disastrous results, and he promises to try to do what he can to prevent it through investigations by our consuls abroad. But he is not willing or permitted by the administration to favor a correction of our present turiff laws, and it is common knowledge that this is the only way of prevention.

THE REPUBLICAN POLICY NEEDED.

Nothing but sufficient rates of tariff can prevent such "dumping" and protect our farmers and other producers. Long experience has proven this. It has also proven that the Democratic Party will never give us such tariff rates, but will tear down and destroy the Republican tariff rates whenever it is given power to do so. The Democratic Party can not give up its freetrade theory. Even in the present admitted emergency it can not lay aside this destructive idea. It is therefore necessary for producers—the farmers and all others—to save themselves from the emergency and to set aside the Democratic Party and its unfortunate policy. The farmers of New York will serve themselves and their families, their State and its progress, and the farmers and all the people the country over by adding their power to the movement now progressing so favorably in the other States for the reestablishment of the Republican protective tariff policy, in order that all our productive industry may flourish and all our people be comfortable and satisfied.

Migratory Bird Law.

EXTENSION OF REMARKS

HON. L. C. DYER. OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 24, 1916.

Mr. DYER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following:

To the Members of the honorable United States Senate and House of Representatives, assembled at Washington, D. C.

HONORABLE SIRS: Your petitioners respectfully ask that we be given consideration regarding an injustice being perpetrated against us by the Burean of Biological Survey, Department of Agriculture, under certain regulations provided for in the migatory bird law.

We have appealed in vain to that bureau, but are unable to obtain redress affording "equal and exact justice to ail, with special privileges to none," which we, therefore, request your honorable body to accord to us, through the power of Congress.

When this law was enacted provision was made therein for the very relief which we are new compelled to ask you to insist upon in the name of justice.

Seasons for hunting migratory birds have been so arranged by the Biological Survey officials that hunters residing in the Middle Western States are authorized to hunt migratory game only during such seasons of the year when the migrants are practically absent, and they prohibit us from hunting them during the seasons when they are present in our locality.

The migratory fowl begin passing over our States, going southward from their breeding zone in the North, according to variable climatic conditions.

The flight begins about September 1 to October 1 and is spread out until the period of our autumn storms, but the dry fail weather affords no attraction, and they do not tarry with us, but continue on to the south.

In the winter months they are farther south.

south.

In the winter months they are farther south
They begin their return migration to the North in February, and
periodically arrive here, and again depart southward upon alternate
warm or cold weather changes of a few days' duration at a time.
This process continues during February and March.
Our ideal period for hunting waterfowl begins February 1 and ends
March. 31, but at this opportune time we are legally prohibited from
hunting.

hunting.

The season established by the Biological Survey for us to hunt these waterfowl is during our dry fall months, but when our wet season arrives, and likewise the waterfowl, we are denied the hunting privilege.

In the dry fall season the large watercourses afford the main resort for the fowl, but the biological officials prohibit hunting on the upper Mississippt River (above Memphis, Tenn.), but at no period do they prohibit hunting upon the Mississippt River by citizens residing farther south.

we have offered positive physical evidence, contained in the dead bodies of the ducks, to prove that they are not even approximating the breeding or nesting period in February and March, nor do they at any other season breed in this section of the Nation.

Our facts about climatic conditions, topography of the country, and natural habits of the birds are not disputed, and yet we receive no redress.

natural habits of the birds are not disputed, and yet we receive no redress.

The Bilogoical officials even admit that they have made no scientific collection of evidence such as we have done, nor have they accepted our offer to furnish them dead specimens of the fowls killed each week for their own investigation and information.

The sole reason given us for not correcting these errors is that should our just claims be recognized it would probably cause a protest by other sections of the Nation, whose residents, they claim, would object to our proper seasons, though presumably satisfied with what the Biological Survey had decreed for the alleged objectors.

There has occurrented a so-called advisory board for consuitation about this subject by the Agricultural Impartment, though we are aware of no congressional authority for the same.

However, the members of this board are not representative of the various sections of the Nation; in fact, 5 of them out of 12 reside in a single Eastern city.

This law has prevailed since 1913, during which time three United

various sections of the Nation; in fact, 5 of them out of 12 reside in a single Eastern city.

This law has prevailed since 1913, during which time three United States district courts have held it to be unconstitutional, and no other court has sustained it. Its constitutionality is now before the United States Supreme Court for final decision.

Large sums of money have been appropriated by Congress for the enforcement of this law, but in numerous instances the Biological Survey has positively refused to prosecute violators.

The law has been flagrantly disregarded, and we offered proof of this statement to those intrusted with its enforcement.

In every instance the issue has been evaded. We have since been informed by one of the administrative officers in the Biological Survey that pending the decision of the United States Supreme Court upon its constitutionality no further cases would be received by the Department of Justice for prosecution.

Notwithstanding this statement, notices have been recently circulated in the daily press by the Department of Agriculture, which announced that "the law would be vigorously enforced."

Our best citizens had hoped that the law would be enforced and that the unjust season would be corrected. This has not been done.

The unruly element has regaled itself in hunting liberties which are alone denied to the better element through its conscience about law observance.

nlone denied to the better element through its conscience about law observance

Their conscience, and not the vigilance of the law officials, is the only restraint produced by this deplorable state of affairs.

We are being deprived of our rights without any compensation on behalf of wild-life conservation.

If the migratory fowl are the property of all of the people of the Nation, the residents of the Middle West are part owners therein, and should be accorded their constitutional rights in its use and enjoyment, without any excuse or subterfuge being offered.

Article IV, section 11, of the United States Constitution declares: "The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States."

All other means having been denied us, we carnestly petition that no further public funds be appropriated for the enforcement of this migratory bird law, and that our Senators and Representatives oppose it in every form and manner, even to its repeal.

Investigations into the transactions of the Bureau of Biological Survey will disclose that, in connection with the administration of this law, there have been many irregularities.

One official, who was in immediate charge of framing the aforesald regulation, has so conducted himself that it was deemed necessary to dismiss him from his high position.

Several officers have cliner been removed or are now under investigation, and one Federal inspector has been indicted for faisifying his expense accounts.

tion, and one Fuderal inspector has been indicted for faisifying his expense accounts.

The latter individual, while under annual salary and expenses as Federal game inspector, also during the same period occupied a position as deputy State game warden in Missouri and received, as salary and expenses, large sums of money, during two years, from the Missouri State game and fish commission.

The letters on file in the Biological Survey, and likewise the replies thereto, will discose correspondence calling attention to this condition over a year ago, but only very recently has it been deemed of sufficient

importance to verify the true state of affairs which caused the Federal indictments.

importance to verify the true state of affairs which caused the Federal indictments.

We respectfully submit our plea for such action as your good judgment and regard for justice deems adequate to meet the conditions named herein.

In support of our position, and to show that the residents of Missouri, Illinois, Iowa, Kansas, and Nebraska are not seeking special privileges, nor are they antagonistic to modern methods of whid-life conservation, we with pride call attention to the fact that our State game laws are the most perfect and restrictive legislation of any of the various States.

The Federal regulations also produce such conditions in conflict with our State laws as to sadly deplete our hunting license revenue necessary to protect not only our native wild game but also protection of our public fishing waters, as well as the nongame, song, and insectivorous birds of great value to our agricultural interests.

The Federal law affords no substitute for this material damage.

Most respectfully submitted

River and Harbor Bill.

EXTENSION OF REMARKS

HON. FRANK D. SCOTT.

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1916.

Mr. SCOTT of Michigan. Mr. Speaker and gentlemen of the House, with the existing method of legislating on river and harbor appropriations I find myself confronted with a somewhat

Having lived in a country abounding in real lakes and rivers I can almost believe an improbable fish story; but in this bill you are endeavoring to pull off a few jokers I am unable to swal-In the bill now before us you propose to spend approximately \$40,000,000. Of this amount, between twenty and thirty million are necessary and meritorious and the balance is not only unnecessary, but flagrantly abuses the purpose of a rivers and harbors bill and completely contaminates the otherwise meritorious projects therein contained. At the present time this country has an almost depleted Treasury. Our citizens are being taxed as never before in a time of peace. Our constant growth means enlarged expenditures. Economy should not only be the watchword, but economy must be the watchword if we are to avoid a higher taxation or the issuance of bonds.

The people of this country fully realize and appreciate the necessarily increasing maintenance cost to fittingly care for our continuing growth. They do not deprecate enormous expenditures on great and needed projects, but they do emphatically resist this, or any other Congress, linking bad and undesirable projects with good and meritorious ones with the hope that the major good in a bill of this kind will carry the evil items with it. About two-thirds of this bill is valuable and worthy of our support, but the other one-third is not only unnecessary but in most part it is bad. That undesirable one-third, by its appropriation, is depriving the valuable two-thirds of the money that should be expended thereon. If we were spending our own money, the attitude of this House would change wonderfully and our generosity would be greatly diminished. Many of the river and harbor projects of Michigan and elsewhere are being deprived of an adequate appropriation in this bill because you have diverted that money to the making of a river where there is no river, and to other similar enterprises.

As an illustration, you insist that the channel of the Trinity River, in Texas, should be deepened for navigation, yet a Representative from that State testifies on the floor of this House that as a boy he was unable to find enough water in that river in which to swim. You are also endeavoring to start a most extensive undertaking on the St. Francis River in opening up its channel, when the testimony before the committee, and before this House, is to the effect that in many, many places you can cross the St. Francis River without getting your feet wet and without even knowing that the river is there. There is further testimony that where the river was there is now a dense growth of vegetation, "and if you should probe down through this

growth you would be apt to find water at a depth of from 18 inches to 10 feet."

There certainly can be no extensive navigation on a river where a boy can not find enough water in which to swim or on a river where you are obliged to dig down 18 inches to 10 feet before you strike water. Think of tying up such projects with the Soo Locks and the St. Marys River, where the commerce annually aggregates from sixty-five to eighty million tons, and yet you will jeopardize and injure such a great governmental enterprise by tying to it such political monstrosities as I have just called to your attention, and you expect to compel me to vote an expenditure of the people's money on such enterprises in order that the rivers and harbors of northern Michigan may receive a part of their just deserts. I refuse to be sandbagged in such a manner. Our projects will stand on their own merits. I do not ask to lean on you in order to carry them through, and I refuse to let you lean on me with your cistern, sink hole, subterranean propositions. If this bill is defeated, the appropriations for the northern Michigan rivers and harbors will still be allowed, even if it is necessary to introduce a general bill, which policy was adopted in the last Congress to avoid the very thing which you are attempting to do in this bill.

No man on this floor is more earnest or sincere in his desires to see the good enterprises in this bill allowed than am I, but I can not, by my vote in favor of this entire measure, become a party to the deception its passage must necessarily convey.

The people are entitled to the maximum benefit from a minimum taxation, and the citizens of the district I represent do not expect me to barter their intelligence and their honor to secure one or two million dollars for our rivers and harbors by voting for the expenditure of upward of \$10,000,000 in this bill on projects so tinged with pork-barrel hypocrisy that the rind is apparent to the naked eye.

Resolution of Chicago Federation of Labor.

EXTENSION OF REMARKS

HON. FRANK BUCHANAN. OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 25, 1916.

Mr. BUCHANAN of Illinois. Mr. Speaker, so much has been said, and well and ably said, against the pernicious propaganda of the war traffickers, who are enthusiastically fanning the flames of war in their attempt to clinch a system of militarism upon the people of this country that it is hardly necessary for me to enter into a further extended discussion of the sophistry upon which their campaign is grounded. Every argument they have propounded in their attempt to rush the people of the United States into a mad rivalry with Europe in military and naval expansion has been met with irrefutable facts. The duplicity of this sordid crew which aims to carry the "war brides" to new and higher levels in Wall Street has been exposed. Theirs has been a campaign of manufactured sentiment, misrepresentation, and deception, but I am happy in the belief that the great masses of our people are becoming awakened to the real motives of this ravenous system, and as an indication of this 'awakening" I desire to have inserted in the RECORD a resolution adopted by the Chicago Federation of Labor, an organization representing 250,000 workingmen.

The resolution is as follows:

Resolution adopted by the Chicago Federation of Labor, Sunday, April 16, 1916.

Whereas the Chicago Tribune, April 4, 1916, and other papers printed the following article:

the following article:

"PREPAREDEESS SPECIAL TRAINS TO VISIT CAPITAL—TWO HUNDRED PATRIOTS OF CHICAGO AND DOWN STATE TO LEAVE ON APRIL 18.

"The newest idea in the better-defense movement is a 'prepare special." The Middle West business interests have adopted the plan of invading Washington with extra trains for personal conferences as a part of the agitation to acquaint Congressmen with the sentiment back home.

"The first train will leave Chicago on April 18 over the Baltimore & Ohio with 200 Chicago and down State patriots. They will have with them a carefully thought out memorial containing a definite statement for a permanent defense policy, which will be presented to the 30 Illinois Representatives. A banquet will be held at the Shorcham Hotel in Washington on April 19 Senator Lewis, as the senior Illinois Senator, will preside, with Samuel M. Hastings, president of the Illinois Manufacturers' Association, representing the business men."

HERE'S THE COMMITTEE.

The committee that is now working on the plan the Illinoisans will pack includes the following: Samuer M. Hastings, K. K. Knapp. La Verne Noyes, Milton J. Foreman, Charles H. Markham, J. S. Miller,

John P. Hopkins, Paul Schulze, Milton S. Florsbeim, A. H. Mulliken, D. E. Felt, G. R. Meyercord, John C. Spry, W. M. Lewis, J. B. Sanborn, Hale Holden, Courad Poppenhusen, Colin C. H. Fyffe, W. Nelson Pelouze, F. W. Upham, Peter Theorer.

OTHER SECTIONS REPRESENTED.

Capt. George B. Blow, of La Salle: H. G. Herget, of Pekin; George D. Tower, of Mendota; and William Butterworth will represent the other sections of the State in the committee.

In addition to originating the invasion method, the Illinois leaders are working on the organizations in othe. States to get up similar expeditions.

AGAINST PREPAREDNESS.

That the labor element, the small business men element, and the farmer element in most of the cities recently visited by President Wilson in his last trip West are against preparedness was the statement of Victor S. Yarros at the City Coub yesterday

Mr. Yarros, as correspondent of the New York Evening Post investigated the subject of "preparedness sentiment" in seven cities after the President's visit to them.

Also on April 13, 1916, the following:

RE NOTE FOR DINNER—ILLINOIS MANUFACTURERS' ASSOCIATION WILL BE HOST OF MEMBERS OF CONGRESS ON APRIL 26.

"PREPARE NOTE FOR DINNER—ILLINOIS MANUFACTURERS' ASSOCIATION

"WASHINGTON, D. C., April 22 (Special).

"Headed by Samuel M. Hastings, president of the Illinois Manufacturers' Association, 260 members of that body will visit Washington on April 26 to give a dinner to the Illinois delegation in Congress and present a pian for preparedness. Announcement of this impressive manner of convincing the delegation that Illinois industrial leaders are warmly in favor of effective preparation against war was made to-day by John M. Glenn, secretary, who is in Washington.

Whereas the "patriots" of the Illinois Manufacturers' Association therein mentioned are nearly all reaping great financial benefits from the present war in Europe by furnishing ammunition and other war materials; also would repeat very large profits if the Senate and House of Representatives of the United States should adopt their so-called "military preparedness" plan;

Whereas the 'patricts, whose ill-gotten profits enable them to hire a special train and arrange for an elaborate dinner in Washington to the Members of the Senate and House of Representatives, represent numerically a very small portion of our community, and do not represent the sentiment of the "people back home" in Chicago; and

Whereas the daily press has not given us any record of any of these self-admitted "patriots" of the Hilnois Manufacturers' Association rushing to the recruiting station and enlisting in the Army or Navy of the United States since Mexican trouble started at Columbus, N. Mex.: Therefore be it

Resolved by the delegates to the Chicago Federation of Labor, representing 250,000 organized workers of the city of Chicago, who are not participating in the profits of war and "military preparedness." but, on the contrary, are suffering from the continued rise in price of the necessities of iffe, and the decline of the purchasing power of their wages and salaries and are therefore unable to hire "special preparedness" and the M

GRESSIONAL RECORD of February 18, 1916, and which we hereby reaffirm; and be it

Further resolved, That the secretary of the Chicago Federation of Labor be instructed to send a copy of this resolution to the Hon. Frank BUCHANAN, requesting him to have same read into the CONGRESSIONAL RECORD; also a copy to be sent to the President of the United States, to each of the Schators and Members of the House of Representatives from Illinois, and to the American Federation of Labor.

Respectfully submitted.

CHICAGO FEDERATION OF LABOR

I also insert an article in the Chicago Day Book of April 18, 1916, a publication that accepts no advertisements, and is read largely by the wageworkers and which speaks the sentiments and ambition of the working masses:

BANQUETING GAME OLD STUFF-CONGRESSMEN TO FEED WITH MANUFAC-

The Illinois delegation in Congress will be guests of 200 members of the Illinois Manutacturers' Association at a banquet in Washington April 26. The manufacturers left Chicago for the Capital Tuesday

April 26. The manufacturers left Chicago for the Capital Tuesday morning.

Once when the writer of this was working on another paper he was put hep to the way this game of banqueting legislators is played.

It happened that the big commercial and manufacturing association of the State was giving a banquet to the 200 members of the legislature. The cost was \$5 for each of the 750 plates—for the eats alone—and there was entertainment by a star of the Chicago Grand Opera Co., the most noted moving picture comedy star of the day, and the stars from many theaters. No drinks were served, because many of the legislators were "dry," but fine booze was passed out free at a special bar in an adjoining room.

The reporter knew that the evening's entertainment was costing the commercial association a little better than \$1,000.

"Why waste so much money?" inquired the reporter of the secretary of the association.

of the association.

The secretary roased with laughter.

"Waste? Waste nothing!" he shouted. "We consider this the best investment of the year. Why, do you know that on either side of every lawmaker at that banquet there sat a member of our association. We have an ax to grind. We want some special legislation that will be a great boon to manufacturers. So we spent \$7,500 on a big feed and fine entertainers to get the legislators in a good humor to listen to us.

"I told you there was an association member on either side of every legislator. Each one of these members was picked for the part. Our legislative experts studied for weeks to find out just how each lawmaker stood on the 'ssues in which we are interested. If he was not favorable to us, we put our best persuaders beside him at the table.

"Don't tell me it was wasting money. We're going to give one every

"Don't tell me it was wasting money. We're going to give one every year."

Before that legislative session was over it passed four of the six bilist the association wanted, and would have passed another, a gigantic street franchise 'feat, but the people got wise and so mad that it dared not put the bill through.

The Illinois Manufacturers' Association is going to send trainloads of members at great cost to Washington to sit beside Illinois Congressmen at the banquet April 26 to interest the Nation's lawmakers in military preparedness measures which big business wants passed.

The passing of preparedness bills will bring more money to the coffers of Illinois manufacturers, who will share in furnishing the extra equipment and ammunition, while it will increase the amount of public guards of private property.

The Manufacturers Association admitted that the purpose of the banquet is "to upress on the Congressmen the fact that the business interests of the Middle West are keenly alive to the necessity of a broad general plan of preparedness."

President Samuel M. Hastings of the association, it is announced, will present a memorial to the memoers of the delegation containing a pian for preparedness which the manufacturers feel should be indorsed.

After summing up the plans of the manufacturers, the Chicago Federation of Labor, at their meeting Sunday, passed resolutions which wound up with:

"Re it resolved by the 250,000 organized working neople of Chicago."

eration of Labor, at their meeting Sunday, passed resolutions which wound up with:

"Be it resolved by the 250,000 organized working people of Chicago who are not profiting by the European war and who will not gain by the 'military and naved preparedness plans,' but, on the contrary, are suffering from a continual rise in prices of the necessities of life, and who are, therefore, unable to hire special trains and pay for dinners, That we condemn this attempt by these self-styled 'patriots' of the Illinois Manufacturers' Association to mislead Congress as to the true sentiment of the people back home."

Susan B. Anthony Amendment.

EXTENSION OF REMARKS

HON. BENJAMIN C. HILLIARD.

OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 24, 1916.

Mr. HILLIARD. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I wish to include the following resolution:

Resolved, That this mass meeting of citizens assembled in Colorado Springs, Colo., in the opera house, April 16, 1916, in response to the appeal of women from nonsuffrage States, calls upon Congress to pass forthwith on to the State legislatures for ratification the Susan B. Anthony amendment, and protest against the action of the Judiciary Committee in unjustly blocking the Susan B. Anthony amendment, and demands an immediate and favorable report of this amendment to the

Resolved also, That copies of this resolution be sent to the President, Speaker Clark, the Senate and House leaders of all parties, and to the two Senators and the Representatives from Colorado; and be it further Resolved, That the chairman of this meeting be empowered in lorwarding copies to request that the resolution be read into the Congressional Record.

A United Service First-Year School as Provided by House Bill 12487.

EXTENSION OF REMARKS

HON. ARTHUR W. OVERMYER. OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 25, 1916.

Mr. OVERMYER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I desire to include an article from the November, 1915, Issue of the Navy, commenting upon an article by Commodore R. G. Denig, United States Navy, retired, which appeared in the New York Sun of October 31, relative to a plan for establishing a united service first-year school to increase the efficiency of the United States Military and United States Naval Academies, as provided in House bill 12487, introduced by myself February 29, 1916, and now pending in the Committee on Military Affairs.

The article follows:

UNITED SERVICE FIRST YEAR SCHOOL.

Commodore R. G. Denig, United States Navy, retired, in an article published in the New York Sun of October 31, makes a valuable and timely pien for the establishment of a united service first year school. He believes that the best solution of the problem of obtaining more trained officers for the Army, Navy, and Marine Corps lies in the immediate inauguration of such a school. He says:

"The creating of other military or naval schools identical in character to West Point and Annapolis is not possible, and the attempt not advisable, for they never could produce officers with the same prestige,"

The Secretary of War, Lindley M. Garrison, in his address to the members of the graduating class at West Point in June said:

"You at the Point here are permeated with traditions of the highest import. The unwritten part of your curriculum is that which puts its best stamp upon you. To be honorable, valorous, truthful, fair, and just in your dealings, and ready to sacrifice all for your country, are the traditions which were handed on to you and will be handed on by you to those who follow."

These same inspiring words apply equally to the Naval Academy.

This preparatory school, with a training course of one year, must be a part of the Military and the Naval Academies, and therefore a strictly military institution commanded by an officer of the Army whose staff and corps of instructors must be composed of Army, Navy, and Marine Copps officers.

The purpose set forth is to give, at the First Year School, the cadets first year of instruction, leaving the last three years of their military and naval education to the parent schools.

He clearly shows that because of the absolute demand for more officers fully trained, that the combined graduates of the two academies should not be less than 760, or 380 from each. The present number, less than 200, is "barely sufficient for our present Army and Navy, and Shamefully inadequate when we consider our needs for even moderate preparedness, to say nothing of our actual necessity for officers in time of war."

preparedness, to say nothing of our actual necessity for omcers in time of war."

A board of Army officers has been appointed to make plans for the enlargement of West Point to a capacity of 1,200 cadets, like provisions are under way at Annapolis.

This is a move in the right direction and clearly in line with the preparatory school proposed by Commodore Denig.

The last annual report of the Superintendent of the Military Academy shows that, under the present system, a corps of cadets of 1,200 would only produce a graduating class of 125. To exceed this number we are convinced that the present high standard of fitness would be lowered. By the introduction of the first-year school the corps of cadets at each academy would be 1,200, but composed of the three upper classes, and the graduating classes of each academy would be 380 trained officers ready for instant duty in all the military branches of the Government, Commodore Denig advocates that these graduates be at once commissioned in the line of the Army, Navy, Marine Corps, Navy Construction Corps, Navy Pay Corps, and the United States Coast Guards, without in any case lessening the number of enlisted men commissioned from the ranks.

He advocates that those graduates for whom no vacancies exist should be returned to civil life, but receive commissions as officers in reserves of the Army and the Navy, with certain conditions not here

reserves of the Army and the Navy, with certain conditions not need set forth.

The lowest ebb of interest in military and naval preparedness was in the eighties. Admiral Mahan speaks of how the Nation sank into a period of "general apathy concerning its military and naval necessities."

period of general apathy concerning its initiary and naval necessities."

A repetition of this he adds "will be a matter not merely of lasting regret but of permanent harm." ("Lessons of the War with Spain."). During that lamentable period excess graduates from the Naval Academy were returned to civil life without commissions.

This practice was not done with any idea of future benefit to the country, but purely through mistaken economy. Mark the unforeseen result. To the lasting honor of the Naval Academy, the patriotism of these graduates was shown by the fact that almost to a man they immediately, upon the outbreak of the War with Spain, volunteered for the Navy and rendered invaluable service throughout the war.

Shall we not take heed of this lesson of loyalty and use it for preparedness?

We would suggest that the value of their training would be greatly enhanced if this commission be given after one year of active service with the flag, affoat or ashore.

The article proposes that the number of appointments each year be 550 for West Point and 544 for Annapolis, examinations in March, and would distribute them as follows:

	Military cadets.	Naval cadets.
President of the United States. Vice President. Each Senator, one to each service. Each Congressman, one to each service. District of Columbia. Porto Rico. Ha vali. Philippine Islands.	10. 2 96 435 1 2 2 2	10 2 96 435 1
Total	550	544

Total cadets to enter preparatory school each June, 1,094. Commenting on this proposition, Commodore Denig says:

"Assuming then that 1,100 cadets will each June enter the preparatory school, we may safely predict that 800 will qualify for the two academies, and that these will be equally divided between military and naval cadets. Thus each June 400, a fully prepared battalion, will proceed under orders to West Point and Annapolis and report for duty as third classmen, with a 95 per cent chance of graduating.

"The two academies will have constantly within their walls a full regiment of cadets, a well-balanced and highly satisfactory condition for organization, studies, and drills, and one that will go far toward meeting the quota of trained officers that the services demand."

The suggestion is supported by sound arguments and aims.
First. To preserve the prestige of our two great academies. Second. To increase the number of graduates from them without lowering one jot their present high standard of efficiency, a standard that would be endangered if the academies be overloaded.

Third. To augment the education of the Army officer by the valuable addition of naval training.

Fourth. To fill the demand for an increased number of graduate officers by retaining the present democratic and equally distributed manner of appointments to cadetships.

Fifth. To make the number of cadets under instruction the same at all times.

The West Pointer, because of the variety of accomplishment required in modern warfare and our possessions beyond the seas, is positively in need of a better knowledge of navigation and seamanship, especially

in the handling of small boats, hydroplanes, mine planters, trans-

ports, etc.

The early association of these young men in the same class, pursuing the same patriotic end, will lead to acquaintances and friendships and eventual understandings that must result in good to all branches of the

the same patriotic end, will lead to acquaintances and friendships and eventual understandings that must result in good to all branches of the service.

West Point began this year with 79 vacancies; the same annoyance exists at Annapolis.

The first-year school will correct this, because of the greater number of yearly appointments and because the weeding-out process will take place there.

To a mixed board of Army and Navy officers this duty should be assigned; they would eliminate political expediency and disregard the ambitions of a locality not provided with the necessary requisites.

The Outlook of November 3, in commenting on the plan, says:

"If such an academy could be located somewhere in the interior of the country, its political value in bringing home to the citizens of the Central States a realization of the needs and worth of the Army and Navy might prove as great as the worth of its military product."

The advantages of combining the early education of Army and Navy officers has often been in the minds of both services, but we have never before seen it so logically and clearly outlined. The distinct conservation of the scheme appeals to us. The great benefit that would result, the rapidity with which it could be put into operation, and the economy of the plan should commend it not only to the services, but to the Nation as well, for a favorable indorsement.

Editorially in the same issue the Navy says:

Editorially in the same issue the Navy says:

UNITED SERVICE FIRST-YEAR SCHOOL.

In another column is an article on the united service first-year school proposed by Commodore R. G. Denig. This plan seems to offer the basis for a logical solution of the difficult problem of largely increasing the output of the Naval and Military Academies without in any way interfering with their present high standard or with their future development. The plan commends itself most strongly to the Navy, and while it will doubtless take further consideration to work it out in detail, the idea, which so far as we know is entirely original with Commodore Denig, seems most valuable. We would only suggest at this time that the proposed increase in the number of appointments, 550 for West Point and 544 for Annapolis, may not be sufficient to meet the requirements of the two services. The Outlook of November 17, commenting upon the article, says:

"This in our opinion is a proposal which deserves wide discussion and the attention of those upon whem rests the responsibility of the solution of our problems of national defense."

We heartily indorse this opinion.
We invite discussion of this plan, particularly from our naval readers. Its potential value is such that it deserves the support and study of all who are able to assist in its perfection.

Agriculture Appropriation Bill.

EXTENSION OF REMARKS

HON. JAMES H. MAYS. OF UTAH.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 22, 1916.

Mr. MAYS. Mr. Speaker, I am in favor of the amendment offered by the gentleman from South Carolina [Mr. Lever] increasing the amount available for "use upon the national forests and public domain in destroying wolves, coyotes, and other animals injurious to agriculture and animal husbandry" from \$125,000 to \$250,000. This increase becomes essential since a point of order against the proviso carrying an item of \$125,000 with which to combat the spread of rabies among such wild animals.

Objections so far made to this provision appear to be based upon the theory that the farmer and stockman, aided by the various States infected, should eradicate these predatory animals. It should be remembered, however, that the Government owns and supervises vast quantities of the territory of these Western States. Forest reserves and public domain together comprise more than half the area of some of the States so severely afflicted. The Government is thus virtually pro-viding a breeding ground and harbor and refuge for these animals which sally forth and destroy the live stock of the citizens. It is clearly the duty of the National Government to do its share in this great campaign of extermination. States and the citizens interested are now and long have been cooperating in

In Utah a bounty of from \$2.50 to \$15 each is provided upon such animals. Many thousand have been exterminated, but the coyote, which we regard as the most perticious offender, is a most wary animal. He is said to be a cross between the gray wolf and the fox, and has the viciousness of the one combined with the cunning of the other. He is possessed of a refentless disposition to kill, to destroy, even far beyond his requirements. I have personally counted as high as 20 lambs from one flock whose throats had been cut by a single coyote. No effort had

been made to devour the flesh of these lambs. The killing was accomplished in response to a cruel, wanton, natural desire to destroy. Why should the farmer and the stock raiser be required to feed the coyotes owned by the General Government and oc-Why should the farmer and the stock raiser be required

cupying these forest reserves and public domain?

It is interesting to observe the cunningness of the coyote. one of these should, when alone, discover a mother sow with a litter of young pigs, he will be too cowardly to attempt to take the pigs from the mother alone, but will secure the assistance of a companion in crime. One will then approach the mother, who gives angry chase. He encourages the pursuit until his companion steals a pig, this process being repeated until the entire litter is destroyed.

One mountain lion will, during a single year, destroy in value many times the bounty offered for his destruction. I have seen in the mountain lair of a family of these beasts evidence that a score of deer had been slain and devoured during the preceding year. Old hunters of the Rocky Mountain region will tell you that these lions destroy many times the number of deer slain by

all the hunters.

The farmer who leases these public lands for his stock has the right to know that the stock will not be destroyed by the animals harbored and protected by the Government.

The losses to live stock, in many instances, absorb all the

profit, in some cases utterly ruin the stockman.

The gentlemen who so vigorously oppose such appropriation, who for the most part reside in the great eastern cities, should realize that this unnatural waste of our meat supply must be borne by the consumer ultimately. The producer may be the direct and immediate sufferer but the dwellers in the great cities will bear their share of the losses these predatory animals inflict upon our meat supply. From this there is no escape. The total annual loss is astounding, sufficient to feed millions of people. One coyote, in average condition and with his usual attention to business, may annually destroy a hundred head of sheep. Some flocks will be reduced by one-tenth their number in a single season and a detached flock will often be entirely destroyed.

It is strangely shortsighted and narrow for gentlemen to display themselves as the gentleman from Massachusetts [Mr. WALSH] and the gentleman from Illinois [Mr. MADDEN] have done in this debate. They and their constituents must look to the great meat-producing ranges of the West for their daily supply of this food. It is rapidly decreasing while the popula-tion is increasing. This must have a disastrous effect upon the cost of living, already most beyond the poor man's attain-

The gentlemen, and others of the great eastern cities, show an amazing solicitude for the Treasury when a small sum is proposed to aid the overworked, overburdened, and underpaid producer of life's necessities. They forgot the depleted condition of the Treasury and the sad condition of the taxpayers, tion of the Treasury and the sad condition of the taxpayers, over whom they periodically shed crocodile tears of grief assumed for political effect, when the \$40,000,000 were appropriated a few days ago by the rivers and harbors bill. That money is to be expended largely in and around their cities, The Boston man gets his share. The Chicago man gets his. The New York man gets his portion. And the Philadelphia man gets a few millions for the Delaware River. Altogether they extract from the Treasury the handsome total of \$40,000,000 to follow the \$800,000,000 already appropriated upon these same to follow the \$500,000,000 already appropriated upon these same projects. They believe that an essential and profitable expenditure, and the larger portion of the money may be wisely expended. The States of Utah, Colorado, Nevada, Idaho, and Wyoming will receive not a penny of that magnificient total but we supported the appropriation. We ask that a spirit of fairness be exhibited now toward this sparsely settled portion of our country.

This bill carries an appropriation of over \$60,000 for "investigating" insects affecting deciduous fruits; over \$114,000 for "investigating" insects affecting cereals and forage; over \$60,000 for "investigating" insects affecting cotton, tobacco, and other plants; over \$50,000 for "investigating" insects affecting forests; over \$40,000 for "investigating" insects affecting truck gardens; \$20,000 for "investigating" bee culture; over \$17,000 for "investigating" insects affecting citrus fruits; over \$33,000 for "investigating" the Mediterranean and other flies; over \$57,000 for "investigating" miscellaneous insects affecting citrus fruits; over \$57,000 for "investigating" miscellaneous insects affecting citrus fruits; over \$57,000 for "investigating" miscellaneous insects affecting citrus fruits; over \$57,000 for "investigating" miscellaneous insects affecting citrus fruits. over \$57,000 for "investigating" miscellaneous insects affect-ing man and beast. This bill appropriates \$305,000 to "investi-gate" and prevent the spread of the gypsy and brown-tail moths. This is largely for the benefit of our fellow countrymen who dwell in the gentleman's State of Massachusetts.

Mr. Speaker, by this bill we appropriate nearly \$900,000 for "investigating" these insects, flies, and moths, and so forth, and every dollar is wisely appropriated. We want the \$250,000 provided

in this amendment not to "investigate" the various predatory animals which prey upon the live stock of the West and drive the producer into insolvency. They are thoroughly investigated already. Their pernicious character is known to every strugalready. Their pernicious character is known to creating gling settler who must contend against beak and claw and fang gling settler who must contend against beak and claw and fang gling settler who must contend against beak and claw and fang throughout all that vast region. It is not investigation that we contemplate, but extermination, relentless and determined extermination

The spread of rabies among coyotes, beginning in Oregon and extending rapidly into California, Idaho, Nevada, and Utah, is becoming an alarming menace to the settler and inhabitants, and should elicit immediate aid from the National Government. coyote may infect scores of domestic animals. You have heard related the record of the treatment of many individuals who had been bitten by these animals. It is clearly a national duty to suppress this most fearful of maladies and exterminate these animals which find harbor and refuge in the Nation's forest reserves and public domain.

. The gentlemen from the great cities and those dwelling along the Atlantic seacoast, and whose constituents are largely engaged in manufacturing, are always on the alert and ready to secure Federal aid for their enterprises. In this they are to be commended and their constituents to be congratulated. Their

interests have been carefully guarded and conserved.

It is high time, Mr. Speaker, that the attention of the Congress be turned for a brief time toward those who produce the necessities of life for the whole Nation. The American yeoman is the hardest worked and the poorest paid of all our citizenship. He is the victim of predatory man and beasts of prey.

The Sixty-third Congress has been deservedly credited with more constructive legislation than any 10 Congresses preceed-It emancipated the business interests of the country from a crude, unscientific financial system which had periodically plunged the Nation into panics destructive and damaging to all

classes and instituted a system under which such panics can That Congress enacted wholesome antitrust laws designed to liberate the business of our country from monopoly. It put upon the statute books an income tax which places the burdens of taxation upon the backs of those most able to bear them. That Congress dealt wisely and effectually with the tariff question, with banking questions, with questions of interstate trade, and brought forth many measures for the relief of business,

banking, and commerce.

It is time now, we submit, to pay some attention to the real producer of the wealth of the Nation. His interests have been too long neglected. He has been compelled unjustly, because of our archaic system of banking laws, to pay exhorbitant interest rates on capital required, rates which no business on earth could continue long to pay and survive. He has been robbed systematically by middleman, commission man, and monopoly. He is entitled to a system of rural credits from this Congress. He is entitled to relief from such monopoly as the investigation of a committee of this Congress is now disclosing among the packing houses of the country.

All other countries of any standing guard with watchful care the rights and interests of the producers of life's necessities. They seem to appreciate the paramount importance of the food supply to the whole Nation, and in this regard we would act wisely to consider such wholesome examples.

I trust that the amendment carries and becomes a law.

The American Farmer.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA, IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 25, 1916.

Mr. BAILEY. Mr. Speaker, a few days ago it was my privilege, in discussing this great measure concerned with the farmer and farm interests, to call attention to what I regard as one of the most vital factors in the problem with which we are attempting to deal. In my former remarks I dwelt at some length on the fact that in a relative sense agriculture has declined in this country. It has not kept pace with the growth of population, with manufactures, with transportation, with mining. It has indeed grown and is still growing, but not in proportion to

the growth of the other elements in our national life.

Yet it seems to me that agriculture above all other interests should thrive in the United States. There is perhaps no other

portion of the habitable globe of equal extent so well adapted to agriculture. Climate, soil, everything combines to favor this primary industry. There is scarcely a square mile of our huge territory that, tickled with the hoe, will not laugh with a harvest. And there is a diversity of soil and climate almost if not quite unequaled anywhere else under the sun. In a hundred ways we are favored above others by nature. The imagination staggers in the presence of the magnificent possibilities of wealth and prosperity which our fields offer to the cultivator. Yet men like James J. Hill have been telling us for years that we are not far from the day when it will become necessary for the United States to look outside their own borders for food. They have been warning us against the time when our fields will no longer feed the ravening mouths of our cities and towns.

What does all this mean? Does it mean that our apparently boundless resources are, after all, approaching exhaustion? Does it mean that population is already pressing upon subsistence in any true sense? Does it mean that our soil is wearing out; that our farmers are losing their skill; that actual scarcity of land is even thus early confronting this Nation of a hundred millions? I think not. But I think that a factitious scarcity is already being felt. As I endeavored to make clear in the previous remarks on this same subject, the trouble lies chiefly, as I believe, in an artificial scarcity resulting from the forestalling of agricultural opportunities through speculation in farm-land values; it comes inevitably as a consequence of a system which encourages monopoly control of the soil at the expense of the mass of farm workers who must live upon the soil and bring forth the fruits thereof.

In my previous remarks I took the liberty of quoting at length from the late Henry F. Ring's Problem of the Unemployed; and in connection herewith it is my desire to quote at equal length from another and a greater authority on the land question. No man who has written on the subject of political economy has done so with as clear a vision as Henry George; and in none of his writings has he more vividly set forth his doctrine as it relates to the working farmer than Chapter XX of his Social Problems on The American Farmer. I want to include in my remarks that illuminating chapter, and I desire in doing so to impress upon the Members of this House and upon all who may read it the important bearing it has on the great problem with which we are dealing, or undertaking to deal, in the bill now under consideration, for it must be clear to the gentleman from South Carolina [Mr. Lever] and to his colaborers on the Committee on Agriculture that if the typical American farmer must disappear, as he is already disappearing, propositions more fundamental than any contained in this measure must ultimately be forthcoming; we must go deeper than we are now going if we are to check the obvious tendency and save him from utter extinction,

I think that in the chapter to which I have referred the more fundamental proposition is set forth logically and with power. It supplements what has previously been brought to the attention of the House by me on the same general subject, and I would most earnestly urge upon the members of the great Committee on Agriculture and upon the Members of this House an open-minded study of the question as a whole as I have sought to present it with the aid of two master minds from which I have borrowed and to the memory of which I pay my grateful tribute. Chapter XX from Social Problems on The American Farmer follows:

SOCIAL PROBLEMS,
[By Henry George.]
THE AMERICAN FARMER,
Chapter XX.

It is frequently asserted that no proposition for the recognition of common rights to land can become a practical question in the United States because of the opposition of the farmers who own their own farms, and who constitute the body of our population, wielding, when they choose to exert it, a dominating political power.

That new ideas make their way more slowly among an agricultural population than among the population of cities and towns is true, though, I think, in less degree true of the United States than of any other country. But beyond this, that those who look upon the small farmers of the United States as forming an impregnable bulwark to private property in land very much miscalculate.

Even admitting, which I do not, that farmers could be relied upon to oppose measures fraught with great general benefits if seemingly opposed to their smaller personal interests, it is not true that such measures as I have suggested are opposed to the interests of the great body of farmers. On the contrary, these measures would be as clearly to their advantage as to the ad-

vantage of wageworkers. The average farmer may at first start at the idea of virtually making land common property, but given time for discussion and reflection, and those who are already trying to persuade him that to put all taxation upon the value of the land would be to put all taxation upon him have as little chance of success as the slaveholders had of persuading the negroes that the northern armies were bent on kidnapping them and selling them in Cuba. The average farmer can read, write, and cipher-and on matters connected with his own interests ciphers pretty closely. He is not out of the great currents of thought, though they may affect him more slowly. and he is anything but a contented peasant, ignorantly satisfied with things as they are, and impervious to ideas of change. Already dissatisfied, he is becoming more so. His hard and barren life seems harder and more barren as contrasted with the excitement and luxury of cities, of which he constantly reads, even if he does not frequently see, and the great fortunes accumulated by men who do nothing to add to the stock of wealth arouse his sense of injustice. He is at least beginning to feel that he bears more than his fair share of the burdens of society and gets less than his fair share of benefits, and though the time for his awakening has not yet come, his thought, with the decadence of old political issues, is more and more turning to economic and social questions.

HOW EQUAL RIGHTS TO THE SOIL MAY BE ASSERTED.

It is clear that the change in taxation which I propose as the means whereby equal rights to the soil may be asserted and maintained would be to advantage to farmers who are working land belonging to others, of those whose farms are virtually owned by mortgagees, and of those who are seeking farms. And not only do the farmers whose opposition is relied upon-those who own their own farms—form, as I shall hereafter show, but a decreasing minority of the agricultural vote and a small and even more rapidly decreasing proportion of the aggregate vote, but the change would be so manifestly to the advantage of the smaller farmers, who constitute the great body, that when they come to understand it they will favor instead of oppose it. The farmer who cultivates his own small farm with his own hands is a landowner, it is true, but he is in greater degree a laborer, and in his ownership of stock, improvements, tools, and so forth, a capitalist. It is from his labor, aided by his capital, rather than from any advantage presented by the value of his land, that he derives his living. His main interest is that of a producer, not that of a landowner.

THE STORY OF COZY MURPHY.

There lived in Dublin some years ago a gentleman named Murphy—"Cozy" Murphy, they called him for short and because he was a very comfortable sort of a Murphy. Cozy Murphy owned land in Tipperary, but, as he had an agent in Tipperary to collect his rents and evict his tenants when they did not pay, he himself lived in Dublin, as being the more comfortable place. And he concluded at length that the most comfortable place in Dublin—in fact, the most comfortable place in Dublin—in fact, the most comfortable place in the whole world—was in bed. So he went to bed and stayed there for nearly eight years; not because he was at all ill, but because he liked it. He ate his dinners and drank his wine and smoked his cigars and read and played cards and received visitors and verified his agent's accounts and drew checks—all in bed. After eight years' lying in bed he grew tired of it, got up, dressed himself, and for some years went around like other people, and then died. But his family were just as well off as if he had never gone to bed—in fact, they were better off, for while his income was not a whit diminished by his going to bed, his expenses were.

This was a typical landowner—a landowner, pure and simple. Now, let the working farmer consider what would become of himself and family if he and his boys were to go to bed and stay there, and he will realize how much his interests as a landowner.

HOW INDIRECT TAXES HURT THE WORKING FARMER.

It requires no grasp of abstractions for the working farmer to see that to abolish all taxation, save upon the value of the land, would be really to his interest, no matter how it might affect larger landholders. Let the working farmer consider how the weight of indirect taxation falls upon him without his having power to shift it off upon anyone else; how it adds to the price of what he has to sell; how it compels him to contribute to the support of government in far greater proportion to what he possesses than it does those who are much richer, and he will see by the substitution of direct for indirect taxation he would be largely the gainer. Let him consider further and he will see that he would be still more largely the gainer if direct taxation were confined to the value of the land. The land of the working farmer is improved land, and usually the value of the

improvements and of the stock used in cultivating it bears a very high proportion to the value of the bare land. Now, as all valuable land is not improved as is that of the working farmer, as there is much more of valuable land than of improved land, to substitute for the taxation now levied upon the improvements and stock, a tax upon the naked value of the land, irrespective of improvements, would be manifestly to the advantage of the owners of improved land, and especially of small owners, the value of whose improvements bears a much greater ratio to the value of their land than is the case with larger owners; and who, as one of the effects of treating improvements as a proper subject of taxation, are taxed more heavily, even upon the value of their land, than are larger owners.

WHAT THE WORKING FARMER MAY SEE BY LOOKING ABOUT HIM.

The working farmer has only to look about him to realize this: Near by his farm of 80 or 160 acres he will find tracts of 500 or 1,000, or, in some places, tens of thousands of acres, of equally valuable land, on which the improvements, stock, tools, and household effects are much less in proportion than on his own small farm, or which may be totally unimproved or unused. In the villages he will find acre, half-acre, and quarter-acre lots, unimproved or slightly improved, which are more valuable than his whole farm. If he looks further, he will see tracts of mineral land, or land with other superior natural advantages, having immense value, yet on which the taxable improvements amount to little or nothing; while, when he looks to the great cities, he will find vacant lots 25 by 100 feet worth more than a whole section of agricultural land such as his; and as he goes toward their centers he will find most magnificent buildings less valuable than the ground on which they stand, and block after block where the land would sell for more per front foot than his whole farm. Manifestly to put all taxes on the value of land would be to lessen relatively and absolutely the taxes the working farmer has to pay.

So far from the effect of placing all taxes upon the value of land being to the advantage of the towns at the expense of the agricultural districts, the very reverse of this is obviously true. The great increase of land values is in the cities, and with the present tendencies of growth this must continue to be the case. To place all taxes on the value of the land would be to reduce the taxation of agricultural districts relatively to the taxation of towns and cities. And this would be only just, for it is not alone the presence of their own populations which gives value to the land of towns and cities, but the presence of the more scattered agricultural population, for whom they constitute industrial, commercial, and financial centers.

WHAT APPEARS AT FIRST BLUSH.

While at first blush it may seem to the farmer to abolish all taxes upon other things than the value of the land would be to exempt the richer inhabitants of cities from taxation, and unduly to tax him, discussion and reflection will certainly show him that the reverse is the case. Personal property has been, and can never be fairly taxed. Personal property is not, The rich man always escapes more easily than the man who has but little, the city more easily than the country. Taxes which add to prices bear upon the inhabitants of sparsely settled districts with as much weight, and in many cases with much more weight, than upon the inhabitants of great cities. Taxes upon improvements manifestly fall more heavily upon the working farmer, a great part of the value of whose farm consists of the value of improvements, than upon the owners of valuable unimproved land, or upon those whose land, as that of cities, bears a higher relation in value to the improvements.

The truth is that the working farmer would be an immense gainer by the change. Where he would have to pay more taxes on the value of his land he would be released from the taxes now levied on his stock and improvements, and from all the indirect taxes now weighing so heavily upon him. And as the effect of taxing unimproved land as heavily as though it were improved would be to compel mere holders to sell, and to destroy mere speculative values, the farmer in sparsely settled districts would have little or no taxes to pay. be until equally good land all about him was in use and he had all of the advantages of a well-settled neighborhood that his

taxes would be more than nominal.

LOSS NOMINAL, GAIN REAL.

What the farmer who owns his own farm would lose would be the selling value of his land, but its usefulness to him would be as great as before-greater than before, in fact, as he would get larger returns from his labor upon it; and as the selling value of other land would be similarly affected, this loss would not make it harder for him to get another farm if he wished to move, while it would be easier for him to settle his children or to get more land if he could advantageously cultivate more. I tivates his own small farm. When a Brooklyn lawyer or Bos-

The loss would be nominal; the gain would be real. better for the small farmer, and especially for the small farmer with a growing family, that labor should be high than that land should be high. Paradoxical as it may appear, small land-owners do not profit by the rise in the value of land. On the contrary, they are extinguished. But before speaking of this let me show how much misapprehension there is in the assumption that the small independent farmers constitute, and will continue to constitute, the majority of the American people.

Agriculture is the primitive occupation; the farmer is the American pioneer; and even in those cases, comparatively unimportant, where settlement is begun in the search for the precious metals, it does not become permanent until agriculture in some of its branches takes root. But as population increases and industrial development goes on, the relative importance of agriculture diminishes. That the nonagricultural population of the United States is steadily and rapidly gaining on the agricultural population is, of course, obvious. According to the census report the urban population of the United States was, in 1790, but 3.3 per cent of the whole population, while in 1880 it had risen 22.5 per cent. Agriculture is yet the largest occupation, but in the aggregate other occupations must exceed it. cording to the census, which, unsatisfactory as it is, is yet the only authority we have, the number of persons engaged in agriculture in 1880 was 7,679,493, out of 17,392,099 returned as engaged in gainful occupations of all kinds. Or if we take the number of adult males as a better comparison of political power we may find, with a little figuring, that the returns show 6,491,116 males of 16 years and over engaged in agriculture, against 7,422,639 engaged in other occupations. According to these figures the agricultural vote is already in a clear minority in the United States, while the preponderance of the nonagricultural vote, already great, is steadily and rapidly increasing.

FARM OWNERSHIP STEADILY DECLINING.

But while the agricultural population of the United States is thus already in a minority the men who own their own farms are already in a minority in the agricultural population. According to the census the number of farms and plantations in the United States in 1880 was 4,008,907. The number of tenant farmers paying money rents or share rents is given by one of the census bulletins at 1,024,601. This would leave but 2,984,306 nominal owners of farms out of the 7,679,493 persons employed in agriculture. The real owners of their farms must be greatly less even than this. The most common form of agricultural tendency in the United States is not that of money or What proportion of American share rent, but of mortgage. farms occupied by their nominal owners are under mortgage we can only guess. But there can be little doubt that the number of mortgaged farms must largely exceed the number of rented farms, and it may not be too high an estimate to put the number of mortgaged farms at one-half the unrented ones. However this may be it is certain that the farmers who really own their farms are but a minority of farmers and a small minority of those engaged in agriculture.

Further than this all the tendencies of the times are to the extinction of the typical American farmer—the man who cultivates his own acres with his own hands. This movement has only recently begun, but it is going on and must go on under present conditions with increasing rapidity. The remarkable increase in the large farms and the diminution in the small ones, shown by the analysis of the census figures, evidence of the fact-too notorious to need the proof of figures that the tendency to concentration, which in so many branches of other industry has substituted the factory for self-employing workmen, has reached agriculture. One invention after another has already given the large farmer a crushing advantage over the small farmer, and invention is still going on. And it is not merely in the making of his crops, but in their transportation and in their marketing, and in the purchase of his supplies, that the large producer in agriculture gains an advantage over the small one. To talk, as some do, about the bonanza farms breaking up in a little while into homesteads is as foolish as to talk of the great shoe factory giving away again to journeymen shoemakers with their lapstones and awls. The bonanza farm and the great wire-fenced stock ranch have come to stay while present conditions last. If they show themselves first on new land it is because there is on new land the greatest freedom of development, but the tendency exists wherever modern industrial influences are felt, and it is showing itself in the British Isles as well as in our older States.

WIPING OUT THE TYPICAL AMERICAN FARMER.

This tendency means the extirpation of the typical American farmer, who with his own hands and the aid of his boys cul-

ton banker can take a run in a palace car out to the new Northwest; buy some sections of land; contract for having it broken up, seeded, reaped, and thrashed; leave on it a superintendent, and make a profit on his first year's crop of from \$6,000 to \$10,000 a section, what chance has the emigrant farmer of the old type who comes toiling along in a wagon which contains his wife and children, and the few traps that with his team constitute his entire capital? When English and American capitalists can run miles of barbed-wire fence, and stock the inclosure with large herds of cattle which can be tended, carried to market, and sold at the minimum of expense and maximum of profit, what chance has the man who would start stock raising with a few cows?

TWO DEVELOPING TYPES.

From the typical American farmer of the new era now beginning to pass away, two types are differentiating—the capitalist farmer and the farm laborer. The former does not work with his own hands, but with the hands of other men. He passes but a portion of his time, sometimes hardly any of it, upon the land he cultivates. His home is in a large town or great city, and he is, perhaps, a banker, and speculator as well as a farmer. The latter is a proletarian, a nomad—part of the year a laborer and part of the year a tramp, migrating from farm to farm and from place to place, without family or home or any other influences and responsibilities that develop manly If our treatment of land continues as now, some of our small independent farmers will tend toward one of the extremes, and many more will tend toward the other. But besides the tendency to production on a large scale, which is operating to extirpate the small independent farmer, there is, in the rise of land values, another powerful tendency operating in the same direction.

At the looting of the Summer Palace at Pekin by the allied forces in 1860, some valuable jewels were obtained by private soldiers. How long did they remain in such possession? If a Duke of Brunswick were to distribute his hoard of diamonds among the poor, how long would the poor continue to hold them? The peasants of Ireland and the costermongers of London have their donkeys, which are worth only a few shillings. But if by any combination of circumstances the donkey became as valuable as a blooded horse, no peasant or costermonger would be found driving a donkey. Where chickens are cheap, the common people eat them; where they are dear they are to be found only on the tables of the rich. So it is with land. As it becomes valuable it must gravitate from the hands of those who work for a living into the possession of the rich.

What has caused the extreme concentration of landownership in England is not so much the conversion of the feudal tenures into fee simple, the spoliation of the religious houses and the inclosure of the commons, as this effect of the rise in the value of land. The small estates, of which there were many in England two centuries and even a century ago, have become parts of large estates mainly by purchase. They gravitated to the possession of the rich, just as diamonds, or valuable paintings, or fine horses, gravitate to the possession of the rich.

So long as the masses are fools enough to permit private property in land, it is rightly esteemed the most secure possession, It can not be burned, or destroyed by any accident; it can not be carried off; it tends constantly to increase in value with the growth of population and improvement in the arts. Its possession being a visible sign of secure wealth, and putting its owner, as competition becomes sharp, in the position of a lord or god to the human creatures who have no legal rights to this planet, carries with it social consideration and deference. For these reasons land commands a higher price in proportion to the income it yields than anything else, and the man to whom immediate income is of more importance than a secure investment. finds it cheaper to rent land than to buy it.

WHEN IT BECOMES MORE PROFITABLE TO SELL THAN TO HOLD,

Thus, as land grew in value in England, the small owners were not merely tempted or compelled by the vicissitudes of life to sell their land, but it became more profitable to them to sell it than to hold it, as they could hire land cheaper than they could hire capital. By selling and then renting, the English farmer, thus converted from a landowner into a tenant, acquired, for a time at least, the use of more land and more capital, and the ownership of land thus gravitated from the hands of those whose prime object is to get a living into the hands of those whose prime object is a secure investment.

This process must go on in the United States as the land rises in value. We may observe it now. It is in the newer parts of our growing cities that we find people of moderate means living in their own houses. Where land is more valuable,

we find such people living in rented houses. In such cities, block after block is built and sold, generally under mortgage, to families who thus endeavor to secure a home of their own. But I think it is the general experience, that as years pass by, and land acquires a greater value, these houses and lots pass from the nominal ownership of dwellers into the possession of landlords, and are occupied by tenants.

So, in the agricultural districts, it is where land has increased little, if anything, in value that we find homesteads which have been long in the possession of the same family of working farmers. A general officer of one of the great trunk railroad lines told me that his attention had been called to the supreme importance of the land question by the great westward emigration of farmers, which, as the result of extensive inquiries, he found due to the rise of land values. As land rises in value the working farmer finds it more and more difficult for his boys to get farms of their own, while the price for which he can sell will give him a considerably larger tract of land where land is cheaper; or he is tempted or forced to mortgage, and the mortgage eats and eats until it eats him out, or until he concludes that the wisest thing he can do is to realize the difference between the mortgage and the selling value of his farm and emigrate West. And in many cases he commences again under the load of a mortgage, for as settlement is now going, very much of the land sold to settlers by railroad companies and speculators is sold upon mortgage. And what is the usual result may be inferred from such announcements as those placarded in the union depot at Council Bluffs, offering thousands of improved farms for sale on liberal terms as to payment. One man buys upon mortgage, fails in his payments, or gets disgusted and moves on, and the farm he has improved is sold to another man upon mortgage. Generally speaking, the ultimate result is that the mortgagee, not the mortgagor, becomes the full owner. Cultivation under mortgage is, in truth, the transitional form between cultivation by the small owner and cultivation by the large owner or by tenant.

WHERE LAND IS DEAR LABOR IS CHEAP.

The fact is that the typical American farmer, the cultivator of a small farm of which he is the owner, is the product of conditions under which labor is dear and land is cheap. As these conditions change, labor becoming cheap and land becoming dear, he must pass away as he has passed away in England.
